No real issue presented itself when, in 1904, Mr. Roosevelt was again nominated by the Republicans, this time as President to succeed himself, and Judge Alton B. Parker was nominated by the Democrats. Imperialism was, as an issue, as "dead" as the silver question. A conservative candidate nominated by a party formerly radical contested the election of Mr. Roosevelt: regarded as the somewhat radical candidate of a

*A HISTORY OF THE PRESIDENCY FROM 1897 TO 1909. *By Edward Stanwood.* Pp. 298. Boston: Houghton Mifflin Co. $1.75.

party grown unmistakably conservative. No wonder there was a falling off of more than 460,000 in the popular vote, as compared with 1900!

Thruout his second term Mr. Roosevelt felt freer than during his service as an accidental President to express his own personality in policies and in performance. Moreover, he had announced more than once that he would "not again" be a candidate for the Presidency and that there were "no strings to this statement"; and thus he had the opportunity to cut loose from the traditional trading of Presidents with an eye on the renomination. Mr. Roosevelt entered upon his second term with a personal popularity (as distinguished from a political popularity) "greater than that of any other President, unless General Jackson." His sincerity was no more questioned than his strict integrity. The years 1901-1905 teemed with events and discussions, "all owing to the prodigious activity of the President's mind and to his extraordinary energy." "He always had a long program of reforms, and turned swiftly from one to another, representing each in turn to be of the utmost importance."

Besides what was accomplished in the admission of new States, a coal strike arbitration, international affairs, the authorization of a Panama canal, etc., this Presidency was notable for its development of what the historian calls "'progressive' insurgency," and the politico-social-economic unrest which remains the most characteristic symptom of the times. Mr. Stanwood is imprest, too, by the "singular" absence of the tariff question from discussions in Congress:

> "Altho the President was believed to sympathize at least mildly with the revisionists, he was too earnest in securing the social reforms which he advocated to favor the taking up of the tariff question."

A valuable feature of this book as an historical record will be found in its inclusion of the party platforms for the period covered—with those of 1912 to boot—and of tables of statistics of popular and electoral votes, etc.

Mr. Stanwood devotes his concluding chapter to "The Evolution of the Presidency." Madison feared the encroachment of the legislature, which, he wrote, "is everywhere extending the sphere of its activity, and drawing all power into its impetuous vortex." Today, at least, Madison would be condemned as a nervous conservative; and so some reviewers will classify Mr. Stanwood, who fears the encroachment of the executive. The powers of the legislative branch are, as he points out, minutely specified; so much so that the cry is, Down with the Constitution! It is those of the President that that document phrases broadly and in general terms. Now, the extension of the Presidential powers has been constant in recent years; and "it is the teaching of experience," writes Mr. Stanwood, "that power always tends to its own increase, at the expense of a weaker power." The British House of Commons has taken centuries to gain its supremacy over king and lords: but it has never let go an advantage once gained. Mr. Stanwood cites also the aggrandizement of the American Speakership. "So it has been with the Presidency." Mr. Roosevelt having carried his conception of the prerogatives of this office to the highest point, Mr. Taft, his successor, has used the same powers and methods, runs the argument. But Mr. Stanwood says little or nothing of Mr. Taft's placing a great many more postmasterships under the civil service rules.

"It would not be difficult," our authority continues, "to sustain the proposition that the extension of executive power and influence . . . was imported into Washington by those who had filled the executive chair at Albany," *i. e.*, by Messrs. Cleveland and Roosevelt.

> "The justification for the change, if it is to be justified, lies in the contention that in modern times the executive of the State or the nation is placed, in popular estimation, and by the popular will, in the position of a leader. He is expected to do things, and to get things done. . . . The party machine is by no means the perfect machine it is in most countries having a parliamentary government."

To quote Justice Hughes—his words were spoken at Harvard while he was Governor of New York:

> "The scope of administration has increased rapidly during the past few years, not only with respect to the multiplication of demands traditionally associated with it, but also in the provision that has been made to secure adequate supervision of activities related to the public interest. . . . But the aggrandizement of the executive is not to be accounted for

simply in this way. It is rather that out of the conflicts between competing interests or districts the executive emerges as representative of the people as a whole."

This has been the doctrine of Mr. Roosevelt and of Governor Wilson no less than that of Justice Hughes as Governor of New York. In modern politics the executive is the people's man.

By Any Other Name

AUTHORS are "kittle cattle" if all reports be true, and there seems to be no saying what new scheme they may not try out on the unoffending public. Anonymity is ancient craft, but of late certain novelists, aided and abetted by their publishers, have invented a new war game. It consists in putting out a work under a new pen name—but here comes the artful dodge—labelling it as the work of—a well-known novelist, who assumes the name as an experiment, etc. When we come across this notice please let us be calm. We must not let our curiosity get the better of us, and if we are hardened novel readers who go by quality of work rather than by pomp of names—we don't.

What does an author with an assured public seek to gain by tricks of this sort? Does he fear his vogue is declining and seeks to enlist a new army of admirers under a fresh banner? If his masquerading work fails he has the mortification of knowing that he has been living on reputation of earlier days. If it succeeds then he cannot tell whether it has done so on its own merits or owes its sale to a semi-mysterious advertisement. Be it noted, however, that we bear no grudge against the author who hides behind an honest anonymity.

Who is "John Inglis"? The publishers say: "An author of considerable note who chooses in this case, as an experiment, to use an assumed name." Well, whoever it is, the author of *George Wendern Gave a Party*[1] has no cause to be ashamed of his work. It is a good story, the craftsmanship is admirable, and the interest sustained until the remarkable dénouement which gives its title to the novel. The scene is London. The principal characters—a dreamy quixotic man, manager of a shady syndicate and the woman he loves, a charming American heiress whom her father's wealth has destined for a coronet—are striking personalities. There is a minor love story told with many delightful touches, and several other characters are deftly handled. Decidedly a story to read, betraying the tender and sympathetic hand of—No!—wild horses will not drag the name from us.

Who is the fanciful "M. P. Revere," author of *The Bride's Hero*,[2] "by one of the leading writers of fiction, whose books have sold into the millions. The author wishes to make a test of popularity, and has chosen to issue this latest work without disclosing identity."

Doesn't that whet your curiosity? Millions! Let us hurry to it. We find it written in the form of confessions in a Self-Book, which "locks up with a golden key, like the bangle Jimmy McLean gave my cousin Marguerite, which got on her nerves, and made her have hysterics one night because she couldn't get it off." (Query. Off her nerves?). It is a twittering tale of girly revelations, absurdly melodramatic, but saved to popularity by some really clever character studies. An American heiress loves an English soldier hero with a marble heart. Tho his love is in the grave with an opera singer, he marries the diarist in order to get money for a costly operation on his brother, who has received grave injuries while running away with the opera singer, who was killed in the accident. The girl knows this fact of faithlessness, the hero doesn't. The hero is cold as ice; the wife is wife in name alone, loving still, thrilled by the sight of her marble husband in his shirt sleeves, having "calm and golden happiness in the thought of mending a sock for Miles." Finally there is an explosion, not domestic, but in a mine, which sets the sundered couple out on a fresh honeymoon.

Between Two Thieves[3] stands apart. Its author, "Richard Dehan," claims no trimmings of "millions," "experiments," or anything else. Yet "Richard Dehan" cloaks the identity of a woman whose "One Braver Thing" caused much talk.

[1]GEORGE WENDERN GAVE A PARTY. *By John Inglis.* New York: Charles Scribner's Sons. $1.25.

[2]THE BRIDE'S HERO. *By M. P. Revere.* New York: Frederick A. Stokes Company. $1.25.

[3]BETWEEN TWO THIEVES. *By Richard Dehan.* New York: Frederick A. Stokes Company. $1.40

We believe we are right in naming her as Miss Clo Graves. This latest work, nearly 700 pages long, has all the faults and all the greatness of her other. It contains same prodigality of incident, burning sincerity, passionate outbursts of vituperation and panegyric; the same unrestrained energy which knows no discrimination in its use of material, its selection of the fitting phrase. There is reckless splattering of full colored adjectives, sentimentality, sanctimonious invocation such as even Dickens never employed. We bow our heads beneath a torrent of words, words, confused and amazed. And yet there is a passionate power and insight which makes this a notable work. Her characters are stage characters, heavily emphasized: the noble sinning and suffering Hector Dunoisse, Henriette de Roux, the Circe of incredible enchantments, the depraved monster Napoleon Third, the angelic Ada Merling (a portrait of Florence Nightingale), the rascally army contractor—but they hold our attention. The scenes are laid in England, France and Russia before and during the Crimean War, and are masterly in detail and documentally exact.

Majority Rule and the Judiciary. By William L. Ransom. With an introduction by Theodore Roosevelt. New York: Charles Scribner's Sons. 60 cents.

This is a very timely and important book, for it presents in a form comprehensible to the layman as able an argument as can be made for the recall of judicial decisions, as advocated by Mr. Roosevelt. The author is a New York lawyer, and makes his plea in the legal manner, citing precedents to show that the right of the people to reverse judicial interpretations of constitutional questions has been recognized by the Supreme Court from the founding of our Government to the present, and that the people have in fact often overruled the judiciary, tho necessarily in roundabout, dilatory and sometimes objectionable ways. Lincoln said of the Dred Scott case: "Somebody has got to reverse that decision since it is made, and we mean to reverse it, and we mean to do it peaceably." He did reverse it, but was not able to do it peaceably. As late as 1890 the Supreme Court of the United States, referring to the Eleventh Amendment, said: "This amendment, expressing the will of the ultimate sovereignty of the whole country, superior to all legislatures and all courts, actually reversed the decision of the Supreme Court." Mr. Ransom quotes Alexander Hamilton to the effect that "the people themselves . . . as grantors of the commission, can also declare its true meaning and enforce its observance."

Literary Notes

....The Rev. Richard Roberts has made a fine popular restatement of the essential elements of the Christian faith in *The High Road To Christ* (Cassell; $1). The enthusiasm of conviction flashes from his direct and spirited sentences.

....Announcement is made by J. B. Lippincott that *Julius Cæsar*, the seventeenth volume in the New Variorum Edition of the works of Shakespeare, is on press for publication early in 1913. The series, which was the life work of Dr. Horace Howard Furness, is continued by his son, Horace Howard Furness, Jr., who has contributed two volumes.

....*The Story of the Renaissance*, by William Henry Hudson, is imported by Cassell & Co. (pp. 268; $1.50). There are eight full-page plates—fewer than the subject suggests. The story is almost wholly confined to Italy, France, Germany and England. The author is a university extension lecturer who presents an account of his great subject that will be found fairly adequate by the general reader.

....Mr. J. A. Packer, a journalist of Australia, in true reporter style, gives a sprightly account of his travels, experiences and observations *Among the Heretics in Europe* (Cassell), especially among those of the Baptist persuasion. The book furnishes many interesting glimpses of the official tyranny and petty annoyances to which missionaries and native Protestant workers have almost continuously been subjected in their religious efforts.

....The short story as a specific type is being nowadays more read, more written and more studied than ever before, so there should be a welcome for the neat pocket volumes of *Short Story Masterpieces* edited by Dr. J. Berg Esenwein, of *Lippincott's*. The two volumes first published by the Home Correspondence School, Springfield, Mass. ($1.62), contain attractively written essays on ten French writers, Loti, Maupassant, Balzac, etc., followed by very brief specimens of their work.

....A collection of first-rate detective stories is *Scientific Sprague,* by Francis Lynde (Scribner; $1.25). The fight between rivals for the possession of a railroad furnishes a thread of continuity for these stirring tales, and the reader is allowed to use a little of his own cleverness in anticipating some of the discoveries made by the unprofessional detective, who is a Government chemist, but skilled in analysis of men's thoughts and motives as well as of seeds and soils.

....The musician Massenet must have been correcting the proofs of his autobiography very shortly before his recent death, for here are *Mes Souvenirs, 1848-1912,* published by Pierre Lafitte et Cie., with a preface by Xavier Lecroux, author of the score of "Le Chemineau," and other modern compositions. Massenet confesses that all thru his career he was haunted by a doubt whether the exact sciences were not his true field. Like his music, these memoirs are of an almost cloying sweetness.

....Dr. Rudolph Steiner, the theosophic writer, adds to his recent book on *The Gates of Knowledge* (Putnams) a lecture in which he discusses the relation of philosophy and theosophy. He takes the philosophers sharply to task for not going "to the foundation of things." "They are blinded and lost in a labyrinth of their own theories out of which they are unable to find an exit." Of course "when once they extricate themselves from their present coil, they will find their way to theosophy." The poor philosophers have our sympathy.

....The Home University Library has added a volume on *Missions, Their Rise and Development* (Holt; 50 cents), by Mrs. Louise Creighton, who writes from the standpoint of one more especially familiar with the missionary work of the Church of England. The perspective of her book, which has the advantage of a spirited style, is quite different from that of the fuller account of missionary progress given by Dr. Alfred De Witt Mason in his *Outlines of Missionary History* (Doran; $1.50). The latter volume emphasizes the particular contributions of great missionary leaders in relation to the movement as a whole. Both books are worthy additions to missionary literature.

....Certain similarities between Buddhism and Christianity have often led to the suspicion and sometimes to the assertion of Buddhistic influence in the formative period of Christian thought, but no definite relationship has ever been satisfactorily established. Mr. Arthur Lloyd, M. A., in his sketch of *The Creed of Half Japan* (Dutton; $2.50), gives some very good evidence for the belief that there was a connection made by way of gnosticism which, it is well known, influenced largely the thinking of the early Church.

"There can be little doubt," he says, "that the system known in Japan as the shingon, and introduced into that country about A. D. 804, by the celebrated Kobo Daishi, must be looked upon as a system which is not Indian in its origin, but which has been foisted upon Buddhism from some extraneous quarter, and that it is essentially Egyptian and Gnostic."

Pebbles

If we would have corruption stop
Let's have a cop to watch each cop,
And then a cop to tag the cop
We've set to watch the other cop.
—*Exchange.*

The following poem, appearing in the current issue of the *Century,* aptly illustrates the complexities of unsimplified spelling. It may also serve as a test to determine if one reads by eye or ear, for to an eye-minded person it is quite incomprehensible until read aloud.

APE OWE 'EM.

BY DEEMS TAYLOR.

When fur stews can this sill leer I 'm,
Toot rye tomb ache theme e'en ink Lear,
Youth inked wood butt bee weigh sting thyme;
Use eh, "It's imp lean on scents, shear!"

Gnome attar; Anna lies align!
Nation mice lender verse says knot—
Fork rip tick poet real Ike mine,
How Aaron weal, demesnes allot.

"I have never said an insulting word of an Orange Irishman—ignorant, bigoted and inconceivably narrow-minded tho he may be!"—William Redmond

Now comes another scientist, who seeks to shock us with
A very grave announcement that old Adam was a myth;
He says the fig leaf is a simple figment of the brain;
We must not blame old Adam when we go to raising Cain:
So, goodby, Adam; Noah, too, and Jonah—all are gone—
But, Mister Scientist, please leave us Eve to blame things on.

We cling to Eve—we've got to have a plausible excuse
For every little tendency to turn our language loose,
Or steal a horse, or crack a bank, or gayly to deceive—
Those things, you know, originated with good mother Eve.
So, shatter Adam, if you will, but in our lexicon
Be sure to leave the name of Eve for us to blame things on.
—*Chicago Evening Post.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - - New York

A WEEKLY MAGAZINE FOUNDED IN 1848
One Year, $3.00 Single Copies, 10 Cents

Single copies over six months old, 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as those offered by any responsible agency.

An order for the change of an address should be received two weeks before the change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of the publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. Even so, we cannot hold ourselves responsible for their return. Authors should preserve copies of their manuscripts.

Advertising rates will be furnished on application.

Before the Election

NEXT Tuesday the voters of the country will select the electors who will elect the next President, if they can. We presume they can, for the outlook favors the election of the Democratic candidate. The gamblers have so decided.

Four years ago Mr. Taft was chosen President with 321 electoral votes against 162 for Mr. Bryan; but States that gave Taft an overwhelming majority went Democratic on the State tickets. Ohio was Republican by 75,000, but it elected Harmon for Governor by 25,000. Here was a difference of 100,000 votes. Minnesota gave Taft 90,000 majority, but it elected the Democratic Johnson as Governor by 25,000 majority. In New York Taft had a majority of 200,000, but Hughes's majority was only 70,000. A Democratic drift had set in, which has grown stronger since and has given the House of Representatives to the Democratic party. The country may make the experiment again of giving the Government to that party, as it did under Cleveland, with the Wilson tariff to follow, and its financial disasters. It is to be hoped that success will not breed recklessness; Mr. Wilson promises that it will not. We are not so confident. The burnt child's memory does not wholly fail in eight years.

An article in our issue this week ably discusses a question which has become more prominent as the campaign is closing, that of competition against monopoly. Mr. Wilson will allow no monopoly whatever in the great manufacturing industries, while Mr. Roosevelt appears to believe that not only trusts, but monopolies are inevitable, and he would have them controlled by a Federal commission. Now a Federal commission is precisely what Mr. Taft also urges, yet there seems to be a difference between the two. Mr. Taft has rather insisted on enforcement of the law, and he asks for a commission to be ancillary to it, as it exists or may be amended; while Mr. Roosevelt puts little or no emphasis on the enforcement of the law, but seems to put the control of trusts and monopolies almost or quite entirely in the hands of a commission which is to decide whether the trust is a benevolent one or a selfish and mischievous one. Mr. Wilson well says that this is a very large power to be put wholly into the hands of an executive commission; and there would be great danger of its falling into alliance with, or becoming subservient to the trusts themselves. Better than either is the method urged by President Taft, which presses the prosecution, under an amended Sherman law, of trusts which violate it, and gives the aid of a Federal commission to guard and ensure its strict enforcement.

If we are not mistaken the final considerations which the citizen should keep in mind when deciding how to vote on election day are these:

Historically: What party has best represented the liberty, fraternity and equality of all its citizens; and does it still represent them?

Industrially: What party is most likely to maintain and increase the business prosperity of the country, while firmly, yet prudently, controlling the encroachments of selfish combinations on the freedom of competition?

Internationally: What party will most assuredly preserve peaceable and honorable relations with foreign countries, and

especially with our weaker neighbors to the south, which are disturbed by chronic revolution?

These are the considerations which the voter should have in mind next Tuesday morning, if he cares for his country's honor, prosperity and peace.

Political Campaign Funds

NEARLY all of the testimony recently taken in the campaign fund inquiry at Washington relates to the money contributed in 1904 for the elections of that year, and in 1912 to promote the nomination of Presidential candidates. In the facts thus given to the public, as well as in the record of national and State legislation, there is evidence of a continuous forward movement. Only a little more than four years ago, the late Cornelius N. Bliss, treasurer of the Republican National Committee, who enjoyed the respect of many good men, said in a letter to the committee's chairman:

> "During the years that I have served as Treasurer of the committee I have considered the relations between the committee and the contributors as confidential. I have persistently refused to make the accounts public. In my opinion, contributors have the same right to object to publication of their gifts that they have to cast a secret ballot at election time."

But the American people now insist upon publicity and have made laws to compel it. These laws, however, leave something to be desired. Additional legislation is needed.

We shall refer briefly to parts of the testimony. It has been shown that the contributions to the Republican campaign fund in 1904 amounted to $2,280,018, and that 73½ per cent. of this sum was given by corporations. These are now by law forbidden to contribute. Mr. Bliss said that the Republican fund in 1900 was a little less than $3,000,000; that $3,450,000 was received in 1896, and that the contributions in 1892 were $1,600,000, to which a debt of $100,000 was added. Among the contributors in 1904 were E. H. Harriman, $150,000; J. P. Morgan, $150,000; George J. Gould, $100,000; H. H. Rogers, $100,000, and Chauncey M. Depew, $100,000. Large sums were assigned in the list to other men who represented corporations or who had acted as collectors. George W. Perkins appears to have given at least $160,000. In the same year August F. Belmont gave about $250,000 and Thomas F. Ryan $450,000 to the Democratic fund. Mr. Ryan has testified that nearly all of his $450,000 was paid after he realized that Judge Parker could not be elected. His aim was "to save the honor" of his party.

Nearly three-quarters of the Republican fund in 1904, or $1,675,000, was given by corporations subject to investigation and control—possibly to prosecution—by the Government or Administration for which the contributors sought another term of four years. We are not saying that during those four years any of the contributors were improperly favored because of their large gifts, but it must be admitted that favors shown to them could not fail to excite sharp criticism. Mr. Roosevelt in his testimony said that Henry C. Frick (who gave $50,000), "a strong supporter of mine," had offered to make good the loss of the Standard Oil contribution, if this contribution should be rejected or returned. This was in 1904. Three years later Mr. Frick and Judge Gary, representing the Steel Corporation, called at the White House and obtained President Roosevelt's approval of the acquisition of the Tennessee Coal and Iron Company by the Steel Corporation. As our readers know, we are not in sympathy with those who attack Mr. Roosevelt for that action, but it was to be expected that many would say the steel capitalists' gifts had determined the President's course; also that they would point out that the Steel Corporation was not prosecuted while Mr. Roosevelt was President, and that he restrained the Department of Justice from proceeding against the Harvester Trust, in which Mr. Perkins was deeply interested. If great combinations contribute largely to the successful party's fund and afterward appear to be favored by the Government, critics will assert—unjustly, it may be—that the favor is related to the gift. Corporations should be, as they now are, restrained by law from contributing to a party's fund.

We do not think any considerable part of the campaign funds in recent years has been used in the direct purchase of votes. Expenditures have been mainly

for speakers, employees' salaries, printing, advertising, rent, telegrams, office supplies and the like. There has been indirect purchase, however, in the unnecessary employment of men on and before election day. Mr. Harriman said the $260,000 contributed by himself and a few associates "turned 50,000 votes in New York City alone." Probably he was misinformed. His aim was to magnify the political effect of his action.

The testimony shows that more than $1,500,000 was contributed and used, before the recent national conventions, to promote the nomination of candidates for our highest office. In round numbers the totals (not all of them completed) are as follows: Mr. Roosevelt, $600,000; President Taft, $500,000; Governor Wilson, $208,000; Governor Harmon, $151,000; Mr. Underwood, $52,000; Speaker Clark, $50,000. More than $1,500,000, and how much more the public does not yet know, was spent in connection with the primaries and conventions and by the bureaus which the aspirants maintained. With respect to these expenditures there is need of reform. They are too large. The use of so much money tends to invite corruption.

Many of the States now have publicity laws for campaign funds. The committees of both the great parties voluntarily subjected themselves to the New York law in 1908. One Federal statute forbids corporations to contribute, and another, which became operative for the first time last week, requires publicity, before and after election, for the campaign contributions and expenditures of Presidential and Congressional candidates. To these should be added laws, State and national, limiting the expenditures of candidates in primary elections and for conventions. With complete and timely publicity there must be reasonable restraint to prevent an extravagant, unnecessary and demoralizing use of money in promoting nominations or carrying elections.

The Metropolis Dishonored

Did you ever stand still on the sidewalk of the city street to admire a platoon of the city's police striding by? Did you ever watch a thousand policemen march along Broadway in their annual parade? What tall, strong, stalwart, splendid, picked samples of humanity they appeared to you! What men to be proud of, what brave and competent defenders of the city's peace, what protectors of the defenseless citizens, what a terror to evildoers! You thought with what courage and skill and power they would quell a mob, for have we not been told that they are "the finest," and do they not look it?

On these guardians of the peace of our metropolis there has, in the conviction for murder in the first degree of Lieutenant Becker, fallen a terrible disgrace. He, a trusted officer of New York's police, has, after a full and careful trial, been proved guilty of summoning a band of criminals to murder a gambler with whose nefarious and unlawful business he had been in partnership. He, officer of the city's guard, planned the murder, sent his trusted companion to gather a squad of ruffians from the worst gang in the city, promise them protection, and then send them to slay his victim, and when they delayed sped them to their ugly task. It is incredible and true.

If this is true what can we not believe as to the venality of the New York police? Here we have an officer who had enriched himself by laying tribute on gamblers and disorderly houses, fattening himself on the shame of men and women; who was in the very center of the "system" of which we guessed so much, but could prove so little; who was so hardened in the infamy of his crime that he crowned it with the murder of the poor wretch who he feared would betray him. Is he a specimen of the force? Are there others as bad? It would seem so, for the term, "the system," accepted, acknowledged, requires the combination of a multitude of men of the force who are banded together to stand by each other in any required amount of lying, and perjury even, to protect each other's graft. Hence it is that in this case the jury of unusually intelligent men believed the oath of gamblers rather than that of policemen.

The question whether it is possible in our large cities to suppress gambling houses and dives and the white slave traffic is largely one of the power to purify the police. The one way that policemen can get graft is by protecting

these illegal resorts and businesses. It is the old question, '*Quis custodiet ipsos custodes?*" "Who will guard the guards?" We must have policemen to close up the houses of prostitution, as they are now trying to do in Chicago, and then organizations of citizens to see that they do it, and to punish those policemen who, like foul parasitic insects, feed on the blood of the outcasts of society. This lieutenant of police, now convicted of murder, committed this horrible crime to conceal the fact that he had enriched himself in two years by not less than sixty thousand dollars extorted from the profits of crime. He, chosen to suppress crime, was the companion and protector of criminals. We must have a thoro cleaning up of the police of the city, for he has disgraced them all and smirched them all, honest as we believe most of them to be, while deeply dishonoring the chief city of the continent. It is a splendid service which Prosecutor Whitman has done in convicting this officer and murderer, but it is only the beginning. It must be followed up by a complete exposure of "the system," and the persistent effort to remove the evil resorts which have been such a temptation to officers of the law as well as to weak minded and vicious minded citizens. This physically magnificent corps of our constabulary can be made the city's pride, so that its shield upon the breast shall become the badge of honor as well as of courage.

Can Business Be a Profession?

THE late James B. Dill remarked, not long before his death, that the practice of the law was getting to be a business, rather than a profession. A successful medical specialist tells his acquaintances that the practice of medicine likewise is losing, in a degree, the professional quality. And now comes Mr. Louis D. Brandeis, who contends that business is becoming a profession! Like enough all three observations may be true.

It depends in part upon our definitions of "business" and "profession." Mr. Brandeis says that a profession differs from a business occupation in the usual meaning of the word "business" by reason of intellectual preparation and in being pursued so largely for the general good that financial reward is not the measure of success.

This definition is perhaps substantially equivalent to that which has been accepted in professional circles since the days of Aristotle, but it does not adequately express one of the essential elements in the highest professional ideal.

Aristotle, as all his readers know, was of opinion that no gentleman could concern himself with business, and that no business man could be a gentleman. The thought in the back of the philosopher's head has not always been rightly apprehended, however, by modern critics. Aristotle was an aristocrat, to be sure, but it was not quite for this reason that he objected to business. The real reason and the highest conception of the professional attitude was best exprest by Ruskin, whose test by which to discriminate a profession from business was that a profession subordinates gain to honor, while business too often subordinates honor to gain. True professional idealism, according to Ruskin, carries this distinction so far that both life and reputation must be held at the service of mankind. The military career is rightly looked upon as professional, because the soldier must expose himself to death for his country. The physician must risk death in facing the most deadly contagious or infectious diseases. The lawyer must remember that he is an officer of the court and stand ready to disregard any attack upon his motives or his reputation in the performance of his sworn duty.

A good many high-minded members of the bar and of the medical profession can be found today who sadly acknowledge their agreement with the observations made by Mr. Dill and his medical contemporary. We prefer to believe that their view is more pessimistic than the facts call for. Undoubtedly, an impressive array of evidence might be set forth in proof of a commercializing tendency in both law and medicine. On the other hand, no age has shown a more reckless sacrifice of life and material well being in the advancement and application of medical knowledge than this in which we live.

Is it further true, as Mr. Brandeis argues, that business is advancing to the

professional level? This we want to believe as much as we want to disbelieve the criticisms of the older professionalism. Mr. Brandeis gives some strong reasons for his faith. That business is demanding and securing intellectual training, broad knowledge and first class mental power no well-informed person is likely to deny. The present day attitude of the successful business man toward the university is a combination of respect and demand. He looks to the university for invaluable assistance in dealing with the big new problems of the relations of business to legislation and the courts, to social welfare and to the labor movement, quite as naturally as he looks to it for trained engineers, physicists and chemists. Far more often than a generation ago the up-to-date business man is himself a college and university man.

Mr. Brandeis would not claim, however, that intellectual equipment alone puts the business man into the professional rank. It is because also the men of big business are beginning to look at their problems from the standpoint of the citizen and the servant of mankind, as well as from that of the money-maker, that they may be admitted to professional rank. They are beginning to have a code of ethics as well as ratings in the credit books. Thousands of them are not only sincerely interested in the general aspects of the big social questions, but are also endeavoring to work out solutions of them in their own factories and department stores.

Doubtless these men are still the exceptions. Business in general is not yet a profession, but we agree with Mr. Brandeis that it is being professionalized. And nothing better could happen.

To Suppress Tuberculosis

SUNDAY, October 27, was chosen as the day on which special attention would be given in the churches to the question of tuberculosis, its cure and, above all, its prevention. There is probably no disease that causes so much suffering to humanity as tuberculosis, though pneumonia now leads it as "the captain of the men of death" in mortality. In a great many cases the fatality in pneumonia has been predisposed to by a previous lessening of resistive vitality thru pulmonary tuberculosis. In consumption, moreover, the suffering affects not only the victim, but also the relatives and friends and for a prolonged period. There could be no finer Christian purpose than the lessening of all this suffering. The present crusade against tuberculosis has done much to mitigate the inroads of the affection. In our large cities the death rate from tuberculosis used to be nearly one in six and always more than one in seven; it is now said to be only one in eight of all the deaths. To have reduced human suffering and the mortality of a single disease by nearly one-third is an achievement to be proud of and is most promising for the future now that the campaign of information has been so strenuously taken up. Tuberculosis is, above all, the child of ignorance, tho also of alcoholism and living in crowded quarters with insufficient nourishment.

While often spoken of as the great white plague and as a scourge of humanity it must not be forgotten that tuberculosis is a disease which, by the impression it creates, causes a forcible reaction toward healthy living that of itself is very precious for the race. The best possible remedy for it is an abundance of pure air. It is literally the cheapest and most abundant remedy in the world and can practically be had for the taking. Tuberculosis occurs particularly in those who live in dusty, dirty quarters, which of themselves predispose individuals to slothful and vicious living. It occurs with special frequency among those who work in dusty places and in certain trades it is impossible to provide death benefit funds from the contributions of the workmen, because they die off so fast that the treasury becomes exhausted. There are some metal polishing trades in which, unless special precautions are taken, the limit of the workmen's life is scarcely more than seven years. Strong, healthy individuals of twenty to twenty-five who go into the trade are dead as the victims of tuberculosis in an average of five years.

Vacuum apparatuses by which the dust would be carried off before reaching the workmen would save most of this fa-

tality, but as they are somewhat expensive to install, tho not expensive to maintain, for they can practically be run with the surplus steam of a plant, manufacturers have until recent years refused to install them.

Almost as a rule such protection for workmen has not been installed until the public sentiment of the community or the development of legislation demanded it. Tuberculosis has been, then, in these cases, not a scourge that came upon humanity from without, but a source of evil consequent upon man's inhumanity to man. In many trades besides the polishing trades, in the hat and feather industries, in certain of the milling trades, in the coal industry, similar results have been noticed. The well known anthracosis of the lungs, in which they become blackened as the result of the inspiration into the lungs of coal dust, has often been spoken of and similar conditions are noted where stone is sawed or where grinding of stone goes on.

All this constitutes the warning with regard to the disease. To be free from it people must live as far as possible in quarters free from dust and work in fresh pure air. Human nature does its best work only under such conditions, and it would seem as if tuberculosis were a protest on the part of nature against attempting to make men and women live and work under any but reasonable and favorable conditions. If men fail to obey nature's laws in this matter then some one must bear the consequences. It is well known how much of energy men develop when living in an atmosphere of pure air and how sluggish they become in vitiated atmosphere. Nature would have only man's best work as far as possible and abhors conditions in which poor work is inevitable.

In a sense, then, tuberculosis is really a conservative agency punishing men for the violation of hygienic laws and tempting as far as possible to the living in such conditions as will make for the best and the highest effort. Unfortunately the punishment for the violation of nature's laws falls alike on the just and the unjust in the sense that all suffer, tho not all are to blame. Sometimes those who are most guilty in the matter of violations of law escape the immediate punishment. One thing is sure, however, that the crusade against tuberculosis and the campaign of information that have been carried on have made many people live much healthier, and as a consequence happier and on a higher plane of productive energy than would otherwise have been the case. Humanity has learned not to dread fresh air, even tho it be cold, and to know that night air, far from being harmful in itself, is the only fresh air there is at night, and having less dust in it, because there is less movement of persons and vehicles, is absolutely fresher than the day air in the same region.

Without the lessons that have been taught as the result of the study of the disease, the living quarters in our cities would have grown more and more cramped and less and less of air would have been provided for the inhabitants. As it is every day striking improvements are coming in providing larger supplies of fresh air for city folk, in laying out parks even in the most crowded quarters, parks that are really lungs for the cities, and in arousing the feelings of those who see how much good may be thus done to renewed efforts for the health and the happiness of the city dwellers, whose meager wages necessitate the slum life that, thanks to Christian charity, is now rapidly disappearing.

Balkan Surprises

REAL war is different from *Kriegspiel*. Last week we told how the Turkish commanders had for years devoted their grand maneuvers to the problem of the defense of Adrianople against an invading army from Bulgaria. This week we tell how the Bulgars outwitted them and outfought them on that very practice ground. That is always the difficulty with these chess openings. Your opponent, not having studied the game so much, does not move according to Lasker. The Bulgarian commander flung out a battle line of fifty miles and within a week had coiled his right wing closely about Adrianople, while with his left he drove the enemy from Kirk-Kilisee and threatens to paralyze Turkey by a blow at its spinal cord, the railroad from Constantinople to Salonika.

This is a severe shock to Turkish pride, for Kirk-Kilisse was defended by more troops than Adrianople and by fortifications planned by German engineers according to the latest principles of military science. It is next in importance to Adrianople among the cities of Thrace, and has been held up as a model to show what an excellent administration the Turks could give. Mr. Allen Upward, an eloquent apologist of the Ottoman Government, gives in his "Unknown Turkey," an interesting account of his visit to Kirk-Kilisse five years ago. He found that the Turkish Governor of this vilayet of a million population, Galib Pasha, had two sons in Robert College, the American college at Constantinople, and was studying English by himself in order to keep up with them, his textbook being "East Lynne." The population of the city was distributed, according to nationality, as follows:

Hellenes	9,210
Turks	6,120
Bulgars	4,045
Jews	1,526
Strangers	150
	21,051

No wonder that the Governor added in the note he wrote in English to Mr. Upward:

"It is very difficult to direct that department where are the different and hostiles inhabitants (Mussulmans, Greeks, Bulgars, Jewishs). But for to annihilate the hostility the Government arranges the concerts, the representations and the picnics with them."

Mr. Upward found the Turkish and Greek schools well equipt with desks, maps, and shelves of books as well as provided with a stage for musical and dramatic entertainments. Trees had been planted in the streets and flower beds in the parks. But the Young Turks have now lost their chance to "make good" in the administration of Kirk-Kilisse and it is up to the Bulgarians to show that they can do better with "the different and hostiles inhabitants."

The name "Kirk-Kilisse" means "forty churches" or rather shrines, not four, as the latest edition of the Encyclopedia Britannica has it.

These "impregnable fortresses" appear to be about as unreliable as "fireproof buildings." Skutari, the ancient Venetian stronghold, withstood an eight months' siege by Mohammed II in 1477, and the baffled conqueror of the Ottoman empire was obliged to give it up and get by treaty what he failed to get by force of arms. Skutari also had been fortified by the Germans, but a little band of Montenegrins, unskilled in the use of heavy artillery, brings it down within a few days. That reminds us that the crack cavalry regiment, trained by German officers, and if we may believe the Servian reports, still commanded by them, was overwhelmingly defeated at Kumanovo by a smaller force of Serbs last week. The Balkan war is playing havoc with military experts. Already the reputation of the Turks for indomitable courage and stubborn resistance is shattered, and it looks as tho the reputation of German military science would also suffer.

Double Personality in the Drama

Imagination and originality of thought are at the present time more evident in science than in literature and we see the strange sight of authors standing humbly outside the door of the psychological laboratory and the clinic, waiting for a chance to pick up new themes for their stories and plays. One of the most interesting plays of the season, "The Case of Becky," by Edward Locke, now running in New York, is virtually a dramatization of Dr. Morton Prince's "The Dissociation of a Personality," and sticks about as close to its text as do most of the dramatizations of novels. The last act of this play is a veritable psychological laboratory stocked with apparatus; all "practicable" you may be sure, since it is installed by Belasco, a Holtz machine giving a ten-inch spark, a chronoscope, a dynamograph and all manner of devices for inducing hypnosis by means of falling cadences, pneumatic hushes and revolving mirrors. With the aid of these—the modern form of the ancient *deus ex machina*—the villain is unmasked and the heroine is freed from her obsession. Miss Dorothy as we meet her in her normal personality in the first act is a demure and well-behaved damsel, and we are startled to see her reappear sliding down the bannisters as her *alter*

ego, "Becky," greedy, slovenly, vulgar and vindictive. Still more startling is to see the transformation from the good to the bad nature take place before our very eyes in the second act and then the final expulsion of the evil spirit from the body of the girl, under the influence of the doctor's reiterated command, "Go back where you came from, Becky; you must." It is almost a murder, this "recall" of a personality, and we cannot suppress a touch of sympathy with the mischievous and malicious being who, while she slowly passes into annihilation, protests and pleads as did Dr. Prince's "Sally," as did the devils of Gadara.

The dramatist in this case keeps close to his authorities, the reports of the psychopathic clinics, and making due allowance for the exaggeration and condensation necessary in a drama, but little fault can be found with it by the scientific critic. Stevenson, however, whose "Dr. Jekyll and Mr. Hyde" was the first successful presentation of double personality on the stage, thought it necessary to resort to magical means to effect the transformation, an unknown drug of strange potency. The dramatic possibilities of the idea were, however, thoroly demonstrated by Richard Mansfield, who, by stooping and pulling his forelock down over his forehead and curling up his fingers, could turn *instanter* from the gentleman and scholar into the human brute.

But in saying that this was the first dramatization of double personality we are ignoring the new book of Dr. Isador H. Coriat on "The Hysteria of Lady Macbeth." The quotation of a few paragraphs will show his standpoint:

"The act of washing the hands is a compromise for self-reproach and represt experiences. The mechanism here is the same as in the compulsion neuroses, a proof of Shakespeare's remarkable insight into the workings of the human mind. When the doctor later states, 'This disease is beyond my practise,' he exprest the attitude of the medical profession toward these psycho-neurotic symptoms until the advent of modern psychopathology.

"In the words, 'Out damned spot—Out I say,' the mechanism is that of an unconscious and automatic outburst. It is very doubtful if Lady Macbeth would have used these words if she were in her normal waking condition. Thus the difference between the personality of Lady Macbeth in her somnambulistic and in her normal mental state, is a proof of the wide gap existing between these two types of consciousness. Lady Macbeth may therefore be looked upon as possessing two personalities, which appear and disappear according to the oscillations of her mental level."—*The Hysteria of Lady Macbeth, by Isador H. Coriat, M. D.* (*Moffat, yard; 75 cents.*)

What a pity Lady Macbeth lived so long ago! If now Dr. Coriat had been the attending physician at Dunsinane when Macbeth asked:

"Canst thou minister to a mind diseased,
Pluck from the memory a rooted sorrow,
Raze out the written troubles of the brain
And with some sweet oblivious antidote
Cleanse the stuff'd bosom of that perilous stuff
Which weighs upon the heart?"

he would have answered, "Why, certainly. Send her up to the clinic of the Emmanuel Church and we will use psychoanalysis and suggestion."

We must confess that such applications of the new psychology to fictitious personages, as in Dr. Coriat's diagnosis of Lady Macbeth's case and Dr. Jones's paper on "The Œdipus Complex as Explanation of Hamlet's Mystery," in the *American Journal of Psychology,* January, 1910, tend rather to arouse our distrust than to confirm our faith in the method. It seems to us a *reductio ad absurdum.* If a Baconian cipher is found to work as well on the Declaration of Independence as on Shakespeare's works, we naturally suspect there is nothing in it. How much there is in the dream theory of Freud remains to be demonstrated, but it must be said that the use made of it by his enthusiastic followers does not inspire confidence in a layman.

A Saving of Thought

What a comfort and easement it would be for all other biblical scholars if they did not have to take the trouble to look up evidence and decide any question for themselves, but had a final authority which would say Yes or No to their questions. Such an authority is the Pontifical Commission on the Bible. About every six months or a year it emits a series of decisions on critical questions, telling what one ought to believe. The last decisions have to do with the Synoptic Gospels, and they end the matter for all those who are obliged to teach in the seminaries for the education of priests, and equally for every other good Catholic. The first decision

is one with which most of us will agree, that Matthew and Mark were the veritable authors of the Gospels which bear their names. The next decision we translate in full from the Latin:

"Whether the reasons by which certain critics attempt to prove that the twelve last verses of the Gospel of Mark were not written by Mark himself, but were added by another hand, are such as to give us the right to affirm that they are not inspired and are not to be regarded as canonical; or at any rate to show that Mark was not the author of these verses?

"Ans. No, to either question."

Another decision is that Matthew wrote his Gospel first in his native language, and that Mark followed, and then Luke; but it is allowable to hold that Matthew and Mark were composed before Matthew's Gospel was translated from Aramaic to Greek. Again, one is not allowed to doubt the inspiration and canonicity of the stories of the infancy of Christ, or the appearance of the angel to comfort Jesus, or the bloody sweat. Yet another decision declares that we cannot postpone the writing of Mark and Luke till after the destruction of Jerusalem; and the prophesy in Luke about the destruction of the city was written before the siege began. Again, the sayings and acts of our Lord as told by Mark and Luke are to receive full acceptance, without any allowance for a supposed misapprehension as to the order of events, or thru new conceptions of Christ which had arisen, or thru any preconceived notions on the part of the writers. Nevertheless, so long as one holds firmly to the foregoing statements as to the authenticity and integrity of these three Gospels, and to the faithfulness of the Greek translation to Matthew's original Aramaic, the scholar can dispute freely as to the sources and the dependence of one Gospel or another. But it is not allowable to hold or teach that the Gospels of Matthew and Luke depend on what are called the two sources, one the Gospel of Mark and the other a lost collection of the Sayings of our Lord. All these critical questions are hereby settled. Much labor and study are saved. "*Roma locuta est; causa finita.*" In the immortal words of Abraham Lincoln, "For them that like this sort of thing, we should think it such a thing as such people would like."

A Socialist Success

Butte, Mont., like most other American cities, has suffered from misgovernment and graft until many of its best citizens have been forced to vote for Socialists against their will, since there was absolutely no chance for betterment thru either of the old parties. The taxes have been higher, however, and less received in return than in most cities of its size, both parties ignoring absolutely the rights of the people. It was shown recently, when an audit of the city's business was made, that former administrations had balanced the books by taking them with them when their terms expired. Consequently the Socialists have elected their tickets and under Mayor Duncan have given the people a clean city, morally and physically. The streets and alleys for the first time in Butte's history are clean and sanitary, and it has been shown that infant mortality due to unclean conditions such as have prevailed here always formerly has been almost eliminated. At this time contagious diseases are almost nil. The Socialists have regulated traffic, graded streets, made city employees work like other men, given us honest policing, and an adequate return for our money. They have taken a bankrupt city and made its credit good, and they have done all this under most distressing conditions, as the newspapers are all owned by the Amalgamated Copper Company. They have hounded the Socialist administration until, notwithstanding their good work, they have been discredited, they have been lied about and maligned, so that weaker men might easily have given up. Facts like these explain the success of the Socialists at the polls in other communities.

Slanders of Public Men

Very properly has Mr. Roosevelt brought suit for libel against an editor who had charged him with drunkenness. On the face of it the charge is incredible. A public man, ever in the public gaze, it could not be true, and only recklessness or viciousness could have issued the slander for the purpose of doing him an injury. The story had been whispered abroad for months that he was a hard drinker, and Dr. Lyman Abbott met it by declaring on his personal knowledge

that Mr. Roosevelt is quite as temperate as he is himself. A similar charge of intemperance has been privately, and to some extent publicly, given out against Assistant Indian Commissioner Abbott, promulgated just at the time when Commissioner Valentine has resigned and a successor is to be appointed. It is to our knowledge utterly unjust. Before taking the position he holds he was one of the regents of the University of Nebraska and editor of a paper which always supported temperance measures, and his friends know him to be an abstainer. The strictest warning against the introduction of intoxicants into Indian reserves or its use in schools or agencies has recently been issued under his signature. The law forbids it for any purposes whatever, except sacramental, under Church authority. Slanders of this sort have a purpose, and that not a good one.

The Universal Language Again The inventor of Volapuk is dead. But Volapuk died before its inventor. Esperanto is hardier. Tidings of Esperanto come to us from Saint-Dié—the town in the Vosges where Hylacomylus Waldseemüller's "Cosmogrophiæ Introductio" was published in 1507, with its reference to the New World—"which, since Amerigo found it, we may call Amerigé or *America*." The bishop of this town of Saint-Dié, whose Waldseemüller named our continent, formerly exprest his fear lest "the enemies of religion might seize upon the new tongue [Esperanto] to make of it a weapon for war against the Church." More recently, the prelate has noted the movement among Catholics in favor of Esperanto and Ido, and that "the Sovereign Pontiff himself, deigning to interest himself in the question, has blessed the works and encouraged the efforts in this direction." Therefore does Monseigneur Foucault call upon all Catholics who are interested in one or other of these "universal" languages to leave off quarreling, and to meet in convention to study, "on the basis of the least effort, the unification of the alphabet and of grammar, while waiting till usage, master in the matter, if we may believe old Horace, brings us insensibly to the unification of the vocabulary, and consequently to the definitive establishment of the auxiliary universal tongue." It is not clear whether the good bishop would have this *universala parolilo* a modified Esperanto or a simplification of one of the national tongues. Of the latter, English, a language which foreigners find far from simple, is at least the most widely diffused. According to the *Annales* of Paris, English is spoken more or less correctly by two hundred millions—twice as many as can make themselves understood in French. Next comes—not German, but Spanish, spoken by seventy-five million persons, not counting those who speak Portuguese. German, Russian, Italian, Swedish, Rumanian, Danish and Provençal follow, in the order given.

Incitement to Murder When a man protests vigorously for or against legislation and declares that a decision contrary to his protest will be followed by assassinations, that is incitement to murder. Here is a man by the name of Crozier, who is wisely or unwisely opposing the Aldrich currency bill, declaring that it will put dangerous power into the hands of money kings, all very proper for him to say it if he believes it. But he proceeds in circulars sent all over the country to declare that if it is past there will be more assassinations, like the attempt on Roosevelt at Milwaukee. He is thus quoted:

> "When the people wake up and find themselves and all their interests helpless in the tightening grasp of one private corporation controlled by the selfish interests of Wall Street there may be many acts of violence against those in control and the public officials responsible such as occurred at Milwaukee. If mere fear of an individual despotism will cause one weak mind to attempt to assassinate an ex-President, will not a soulless incorporated despotism like the Aldrich central bank inspire thousands to similar acts when it is an accomplished fact? The insane greed and lust of special privilege for supreme power and profits is making anarchists and mentally desperate men about as fast as they can be counted, and if they succeed in putting over the Aldrich scheme the next great tragedy like that at Milwaukee will take place in Wall Street."

Such language is criminal. It tells "anarchists and mentally desperate men" what they should be expected to do, and it incites them to do it.

Union of Theological Seminaries

What would they think of it in England? The Anglican, Methodist, Presbyterian and Congregational theological seminaries in Montreal attached to McGill University have united their faculties and their students will receive common instruction in all except their denominational peculiarities. In Canada the Episcopalian does not feel ecclesiastical superiority, and there are no "Dissenters" or "Nonconformists" to be patronized or excluded from religious courtesies. The British Conservatives think it a fearful thing to disestablish the Church of the minority in Wales, forgetting what has been done in all the British dependencies. Equally they think it disunion and treason to allow Ireland a provincial parliament, which is precisely what Canada enjoys. In this union of theological seminaries Canada is in advance of us in this country, for the proposed union of those about San Francisco hangs fire. Dr. Tipple, the new president of Drew Theological Seminary, said in his inaugural address last week that "most theological seminaries are denominational and ought to be." What a fearful waste that is of good brains, and what an incentive to keep up denominational fences. We still have professors of "Polemic Theology." But we have also a Federation of Churches, and why not of seminaries, as in Canada and China?

General Nogi's Religion

The best account of the character and beliefs of the late General Nogi has been given by Dr. Inouye, professor of ethics and philosophy in the Tokyo Imperial University. He says of him:

"He was downright opposed to religion. At the time the amalgamation of the three religions was talked about, he was positively opposed to the scheme. He did not believe in Buddhism and still less in Christianity. He disliked religions and hated priests. To Confucianism, he was comparatively less strongly opposed, but he did not believe in it. He did not despise Confucius, but he honored the national code of ethics more. Only in Shintoism did he take a deep interest. He studied it with a great deal of interest and zeal—and in fact he had a religious faith which conforms with the doctrine of Shintoism more than anything else."

Shintoism is not really a religion, but more a system of ethics. When he was made head of the school for nobles he made its motto to be:

"Honor and respect the traditions and customs of the country. Follow the teachings of the wise and sage. Read the ethics of the country, which is the unchangeable basis and criterion of righteousness and justice. Read the sage words of classics, as without them no culture is possible. Read those noble and sacred words, and understand and practice what is taught."

This means national ethics and not religion. When a few months ago the Minister of Education called together representatives of Buddhism, Shintoism and Christianity to unite against dangers to morality, General Nogi was strongly opposed, believing that the old Japanese ethics and tradition are sufficient. But his suicide was in harmony with those traditions, and the wiser Young Japan does not approve.

Do our readers remember the shiver, the terror, that blanched the country when Captain Hobson, M. C., standing in the halls of Congress, solemnly warned us that within twenty months Japan would declare war on the United States, to be followed by the seizure of Hawaii and the Philippines and the devastation of our unprotected Pacific Coast? We are very glad to inform our readers that the twenty months have peacefully past, ending last week, and not a dreadnought, not a cruiser, not a gunboat, not a submarine destroyer, not an admiral nor a midshipmite has floated over or dived under the ocean to do us detriment. No more shall we tremble at the predictions of the hero of the collier in Santiago Harbor. "When a prophet speaketh in the name of the Lord, if the thing follow not nor come to pass, that is the thing which the Lord hath not spoken: the prophet hath spoken it presumptuously, thou shalt not be afraid of him."—Deut. 18:22.

During the last six months we have received many letters charging THE INDEPENDENT with being bought up by the Catholic Church, or of being Jesuit in disguise. We are happy to be able to contradict this false notion by the following testimonial from the Boston jour

nal owned by Cardinal O'Connell, who is in the very highest favor at the Vatican, and of whom we published a sketch two weeks ago:

"Incidentally one has to smile at the attitude of the editors of THE INDEPENDENT on all matters touching the Catholic Church. Their arrogance and pretense to superior knowledge are laughable in face of their extravagant statements. To narrowness, ignorance and ingrained prejudice they join petty spite, and indulgence in intolerable personalities. This, with very careless editing, is a combination that forces the conviction that THE INDEPENDENT is independent only of common sense and ordinary information."

"Give us something authoritative," some correspondents write us, "about the genuineness of that oath attributed to the Knights of Columbus, for we are not quite satisfied with your denial, which may be based on your view of its inherent improbability." Its inherent absurdity ought to be sufficient; but we wrote to headquarters and have the following statement from the National Secretary, William J. McGinley:

"Speaking for the Knights of Columbus, I desire to make a flat denial of the entire statement and each and every part of it, contained in said alleged oath, and will be glad to submit to you any further proof in connection therewith that you desire.

"The Knights of Columbus, as a matter of fact, take no oath whatsoever, but any obligations taken are promises of gentlemen."

That should be conclusive to the most suspicious hater of Popery.

We quote the following paragraph from the leading editorial in the October number of *Mother Earth,* published by Emma Goldman and edited by Alexander Berkman:

"We have not the least doubt that the future historians, who will not be content with picturing the glories of great generals and their armies, but who will deal with the struggles of humanity for greater freedom, will assign to Leon Czolgolz a more honorable niche in the temple of humanity than to William McKinley."

That comes very near to incitement to murder, and suggests exclusion from the mails.

To be independent is not to be indifferent. We claim to be an independent journal, but we have plainly favored the re-election of President Taft. If we had taken no position, that would not have been independence, but cowardice. We have praised points in all parties and have criticised all. To have supported one party's candidate, and then to have been blind to that party's or candidate's blunders, would have been truckling servitude. Independence consists in critically weighing and marking every act or policy of every party, and then faithfully balancing their comparative claims.

A lawsuit brings out the extraordinary fact that a single brewery in Worcester, Mass., certainly not one of the largest, has spent $100,000 in the last ten years in political contributions to fight prohibition. Just as Congress is conducting an investigation on contributions for Presidential campaigns, it would be well if every State legislature should order an investigation of the sums contributed to prevent the enactment of laws suppressing the liquor traffic. They must amount to many millions, largely spent in corrupting the electorate.

The foci of nearly all religious vagaries are to be found in or about Boston and the cities of Southern California, and it is the women that swarm about the Swamis and Babis. The last reported convert is Mrs. Isabel C. Merriman, of Palo Alto, philanthropist, who has adopted the faith of Abdul Baha, and at his orders will go to Palestine—the papers say Persia—to teach the children of the temple. A famous Elizabethan poet tells of a teacher of his day:

"He weighèd vanity,
And fild his ballaunce full of idle toys;
Yet was admirèd much of fooles, wemen and boys."

A letter received from an English correspondent declares that the reports current and accepted by us that Miss Pankhurst was warned by the French authorities that any attempt at annoying Premier Asquith would be followed by expulsion, and that the Canadian authorities refuse to let these militant suffragets be admitted, are untrue.

The sympathy of the world goes out to Marconi, who after an accident has been obliged to have one eye removed.

INSURANCE

Wisconsin an Insurer of Lives

ENLARGING the political limitations which for more than a century have been carefully observed by the several commonwealths composing the American constitutional system, the State of Wisconsin, under a previously enacted act, during the closing days of the present month enters the domain of private business as a proprietor. For several months past the machinery necessary to commencing the business of life insurance was being set up and the State is now ready to issue policies.

Unlike the kingdom of Italy, which has also recently embarked in the business, taking it over as a monopoly, the Wisconsin venture will be subject to the competition which characterizes all enterprises of that kind in a given field, and as it will not have the valuable assistance consequent upon the aggressive services rendered by agents, we may expect its progress to be comparatively slow. As an offset to this, however, there should be a material saving in initial expenses as a reward to those who voluntarily join the fund.

The system of life insurance as it has finally been reduced to practice is not complicated, nor would it be difficult to find a number of men of ripe experience to guide a State institution devoted to that purpose. Under the proper auspices there should exist no obstacle to the success of a government-controlled life insurance fund, but it must be admitted that the constitutionally unstable nature of party politics is a feature that is full of danger. A company properly founded and equipped will, as to its physical affairs, almost run itself. It is not unlike a fine piece of machinery—every part is accurately balanced and geared; when the steam is turned on, it instantly responds, and thru days and weeks and years, faithful to the trust reposed in it, keeps at its task, never slipping a cog. But its attendants, from chief engineer to oilers, must be tried and experienced men, familiar by association with the parts they are caring for, and confident as to the permanency of their positions. The success of a life insurance company which renders good service to its members is mainly due to three things: the ability of its managers, the honesty of its managers, and the permanency of its managers. Granting that nearly every life company worth considering possesses the first two of these requisites, it will be but a matter of a few years when it will be a failure if its affairs pass into a new set of hands with any degree of frequency. If the new Wisconsin trust goes into the hands of a set of capable life underwriters of undoubted integrity, and remains there undisturbed, save by those successions occasioned by the natural mutations of human affairs, it can be made into an instrument of practical beneficence, provided a sufficient number of insurable persons every year will voluntarily seek its benefits.

We here arrive at another inherent weakness in the plan: the average insurable human being does not usually seek life insurance. He knows he will die some time, and he will admit that his tenure is uncertain—that his death is just as likely to be near as remote. But in spite of that his confidence in his ability to continue in life is so strong that he has to be pursued, harassed, persuaded, seduced and, occasionally, deceived into doing the prudent thing. Why this should be so, every man consulting his own thoughts and hopes understands, but no man can satisfactorily explain.

To do without representatives at large among insurable persons, urging them to become members, is the old way, the slow way, and, admittedly, the least expensive way to those who go in; but it narrows the organization's field of beneficence. There are several old English companies which adhere to the ancient customs, and while they render good service to their patrons at a most economical annual cost, their membership continues exceedingly small and their growth is very slow.

American companies will probably not regard the competition in Wisconsin due to the State organization with any great degree of seriousness for some time to come, but it is quite certain that every life underwriter will watch with unabated interest the development and progress of the experiment.

FINANCIAL

Securities and Business

On the New York Stock Exchange, last week, 2,482,800 shares were sold. There was an average loss of about 1½ points for railroad stocks and 2 points for industrial issues. A little more than 70 per cent. of the trading was in three stocks, and their net losses were as follows: Reading, 3⅝; Union Pacific, 3⅞; Steel, 3⅝. The decline was due, not to conditions at home, which are sound and encouraging, but to disturbances in European markets, caused by the war, and to the sale here of American securities by European holders of them. Estimates of the quantity sold in the last two or three weeks vary, ranging from 300,000 to 800,000 shares. It is said that 200,000 have already been delivered, and that 300,000 more are now crossing the Atlantic. Probably the value is from $40,000,000 to $50,000,000. These sales were made, not because of any lack of confidence in American corporations, but for the reason that it was necessary to sell something, and our market was the best one. Sales of our securities could be made here at very little sacrifice. The full effect upon prices was not seen until actual delivery of the shares brought on steamships increased the floating supply and affected the volume of loans, at a time when money here was in demand for moving the crops.

This liquidation by foreign holders tends to prevent, or to delay, an upward movement which is warranted by our abundant crops, the condition of business, and great activity in the steel industry. The broad foundation here is the crops. In the following table are shown the yields of this year, those of last year, and the record, or greatest yields in a long series of years. The last three figures have been omitted:

	1912.	1911.	Record yields.
Corn	3,016,000	2,531,488	2,927,416
Oats	1,417,000	922,208	1,186,341
Wheat	720,000	621,388	748,460
Barley	224,000	160,240	178,916
Rye	35,000	33,119	34,897
Buckwheat	18,000	17,549	22,792
Flaxseed	29,000	19,370	29,285
Rice	24,000	22,934	24,510
Potatoes	401,000	292,737	389,195
Hay (tons)	72,425	55,000	70,798
Tobacco (lbs.)	974,000	905,109	1,103,415

The records were made, before this year, for corn in 1906, for wheat in 1901, for oats, rice, rye and tobacco in 1910, and for potatoes in 1909. This year there are new high records for corn, oats, barley, rye, potatoes and hay.

Our wheat exports last week were greater than in any other week since the beginning of 1908. Heavy orders for steel (including those for 200,000 tons of rails) make it impossible for production to keep pace with demand. The condition of general business is excellent. *Dun's Review* says:

"Every report from every section of the country is favorable, and the general situation is not only very active, but is entirely healthy. There has never been a more remarkable uplift in American business than that which is now in progress at a time of foreign disturbance and of an important domestic political campaign."

....The Pennsylvania Railroad Company recently ordered 1,000 freight cars intended solely for the transportation of automobiles.

....Sauerbeck's index number for the month of September, relating to the prices of commodities in England, is the highest that has been shown in the series since 1880.

....November interest and dividend payments, the *Journal of Commerce* says, will amount to $104,425,275, which may be compared with $94,099,471 in November a year ago.

....At the annual conference of the American Association of Tanners, in Chicago, last week, the prediction was made that there must be a further increase of the price of shoes, unless the farmers raise more cattle and thus enlarge the supply of leather.

....Following the merger of the Standard Trust Company with the Guaranty Trust Company, the latter reported last week deposits of $189,301,170. Thus the Guaranty Trust Company has become the largest institution of its kind in the United States, and for the first time in the history of the Clearing House Association a trust company member has shown deposits exceeding those of any bank member.

The Independent

Vol. LXXIII. NEW YORK, THURSDAY, NOVEMBER 7, 1912. No. 3336

Survey of the World

Death of Vice-President Sherman

Vice-President James Schoolcraft Sherman died at his home in Utica, N. Y., on the 30th ult., in the evening. He had been very ill for several days, and his death, according to the statement of the attending physicians, was due to Bright's disease, heart disease and hardening of the arteries. He was born in 1855, was graduated from Hamilton College in 1878, was elected Mayor of Utica when he was only twenty-nine years old, and had been a member of Congress for several terms when he was nominated for the Vice-Presidency. The news of his death came to President Taft while the latter was guest of honor at a dinner given at the Brooklyn Navy Yard in celebration of the launching of the battleship "New York." In a proclamation issued by the President on the following day, directing that the executive offices be closed on the day of the funeral and that the flag be displayed at half mast at all ports and stations of the army and the navy, he said:

"Elected at an early age to the mayorship of his native city, the continuance of his popularity was shown by his election for ten terms in the national Congress. As a legislator he at once took and retained high rank, and displayed such attributes of upright and wise statesmanship as to commend him to the people of the United States for the second highest office in their gift. As presiding officer of the Senate he won the respect and esteem of all by his fairness and impartiality. His private life was noble and good. His genial disposition and attractiveness of character endeared him to all whose privilege it was to know him. His devotion to the best interests of his native land will endear his memory to his fellow countrymen."

While the body of Mr. Sherman was lying in state, on the 1st, in the rotunda of the court house at Utica, 25,000 persons passed by the casket. There were private funeral services at his home, on the 2d, conducted by the Rev. Dr. Holden, of the Dutch Reformed Church, of which Mr. Sherman had been the treasurer. Later, in the First Presbyterian Church, there were simple but impressive services, conducted by the Rev. M. W. Striker, president of Hamilton College, assisted by the Rev. Dr. Holden and the Rev. R. W. Brokaw, pastor of that church. All of the honorary pallbearers, except Senator Elihu Root, were residents of Utica. Among those present were President Taft, several members of the Cabinet, Justices of the Supreme Court and many Senators and Representatives. There was to have been a grand parade in New York that day, in honor of Governor Wilson. The organizers had been at work on their plans for a month, and 77,500 men were to be in the procession. Governor Wilson directed that the parade should not take place. The Republican National Committee decided not to fill the vacancy on the national ticket until after the election. It was reported that the choice of Mr. Taft and a majority of the committee was Governor Hadley, of Missouri.

Last Days of the Campaign

In the closing days of the campaign the Presidential candidates and those who spoke for them repeated the arguments and appeals with which the people were already familiar. Mr. Taft addrest the public in letters which were given to the press. He emphasized what he believed

to be the danger by which prosperity would be menaced it the Democratic party should be successful. The election of the Democratic candidate, he said, would be a leap in the dark. He assured farmers that the proposed removal of the duty on sugar would ruin the domestic beet sugar industry. In a letter to a Republican in Ohio he said:

"From absolutely dependable sources information comes to me that none of the leaders of the third party believes it has the slightest chance of success, and that they realize that a vote for it means a vote for the Democrats. But they are, most of them, so filled with hatred for the Republican party because it refused to accept their dictation that they are willing to bring disaster upon the whole country simply to gratify their revenge."

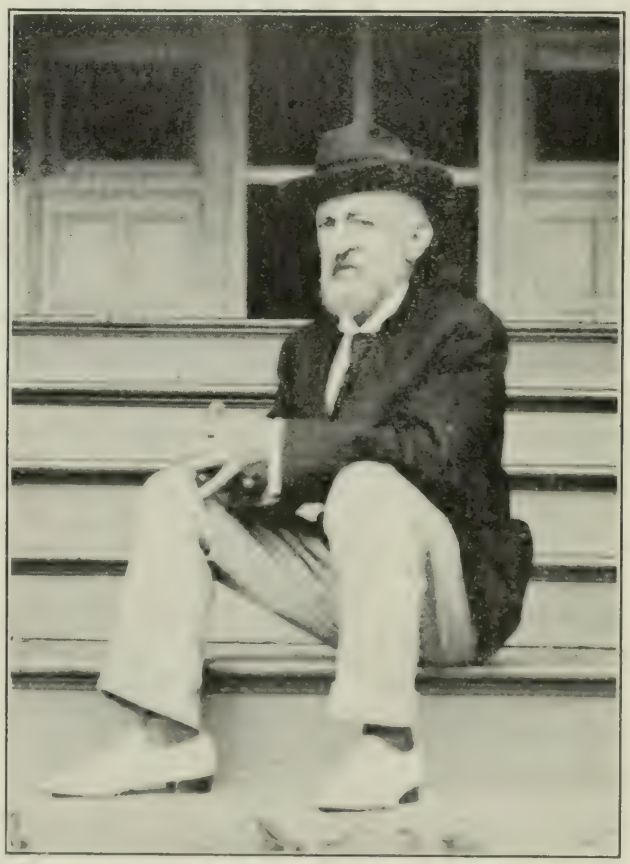
On the other hand, Governor Wilson assured the public than the Republican talk about panic and hard times, to follow a Democratic victory, was "a childish bluff," and Chairman McCombs was saying that the Governor was not in favor of free trade, but of a readjustment of tariff duties in the interest of the people. Between the Governor and Mr. Roosevelt there was an interchange of argument about the treatment of Trusts. Mr. Bryan and Senator La Follette attacked Mr. Roosevelt sharply in published statements. On the 30th Mr. Roosevelt addrest a great audience in Madison Square Garden, and there was continuous cheering for 41 minutes. The following evening, at the same place, another great audience cheered Governor Wilson for 59 minutes. When Mr. Roosevelt spoke again at the Garden, a day later, those who heard him were inclined to make "a new high record" of endurance in applauding, but at the end of 25 minutes he checked them. At the end of the week his message to the public was:

"We have already won. Whatever the result of the ballot is, the Progressive party has been founded and put upon a lasting basis. The old boss-controlled Republican organization is a thing of the past, and the dream of the people for social justice, and a return of their Government into their own hands, has been formulated into a party program and an organization which will carry on the fight until it is won. It is immaterial what part I play. If I am able to serve, that is sufficient. If another can serve better, that is equally satisfactory. The main thing is for the movement to go forward to definite results."

As reported by the press, the betting, at the end of the week, was 4 or 5 to 1 in favor of Governor Wilson, and 10 to 8, or even 7, in favor of Mr. Roosevelt as against President Taft. Estimates published by prominent Democratic papers gave Governor Wilson a large majority of the electoral votes, and, as a rule, placed Mr. Roosevelt second. But Senator Dixon, who has been at the head of Mr. Roosevelt's campaign bureau, predicted that the ex-President would have 287 electoral votes (or more than a majority) and would receive the votes of 6,117,000 persons. To Governor Wilson he assigned 5,648,900, and to Mr. Taft only 2,560,000.——John Schrank, who attempted to kill Mr. Roosevelt, says he hopes the latter will be kind and lenient to him. "Now that it is all over," says Schrank, "his better self surely has concluded that I should be pitied and not condemned. If he will come to Milwaukee and speak for me, and adopt a broad view of the matter, I shall get a light sentence. I should think he would come."

Political Funds

Supplemental reports concerning campaign funds were filed at Washington last week by the committees and many Congressional candidates. To the Republican national fund $153,655 had been added, making a total of $744,688. Among the new contributions were the following: Senator Crane, Adolph Lewisohn, and Lloyd S. Bryce, each $5,000; Andrew Carnegie, an additional $5,000; Taft Club, of the Yale class of '78, $8,175. The largest item of expenditure was $10,000, paid to the Association of Foreign Newspapers. The contributions reported by the Republican committee at Chicago included $10,000 from Julius Rosenwald, $4,000 from Charles G. Dawes, $2,500 from Mrs. George M. Pullman, and $2,500 from Secretary MacVeagh. The addition of $136,688 had made the entire receipts of the Democratic national committee $815,053, but $845,814 had been expended, thanks to a loan of $40,000. Officers of the committee said $150,000 more would be needed. Contributors of large sums were as follows: C. S. Guggenheim, $10,000; W. R. Craig, $9,000; F. S. Pea-



body, $6,400; R. T. Crane, Jr., and John D. Ryan, each $5,000; Jacob H. Schiff, $2,500; Senator Newlands and Lewis Nixon, $1,000. Of 64,647 contributors, 63,414 had given less than $100 each. The Progressive party reported an addition of $93,974, making nearly $400,000 in all. Among the new contributions were the following: George W. Perkins, $25,000; Alexander Smith Cochran, $25,000; Robert Bacon, $10,000; August Hecksher, $10,000; O. C. Barber, $4,500. To the Prohibitionist party's fund $20,035 has been given. No contribution exceeded $1,000. The Socialist party reported $42,735, about two-thirds of which was procured by the sale of literature and by assessments for campaign speakers. Included in the sum of $18,745 reported by the Union League Club of New York was $5,000 from Frank J. Gould. To the Democratic Congressional Committee $21,381 had been given, and $5,000 of this was from Thomas F. Ryan. Many reports from Congressional candidates were received. Among these were the following: F. S. Hicks, $3,638; Sereno E. Payne, $1,250; Speaker Clark, $547; ex-Speaker Cannon, $3,012; Amos R. E. Pinchot, $1,259; Nicholas Longworth, $1,350. Of forty-six reporting from New York, only ten showed receipts or expenditures exceeding $1,000. Six candidates, Victor Berger one of them, had spent nothing.——Ex-Senator Foraker and ex-Congressmen Grosvenor and Sibley have asked the Senate committee to hear their testimony concerning references to them in the Archbold letters.

Peaceful Election in Cuba

Those who expected great disorder in Cuba on election day were agreeably disappointed. Ten men were shot at political meetings on the preceding Sunday, but on the 28th the leaders in both parties agreed that no more meetings should be held. There were 3,000 soldiers in Havana. On election day, the 1st, there were no riots. One man was killed in Havana, in a controversy with the rural guards, but no additional casualties were reported. President Gomez had closed the cafés, forbidden the sale of alcoholic drinks, and ordered that no one going to the polls should carry arms. Even canes must be laid aside. The present Government is controlled by the Liberal party, but the successful candidates at the election were Conservatives, Gen. Mario Menocal for President and Enrique José Varona for Vice-President. Their majority in the electoral college was small. Less than 50 per cent. of the registered voters went to the polls. General Andrade, Conservative, was elected Mayor of Havana. General Menocal has been manager of the largest sugar estate on the island, and it is said that he gives up a salary of $50,000. He says:

"My own success is nothing in comparison with Cuba's demonstration of her ability to hold law-abiding elections, in which her disapproval of corrupt government was thoroly established. We feel and will soon prove that we are worthy of that confidence which the people of the United States and the outside world once placed in us."

He promises to cultivate close relations with the United States, to reduce expenses, to seek agricultural and indus-

OSCAR S. STRAUS

Formerly Minister to Turkey and Secretary of Commerce and Labor; Progressive Nominee for Governor of New York

trial development and to negotiate, if possible, modifications of the present tariff treaty with this country. A commission to study the tariff will be appointed. Some expect that the defeated candidates will complain because approaches to polling places were guarded by soldiers.——In Santo Domingo the rebels have gained several victories and have defied the authority of the United States. Two warships were sent to the island on the 30th ult. Alfredo Victoria, the President's nephew, has retired from the Cabinet. He was Minister of War. ——A new magazine, owned by Delegate Quezon and devoted to the cause of Filipino independence, publishes a letter in which Jacob Gould Schurman, formerly president of Cornell University and now Minister to Greece, warmly commends the Democratic plan, set forth in the Jones bill, for giving the Philippines tentative independence for eight years and full independence thereafter. As this is at variance with the policy of the Taft Government, it excites comment at Washington.

Mexico Gen. Felix Diaz remains in prison at Vera Cruz. President Madero says his case is in the courts, with which he cannot interfere. Colonel Diaz Ordaz, one of Diaz's associates, was captured last week, and he is soon to be tried by a military court. In the north, General Rojas, one of Orozco's officers, is looting ranches and holding captives for ransom. Last week, near Saltillo, 37 of Orozco's rebels, who had been captured, were summarily shot by order of the Federal commander. Railroad service between Chihuahua and the capital has been resumed. In the south there is much disorder. On the 2d, after three days' fighting, the Zapatists were driven from the hills near Cuernavaca. It was reported at the capital that Madero was negotiating a peace treaty with Zapata. In an address at his birthday reception, on the 31st ult, he said that the collapse of the Diaz rebellion presaged a speedy restoration of peace. Much loss was caused at the Pacific port of Acapulco on the 30th ult. by a hurricane. More than half the town was wrecked. Among the buildings which were unroofed was the American consulate.

Central and South America A peaceful election was held in Nicaragua on the 2d. Adolfo Diaz, now Provisional President, and Fernando Solorzano, who was elected Vice-President by Congress in October of last year, were the candidates of the Conservative party. There was no opposition, and, of course, they were elected.——The women of the city of Granada have sent to Rear Admiral Southerland, commander of our forces in Nicaragua, a letter expressing their gratitude for the relief brought to their city by the American marines, commending the prudence and good judgment of the officers in command and testifying to the fine conduct of the men.—— Nicaragua's Government has reached an agreement with the foreign bondholders concerning the debt incurred in 1909, about $7,500,000. The interest rate has been reduced from 6 to 5 per cent., and it is provided that the customs revenue shall be collected under the supervision of officers approved by the President of the United States. A part of the revenue is to be sent to New York every month and deposited there for payment of the debt.——General Mena, leader of the revolutionists in Nicaragua, who was sent to Panama and has been a prisoner there, now seeks release by writ of habeas corpus. He is ill and in the Ancon Hospital. In Nicaragua there is a price on his head. Probably he will be released by order of the Zone's Supreme Court.——Peru's Government, intending to punish those officers who permitted the atrocities in the Putumayo rubber district, has arrested Lieutenant Villa.——It is reported that Argentina has undertaken to employ 1,800 American seamen, formerly in our navy or merchant marine, to man her new warships.——It was reported last week that Germany was seeking to acquire an island in the Magellan Channels for a coaling station, and that a German cruiser was making surveys in those waters. This suggested comment as to the bearing of the recent Monroe Doctrine resolution of the Senate upon such a project.

The islands belong to Chili. The German Foreign Office says the report is without foundation.——It is said that some interest has been shown at Washington in the sale of Christmas Island, in the Pacific, by the Grieg family and Father Rougier, to a German syndicate, which will take possession on December 5, and will establish a coaling station there.

THE SCENE OF WAR: ADAPTED FROM THE LONDON "TIMES"

The Advance on Constantinople

Owing to the fact that the war correspondents are not allowed at the front few details of the heavy fighting of last week have been received, but it is clear that the Turkish troops have suffered a serious defeat and have been driven back along the line of the Orient Railroad toward Constantinople. The principal movements may be easily understood by reference to the accompanying map. After the capture of Kirk-Kilisse by the Bulgars, the Turkish troops withdrew to the southward and attempted to make a stand between Eski-Baba and Lule-Burgas, in order to defend the railroad, which runs a few miles to the south of these towns, but they were hotly pursued by the Bulgars, who attacked the left wing at Baba-Eski and cut the communications between Constantinople and Adrianople at that point. Then, under the personal command of Nazim Pasha, Minister of War, the Turks were drawn up in a new line of defense stretching across the point of the Balkan peninsula between the Black Sea and the Sea of Marmora. The Turkish left wing was at Lule-Burgas and the right was advanced from Sarai to Visa. The left wing was reinforced by new levies of Asiatics landed at Rodosto and the right by troops from Constantinople under Torgut Shefket Pasha landed at Midia. The Bulgarians brought up troops from Adrianople, and

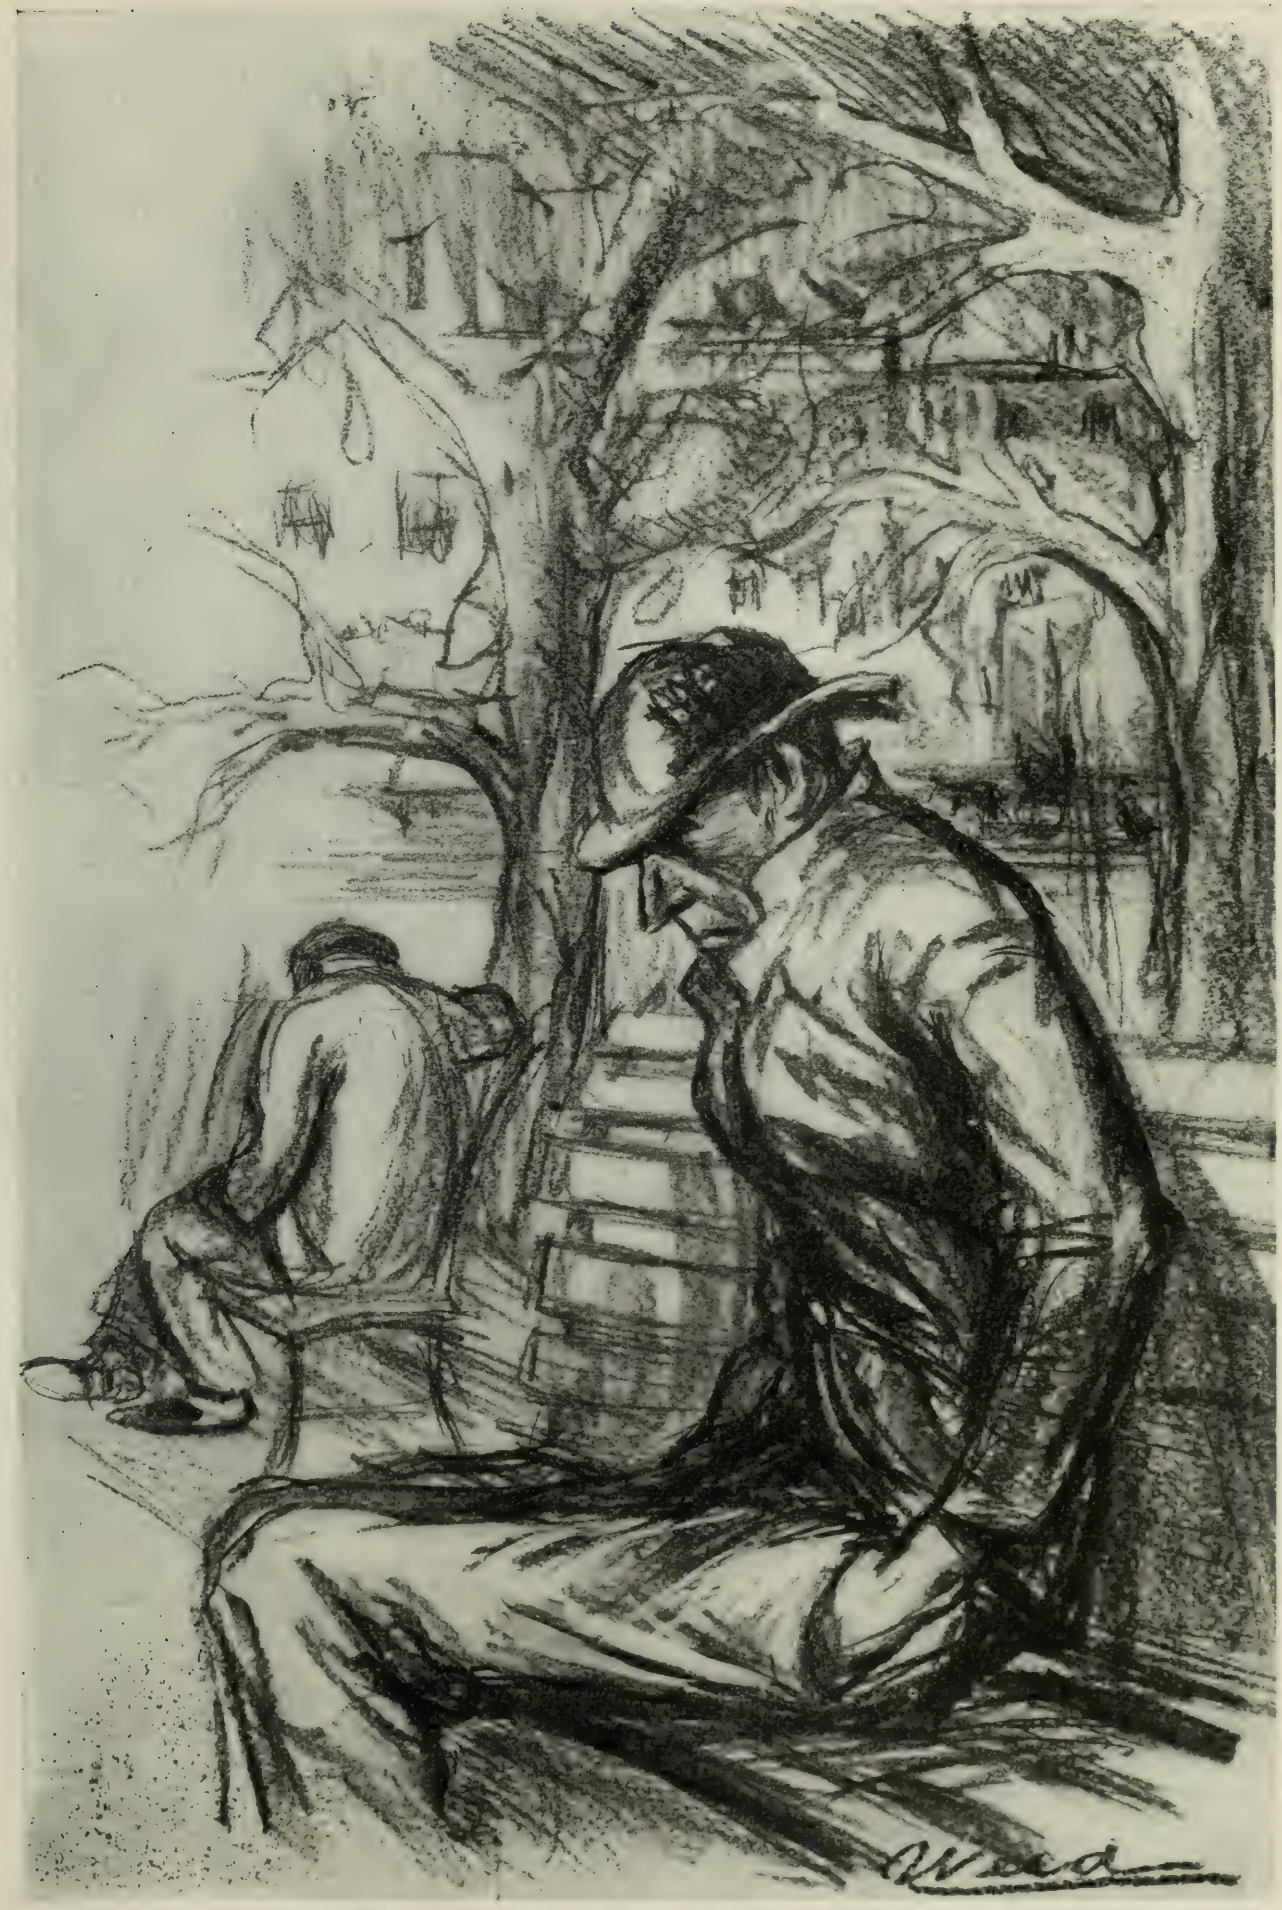
GREEK INFANTRY IN ACTION AT ELASSONA, ON THE GRÆCO-TURKISH FRONTIER

on Tuesday, October 29, began a three days' engagement along the whole front. The Turkish right in the forests about Visa was overcome, but instead of falling back upon Sarai and Istranja, as they should, the routed troops fled to the south and became entangled with the troops of the left wing already in retreat from Lule-Burgas. The whole of the army, frightened and completely disorganized, was thus crowded together in confusion on the road to Tchorlu, while the Bulgarian left wing swept around to the north by Sarai and Istranja and to the south the right wing reached to the sea at Rodosto. The undisciplined reserves from Anatolia could not stand against the well-directed artillery fire of the Bulgars, and once in retreat became altogether unmanageable. Some of their officers are no better. Aziz Hassan, an Egyptian prince, trained in the German service, displayed signal incapacity, if not cowardice, in deserting Kirk-Kilisse. The Turkish cavalry at Lule-Burgas dashed upon the Bulgars with their old war cry of "Allah! Allah!" and swept all before them, but their artillery was poorly placed and insufficiently supplied with ammunition. The inefficiency and confusion of the Ottoman Government are shown by the fact that the ammunition supplied to the Turkish troops at the battles of Visa and Kumanova consisted of blank cartridges. No wonder it did not stop the Bulgarian charges. Many of the Asiatic troops had never seen a magazine rifle until the Mausers were put into their hands on the battlefield, and they attempted to load them at the muzzle. On the other hand, the Bulgarian artillery was splendidly handled and, as the Turks retreated, took positions upon hights previously picked out with as much coolness and precision as if they were merely engaged in maneuvers. The loss of life on both sides was terrible. The Turkish loss in the three days' fighting is estimated at 20,000. The Bulgarians report only their victories, not their losses. Thousands of wounded Turks were brought back to Constantinople by train, but most of them were left without medical aid to suffer or die upon the battlefield. How large a part of the army succeeded in getting behind the Tchataldja line of defense, back of Constantinople, is not known, nor how long this last line of fortifications can be held against the allies. The Porte has publicly confest defeat and has applied to the Powers for mediation.

The Sieges of Adrianople and Skutari

After the battle of Kirk-Kilisse the Bulgarian army pushed forward to the south, cutting the Turkish lines in two. The greater part of the Turkish troops withdrew in the direction of Constantinople, but 30,000 retreated to the southwest in order to defend Demotika, near the junction of the railroad from the Ægean Sea with the line from Constantinople to

Adrianople. The Bulgarian army, however, pursued them to Demotica and captured that place, thus completing the investment of Adrianople. In spite of the fact that contingents were sent in pursuit of the Turks retreating upon Constantinople, the siege of Adrianople has been actively prosecuted. The Bulgarian leaders are confident in their ability to capture Adrianople at any time by means of assault or by a destructive bombardment, but King Ferdinand, who has personally visited the besieging army, does not believe such a sacrifice of life and property is necessary, and has accordingly ordered that the bombardment be confined to the fortifications. The attack has been chiefly directed against Tchataldja Fort and other defenses to the northwest of Adrianople. The Bulgarian bombardment is continued for eight hours a day and is said to be very effective. The batteries of the defenders make but feeble reply. A very stubborn resistance, however, has been offered by the Turkish troops to the Bulgarians advancing along the Arda and Maritza Rivers to Marash and Karagash, the railroad station of Adrianople. The garrison of Adrianople is said to number 40,000. Bulgarian aviators flying over the city have been of great assistance in directing the bombardment, but one of them was reached by the Turkish fire and brought down, the first airman to lose his life in combat.——Horrible atrocities have been committed by the Turks on their retreat. Some villages have been burned and a large portion of the population massacred. Women and children as well as men have been tortured and killed, and the bodies are found mangled in the most frightful manner. It is greatly feared that the infuriated and desperate Mohammedans will massacre the Christians in Constantinople and Salonika, and for that reason cruisers of the great Powers are to be stationed at both these ports in readiness to land marines for the protection of the Christians whenever necessary.——The announcement last week of the capture



TYPES OF TURKISH SOLDIERY

of Skutari by the Montenegrins was incorrect, but, as that stronghold is completely surrounded by the troops under Crown Prince Danilo, its fall is only a matter of time. The Montenegrins are anxious to take it by assault, but King Nicholas refuses to permit them, because this would add to the heavy losses already suffered by his troops. The defense of the city is aided by the overflow of the three rivers surrounding it, and the Montenegrins have been obliged to wade waist deep in mud and water.——The Czar of Russia startled Europe by sending to King Peter of Servia a telegram of congratulations on the success of the Servian armies in Macedonia without outside assistance. This is taken to indicate that Russia will intervene if Austria attempts to prevent Servia from extending her territory.——The German Emperor is said to have written a letter to his sister, Princess Sophie, congratulating her upon the exploits of her husband, Crown Prince Constantine, who is leading the Greek troops in Macedonia.

The Advance on Salonika

While the successes of the Greeks have not been so spectacular as those of the Serbs and Bulgars, they have been continuous, and the Turks have been driven back at every point except Janina, which still holds out, with a garrison of 20,000, altho entirely isolated. Pushing north from Elassona the Greeks have captured Verria and Janitza, thus cutting off Salonika from Monastir. Besides this army under the Crown Prince, which is now upon the Vardar River to the west of Salonika, that city is to be attacked from the east by a division under General Smolensky, which was landed at Stavros, on the other side of the peninsula of Chalcidice. It is not expected that Salonika can long resist this double attack because the provisions are insufficient to supply the soldiers and refugees now crowded into the city. A large part of the army driven out of Uskub by the Serbs retreated to Salonika, and 20,000 villagers from the surrounding country have sought shelter there. The 7,000 Anatolians sent from Constantinople to reinforce the garrison of Salonika are more likely to prove an embarrassment than a help. The Turks and Albanians who were defeated by the Serbs at Kumanova are said to be completely demoralized, and the retreat from Uskub degenerated into a riot. "Every man for himself" was the cry, and artillerymen deserted their guns, cutting traces and riding away on their horses. Some of the Turkish officers threw off their uniforms and tried to escape in civilian clothes. Zekki Pasha, who had command at Uskub, is said to have rallied the remnant of his army and made a stand at Dibra to the southwest, between Uskub and Monastir. The Serbs have possession of Novibazar, Prisrend and Mitrovitza, and a column sent southward from Uskub down the Vardar has come into conjunction with the Greeks to the northwest of Salonika. Thus the Ottoman Empire has been cut across at two points within a week, by the meeting of the Serbs and Greeks on the Vardar River and by the Bulgars in their march to the sea at Rodosto.——The Greek fleet is beginning to play a part in the campaign. The Turkish cruiser, "Feth-I-Buland," at anchor in Salonika Bay, was approached on the night of October 31 by a Greek torpedo boat, which, in spite of the fire of the guns from the forts above, was able to discharge three torpedoes at the cruiser from a distance of about 200 yards. The first torpedo hit its mark and exploded, and the cruiser sank in five minutes. Most of the crew were on shore. The torpedo boat withdrew without injury to Katerína, a Turkish port on the Gulf of Salonika, now in the possession of the Greeks. The salvage steamer "Constance," conveying Turkish troops, was captured and taken to the Piræus. Greek marines have been landed on the islands of Samothrace, Thasos and Imbros. The Turkish torpedo boat in the harbor of Prevesa was burned by the Greeks, and after they had captured the hights of Nikopolis, overlooking Prevesa, the Turkish garrison abandoned that city. ——Anticipating, doubtless, the fall of Salonika, the deposed Sultan, Abdul Hamid, has been brought to Constantinople and transferred with his harem to the Asiatic side. He had been kept in ignorance of the war with the Balkan states and of the loss of Tripoli.

A MADISON SQUARE SOLILOQUY: "IT DON'T MAKE NO DIFFERENCE WHO'S PRESIDENT!"

The Record of The Independent

BY WILLIAM HAYES WARD

DURING the sixty-four years of its history THE INDEPENDENT has been under the responsible control of two men as its proprietors, Henry C. Bowen and Clarence W. Bowen, his son. For its future direction and success his grandson, Hamilton Holt, will be responsible. As I have served with them in the editorial department for forty-five years, it is proper that I should testify to the intelligent enthusiasm and enterprise, as well as the unfailing courtesy and thoughtfulness for their associates, which have made it always a pleasure to work with them, not so much for financial profit as for the advancement of righteousness and truth.

I had known Henry C. Bowen for ten years, often visiting in his family, when on January 1, 1868, I came into the office as assistant editor. THE INDEPENDENT was then nineteen years old. During this time Mr. Bowen had put its editorial direction absolutely into the hands of its editors, while he, a busy merchant until at the time of the Civil War his Southern losses drove him into bankruptcy, had been satisfied to pay its annual deficit. Then he took the publishing of THE INDEPENDENT as his main business, and soon made it a great financial success, but still gave his editors full editorial control. For thirteen years the editors were three distinguished Congregational pastors, Dr. Leonard Bacon, of New Haven; Dr. R. S. Storrs, of Brooklyn, and Dr. Joseph P. Thompson, of New York, aided by Dr. Joshua Leavitt, an old war horse of reform. Dissatisfied with the conservatism both in theology and politics of the Boston organ of Congregationalism, they provided the advanced members of the denomination with a journal that should be in the forefront of the times, radically anti-slavery and theologically progressive. They not only represented the New School teachings of New Haven and Andover as against Princeton, but defended the liberty of Horace Bushnell as against Old School Congregationalism which charged him with Unitarian laxity. They denounced Daniel Webster and the Fugitive Slave law and every effort to extend the area of slavery.

When the war opened, and Mr. Bowen lost all his property, he held on to the hitherto unprofitable INDEPENDENT, and the three editors resigned. This was no fatal blow, for Mr. Bowen immediately called Mr. Beecher to its editorship, aided by the handsome and brilliant boy, Theodore Tilton. This changed its character, for it ceased to be a Congregational paper, and it became the first of undenominational journals. It was an enthusiastic supporter of the war, which was sure to destroy the institution of slavery, but it cared nothing for theology. Two years later Mr. Beecher silently withdrew, leaving Mr. Tilton in full charge, and with Oliver Johnson, a Garrisonian Abolitionist, as his active helper. Tilton wrote the flashing, double-leaded leading editorial, and Mr. Johnson nearly all the rest of the editorial matter. Mr. Johnson had occupied the same position in Garrison's *Liberator*, and was a cross between a radical Unitarian and a Quaker; and it is not strange that radically—I will not say insidiously—the religious character of THE INDEPENDENT was changed, and its constituency was alarmed. Mr. Bowen recognized the danger, but was very loyal to his editor, and sought to modify the editorial utterances. It was as a first step in this direction that he called me as an assistant, January 1, 1868. But with Mr. Tilton and Mr. Johnson as responsible editors, very little could be done. Tilton was exuberant and reckless, while Johnson was conscientious and confident. Mr. Bowen's patience was exhausted. They had to be dismissed, and in December, 1870, the change was made. Mr. Bowen's extraordinary enterprise had drawn in multitudes of subscribers, while the political attitude of the paper aided its popularity. It was a strong advocate

of justice to the slave and the freedman and also of woman's suffrage, then not very popular, but a Garrisonian asset brought in from the *Liberator,* and it was a scarcely disguised critic of the doctrines called evangelical.

Mr. Bowen resolved that never again would he give any other man than himself the name and power of editor. Henceforth, as long as he lived he was editor, publisher and proprietor. He asked me to be superintending editor, but I advised that the position be given to Dr. Edward Eggleston, and he remained for two years, when I succeeded to the same position, which I held until Mr. Bowen's death in 1896.

I have given my tribute to the memory of Mr. Bowen in the sixtieth anniversary issue of THE INDEPENDENT, December 10, 1908. But I cannot forbear here to pay my honor to the Woodstock, Conn., boy who came to New York to make his fortune, became clerk with the dry goods firm of Arthur & Lewis Tappan, married Lewis Tappan's daughter, and himself became head of one of the largest silk houses in the metropolis; who when six thousand New York merchants signed a condemnation of the Abolitionism that provoked Southern anger, announced that he had his goods and not his principles for sale; who was one of the founders of Dr. Storrs's Church of the Pilgrims in Brooklyn, and later of Plymouth Church, and brought Henry Ward Beecher to be its pastor; who after his failure in the Civil War recovered his fortune and paid every outlawed debt; whose gift of fifty thousand dollars inaugurated the Congregational Church Building Society; who founded THE INDEPENDENT and held it dearest to him for forty-eight years; and who was ever as genial and kindly as he was positive, aggressive and alert.

During this period one great sorrow came to him which had its effect on THE INDEPENDENT, and that was his separation from his dearest friend and pastor, Mr. Beecher. It had the unfortunate result of allying him with the conservative party in the sharp conflicts over Andover theology, and the American Board, which for seven years refused to send as missionaries any candidates who had imbibed what was regarded as the new Andover heresy of a second probation. Altho this device of theodicy seemed to me quite needless for its purpose, I publicly supported the side of liberty; but Mr. Bowen, who was editor, gave the influence of THE INDEPENDENT to Joseph Cook and Secretary Judson Smith of the American Board, while I waited with what patience I could, certain of the result which came at last. But THE INDEPENDENT suffered for having taken the wrong side, losing not a little of its normal liberal constituency. It was not long after that Mr. Bowen died, in the eighty-third year of his age.

After Mr. Bowen's death in 1896, his third son, Clarence W. Bowen, became the publisher and later the owner of THE INDEPENDENT, while I assumed the position of editor. It is only just to say for Mr. C. W. Bowen, now that he retires from long and arduous labor—for he was with THE INDEPENDENT twenty-two years before his father's death—that he has maintained always the highest ideals of editorial independence. He has been careful never to allow the interests of the publishing office to affect the editorial conduct of the magazine. His chief desire has been that it might be worthy of its name, organ of no party, but free to tell the very truth honestly and to support it both intelligently and strongly. It has been influence more than money that he has sought. To the business of THE INDEPENDENT he has given his inherited energy, and with success. During these thirty-eight years not a clerk, not an office errand boy has ever heard a harsh word from him, not one that failed of considerate courtesy. I do not believe that he seeks rest, but am confident that he will give his time largely to the historical studies in which he first earned his degree of Doctor of Philosophy and to the American Historical Association, of which he has long been treasurer. His authority now passes to his nephew, son of Judge George C. Holt, of the U. S. District Court of New York, and grandson of Henry C. Bowen. He has been my associate for eighteen years, most of the time as office editor. It may not be seemly for me here to express my warm regard for him, but the public knows his deep interest in moral questions of public import, and the readers of this journal

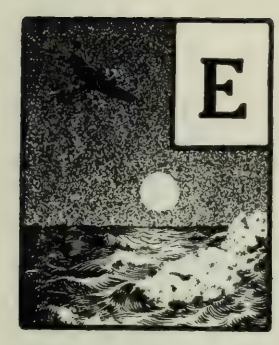
do not know how much they owe to his intelligent initiative in its conduct. To me it is a matter of the greatest satisfaction to be assured that under this third regime there will be no break in the determination to wed progress with faith in God and man and speed the day when the spindles of the Fates shall decree peace between the nations and equal justice between man and man.

As I recall the sixty-four years during which I have been a reader of THE INDEPENDENT—for its first issue came to my father's home—and particularly the years that I have been connected with it and known every one of the many members of its editorial staff, it is pleasant to recall the good and victorious causes which it has championed. It was right on the subject of slavery, and when slavery perished it stood stoutly for the freedman, as it still stands for justice to his children. It has stood for the substance of faith shown in service rather than for the niceties of creed; not careless of intellectual sanity, but caring more for Christian character than for the formulas on which good men differ; and it has seen year by year more freedom and more charity. It has sought unity in the Church and has been gratified by the successful federation of the Churches. It defended evolution when it was not popular, but that contest is long past. It has fought strongly for woman suffrage, and lives to see women's votes counted for the President in half a dozen States, and more to follow. It supported the annexation of San Domingo under President Grant, and tho that failed it has since seen Samoa, Guam, Porto Rico, the Philippines and Hawaii brought under our beneficent flag. It has taken a deep interest in peace and arbitration, and glories in the conferences of The Hague. In every movement for the betterment of the conditions of labor it has taken its part. Not less is it proud of what it has sought even where success is delayed, as in equal justice for the struggling races, yellow or black, which arrogance calls inferior. Till the Golden Age arrives, so long as science is making fresh discoveries and invention is revolutionizing industry, and speedier transportation is annexing suburbs and fraternizing the nations, so long as patriotism shall seek to fight corruption at home rather than foes abroad, and militant charity shall have hot quarrel with greed and oppression, so long and till then may THE INDEPENDENT gently, graciously help the erring and weak and wield the two-handed engine of valorous truth against the strong and wrong.

NEW YORK CITY.

Autumnal Leaves

BY EDWARD N. POMEROY



No more ye sway and shimmer in the sky,
  In happy fellowship together bound,
  But swirl and scatter o'er the alien ground,
Strange to each other in adversity.
Forgotten is the amorous melody
  That, in the equinoctial roar, was drowned,
  As up and down ye wander, sorrow-crowned,
Like Jephthah's daughter who must childless die.
Yet, as the stars unquenched, unflickering, burn
  While daylight chases darkness round the sphere,
The germ of life in dissolution's urn
  Heeds not the pressure of its swathings sere;
And ever, as aforetime, shall return
  The efflorescence of the opening year.

WELLESLEY, MASS.

Turkey at Bay

BY HERBERT ADAMS GIBBONS

INSTRUCTOR IN ROBERT COLLEGE, CONSTANTINOPLE.

EVERY month of the year is interesting at Constantinople. There is always "something doing." If it is not a parliamentary crisis, fall of Cabinet or new Albanian revolution, it is another revolt in the Yemen or Hauran, more massacres in Asia Minor, or fresh bomb outrages and terrorism in Macedonia. When wars themselves become commonplace and rumors of wars are lacking, and we get tired of reading about disturbances in the provinces, cholera terrifies us, an earthquake shakes us, or a big fire in Stamboul satisfies our appetite for excitement.

But this month of October, in the year of our Lord 1912, promises to be memorable in the annals of Constantinople. For Turkey is at bay. Her envoys are treating with Italy for a peace that will rob her of the last vestige of her African possessions and destroy forever her influence in the Ægean Sea. Bulgaria, Greece, Servia and Montenegro are united in the supreme effort to drive the Turkish flag back to the walls of Constantinople. Crete has once more proclaimed her union with Greece, and Cretan deputies are in Athens waiting for admittance to the Hellenic Parliament. Rhodes is in the hands of Italy. In Samos the Turkish troops are besieged by the islanders in insurrection. The other islands have expelled their Turkish officials. The covetous eyes of Austria see the waters of the Ægean glimmering beyond Salonika, and Russia's fleet is hovering around the Black Sea entrance of the Bosphorus.

A year ago I wrote in THE INDEPENDENT that the declaration of war by Italy created no excitement in Constantinople, and that the Turks seemed to have no real animosity against the Italians. This same calm indifference has existed thruout the year. The question of Tripoli has not affected the Turks vitally. Even the bombardment and closing of the Dardanelles created only a momentary excitement in Constantinople. Thruout Turkey the whole Tripolitan war has not affected the people in any noticeable degree. The signing of the treaty of peace passes without comment.

In sharp contrast, however, to the effect produced by the ultimatum of Italy is the feeling in regard to the mobilization of the Balkan states and their concerted action against Turkey. The enthusiasm for a Balkan war is as vehement as it is instantaneous. The confidence in the invincibility of the Turkish armies is unwavering. Every one is happy. For a year the Turks—that is, the "men in the street" among them—have wanted a war with Bulgaria and Greece. That these states have taken the initiative is news almost too good to be true. Demonstrations of great magnitude are being made daily, and systematic recruiting is being carried on in the city and in the Bosphorus villages. Every one is volunteering. For the past week passenger service has been suspended on the railways, and troops are being sent to the Bulgarian and Grecian frontiers. Horses and wagons and stores of provisions are requisitioned, and every one feels that war is in the air. In this city of poor tramway service the lack of cabs is a serious matter, and if you do not care to walk you have to stay at home. State of siege has been proclaimed, and business is at a standstill. But the worst feature of the situation is the awakening of religious fanaticism, which, if Turkey is defeated in the field, may lead to deplorable and awful events here.

Only the inability of the Balkan states to meet on common ground has postponed this war so long. In 1897 and in 1903 Turkey's neighbors had their opportunity, but they could not take advan-

A WAR MEETING IN THE HIPPODROME SQUARE, CONSTANTINOPLE

tage of it. Rival racial and economic claims in Macedonia seemed to make the Christian states worse enemies of each other than of Turkey. But since then there has been a steady improvement, and I have noticed for several years that Bulgaria and Greece have been making every effort to come to an understanding. Much credit must be given to the Bulgarian leaders for their good will and common sense in viewing the Macedonian problem. Two years ago I was present at the memorable meeting on the Acropolis in Athens, when 300 Bulgarian students were fêted by the Greeks. Speeches made then were a prophecy of present events. Servia, desperate since the annexation of Bosnia and Herzegovina revealed to her the peril of annihilation by Austria which ever menaces her, has thrown herself into the arms of Bulgaria. But the chief credit of the Balkan confederation must go to Mr. Venizelos, the ex-Cretan patriot, who is now Prime Minister of Greece. He is one of the most astute statesmen of our age, and is equally able in the management of internal and external affairs. For three years he has worked with Russia and Austria, and was successful last spring in convincing Emperor William of Germany that a Balkan war was inevitable.

United in what they consider a holy cause, Greece, Bulgaria, Servia and Montenegro will never rest until they have secured fundamental changes in the administration of Macedonia. The horror and hopelessness of Turkish rule in Macedonia cannot be told. You have to see with your own eyes to comprehend. All the efforts of the great Powers to ameliorate the condition of Christians in this unhappy country have been in vain. Ever since the Crimean War Turkey has been making promises and passing laws. The futility of European diplomacy at the Sublime Porte can be proved merely by reading the record of over thirty decrees, laws and projects of laws—none

RECRUITING IN STAMBOUL

of them ever carried out—which have been thrown from time to time as a sop to appease the clamoring ambassadors. A leading Bulgarian recently said to me: "No assurance from the European chancelleries can mean anything to us. The diplomats have come to be contemptible and ridiculous in our eyes. Our situation is like that of Italy after Solferino. *We must reject all counsels of the Powers and rely upon ourselves.*"

Four years of "constitutional" government have accentuated the miseries of the Macedonians. The past year has been worse than the darkest days of the Hamidian regime. I went thru Macedonia last month from the Servian frontier to Salonika and from Salonika to Adrianople. All along the railway line soldiers are stationed. Near every bridge and tunnel permanent guardhouses have been built. On every train a baggage car directly behind the engine carries its soldiers with loaded rifles. Your passport is demanded frequently. Your compartment is examined for hidden bombs. In the villages assassinations are common on the open street. No man dares to go to his farm. Anarchy, extortion, murder and licentious cruelty are the order of the day. The Balkan states are full of refugees who have come over to tell their tale of atrocities. Greece, Bulgaria, Servia and Montenegro have been seeing in their dreams for thirty years the man from Macedonia calling them to help him. They can endure no longer. All the pitiful subterfuges of diplomacy are nothing, now that the call of blood has become too strong to resist. I saw some of the demonstrations in Bulgaria this last summer. They have their Julia Ward Howes, and the songs they are singing are not unlike the "Battle Hymn of the Republic."

As for Turkey, she appreciates the vital character of this war and knows that her European possessions are at stake. The Turks have never lost their contempt for the races which were so long

BULGARIAN RESERVISTS OFF FOR THE FRONT

subject to them, and they do not fear the result.

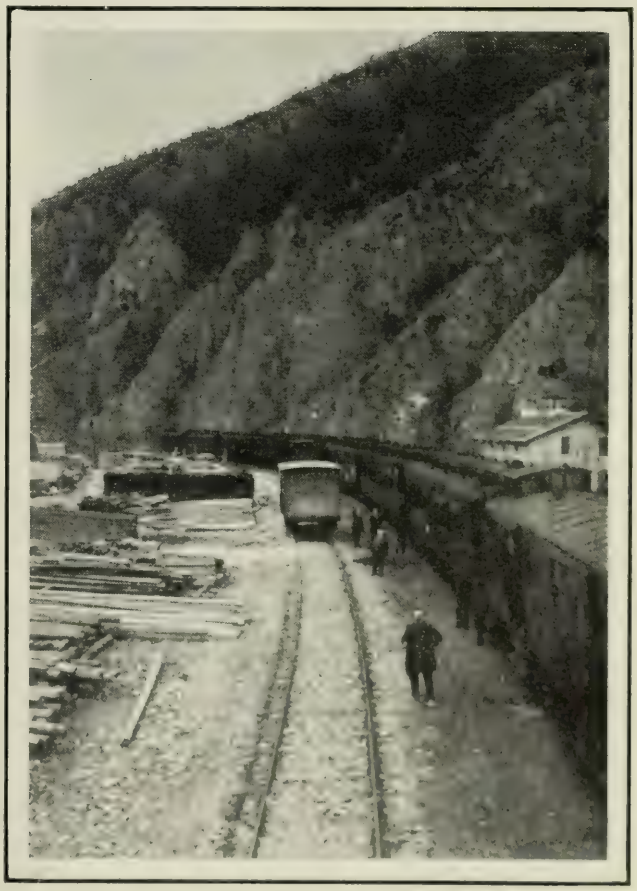
Created by the aid and favor of the great Powers, the small Balkan states have always been considered as little children who should be good and do what they are told. But the little children have grown to manhood, have prospered wonderfully during a generation of freedom, and—what is most important—have developed strong and well-disciplined armies. They are ready to fight their own battles. No disillusionment has been greater than that of the European Concert during the past month. On October 14, by their reply to the remonstrances of the Powers, the Balkan states declared their emancipation from diplomatic tutelage.

One hears about "the interests" of the Powers in the Near East to the exclusion of the interests of the Near Eastern states. Bound by ties of blood, and directly influenced in their political and economic life by their juxtaposition to Macedonia, Bulgaria, Greece, Servia and Montenegro have tired of listening to the self-interested advice of the Powers, who have many irons in the fire in other parts of the world, and could well afford to forego a little in the Balkan peninsula.

But special emphasis must be laid upon the particular interests of Austria-Hungary, which far transcend those of the other Powers in the Near East. England has India, Egypt and her many other colonial problems; France has her African Empire, Russia has her Asiatic empire, and Italy is engrossed in Tripoli. Germany thinks a great deal these days about the Portuguese colonies, but may lose her interest in that direction if oil proves a successful substitute for coal as ship fuel. Even then her attention is mainly directed toward Asiatic Turkey, which will some day be hers. Austria-Hungary, however, has her eyes upon the Balkan peninsula, *and she realizes that, to her, supremacy in the Balkans is a question of life and death.*

Nothing is more certain, then, than

that Austria will be compelled to intervene in the Turco-Balkan war. To show that such an intervention is an economic and political necessity is one purpose of this article.



The loss of Silesia to Frederick the Great was an event which demonstrated that the Hapsburgs must find their future in the East. Maria Teresa and Joseph II saw this. If the French Revolution and Napoleon had not intervened, Austria might have found her inevitable destiny a hundred years sooner. But Metternich led her back into Europe, and Sadowa was the result. Bismarck had merely repeated the lesson which was not well enough taught by Frederick. *An Austria barred from German hegemony, must carve out for itself a way to the Mediterranean thru a territory of Slav subjects, or forever remain in hopeless subserviency to Prussianized Germany.* This is equally true of Hungary. The dual monarchy, as it exists today, was formed the year after Sadowa, and a policy of aggrandizement in the Balkans was inaugurated by the common Minister for Foreign Affairs, the Hungarian Count Andrássy.

To comprehend and sympathize with Austria-Hungary's Balkan policy you must look at the map and note three things: The dual monarchy's present outlet to the world market, the distribution of population by nationalities, and the present Balkan boundaries of this conglomerate organization which can hardly be called a nation as that term is applied to the other countries of Europe.

Let us first examine the economic necessity which drives Austria-Hungary into the Balkans.

This is the industrial age, the day of the world market, when a nation's prosperity is largely dependent upon untrammeled communication with the outside world. We are developing railroads; these railroads run to the sea or to navigable rivers, and tremendous sums are being spent upon ports. We build and maintain navies to protect our commerce, and our greatest fear is that of being shut in by a blockade in time of war. For every nation is producing either manufactured goods or raw materials or food supplies far beyond its own needs for consumption. Austria and Hungary are in a unique position. Each has but one port, and these are both at the upper end of the Adriatic, Italian-speaking cities, to reach which the Austrians and Hungarians pass thru large Slav populations. The only outlet of the Adriatic is thru the Straits of Otranto, one side of which is owned by Italy. *The other side is in European Turkey.* At the mouth of the Straits Greece holds the Island of Corfu. What a precarious means of communication with the outside world for an empire of fifty millions! To the east, it is true, there is the navigable Danube, but to reach the Black Sea hundreds of miles of Bulgarian and Rumanian territory must be traversed.

The Austro-Hungarian state railroads have pushed from Budapest thru Brod and Serajevo to the frontier of the Sanjak of Novi-Bazar. Sixty miles beyond is Mitrovitza, in the Turkish vilayet (province) of Kossova. From Mitrovitza a railroad is already built to join the Nisch-Salonika line at Uskub. To

ON THE ORIENTAL RAILWAY

The main feature of the war so far is the struggle of the Bulgars and Turks for the possession of this line, which connects the capitals, Sofia and Constantinople, and passes thru Adrianople.

build up those sixty miles, and to be assured of the friendly control of the country thru which the railroad passes from the Bosnian frontier to Salonika—that is the economic side of Austrian policy in the Balkans.

The political considerations which may lead to an armed intervention of Austria-Hungary in the present war are most potent. One-half of the population of the dual monarchy is Slav, and only by a clever division have the Teutons and Hungarians been able to rule the country since the days of parliaments. Austria holds the Poles and Ruthenians in the long narrow strip of Galicia, pressed in by the Hungarians on the south, the Rumanians on the east, and their Russian brethren on the north. Her Bohemians and Moravians are surrounded by Germans. Her Slovaks are nicely divided with Hungary. Her Slovenes are hemmed in by Italians and Ladins. But her million Serbo-Croats and Hungary's three millions, to which must be added the two millions of Bosnia and Herzegovina held in common as a *Reichsland*, make a compact body of six millions, whose geographical position is a menace to the future of Austria-Hungary *so long as she is not the dominant power in the Balkan peninsula.*

Why? There are two cogent reasons. The Serbo-Croat population lies between Hungary and the Adriatic, between Austria and her Dalmatian coast, between both Austria and Hungary and Salonika. The Serbo-Croats are the same race as the Servians, the Montenegrins, the inhabitants of the Sanjak of Novibazar, and a large portion of the population of the country thru which the Salonika railroad passes—at least, as far as Uskub. If the Balkan confederation is successful in the present war, and the states are allowed their own free will in the settlement of Macedonian problems, a "Greater Servia" comprised of Servia, Montenegro, the Sanjak of Novibazar and a portion of Macedonia will not only erect a barrier against the Austrian outlet to Salonika, but will also enable the Servians to run a railroad to the Adriatic Sea. That is the first reason.

There is also another risk in the present situation which the fragilely constructed dual monarchy cannot afford to run. Croatia, so essential even for the sole present outlet to the Adriatic, has in late years drawn very close to Servia, with whom her boundaries march. Croatia is also limitrophe to her kinsmen of Bosnia and Dalmatia. A "Greater Servia," with the emancipation of the Macedonians, would bring more than five millions of Serbo-Croats into an independent kingdom. What would the effect be upon the six million adjacent Serbo-Croats of Austria-Hungary? I visited Croatia last spring and investigated the state of feeling in Agram. The hatred of the Croatians for the Hungarians is beyond expression, and they realize that their geographical position makes Austria support Hungary in refusing them the autonomy to which they have a treaty right. I have no hesitation in asserting that Servian success in the present war with Turkey would give rise to a separatist movement which might prove fatal to the stability of Austria-Hungary.

What, then, will Franz Joseph and his ministers do, or rather what *must* they do in the present crisis? Now that the war has started they cannot allow Turkey to crush the Balkan states. For Vienna knows that St. Petersburg would not stand idle. During the summer, from one end of Russia to the other, I asked the question: "What would happen if the Turks occupied Sofia in the coming war?" "We should go to Constantinople," was the invariable and unhesitating response. Nor can Austria allow the Balkan states, *by their own efforts,* to crush Turkey. This would be as great a disaster for Austria as for Turkey.

There are three courses open to Austria-Hungary if the war begins to go against Turkey. She might throw her troops into the Sanjak of Novibazar and prevent a Servian and Montenegrin advance on Uskub. For this service she would demand the cession of the Sanjak of Novibazar, reforms in Macedonian administration, and the connection of her Bosnian railroad with Salonika via Mitrovitza. In event of Turkey gaining some decisive battles over the allied Christian states, she might move with Russia to save the vanquished and still demand of Turkey just what she could ask in the opposite situation. She could base her claim upon the same grounds

as those of England when she secured Cyprus after the Russo-Turkish war of 1878.

The third, and rashest course, is independent of the course of events in the war. It would be to make the dash for Salonika now. Attractive as it looks, this is hardly feasible at present. For it would practically mean the annihilation of Servia, and necessitate a readjustment into a triple monarchy with a Slav member. But how could Hungary keep her hold on Fiume and Zimony? What division of spoils would satisfy Bulgaria and Greece? And would the Russian bear stay in his winter quarters?

CONSTANTINOPLE, TURKEY.

Home Industries in Old Deerfield

BY FLORENCE K. GRISWOLD

SOME time during the same year the world lost William Morris, that great spirit of the early craft movement, there gathered together one sunny afternoon, in one of Massachusetts's oldest and most beautiful towns, a handful of women who loved to work with both brains and hands. It seems that one day a matron of Old Deerfield, inspired by the beauty of design and texture of some old embroideries in the town's Memorial Hall, tried to reproduce them herself. She was successful, and spread her enthusiasm to others. Then followed the first organized industry in the village, "The Society of Blue and White Needlework," whose object was "the revival of the household embroideries that were brought over by the early colonists and kept true to the English tradition of design until the beginning of the nineteenth century."

This small beginning was immediately followed by other efforts to restore to the home its half-forgotten industries of past generations. The village people will tell you that the movement was spontaneous. Undoubtedly this is true, yet there was no one who was willing to affirm positively that the teachings of Morris had not in some way been wafted from over the seas. Whatever may be the theoretical causes of this "spontaneous movement," we may be certain that the motive power lay in an inherited love of industrial work fostered by intense patriotism. Perhaps it is only in such a village as Old Deerfield, where the principal industry of the men is farming, that a reactionary movement could have sprung into life. Nothing except a trolley, which breaks the stillness every half hour, and a tearoom, savor of modernity. All else is of the past; even time is measured from the Indian massacres. Could trees speak, the elms that flank the street could teach this generation so easily all they are endeavoring to pick out by threads woven by ancestors. The houses —homesteads they are called—are hospitably square, with rooms on each side the quaintest of doors, which open into two, sometimes three, sections, longitudinally. Paint seems to be little in demand, hence nature has put her own coloring on boards and shingles. Most of the homes from the day they were built have been handed down from "sire to son" until the present day. The people of Old Deerfield keep alive the heroism and tradition of the past. Scarcely may one go a hundred feet without stopping to read the inscriptions on the simple granite stones commemorating patriotic acts of ancestors. The atmosphere of this little town of a few over two thousand souls *would make possible* a movement to return to the house what it lost when the factory system rose in power. The sturdy, intelligent character of its native population has made that movement a *success*.

With certain concessions to the exigencies of a modern household, the industries are carried on very much as they were in the days when machinery was unknown. Each family specializes in one industry, working individually and independently, but with the spirit of cooperation. These people have simply *returned* to their original crafts. Fifty years ago the housewife used to buy

palm leaves at the general store. How they happened to be there for sale, or from where they came, no one seems to know. In spare moments she braided the palm into hats for her family first, and, as money was scarce and the hats found a ready sale in the store, she braided more, which she exchanged for groceries. There were a few old ladies in Deerfield who had been taught the craft in their youth. They were hunted up and a "braiding bee" was arranged where the young fingers were again taught by the experienced, and a beautiful industry of the past again became an active reality. This developed very naturally into basket making. First the small baskets of finely braided palm, corn-husks and native grasses were made; later the heavier and more substantial wood and carrying baskets. Today the "Pocuntuck basket makers" have a national reputation in their particular craft.

The popularity of the Colonial house has brought about a demand for Colonial furniture and drapery. The last and most perishable, the work of the loom and knitting needles was peculiarly the woman's contribution to the adornment of the house. With the fastidious, an anachronism in furnishing is not tolerated, consequently interior decorators have been put to their wits' end to supply this demand. The problem of furniture was not so difficult. Excellent models still existed, but with the draperies lay the problem. Linen and cotton wear out, and handiwork in most cases had been replaced by machine made articles. If a coverlet to fit the high-poster could be found in some careful family willing to part with a treasured heirloom, there was no "tester" to match, neither were there bureau or stand covers of the same texture and pattern. To remedy this defect in supply, the interior decorators had to discover some one who could still remember the stitches taught them by grandmothers. Here again the revived

PLANNING A DEERFIELD RUG

work of the women in Old Deerfield was destined to play an important part.

When the industries were reinstated in the home, there were found in old barns a few hand looms that could be made workable. These were brought out and set up in the house, and the old ladies, who remembered how to use them, again taught younger fingers. Bedspreads woven as they were a hundred years ago have found a ready sale. Knitting needles have also been brought into play to make the edgings for curtains, the bedspreads and testers. Old stitches that great-grandmothers gave the picturesque names of Moonshine and Matrimony are wrought in linen and cotton. For the old candlestand, with its handmade, hand-decorated cover, Deerfield also supplies the bayberry candle, soft in color and fragrant, made by the same process and in molds of generations past. Floor coverings are also made by these women. Rag rugs, the braided and hand-sewed, and also the larger strips made on the loom, are produced.

"Is a revival of the home industries practical?" is a question that naturally arises. The women of Deerfield—and they should know, for their work is no longer in an experimental stage—answer in the affirmative. They have no theoretical interest in the craft movement as a movement. There is nothing sentimental in their work except that it may have had an inspirational start in patriotism. *Work* to *them* is the *normal expression* of *self*. The women are true to the tradition bred in their bones, they are home makers, mothers, housewives; what leisure they have is given to productive industrial work which has a marketable value. From physical, social and economic standpoints they are performing their full duty to society. Here at least we do not hear that plaintive and reiterated cry of present day women, that the work of the home has been taken from them.

In no way will the Deerfield women

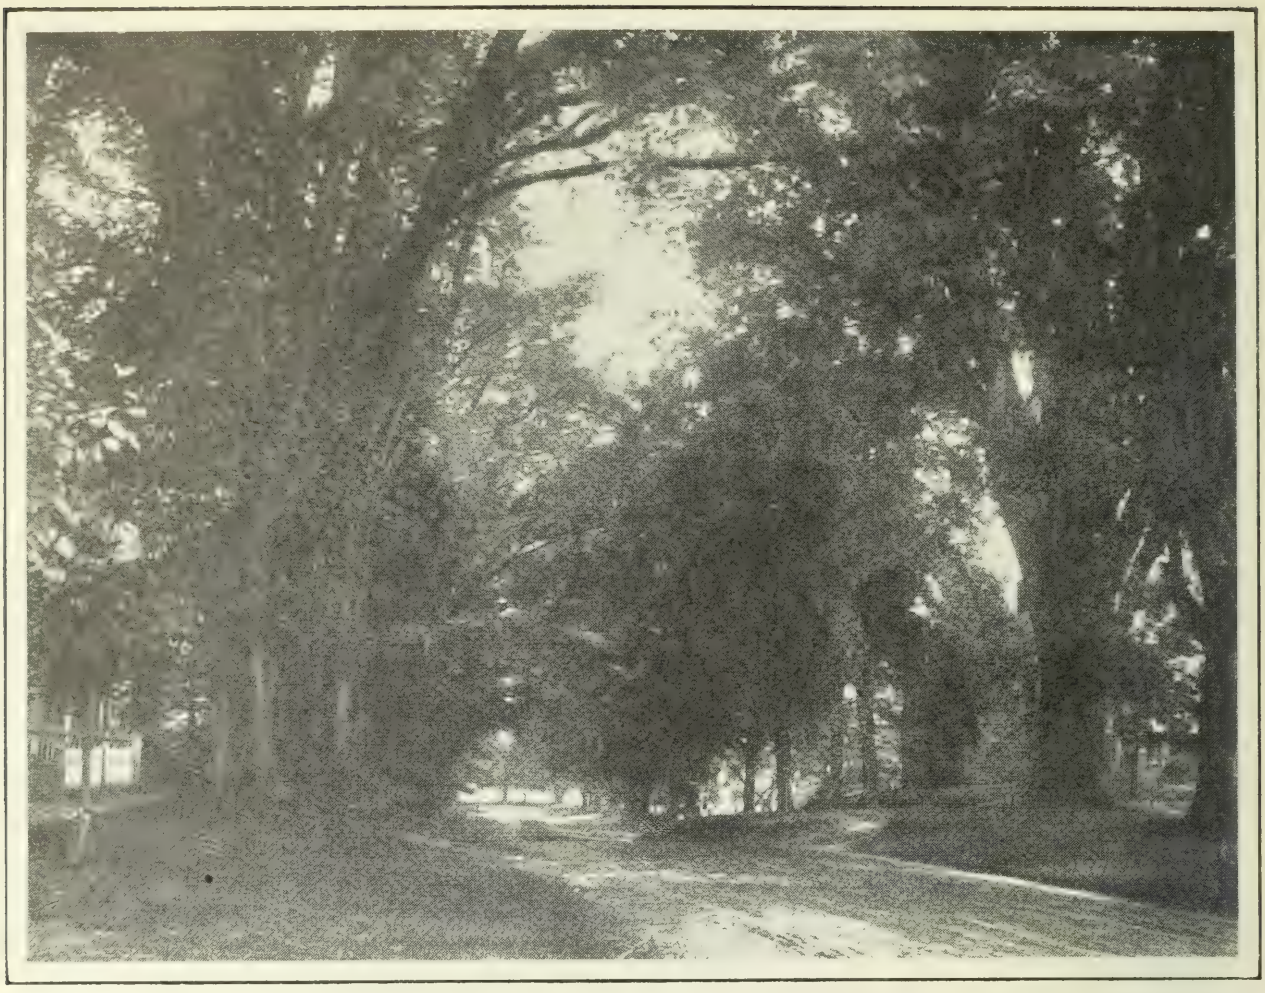

Photo by F. & M. Allen, Deerfield

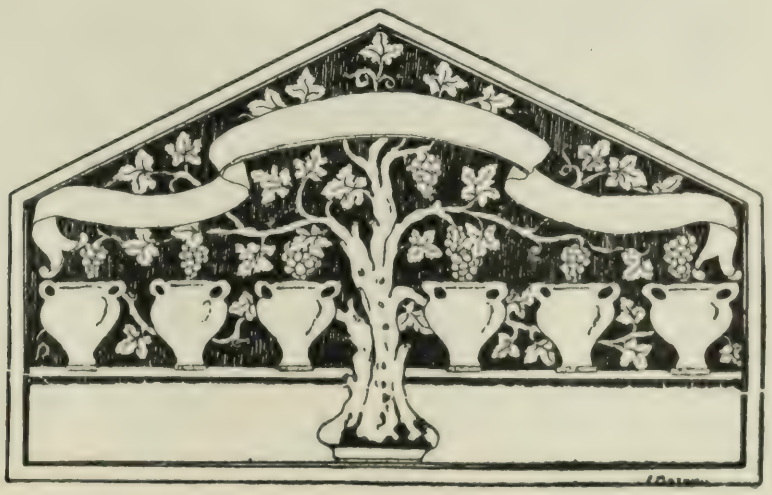
DEERFIELD STREET—THE STEBBINS HOMESTEAD ON THE RIGHT

permit their work to be commercialized. Their patterns, designs, looms and methods of work are as free from copyright as they were in the days of their ancestors. Their dyes are made by no secret process. They are all *skilled* workmen, specialists in their particular trade, not in any one particular part of that trade. Aside from the artistic interest and personal pride to turn out a perfect piece of work which is natural to a good craftsman, they care little whether or not their work is carried on after they lay it down. There is no apprenticeship system. They gladly and willingly teach their trade to any one who may care to learn. They have no trade secrets. Mrs. Henry, who is secretary of one of the guilds and knits wonderful counterpanes and bedtesters in the Matrimony stitch, a happy, charming, elderly woman with the pinkest of cheeks, answered to the query of who will carry on your industry: "Bless you, my dear, I do not know nor care; any one may who will."

Do the home industries pay? Here the women answer, "Yes and no." "We love our work, it takes up our spare time and gives us money which we may call our own. As we do it with our household duties, we feel repaid for our time and energy. If you are looking for a large income, no." It is rather a delicate thing to be specific and inquire into the personal income of any one, particularly when that person is a dignified, self-respecting, independent woman; but she understood the honest motive back of the question, which she was free to answer without giving offense, if she refused. Her sense of altruism, a desire to be of service to others, overcame her natural feeling of reserve. She replied: "One woman among us, who makes an article for which there is rather a steady demand, averages forty dollars a month. Of course, you understand she does that work only in her spare time." This amount may be contrasted with the average weekly wage of $7.72 in Massachu-



setts of a woman weaver who works fifty-eight hours a week in a factory.

One of the difficulties of home production is that of supply and demand. If there is sickness, death or any of the minor ills and worries of life, the burden of which seems to fall to the woman now as it has in the past, her productive work is interfered with, and naturally her output is less. If at this particular time there should come a sudden demand for her work she could not fill it. The women of Deerfield refuse to be either overworked or work under a nervous strain. Here she differs from her highly specialized, unfortunate sister who is the victim of the factory system. This fluctuation has made the women unwilling to place agencies in any of the large cities. "We need no more advertising. Thru the exhibition of our work here and mail orders we are able to sell all we can comfortably produce," they will tell you.

A sympathetic study of a successful industrial community of hand workers in the home helps to solve many economic problems that are worrying present day reformers, both men and women. In the first place, Deerfield has neither a very rich nor a very poor population. There are no great capitalists, for all are laborers with capital invested in their tools. Class distinctions are unknown, hence there is no need for an unnatural "class consciousness." Every woman is a skilled worker in her trade, controlling her hours of labor, place of work and output. She is not parasitic, her work has not been taken from her, she has no "boss" and is not being exploited. She knows the joy of work. Her needs are few and life simple, free, full and well rounded. There are no "unions," the various occupations being very loosely bound together by a guild known as The Deerfield Society of Arts and Crafts. The work is personal, individual, with a high standard, but the keynote of all is co-operation. First, co-operation within the home. Here the woman is doing her full share, performing her natural function of motherhood and home maker, working beside her farmer husband for the support and upbuilding of the family. Co-operation in the community thru her productive work, which, while she maintains her own initiative and individuality, she realizes fully that it is only by working harmoniously together can they both attain the best results.

Is the success of the Deerfield workers worth anything to modern industrial and economic theory? That must be judged individually. The constituents of an ideal society differ with people and are often as far apart as the poles of the earth. The people of Old Deerfield did not start out to prove a theory. As well educated, cultured Americans, they simply sought to express themselves. Unconsciously perhaps these women realized that a full and happy life was to be gained thru the union of working with both the intellect and hands. With them, as with the world at large, a divorce was in progress; but they averted such a catastrophe. William Morris prophesied that "one day we shall win back art again to our daily labor, win back art, that is to say, pleasure of life to the people." This prophecy at least they have made a reality.

New York City.

A Visit to G. K. C.

BY B. RUSSELL HERTS

EDITOR OF THE INTERNATIONAL.

BEACONSFIELD is the little village, forty minutes out of London, where the arch cleverist of his age resides. Coming to it, as I did, at night, I saw only the glimmering station and the stone railway bridges, the houses near and far as I passed in my cab, and finally the ivy-netted cottage approached by stony steps reared beside possibly medieval, but delicate and thriving flower beds, in which dwell both the Chestertons.

I speak quite justly of the Chestertons, Gilbert Keith and Frances, his wife. A very famous literary personage in England has told me that without the one there could not have been the other. My visit led me to believe as much.

I was left by a sprightly, possibly orthodox maid in a parlor hung with prints and water colors—good ones—and manteled with books in a revolving case and pretty little vases partly filled with flowers. But very soon came the tremendous person I was there to visit.

I had expected a large man. I had been told and prepared. But seeing him, I gave a little inward gasp. Chesterton is enormous. His head is massive, his hair thick, his neck fat, his belly capacious, and he must be six feet three in height. I was a pigmy in the left-handed grasp of a giant. I saw the right hand, dangling helplessly in its sling. For only a day or two before, the medieval gardener had left a medieval tub before the medieval door step on which the world's sublimest propagandist of medievalism was forced to march forth, into the open and modernity. In this case Humpty Dumpty had a great fall and the broken right arm was a relic. *The Weekly Illustrated News* still gets its medieval page, but this is now being quite modernly dictated.

Chesterton I found no heretic in hos-

"OUR YOUNG MEN HAVE NO MONEY—AND EVEN OUR OLDER MEN ARE PRETTY DICKY"
Did Mr. Chesterton use John Masefield as his model for the seated figure?

GILBERT KEITH CHESTERTON

pitality. I was gathered glowingly into the larger dining room, and there we proceeded at once to feasting on appropriately named Benedictine and cigars that were no doubt called Franciscans, tho, as they were without wrappers, I cannot be sure.

We discoursed as we drank our cordial from appropriately capacious tumblers.

Shall I truthfully confess to the utterance of ninety words from half-past eight till half-past ten? That surely does not impugn the master conversationalist's abilities.

Chesterton is a phrase maker of rare, quick wit and jolly humor. You readers of him could have guessed it—that his talk is but a slightly milder literacy just as

his writing is but a sublimated conversation. He talks well and much, humorously, sincerely and very tolerantly. And listening to him, you realize that no one could possibly be a jollier, pleasanter companion.

"Even if the majority of people in a generation get away from the normal, as they do today, we must not forget the line of conduct that is normal to history and the race. We must not take the exception and try to make the average live up to it."

This is not exactly what he said—he may have said something clever—but this is what has remained in my memory as the sense of his speech. It struck me as an unusually excellent and brief expression of the real Chesterton, of everything that he stands for and all that he means. It could be applied to marriage, to government, to social intercourse and art, and I do not think he has expressed it quite so clearly elsewhere.

"The *difference* between man and woman is responsible for almost everything that has ever happened," he said. "We must realize that when we try to make man and woman alike."

That, again, suggests the value of Chesterton's eternal questioning of all progressivism to the progressives themselves. They must answer him before they can sensibly proceed. They must know whether they want things to happen differently in the future and they must try to know and face the vast effect on all events that sexual equality will have. . . .

THE STOUTER FIGURE REPRESENTS SIR ARTHUR CONAN DOYLE

"I AM LEAN AND SPRIGHTLY."
Another of Mr. Chesterton's British lions

For the first time I learned of Chesterton's expeditions into the graphic arts' domain. He had always scribbled hobgoblins and gargoyles and demons on his manuscript. But a few years ago he prepared a bouquet of cartoons, political and otherwise, some of which were used for a tract, Hilaire Belloc's, a few copies of which were issued by a publisher and possibly some sold. A few of the unpublished pencil drawings he allowed me to take with me, and they are gloriously characteristic of his jollity—as you see. Mrs. Chesterton, who was curled up on a stool in the fireplace during our first three glasses, left to fetch the drawings, and medievally wifelike admired them and frowned when I criticised.

Two hours with the man removes for all time one's allegiance to the current folly of believing that Chesterton's ideas are jokes. His point of view may be ridiculed, but his sincerity is anything but ridiculous. "St. Augustine and the rest thought as I do, but then it wasn't customary to write humorously," is his explanation. His paradoxes are perforations in our paper civilization.

NEW YORK CITY.

THE PASSING OF JVLIAN

BY STEPHEN PHILLIPS

(THE EMPEROR JVLIAN "THE APOSTATE" DYING ON THE BATTLEFIELD EXCLAIMED: "VICISTI O GALILÆE!" HE FOVGHT THE LAST FIGHT FOR DYING PAGANISM AGAINST THE CROSS)

The spear hath gone too deep: uplift me, friends,
That my last look upon the earth be clear.
I leave you on a disenchanted world,
Whence I am not unwilling to depart.
I would not tarry amid groves awaked
From the old mystery, and awe of leaves,
And sudden lights of beautiful faces,
Startled in holy greenness, or from forms
Naked, from pools disturbed, that dripping flee;
A grave and gentle spirit, powerful,
Hath brought in on us gray reality;
Making that beauty like a moon at dawn.
And the voice hath passed from the waves, the lamentation,
The human music from the Ægean thrown.
Ah, stricken are the horses of the Sun,
Faded is all the glory of Aurora;
Thunder is but a noise that was a voice.
Do ye not hear them still, the older gods,
Not all withdrawn, tho sadly all withdrawing,
With melancholy soft departing voices?
All dispossessed, discrowned, deposed, dispersed!
And yet, no lord of thunder or of flame,
Making this earth a second Semele,
Hath done this thing. A figure whist and still,
With woman-touch for all these troubled brows,
And healing whispers for humanity,
Wandering, but for a few followers,
Alone, and with no legions from the West,
Hath changed the ancient order of the world.
And yet I feel, even to the very bones,
This newer glory given to the world;
This sighing splendor and this ray of tears,
The upward laboring and the thorny path,
Ending—who knows?—in far invisible peace.
I can appraise, tho with an alien will,
The sweat of blood, the thirst upon the tree,
The death, that called the dead out of their graves,
To wander, unrecognized, the streets.
I acquiesce, I bow down, and I pass.
O thou hast conquered, Galilean! I
Have fought my last against thee and I yield.
But ah, my frighted woods and emptied groves,
Unhaunted meres, and thou great ocean dumb!
Lo friends, one leans above me as I die,
The tender aspect of my Conqueror.

LONDON, ENGLAND.

Early Marriage

BY CHARLES W. ELIOT, LL.D.

[By the courtesy of Dr. Eliot and *The Harvard Alumni Bulletin* we are allowed to publish the address made to the freshmen of Harvard University by the distinguished ex-president. The unusualness of the subject and the admirable method of its presentation make this address a matter of interest to the public. We discuss it elsewhere.—EDITOR.]

IT is sixty-three years, gentlemen, since I stood where you stand now. As I look back over that long stretch in my life I see it filled day by day with the duties and enjoyments of the passing moment; and I wish that I had reflected more on things past, and looked forward more to things future. It seems to me that many healthy, active men have this defect in the conduct of their daily lives, and especially that they are apt not to lay out beforehand their own ideal career. Many young men, standing as you now stand on the threshold of what we hope is to be a useful and happy life, seldom look ahead, seldom use their imagination with regard to their own future lives, laying them out, in broad lines, of course, but clearly enough to define to themselves what they are going to aim at, what they hope for, what they mean to be.

In regard to your college life, that process of looking ahead begins now; because under some new good rules about the administration of the elective system you are expected to shape at the start your whole career in college, and to make the choice of studies which will determine that career. Make a deliberate and far-seeing choice in accordance with your tastes and wishes, and your reasonable expectation of success and enjoyment. In the choice of your studies do not omit to take account of your own expectations of enjoyment in your work; because your satisfaction in life is going to depend largely on your enjoyment of your habitual labors. Many young people think that it must be pleasures that tell most toward enjoyment of life; but that is not the fact. If you will allow an old man to testify on that subject, I can assure you that the main satisfactions of life come thru hard work which one enjoys. Major Higginson has told you that a large part of that enjoyable work will be work for others. Look forward, then, to the profession you are going to follow, remembering that nowadays many kinds of business provide a highly intellectual profession. Be guided in your choice by your own convictions about the kind of work you like, the kind of employment which itself supplies you with a strong motive for strenuous and constant exertion. I am sure that after but a little experience you will find that Major Higginson is right; and that altruism is an important element in the enjoyment of most kinds of work. This looking for the work you love, this looking for the profession you are going to enjoy all your life, will carry you some distance ahead from your present standpoint.

But very soon you will be ready to practise some profession. Then look ahead very sharply; because the most important event in your whole lives should then be imminent. Look ahead to marriage—and I should almost say, the sooner the better. It is the fashion nowadays among educated young men to wait many years before they marry. That is a place where the life of the highly educated man is inferior to the life of the mechanic, operative, farmer or farm hand. Postponed marriage is a great modern evil in educated society. You will hear such conduct justified. You will hear some young man say, "I cannot invite a girl, who has been brought up to do nothing for herself, and to have every gratification and every luxury provided for her, to marry me, until I can earn an income which will enable her to live with me in that way."

I have two remarks to make about that doctrine—that if a girl has been brought up in that manner, the sooner she has a chance to live differently the better for her; and secondly, that it is only fair for a young man who loves a young woman to consult her as to whether or not she wishes to marry him before he can earn a large income. The young woman has a clear right to say a word on that subject to the man she loves, and not to be obliged to wait till he is thirty-five years old before he asks her to marry him. This, gentlemen, is a matter of looking ahead at a critical point in your lives. You are not in the habit, perhaps, of contemplating this event of marriage. It would be wiser to do so. The sooner you begin to think about it the better—first, because it will be thinking about the most important event in your lives in respect to the development of your own characters and to the happiness not only of yourselves, but of the women you will marry, and of the family life which will normally result.

This forelooking will bring you on to being twenty-six or twenty-eight years old at the best. But the years will fly, and soon you will find yourselves in the presence of little children every day, your own children. Look ahead to that situation. The very thought will protect you from evil-doing and will prepare you for the greatest joys of life and the most lasting. When that time comes you will see how much this happiness surpasses all other human joys, and how it is the real foundation for the enjoyment of work and the earning a living—no matter whether the way in which you earn your living be in itself satisfactory or not. He who has the domestic joys will get intense satisfaction even from the most monotonous and tiresome employment. He will have the satisfaction of earning the livelihood of wife and children.

The years will go on and you will be forty to forty-five years of age. To what experiences are you going to look forward at that period, beyond the loves and joys of family life? You ought to look forward to and plan for the satisfactions that Major Higginson has been describing, to the love of the home town or city, of the community in which you dwell, of the institutions which have served you and which you hope will serve your children, of the country whose ideals have improved and are improving the common human lot. You will see herein not only high motives for active and sympathetic co-operation in good works, but also new sources of durable satisfaction. By the time you are forty to forty-five years of age you ought to be in position to contribute largely to the welfare of the community in which you dwell. You, with your education and training, ought to be ready by that time to do what thousands of Harvard men are now doing all over this country and all round the world—to be serviceable in your day and generation to multitudes of people; and this service may be rendered in business, in public office, in any of the responsible functions of civilized communities.

The time will go on, and you will be fifty to sixty years of age. What is there in that period that you had better be looking forward to? It is time then to

CHARLES W. ELIOT, LL.D.
President Emeritus of Harvard University

be a grandfather, and so to secure an immense satisfaction to be added to the other joys of human life. Now, the time of life when a man will become a grandfather is something to be considered long beforehand, and you had better begin to consider it now. Why? Because the time at which a man becomes a grandfather is determined — normally, of course—by the time at which he marries. The postponed marriage has the great disadvantage that a man cannot begin to enjoy grandchildren till he is almost too old to do so completely. A young grandfather is a very pleasing object, and one oftener seen in the uneducated classes and in the barbarous countries, as we call them, than among the educated men of a civilized country. Look ahead to that satisfaction in your later lives. Perhaps you are saying to yourselves, "These things are, to be sure, desirable; but are they attainable by the average man? Is there any use in planning for them?" They are attainable with health and character. Those things constitute the indispensable preparation for continuous satisfaction in the kind of life we have been describing. Therefore, gentlemen, look ahead in regard to the care of your bodies. Avoid the vices. Avoid lust. And avoid the habitual use of any stimulating or narcotic drug. And the wider my field of observation the more firmly I believe that the best rule for the attainment of health, long life and steady vigor is to use no stimulant whatever habitually, neither alcohol nor tobacco, neither coffee nor tea. Some recent observations that I have been enabled to make in the East tend toward a possible exception to this rule in favor of tea. The Chinese and the Japanese make habitual use of very weak tea in large quantities, and yet have survived by uncounted millions as indomitable workers, in spite of the fact that they have been subject to famines, floods, occasional pestilences, and chronic contagions, from which they have had till lately no defense.

With this same object of preserving a sound mind in a sound body, look ahead with regard to athletic sports. It may make some difference to you in the next four years, perhaps, if you look ahead with regard to athletic sports. Under modern stresses athletic sports are an indispensable part of young life, and indeed, of sound national life. One of the most serious aspects of China at the present moment is the absence there of all the sports we call "athletic." Neither the educated nor the uneducated Chinese have athletic sports in the open air. All their sports are of a gambling nature. They are sedentary or quiet games of chance. That is a national misfortune on an immense scale. By looking ahead in regard to athletic sports, I mean, give preference to those sports that last, and that you can pursue at thirty, forty, fifty, sixty, seventy and I am beginning to hope eighty years of age. You know what the lasting sports are—walking, rowing, sailing a boat, tennis—any sport which can be pursued by the average individual all thru life. Lord Bacon says that riding horseback is the best recreation for men who use their brains. The sports that an individual can pursue all thru his life are the best ones to learn in youth. The wise choice involves looking ahead.

Let me mention one more point about looking ahead. It is wisest to hold a hopeful ideal of the power of sustained enjoyment as life goes on, an enjoyment which increases rather than diminishes. How common are laments about the incapacities and disabilities of advancing years and the shrinkage in pleasures! It is true that some pleasures which require keen senses do shrink; but, on the other hand, the intellectual and moral delights increase in intensity as life goes on, and many physical satisfactions can be held level to the end. Look forward, therefore, to a life which shall grow more and more enjoyable as time goes on. That expectation corresponds with the facts of the normal, healthy life among civilized men. It is a delight to look forward to it; to anticipate it is in itself a happiness.

For many reasons, therefore, gentlemen, look ahead!

CAMBRIDGE, MASS.

Training England's Future King

BY SCOTT BOWEN

THE training of a prince is a vastly different affair today from the process of which Machiavelli wrote for his Florentine patrons four hundred years ago. At any rate, the good people who have charge of the training of the Prince of Wales, who is one day to rule over the British Empire, are running his education on different lines.

To begin with, Prince Edward's education is chiefly supervised by his mother. Queen Mary is a strong-minded woman and there is no concealing the fact that she is the real mistress at Buckingham Palace. How great her influence on affairs of state is it is hard to say, for the King of England's influence is exercised in all sorts of devious ways, but there is no doubt that she has established herself as the arbiter of the manners and morals of English society. King George is a good, easy-going man who would never have troubled to snub his late father's gay friends, but he is as wax in the hands of his wife, whose views on such matters are almost puritanical. In certain sections of English society the King and Queen are referred to as "George and the Dragon."

THE PRINCE OF WALES AS MIDSHIPMAN

With such a mother directing his education it is not to be wondered at that the Prince has displayed little taste for gaiety or display. As a matter of fact, he has no taste for them and is terribly shy as well. This shyness, no doubt, is inherited from his mother, who has been heard to say that she never undertakes a state function without a severe attack of stage fright. Her extremely serious sense of the duties of her position, however, enables her to overcome it. From his nursery days the Prince has been under the direct charge of his tutor, Mr. Hansell, who has also directed the education of his brothers. Mr. Hansell was tutor to Prince Arthur of Connaught, and when thus employed attracted the attention of Queen Mary, who decided that he was the ideal man to bring up her boys. Mr. Hansell, like the Queen, is serious, but he is by no means what English schoolboys call a "mollycoddle." He is a good cricketer, an excellent tennis player and a first-class shot. He has thus been able to supervise the Princes at their sports as well as in the class room.

A deep attachment has sprung up between Mr. Hansell and his charge. So deep is it, indeed, that Queen Mary became alarmed some time ago and tried to separate them. She feared that the Prince was growing to rely too much on his tutor, and that the development of his character was thus being retarded. The Prince, however, displayed unexpected strength of character. He insisted on his tutor being retained and compelled even his strong-minded mother to yield. This was before the Prince went to Osborne for his naval training. No

doubt he would have liked to have taken Mr. Hansell with him to Osborne, but this was impossible and he did the next best thing. He wrote daily letters to his tutor, placing all his schoolboy problems before him, and asking his advice. In the case of a man of less sterling character than Mr. Hansell this domination might be dangerous, but I have never heard it even hinted that he has used his pupil's affection for him to his own advantage. Another attempt was made to separate the Prince and his tutor when the Prince was sent to Paris last summer to perfect his French. He was the guest of the Marquis of Breteuil, an old friend of the late King Edward, who has two sons of about the Prince's age, and one would have thought that their companionship would have been enough for him. He refused point blank to go, however, unless Mr. Hansell accompanied him, and accompany him Mr. Hansell did.

An amusing story is told of the curtailment of Prince Edward's visit to Paris. As a boy one of his heroes was King Alfonso, of Spain, who, whatever his reputation for gallantry may be, has a real love for children and a gift for gaining their affection. Edward has retained this admiration for Alfonso and frequently corresponds with him. About a month before Edward's visit to Paris was scheduled to end, Alfonso wrote to him that he would be passing thru Paris on his way to England in a few days, and would show him around. Edward wrote a letter of boyish delight to his mother about Alfonso's kindness, and the next day he received a telegram summoning him home at once. Queen Mary did not fancy the thought of her darling boy seeing the sights of Paris in company with Alfonso of Spain.

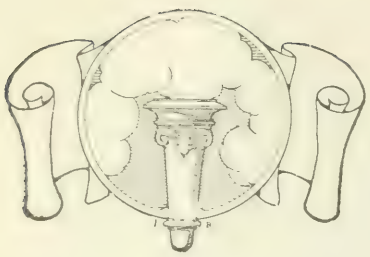
So far every effort has been made to keep the education of the Prince as democratic as possible. Perhaps it would be fairer to say that every effort has been made by the King, but that many of these efforts have been frustrated by the maternal solicitude of the Queen. When the Prince was sent to the naval college at Osborne the King ordered that he should be treated exactly as any other cadet. This was carried to the extent of limiting his pocket money to the same amount—25 cents a week—and it was at first intended that he should occupy a bed in one of the large dormitories. This was vetoed, however, by the Queen, who insisted that he should have his own rooms.

Much the same plan will be followed when he goes up for a term at Oxford in a few weeks. The King is desirous that he should mix freely with the other students, but a special suite of rooms has been fitted up for him at Magdalen College, and he is to be accompanied by his tutor and by a newly appointed equerry, the Hon. William Cadogan. Mr. Cadogan has been an equerry to the Queen for some years and knows her views.

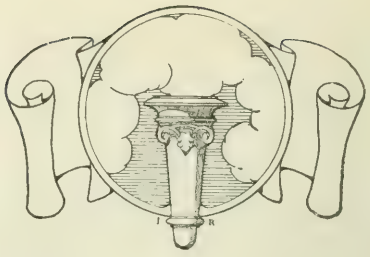
When his term at Oxford is completed he will undergo a little military training as an officer of hussars. This will not, however, bring him much real experience of life, for his regiment will be stationed in London, and he will live at the palace or in a separate establishment which will be set up for him.

If all this has given the impression that the Prince is weak-minded or "backward" it must be corrected. Every one who has come in contact with him describes him as a boy of charming and simple manners. All that can be said is that he knows less of the world and is still more of a boy than most young men of eighteen in England or America, and this is due largely to his mother's scheme of upbringing. No doubt the puritanism of his training is largely a reaction from the laxity with which his grandfather, King Edward, was brought up. I deliberately omit the upbringing of his father, King George, for he was a second son and was not trained for kingship. It was intended that he should become a naval officer, and he had a thoro sea training before the death of his brother, the late Duke of Clarence, made him heir to the throne. It may be said, however, that the Duke of Clarence's death was hastened by dissipation.

The Prince is described by those who know him as above the average in intelligence. He is a quick student of mathematics and science, but he has no taste for the classics or for general literature. He is quick at learning to read modern languages, but his English tongue finds it hard to speak them well. He is keenly interested in politics, history and the science of government. Until now he has had no control over his vast income, and



THE PRINCE OF WALES IN PARIS
The second figure is the Prince's tutor, Mr. Hansell



it is not likely that he will have for some years to come. As Duke of Cornwall he receives from the duchy estates a revenue of about $500,000 a year. Of course, a great deal of this is spent for public purposes, but his managers are quietly accumulating a snug fortune for him.

Various rumors have been circulated from time to time about the Prince's marriage. So far there is no foundation for any of them. Queen Mary does not want her son to marry too early. There was a story about a boy and girl attachment between him and the Grand Duchess Olga, daughter of the Czar, but I am told that this was set afloat by the Prince's grandmother, Queen Alexandra, and her sister, the Dowager Empress of Russia, who wished to bring the match about. The Prince, so far, has a healthy British boy's contempt for the society of girls.

LONDON, ENGLAND.

The Backward Nation

The article by Mr. Theodore Marburg on this subject in THE INDEPENDENT *of June 20 was based on the supposition that the backward nations can be dealt with successfully neither thru treaties nor thru existing Hague institutions, for the reason that such nations lack either the will or ability to live up to treaties and to respect the decisions of courts; that, while equals in the eye of international law, they are not equals in point of moral responsibility. It was suggested that this problem, including the expansion of the progressive races without war, might be dealt with by a commission of the chancelleries of all the enlightened Powers, big and little, in the belief that "substantial justice would be done by it, just as substantial justice is done under the Federal Government of the United States to the individual communities embraced within the scope of its activities." The following is part of the comment upon the plan received by the editor of* THE INDEPENDENT *and by the writer of the article, in response to invitation. The eminence of many of the writers and the importance of the replies in themselves justify fuller quotation, but space forbids. The question, what constitutes a backward nation, probably cannot be answered until this or that nation is guilty of specific acts which stamp it as irresponsible and lawless. In view of the breaking out of the Balkan war this symposium is most timely.*—EDITOR.

Edmund J. James,

President of the University of Illinois.

IN the article, "The Backward Nation," Mr. Marburg has finally begun to go to the very root of one of the most difficult questions connected with the whole peace movement. If, in an organized society, we find an individual who is absolutely opposed to all progress, and insists upon his right, real or imaginary, for the purpose of thwarting progress, we find some way or other of getting around him. If he owns a piece of ground which the community needs in the outworking of its prosperity it will take the ground from him; it will dispossess him by force, tho it give him not what he may consider the value of the property, but what a jury, constituted according to law, may decide that it is worth. We may tax him against his will for the support of institutions in which he does not believe. . . . Now, nations or communities, large and small, are unfortunately as stupid and blind sometimes to their own interests, sometimes to the interests of other nations and other communities, as private individuals are. There has been a rough way of adjusting these things in the course of the ages by force, and might has often seemed to be the chief element in making right. For the modern world to introduce the principle that small nations, small communities, should be neutralized and protected by large communities in the exercise of their arbitrary wills would be to make the progress of civilization in many directions extremely difficult and in some almost impossible. . . . If we are going to adopt the system of arbitration among nations and establish the rule of peace, there must be some method provided by which the right of eminent domain may be exercised in the interest of the civilized world and against recalcitrant nations and communities—just as we have worked out the same principle in our own society in application to individual refusal to move with the procession. Mr. Marburg, so far as I know, is the first man among recent writers on this question to put his finger upon the very weak point in general international arbitrations and

to propose some method by which progress may continue.

URBANA, ILL.

H. F. Guggenheim.

The backward nation, as Mr. Marburg has said, is "an ever-present menace to the peace of the world." In fact, one may without too great optimism say that it is the *only* menace to, not perhaps universal peace, but to international peace. No international war is likely to be carried on without either real or imaginary anticipation of some gain. And the backward nation today presents the only possibility for a profitable war. . . . So the question raised by Mr. Marburg and the expedient which he suggests cannot be too seriously considered. . . . Mr. Marburg apparently, by drawing too close a comparison between the policy of the Monroe Doctrine and the system of influence, undervalues the opposition which his scheme would encounter in Europe. Americans might gladly assent to the suggestion that the United States should be able "to shift some of the responsibility which it at present has under the Monroe Doctrine" upon a disinterested league which would immediately vanish after performing its duties. But would not the case be different for Europeans if the authority of some European power over its sphere of influence were to be impaired by this disinterested league, merely working in the name of humanity? Spheres of influence are established for the purpose of aggrandizement; the Monroe Doctrine, on the other hand, is a political system established for the purpose of self-preservation.

CAMBRIDGE, ENGLAND.

James B. Angell,

President Emeritus of the University of Michigan, formerly U. S. Minister to Turkey.

While in Turkey I was naturally led to study the European concert. Altho it has sometimes failed of good results, I concluded it had saved Europe a good deal of war. And like you I thought some of the other American states might join us in enforcing the Monroe Doctrine in a useful way. . . . I quite sympathize with your suggestions.

ANN ARBOR, MICH.

Bernadotte E. Schmitt.

I agree most heartily with your statement that wars will not cease until the backward nations have reached our level of civilization. I can only wish that you had expanded the idea. The main causes of tension between England and Germany—so far as these are concrete issues—are rivalry in Turkey, conflicts over Morocco, mutual suspicion with respect to Asiatic politics, etc. More negative instances may be found in the British control of Egypt and India. Were the armies of occupation to be withdrawn, anarchy would follow and other powers would promptly take the place of the self-denying English. . . . As to the incompatibility of Europeans and Asiatics in the same country, do you press this home? Is not here one of the most potential causes of war now to be found in the world? As the years roll by, the resentment of Japan against exclusion from this country, from Canada and from Australia (especially the last) will go on increasing, and the arbitrament of the sword may be appealed to rather than of The Hague. . . . The question of the righteousness of the European concert is indeed a large one, but on the whole I believe it has done more good than harm. . . . Coming to your suggestion of a league of "all the Powers where there are just laws administered with a fair approximation of justice," let me say that I am in thoro sympathy with such a reorganized concert, but I doubt if it is practical at this time. Your hypothesis assumes that such a league will have power to intervene in all cases where the concert now does, and that such intervention will be tolerated because it will aim at "substantial justice." Will those very nations whose conduct may require intervention admit that they are backward? . . . A second difficulty will be in getting a dozen or fifteen enlightened (?) nations to agree upon any line of conduct. The present Great Powers will not consent to abandon their hegemony, to admit the lesser nations to an equality of counsel, or cease to intrigue against each other. . . . Nothing happens in any part of the world but England demands the right to be consulted lest British interests be affected. British interests would be af-

fected by a general plan of intervention. . . . For these reasons I cannot see that your idea is practical at the present moment, either for forming such a committee or for securing for it, if it could be formed, any real power or moral authority. . . . In spite of my criticism, however, I should be glad if our own Government would endeavor to see what can be done, to sound other nations. It would be an admirable topic in the agenda of the Third Peace Conference.

WESTERN RESERVE UNIVERSITY, CLEVELAND, OHIO.

Charles Francis Adams,

Historian.

I agree with all your points, except that you seem to me to avoid the conclusion which must inevitably follow from your premises. You there, for instance, speak of some one American nation—we will says the United States in the Northern Hemisphere and the Argentine Republic in the Southern Hemisphere—being delegated powers to enforce the advice of such a combination as you outline, compelling action on the part of such "backward nation" in compliance with the presumably reasonable recommendations of a central commission. I should greatly question whether it was desirable that such authority should in any event be delegated; nor does it seem to me that so doing would be necessary. As I see it, it would prove itself in practice a question of machinery. The issue presented would, of course, first be formulated by one or more of the Powers in question. It would then be submitted to a tribunal in the nature of that at The Hague. The backward nation in question would then be invited to appear before this tribunal. The tribunal would in due process make its report; and it would be communicated to all the parties it represented, together with the recommendations of the tribunal as to how its report and recommendations should be made effective. It seems to me the world has now advanced to that point when such a mandate, properly exprest, in a firm but kindly way, would work its own results. Should it fail to do so, the question of its enforcement thru the joint action of the Powers from which the complaint had emanated would present itself. It would then become a practical question which would call into operation the diplomatic agencies and the capacity, so to speak, of "getting there" on the part of the tribunal. On this head no general rules could be laid down; but the problem must be worked out in an effective manner thru the good judgment and the capacity for accomplishing results of those in charge. In this, as in other things, something must be left to time and the process of natural development.

SOUTH LINCOLN, MASS.

William R. Manning,

Adjunct Professor of Spanish-American History in the University of Texas.

It seems that it could hardly avoid weakening the hegemony of the United States in the affairs of America based on the Monroe Doctrine. Even tho the United States should reserve, as you suggest, the sole right to be commissioned to carry out the will of the Powers in case it should be necessary to intervene, yet the very fact that the United States would have to await the consent of the Powers before it could take any action, and would be morally bound to act at their dictation, would be yielding something of the exclusive position it has hitherto maintained. . . . How would the joint expense be apportioned? Would it be according to size of territory, population, national wealth or revenue? Or would it be determined by the number of citizens each nation had in the troubled state, or by the amount of invested interests? . . . Who would have a right to decide whether a nation were a backward nation or not? How would the representation on the joint commission be determined? . . . If there were only one from each state and if any and all states should be asked to join could not the representatives of the backward nations defeat the will of the orderly nations? If your plan, or some modification of it, could work properly it would be a happy solution of a most vexed problem.

AUSTIN, TEX.

Edward Lauterbach,

Regent University of the State of New York.

You set forth the pros and cons so fully and so cogently as they affect both sides of your unique suggestion as to

make the question of approval or dissent extremely difficult. . . . It is difficult to conceive of a more solemn agreement among the powerful nations than that embodied in the Treaty of Berlin, and yet not only has that pact been consistently violated in the respects to which you refer, but, so far as regarded backward Rumania, where its provisions might readily have been carried into effect, the drastic regulations embodied at the suggestion of Disraeli have been sneeringly disregarded without protest from any of its signatories, altho Rumania's wilful disregard of the rights of the Jews, supposed to have been secured, was called to the attention of those signatories in the memorable protest of John Hay.

NEW YORK CITY.

Edwin Ginn,
Donor of the World Peace Foundation.

It would be rather difficult, I fear, to get the nations to agree to such a plan as Mr. Marburg's. . . . I still feel that the best plan is the establishment of an international force composed of a certain proportion (say ten per cent.) of the present armies and navies. . . . Far better to have Mr. Marburg's plan carried out than to have none, for the advantages would be great; but there is nothing which will have such permanent results looking to the peace of the world as education. People must be taught to respect the rights of each other nationally as well as individually. . . .

BOSTON, MASS.

General H. M. Chittenden.

It appears to me to be an exceedingly sound diagnosis of this particular situation.

SEATTLE, WASH.

Simeon E. Baldwin,
Governor of Connecticut.

I am inclined to think that you do not give force enough to the innate sentiment of independent personality which belongs to sovereign nations, great and small, enlightened or unenlightened. To put such a plan to the test would be to start with a more or less arbitrary distinction between Powers that are politically equal, and to make world-public-opinion the real judge of the validity of the classification. I am afraid that world-public-opinion would never agree on such a question.

HARTFORD, CONN.

Herbert W. Bowen,
Formerly U. S. Minister to Venezuela.

As all men are equal before the law, or should be, so all nations that are recognized as sovereign should have equal sovereign rights. . . . All that we can do is to secure justice from them (the backward nations) by treaties and by rough agreements for arbitration, or by war. All who are opposed to war should concentrate their energies in an effort to establish The Hague Tribunal on a solid foundation.

WOODSTOCK, CONN.

Talcott Williams,
Director School of Journalism, Columbia University.

You are right, I feel, in your general premise that there should be some machinery by which perilous conditions in smaller countries could be met. It is doubtless illogical to have one rule for the weaker countries and one for the stronger, but all beginnings of organized institutions have been full of these contradictions.

NEW YORK CITY.

Charles Noble Gregory,
Dean of Law School, George Washington University.

I think Mr. Marburg maintains successfully his claim as to the right to intervene and even to put an end to independence where in the long run a nation wholly fails in keeping order and doing justice. I have myself maintained like doctrine in articles written recently for the *Spanish Review* and the *Atlantic Journal of International Law*. . . . I cannot so readily follow Mr. Marburg's suggestion of control by united action of the greater nations. Such united action might be very salutary, but is not so readily got.

WASHINGTON, D. C.

Lyman Abbott,
Editor of The Outlook.

I do not get from Mr. Marburg's article a very clear idea of just how he would bring about such a union between

nations in the interest of peace as he proposes. I have been inclined myself to think that the first step to be taken is to secure a true judicial tribunal at The Hague and to make the Hague Conference a body to meet from time to time, with the hope that it would eventually become a permanent congress of nations with only advising powers.

NEW YORK CITY.

Henry B. F. MacFarland,

Late Commissioner of the District of Columbia.

Mr. Marburg has himself raised most of the objections to the proposed plan, and has answered them satisfactorily except as to the fundamental difficulty of obtaining an agreement that will be workable as to which are the backward nations.

WASHINGTON, D. C.

Henry White,

Formerly U. S. Ambassador to France.

I think his idea excellent in itself, but I fear it would be very difficult, if not impossible, to carry it out, because (1) it would be difficult to get a considerable number of great Powers to agree upon a list of backward nations, as some of the former, for reasons of their own, would object to so classing some particular very backward one; and (2) it would be very hard upon such backward nations to brand them by so classing them, however desirable it might be for them to be in tutelage.

WASHINGTON, D. C.

Roland P. Falkner,

Assistant Director of the Census.

Your article suggests a method by which there might be a peaceful solution of the difficulties caused by the unjust treatment of foreign citizens by backward nations. . . . But there seems to be no organ to regulate or control the unjust treatment of backward nations by foreign citizens. . . . Is it not true that they (the vested interests of foreigners) are built up largely on special privilege oftentimes obtained by fraud and bribery? . . . The Powers would be most jealous lest an impartial tribunal might throw the case of some of their subjects out of court.

WASHINGTON, D. C.

Frederic R. Coudert,

U. S. Delegate to the Universal Congress of Lawyers and Jurists.

I think the idea an admirable one. . . . I heartily approve of it, and will be glad to develop it further if opportunity presents.

NEW YORK CITY.

Henry R. Farnam,

Professor of Political Economics of Yale University.

I am glad to see that you appreciate the importance of this problem of the backward nation, for it has always seemed to me that this is the greatest obstacle in the way of universal peace. It is easy to see the evils of war, but one who studies history is constantly brought face to face with the fact that many great evils have been abolished by war, and that it has been the means by which backward countries have been forced either to progress or be absorbed. I imagine that in the practical execution of your plan the great difficulty would be to agree upon ideals of progress.

NEW HAVEN, CONN.

Alpheus H. Snow,

Author of "The Administration of Dependencies," etc.

In my opinion, the United States stands to lose, and every other nation stands to gain, by every alliance or union into which the United States can possibly enter; and this will be so until the other nations adopt our political philosophy, . . . according to which all institutions are the agents of the individuals who create them, and the rights of the individual to life, liberty and the pursuit of happiness are therefore superior to all governments.

WASHINGTON, D. C.

Everett P. Wheeler,

Lawyer and Publicist.

I think his suggestions judicious and educational. One serious difficulty is that the nations which we consider backward do not think themselves such. It does seem to me, however, that if such a federation as is suggested could be formed thru the medium of the next Hague Conference it would intervene with much better grace than any individual nation could possibly do.

NEW YORK CITY.

General James H. Wilson.

The backwardness of various nations arises from local conditions which are frequently due far more to economic considerations than to differences in race capacity. . . . The conditions in all Spanish America are everywhere deplorable. They had their origin not so much in race differences as in race practices. When the conquistadores took possession they enslaved the natives and, in some instances, as in Cuba, exterminated them and replaced them by negro slaves. . . . The simple fact is that Cuba's seventy per cent. white and thirty per cent. colored, altho greatly benefited by independence, still suffer from an unjust distribution of her lands and unjust taxation upon her labor as well as upon her products by the high tariff of the United States. . . . In Mexico the case is, if possible, still worse, for the reason that there is and always has been a far less proportion of white men. The Indians were not exterminated, but enslaved or peonized and converted to Christianity. Their lands were confiscated and subdivided between the conquistadores, and are now held in large tracts by their white successors. In a population of fifteen and one-quarter millions there are approximately one and three-quarter million whites, . . . while the Indian population owns but little land, is docile, industrious, does nearly all the work and is underpaid. . . . Clearly the state of affairs in Mexico is the result of antecedent politics — economic conditions which violate and have violated from the year 1521 the fundamental principle of all human government, namely, "that every man shall enjoy in peace the just returns of his own labor" and that no one shall have his will of another's person or property against the consent of that other person.

WILMINGTON, DEL.

Hannis Taylor,

Formerly U. S. Minister to Spain.

As intervention is a hostile act which the state interfered with may treat as an act of war, the intervening Power or Powers must necessarily assume the right of final judgment and the burden of proving that such judgment is justified by the facts of the particular case. . . . The theologian or metaphysician is confronted with a dilemma scarcely more perplexing than that imposed upon the publicist when he attempts to reconcile the right of independence, which confers upon every sovereign member of the family of nations complete liberty to live its own life and to manage its affairs in its own way, with that higher law which authorizes one or more states, under certain conditions, to compel another to do something which, if left to itself, it would not do. . . . Law, national and international, is a governing organism which changes as the relations of sovereignty change. It is folly, therefore, to attempt to construct, at any moment in the world's history, a set of artificial rules designed to check or hinder the progress of natural and inevitable development. . . . The twentieth century is absorbed with the struggle for existence in the field of commerce and industry. Foremost among the nations that must struggle for commercial and industrial expansion or perish is the dominant military power of Europe, Germany. . . . In the same situation is Japan. . . . Driven by the same necessity Italy is forced to throw her surplus population, even at the expense of war, into North Africa. Nothing is more chimerical than the idea that the natural and irresistible flow of such tides can be checked by conventions or suspended by arbitration—a process which can only be advanced when it is confined to the domain to which it legitimately belongs.

WASHINGTON, D. C.

H. E. Bourne,

Professor of History, Western Reserve University.

Nearly all the small backward countries are already within one of the many spheres of influence, either the spheres of some single Power or the spheres of a group of Powers like the Triple Alliance or the Triple Entente. If this is the case it would be very difficult in practice to persuade these Powers to release their rather exclusive interest and turn it over to a commission. It would seem easier to reach a similar result by utilizing and developing the method now much employed, freeing it of the ele-

ments of gross selfishness and broadening the basis as much as may be practicable. . . . It would probably have been impossible to persuade the French to ignore their special interest in Morocco, due to common frontier, etc., and to turn over the restoration of order to the agents of an international commission, partly because the French out of the troubles hoped eventually to bring a handsome addition to their North African empire. But it might have been possible to have procured from the Algeciras Conference a settlement which should have precluded anything more than the safeguarding of legitimate interests—in other words, prevented the French seizure of Morocco.

CLEVELAND, OHIO.

F. M. Pierce,
General Secretary of the Universal Brotherhood.

All the great Powers have their special spheres of influence. Might it not be that your proposal would break into these sacred places? . . . As to the small backward peoples, will not their powerful neighbors, or natural guardians, act to raise them, as the United States is doing in Central America, in Cuba and in the Philippines?

POINT LOMAR, CAL.

Leon C. Prince,
Professor of History in Dickinson College.

I hesitate to accept as a remedy for the evils which undoubtedly exist such an enlargement of the dangerous doctrine of intervention—a doctrine which is not only contrary to the basic principles of international law, but which has already been strained beyond its resiliency. . . . The small enlightened nations . . . have few or no interests of their own to protect in these backward communities, and I do not see how they could interpose an effective check upon the rapacity of the large enlightened states which would be pretty certain to develop. You say the Monroe Doctrine would indicate the use of the United States as the sole agent of the commission in case of intervention in the two Americas. I think it much more probable that the commission would deny the Monroe Doctrine. There is not one of the great Powers, except perhaps England, that would not be the gainer by the overthrow of the Monroe Doctrine, which tho in no sense a part of the law of nations, has nevertheless proved sufficient thus far to check the rapacity of the Powers in the Western hemisphere.

CARLISLE, PA.

J. W. Garner,
Professor of Political Science of the University of Illinois.

. . . It is the duty as well as the right of the more advanced nations to carry the torch of civilization to the more backward ones. . . . The difficulty (of the present situation) is that they cannot go further without also extending their sovereignty to new territories and this cannot be done by individual action without exciting jealousies and even the opposition of other Powers. Under the circumstances, joint or concerted action, such as you suggest, appears to me to be the only sensible and practicable solution. . . .

URBANA, ILL.

Leopold Grahame.

There are almost insurmountable difficulties in the way of a complete realization of the project—difficulties of a commercial character as well as the difficulties involved in national policies and national characteristics. Yet it is possible, and even probable, that a persistent effort, backed by adequate authority, might be productive of substantial results in the direction indicated. . . .

NEW YORK CITY.

W. F. Sands,
Formerly U. S. Minister to Guatemala.

This article opens up a subject in which I take deep concern, having spent all my diplomatic life in "backward nations" and five years in a futile endeavor to turn the destiny of that ill-fated little empire, Korea. Mr. Marburg's proposal to induce the enlightened Powers jointly to constitute a commission for the purpose of rendering more secure the lives and property of their nationals in backward nations is not new to me. This plan presented itself to me as a solution of the difficulties which beset me as adviser to the Emperor of Korea, but was

made visionary and impossible by the torrential expansion policies of those great nations whose interests centered in that country. . . . In Persia, recently, the same case rose again, . . . altho internal conditions in Persia must have been more favorable to success than those of Korea from 1899 to 1904, inasmuch as there existed a stronger and more enlightened national party in Persia for Mr. Shuster's support. I argue from these two instances that great, and possibly insurmountable, difficulties might be opposed to a realization of Mr. Marburg's plan by certain of the enlightened nations whose political interests are involved.

I argue from my experience of six years in Central America that the enlightened nations of Europe seeking the co-operation of the United States in maintaining security for life and property in several of those backward nations might easily encounter even more emphatic opposition. . . . The need is palpable for an international understanding concerning those nations which have either fallen into degeneracy or in which certain self-seeking and unscrupulous rulers have possessed themselves of power. . . . Whether those who guide our foreign affairs could be brought to agree to such an international commission any more than to assume full responsibility for abuses lying at our doors, I doubt. Either course leads far, and diplomacy, all the world over, is a policy of temporizing, seizing a little good here and there, and, if well and consistently guided, piecing these tiny advantages together to make one whole achievement.

WAWA, PA.

Social Pressure and Moral Weather

BY FRANKLIN H. GIDDINGS, LL.D.

PROFESSOR OF SOCIOLOGY IN COLUMBIA UNIVERSITY.

THE terrible figures of homicide in the United States, upon which THE INDEPENDENT has made comment, afford an excellent measure of the present ineffectiveness of social control in American civilization. Normal social control brings pressure to bear upon anti-social elements of the community. Such as are modifiable, teachable, reformable, it compels to come up to standard, to conform to the typical behavior of civilized men. Such as are incorrigible it eliminates or sequestrates.

This normal functioning of society has broken down in the United States. It has done so because our social pressure, as shown in nearly all its manifestations —and there are, of course, beyond the repression of criminality, many ways in which social pressure reveals itself—has fallen to a low degree. Social pressure is curiously analogous to barometric pressure, and its rise and fall, like the rise and fall of barometric pressure, are followed by changes of importance to the individual human being. A fall of social pressure always brings increasing cloudiness, and presently storm, in the moral weather.

In recent years sociology has rapidly been mastering and applying strictly scientific methods. It is now able to measure with a fair approximation to accuracy the rise and fall of social pressure, and to tell us what causes occasion the fluctuations.

The measuring instrument is a simple statistical device which has come into general use among physicists, biologists, psychologists, economists, and other investigators. It is technically called "the standard deviation," or "error of mean square." It is derived from the arithmetic average of any given set of arithmetic items or measures. To get the standard deviation of any group, array or series of statistical items, you first find the arithmetic difference, plus or minus, between each item and the average of all the items. These differences are called "deviations." You now square each deviation, and find the arithmetic average of the squares. The square root of this average is the standard deviation.

The use of this device is as simple as the process by which it is obtained. Objects or actions that are subjected to any consistent pressure, influence or selection tend to become uniform. For example, the cornstalks in a field of uniform fertility, which has been planted with selected seed of uniform quality and uniformly cultivated, tend to be of equal hight. If a thousand full-grown stalks from such a field should be measured, the standard deviation of the thousand measures would be very small. But if different parts of the field were of unequal fertility, or if it were planted with mixed seed, or if one part of it were better cultivated than another, the full-grown stalks would greatly vary in hight, and the standard deviation of their measures would be large.

An interesting application of this method of measuring pressure has been made by Prof. F. Stuart Chapin, of Smith College, in a paper on "The Variability of the Popular Vote at Presidential Elections," which may be found in the September number of the *American Journal of Sociology*. Mr. Chapin has obtained the standard deviations of the Republican votes cast in all the States, and of the Democratic votes cast in all the States, in Presidential elections from 1856 to 1908 inclusive. These deviations show a nearly continuous increase in the Republican column, from 73 in 1856 to 203 in 1908; in the Democratic column from 51 in 1856 to 148 in 1908. The increase in the Democratic column has been slightly more consistent and uniform than in the Republican column. From these figures Mr. Chapin draws the conclusion, confirming popular belief, and valid if his technical precedence has been right, that independent voting has steadily increased. If it has, political party pressure upon the individual voter in the United States has steadily decreased.

From similar applications of his measuring device the sociologist knows with a high degree of certainty that social pressure in many other manifestations has been declining in the United States for a generation. For example, the statistics of occupations and of membership in religious denominations tell the same story of diminishing restraint upon the individual that is told by the political figures.

The sociologist has arrived also, as has been said, at a definite account of the dominating causes of fluctuation. Social pressure is a product of mental and moral homogeneity, or likemindedness, in the population. Men that think and feel alike arrive at common conclusions; they look at their problems in much the same way; they can get together; they can co-operate; they can shape a consistent social or public policy, and carry it out. Men extremely diverse and unequal, having back of them differing experiences and traditions, looking at life in conflicting ways, can do none of these things, or can do them only with great difficulty, and imperfectly. As a fact of history, extremely heterogeneous populations invariably do one or the other of two things; they evolve a highly centralized and powerful government, which holds them in order with a despotic hand, or they fall into social and moral anarchy. Mexico, within the memory of men now living, has done both.

It is useless to deny or try to disguise the fact that our present tendency in the United Staes is toward anarchy in all those fields of human interest which we have not yet brought under the iron hand of our central Government. It is useless to deny that we have here the real cause of a powerful movement to extend enormously the functions of our central Government, and to bring an increasingly large part of our life interests under authoritative administrative control.

It is a momentous change, and it is no wonder that thoughtful men are disturbed by it. But to the scientific sociologist there is no mystery in it. On one side of his statistical exhibit our appalling homicide rate, on the other side of the exhibit the haste with which we are turning over all sorts of interests to governmental control, are scientific measures of the price we must pay for our idealistic attempt to mingle in one political aggregate first, antagonistic races, and, secondly, the most miscellaneous assortment of nationalities, standards of living, religious, moral and political traditions, temperaments and opinions, ever nominally combined as a single people.

New York City.

Literature

John Synge and His Critics

BEYOND a doubt many of those who have "taken up" the Irish literary movement are fickle faddists. That fact does not lessen the sincerity of those of us who admired John Synge's work before the poetasters fell in line and took to muttering *κάθαρσις* between the acts of his play, chanted by the Abbey players. Synge's life was brief—from 1871 to 1909—but his friends take it for granted that his fame will last longer than his body. It is announced that Dr. Reinhardt will mount his "Playboy" this season at the Chamber Playhouse in Berlin. One of his English biographers writes that he seems as "permanent" as any man of his generation; that it has been claimed for him that he is "the greatest imaginative dramatist who has written English since Shakespeare."[1] Yet this critic is a man of sense, and another Englishman—the author of a valuable account of "The Repertory Theater"—writes: "In all the English drama, from Sheridan and Goldsmith to Mr. Shaw, there is only one name that will go up among the greatest, and that is the name of another Irishman, J. M. Synge."[2]

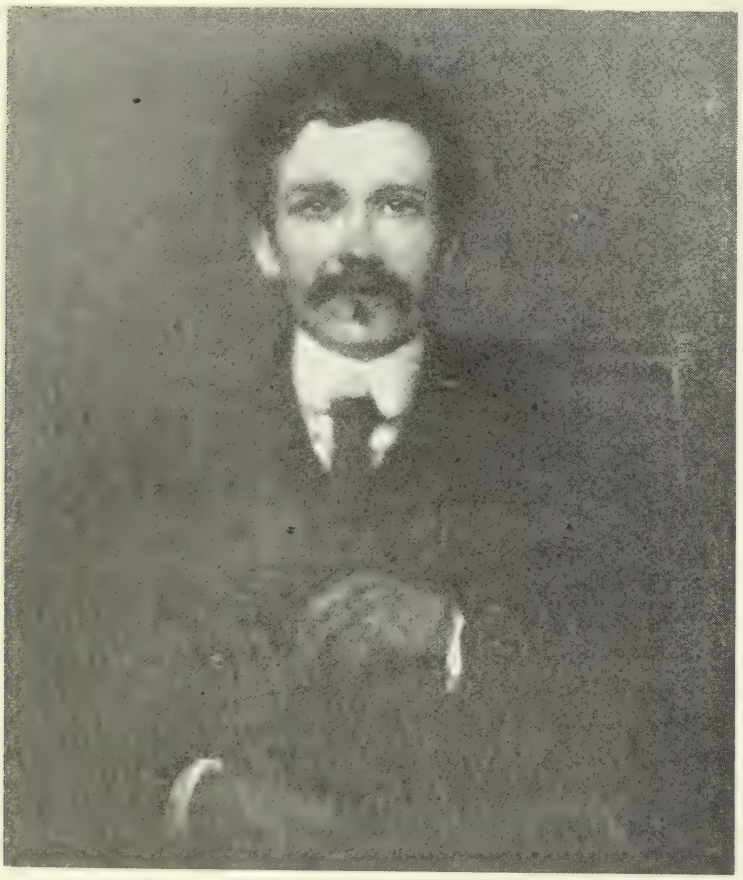
What impresses the reader of Mr. Bickley's little book, and Mr. Howe's big one, is the simplicity of Synge's life, its comparative thinness in incident. The playwright had little to say of himself and of his opinions; he preferred to talk of other persons and of events. Yet his life was one which might well have been replete with adventure, for he traveled far and wide thru Europe after his graduation from Trinity College, Dublin; studied music in Germany and linguistic in Paris; fiddled his way across the map and lived in the families of peasants and petty bourgeois; then, acting upon a suggestion of the poet Yeats, returned to Ireland and learned the wild west coast better than any of his books—better even than his favorites Villon and Rabelais. Synge's residence in France was not wasted, for, as Mr. Bickley writes, it helped to open up before him "that clean, disillusioned view of life which gives his plays their lucid reality." Priestly controversialists have tried to persuade us that he plagiarized certain Frenchmen, and name Loti.[3] Yet we cannot classify Synge cavalierly as of a school. To quote Mr. Francis Bickley:

> "Character, situation and language he borrowed from actual life, improving and embellishing them, but never altering their essence. His plays are never symbolical, his characters never projections of his own moods and ideas, as with Maeterlinck or Mr. Yeats. But, when all is said, no sincere artist has ever produced absolutely impersonal work. He depicts things as he sees them, and each has his peculiar mental vision. . . . The moods of his various plays—laughter and passion and knavery—were what he saw in the world; but the light in which he saw them was his own, a clear, hard light, striking thru smoky glass. If there be an actual reality in things—an authentic value to stultify all our illusions—Synge was one of the few who have got very near to seeing it."

So much for this eminently sane critic—sane, even tho we cannot agree with him that "Deirdre" was Synge's great achievement, and can't help pointing out that in one sense Synge's writing, like all representative art, is inevitably symbolical. Mr. Bickley goes on to discuss those qualities of style which make Synge's dialog, now trenchant, now powerfully poetic, qualities much talked of in the salons and praised in THE INDEPENDENT before the cult of Synge became so fashionable as today.[4] We like Mr. Bickley's book, tho we could wish that he had stuck to his author and saved his knowledge and criticism of Synge's contemporaries in Ireland for another book, where he would have room to turn round in. Besides, Mr. Yeats may be counted upon to blow his own horn; that is a part of the "movement."

And Mr. Yeats's book on Synge, tho we have seen it only in the edition

[1] J. M. SYNGE AND THE IRISH DRAMATIC MOVEMENT. *By Francis Bickley.* Pp. 97. Frontispiece. Boston: Houghton Mifflin Co. 75 cents.



[2] J. M. SYNGE: A CRITICAL STUDY. *By P. P. Howe.* Pp. 216. Frontispiece. New York: Mitchell Kennerley. $2.50.

[3] His debt to M. Georges Clemenceau's "Voile du Bonheur" in his own "Well of the Saints" is very justly estimated by Mr. Howe, *op. cit.*, pp. 122-125.

[4] THE INDEPENDENT, April 13, 1911.

issued by the Cuala Press, at Dundrum, has already been announced by an American publisher.[5]

Tho some of Synge's plays—even his striking and not to be classified "Playboy of the Western World"—may be weak in design, there are no weaknesses in execution. The sum of his "not exceptionally prolific" production was restricted to some four or five years. Here is one who bided his time (which he was late in finding) and kept hidden the chips from his workshop. Yet in his travel books (if one may so describe his Irish journalism) he offers the reader numbers of "uncut crystals, beautiful in themselves, but from which will be fashioned jewels still more beautiful." Synge's "Aran Islands" is, indeed, one of the "few great journals giving a simple and direct account of a life among a people." True, his critics almost inevitably treat the book as a record of his plots, as he gleaned them from the lives of the islanders; a gallery of his types; a treasury of his vivid words and phrases. But we cannot think that Synge coldly regarded these people as so much "copy," for something he found in Ireland, on his return there, fired him, and gave life to his style and direction to his life, so that Mr. Howe can write: "No writer has seen Ireland with such intimacy, at the same time with such detachment." It is a volume of his travel sketches that a Boston publisher issues in a form identical with that of his plays; notes that tell us of the Wicklow vagrants and their picturesqueness; the kelp makers; the harvesters of Mayo.[6] This work may scarcely measure up to the level of "The Aran Islands," but how infinitely superior is it to the common run of travel literature! It has much of the crispness, poesy and inconclusiveness of the plays which he constructed from these materials; nor it is wholly wanting in their native rhythm. The abundance of beggars in Ireland has often been regretted, yet in one sense, writes the dramatist, it is an interesting sign:

JOHN MILLINGTON SYNGE

From the painting by J. B. Yeats, R.H.A.—"the best portrait of the man," as Mr. Howe writes, and hung in the Municipal Gallery in Dublin. "It shows a homely Irish face, gallicized just a little deliberately; with features that are insignificant, save for remarkable eyes. The black hair is in a careless sweep, the attire negligent but determinedly ordinary. The hands are the delicate hands of a craftsman. You come back to the eyes—eyes that assert nothing, that begin by questioning your assertions merely, that hold you under their calm, amused gaze, a gaze tolerant and a little cynical. They are curiously wide eyes, lidded a little lazily. As you look, the impartial gaze appears to have shifted; it is beyond you, on the things of eternal concern."

> "For wherever the laborer of a country has preserved his vitality, and begets an occasional temperament of distinction, a certain number of vagrants are to be looked for. In the middle classes the gifted son of a family is always the poorest—usually a writer or artist with no sense for speculation—and in a family of peasants, where the average comfort is just over penury, the gifted son sinks also, and is soon a tramp on the roadside."

These tramps and tinkers, so often chosen by Synge as the characters of his plays, are men and women "a little richer in life than the ordinary man," and rendered by the dramatist a little richer again than he found them. It is rural Ireland that Synge paints for us, and por-

[5] J. M. Synge and the Ireland of His Time. *By W. B. Yeats.* New York: The Macmillan Co. $1.50.

[6] In Wicklow, West Kerry, the Congested Districts, Under Ether. *By John Millington Synge.* Pp. 215. Boston: John W. Luce & Co. $1.25.

traits of countrymen; we have Mr. Bickley's word for it that at the time when he was composing "Deirdre of the Sorrows," the playwright expressed his weariness of stage peasants (even his own), and contemplated writing a play of Dublin slum life. That play is one of the great works which Death denied us. Even without it, the Irishman's contribution is amazingly rich for its compass. Matthew Arnold is only one of the critics who has praised the Celtic wonder-sense and nature-sense; to this was added, in Synge's case, a gift for dialog far different to that of Sheridan and Wilde and Shaw, yet even more remarkable than the cleverness of these fellow Irishmen. "One has only to read 'The Playboy' or 'Riders'—or hear them finely declaimed by the Irish actors," writes the more succinct of Synge's two commentators, "to recognize that a stage speech has been created more adequate in its energy and beauty than anything, at least, since Lady Wishfort abused her maid, or Millament dictated terms to Mirabell." "It can by no means be set down to accident that the sole major dramatist who had written in English in our time should have been moved to write in a country where life still has its aspects that are free and wild, and where speech is unconscious of the newspapers," writes Mr. Howe. "London, since it outgrew the just proportions of a city, has produced no great drama. Paris does not produce great drama. No great drama has come out of the United States." There is, he continues, a real antipathy between great drama and great cities, where irrelevant business confuses and distorts the concerns of playwright and audience, and you cannot see life for the lives. The newspaper is the rival of the dramatist nowadays, even more than his inspiration; the war correspondent and the chronicler of the *crime passionel* displace your Beaumont and Fletchers and Dumas fils—if, indeed, the reincartions of these celebrated personages are not themselves writing newspaper stories instead of plays. And that is why the drama in English has had a new birth in Dublin when it is dead in London and New York; for we read:

> "Dublin is a great deal nearer to Periclean Athens or Elizabethan London than to modern London or modern Paris. A man may see life in a city the size of Dublin, in every sense but that of the cosmopolitan guide-book; he may even see it whole."

Synge's plots we need scarcely discuss—for they have been analyzed in so many places and nowhere better than in Mr. Howe's study.[7] And why should we not read the author at first hand? As for the paucity of information concerning Synge's life conveyed by his critics, one of them has an admirable way of excusing himself. An old man on the road once asked the dramatist about himself, and Synge writes of his reply: "I told him that I was born in Dublin, but that I had traveled afterward and been in Paris and Rome and seen the Pope, Leo XIII." Mr. Howe tells this story and adds: "Outside of the work he left, that is his life, one thinks, as he would have it told."

Far Horizons in Fiction

If the people of far horizons charm because their cares are not upon us, then there is every reason for the reader of David Gray's new book, *Ensign Russell,*[1] to be delighted with the persons therein introduced. It is not alone due to the fact that they flirt and fight and feast in the Far East and the South Seas that Mr. Gray's men and women are charming. He must be so himself, so of course they cannot help it. The book is a collection of short stories, all connected but the last and that's the best.

Short stories are too short, novels are too long; separately they please and do not please. But in combination? How does that idea tickle the taste? Impossible as it may seem, Roger Pocock has produced such a novelty in his really gripping book, *The Man in the Open.*[2] It is really a novel, but the opening chapters are short stories in themselves and the rest of it's a dialog by diary—almost. The scene is spread, without stretching, from the Labrador to Abilene and north again to British Columbia, and the book is as American in

[7] Not that we agree with all his judgments—as where he places "In the Shadow of the Glen" higher than "The Riders."

[1] Ensign Russell. *By David Gray.* New York: The Century Company. $1.

[2] The Man in the Open. *By Roger Pocock.* Indianapolis: Bobbs-Merrill Company. $1.35.

flavor as a Baldwin apple. The author's manner is odd, but very vivid if one does not allow his disdainful neck-hair to ruff before he gets into the story.

The grand, forbidding loneliness of the H. B. C.'s country becomes a trifle confidential after Harold Bindloss, in straight, newspaper English, has led his parties over *The Long Portage*.[3] The story is of the out-witting of a weak English gentleman by a fine young Canadian. Bella Crestwick, tho not the heroine, is the most interesting character in the book, but unfortunately you do not feel that you get very well acquainted with any one of them.

Many people do not read for the purpose of making friends of the characters in their books. The more their loss. Any who seek thus for $1.25 a new set of acquaintances will find them in Samuel Hopkins Adams' *The Secret of Lonesome Cove*.[4] It is a detective story with the over-done Doctor-Watson entrée omitted from the menu. Unlike most detective stories, the atmosphere of this book is not one of cold cynicism, but rather of warm human interest in the motives behind the actions of the characters. A dead body is found on the shores of a treacherous Massachusetts cove and Professor Chester Kent undertakes the solution of the mystery for his own pleasure. He adds to the mystery, greatly, and is very irritating in his secretiveness about most interesting points, but in the end he grows an athletic pair of the Little God's wings and helps tie two lovers' hearts in a true lover's knot. 'Most anyone would like this story.

And the same is true of *Good Indian*,[5] another of B. M. Bowers's books. This scene is on the far horizon, too, but instead of the exalted air of British Columbia or the bitter bite of the Farther North, the reader swelters in an Idaho summer while Good Indian saves Peaceful Hart's ranch from the devil and Squaw-talk-faroff weaves magic about the hero's broken heart and proves it was only the capillaries of that organ which had been injured. It is harsh to be so vague, but one can scarcely talk above a whisper about this story without giving away the snap, and to do that would be a pity. The author shows considerable knowledge of the Idaho Indians, sage and sand (both kinds of the latter two), but the story is a tale and none of the information is offensively displayed. It just seems to fall into place as the book progresses, the way the letters fall from the busy finger of a linotyper.

The figure of Romance waves his cloak dangerously near the present in the *Secret of Frontellac*,[6] but the shortened focus does not seem to affect His Quality seriously. The story is of a hunt for buried treasure in a French château left somewhat improbably to a 'steenth descendant of an old line, who happens to be an American. The style is not very easy, rather stilted, but the plot is excellent and an unburied treasure in the form of a delectable mademoiselle quite makes up for the slight disappointment one feels in regard to the disposition of the treasure that was buried.

It might be said of Mr. Pocock's book, mentioned above, that it was literature, but not literary. Of *Concerning Sally*,[7] by William John Hopkins, rather the reverse is true. It, too, might be called literature—you know the characters—but it is necessary to keep wishing that their sculptor had worn gloves when he was modeling his clay because his finger-prints are everywhere in evidence. They are nice finger-prints, whimsical in pattern, but ——. And why must he employ so many suppositional and conditional clauses and assume to know so little of the motives of some of his characters? For instance, the engaging professor, tho a delight, must be damned by one's ignorance of him, an ignorance born of the author's innuendo. Possibly he does not speak out because that very mannerism will make him popular among people who are not swift to judge and who like to find others who doubt the infallibility of

[3] THE LONG PORTAGE. *By Harold Bindloss.* New York: F. A. Stokes Co. $1.25.
[4] THE SECRET OF LONESOME COVE. *By Samuel Hopkins Adams.* Indianapolis: Bobbs-Merrill Co. $1.25.
[5] GOOD INDIAN. *By "B. M. Bowers"* (B. M. Sinclair). Boston: Little, Brown & Co. $1.25
[6] THE SECRET OF FRONTELLAC. *By F. K. Scribner.* Boston: Small, Maynard & Co. $1.25.
[7] CONCERNING SALLY. *By William John Hopkins.* Boston: Houghton Mifflin Co. $1.35.

"ALWAYS CLIMBING BY EASY GRADIENTS TOWARD THE GREAT V"
From Winthrop Packard's "White Mountain Trails" (Small)

their judgment. The twenty-five years unfolded of Sally's life are strong, heartening years to the reader, tho rather disheartening, some of them, to Sally. She begins as the modern little girl—a type full of hope for the future, don't you think?—a girl of imagination, the friend of the fairies and of the fairies' apparent foe, Science. The author has read Arnold Bennett, tho perhaps it is unfair, and certainly it is necessary to say so, for he is quite likely the American result of the same literary impulse which has produced Bennett for England. Environment must answer to many charges of plagiarism before the final bar of judgment. Hopkins is, like Bennett, a little long-winded at times, but so warm-hearted and concerned that he may be forgiven by most of the many who ought to read his book.

White Mountain Trails. By Winthrop Packard. Boston: Small, Maynard & Co. $3.

If one likes honey without bread, pansies without greenery, color as color; if he prefers tinkling streams to broad rivers that may be swept by the horn of a searchlight on some steamer's brow—that one will like the purling mosaic of words which sets forth the *White Mountain Trails* and the views to be seen therefrom. Yes, it is to be feared that Winthrop Packard's foot slipped when he was climbing the mountain of descriptive writing and that he went down with the avalanche called Fine and was buried in the valley named Shallow. Yet why mourn? Many readers do like fine writing, so let's see what Mr. Packard has for them. In the first place, he knows his country and loves it, that's evident from the occasional striking phrases he hits off, such as "the snow arch at the head of Tuckerman's ravine holds winter in its heart all summer long." If he loves pellucid fluting on the Pan-evoking pipe better and plays that doubtful instrument with his pen, why shouldn't he? All true poets love the vermeil stricken caravans of the amethystine West, when, at the back of evening, they come forth to parry the last dying thrusts of the immortal effulgence of the day. This isn't quoting, but it's an idea. Apart from the adjectives

—nay, even in spite of them—the book makes the tramper long to go forthwith to the White Mountains and see their splendors for himself. Possibly that was its purpose.

Cuneiform Parallels to the Old Testament. Translated and Edited by Robert William Rogers, Ph. D., Litt. D., LL. D., F. R. G. S., Professor in Drew Theological Seminary. New York: Eaton & Mains. $4.50.

Professor Rogers has rendered a valuable service to ministers and other students of the Old Testament by bringing together all the cuneiform parallels, so far recovered, which have a direct bearing upon the texts, literary materials and historical questions of the Bible, or throw light on some of the Hebrew traditions, customs and religious practices. These excerpts from the cuneiform literature are presented in translations which Professor Rogers has worked over to represent the latest results in decipherment and Assyriological study. For the further advantage of those who have a reading knowledge of Assyrian or other Semitic tongues a transliteration of the original text is given with each translation. The editor has selected about the same material as Gressmann included in the Assyrio-Babylonian part of his "Altorientalische Texte und Bilder," and the grouping follows the general plan found in that work, to which frequent reference is made. In fact, this new volume invites comparison with Gressmann's excellent collection, not only because it is intended to do for English readers practically what the earlier work did for the German, but also because of its parallelism to the German compilation. There are fewer notes in connection with the English translations and the Old Testament parallels are less frequently pointed out. Sometimes the order is changed without any good result, as may be seen in the Sennacherib inscriptions. But in general Dr. Rogers has made advances on the work of his German predecessor. He has brought forward helpful additions, as in the number of Tell-el-Amarna letters translated, and his introductions to the historical texts will be of great assistance to students. One wishes that the author had provided equally helpful introductions to the mythological texts, the hymns and prayers, and especially to the chronological materials. We believe that fuller notes thruout would have greatly enhanced the value of the book, and this, too, without destroying, as the editor feared, the real student's desire to investigate and judge for himself. Those who have not followed closely the results of research in these fields will be surprised at the abundance of material now accessible for comparative study in biblical lines. Among Dr. Rogers's translations are various stories of the creation and flood, hymns and prayers similar to the Hebrew psalms, parallels to the pentateuchal ark of bulrushes and the scapegoat, historical texts relating to biblical events from the time of Abraham to the reign of Cyrus, and an almost complete version of the great law code of Hammurapi, echoes of which are found thruout Israel's long legal development. To this wealth of literary material the editor has added a large chronological table and about fifty fine half-tone pictures of inscribed tablets and cylinders, boundary stones and monuments, statues and other works of art, making a very attractive as well as useful volume.

Illustrious Dames at the Court of the Valois Kings. By Pierre de Bourdeille and C.-A. Sainte-Beuve. Translated by Katharine P. Wormeley. Pp. 308. New York: Lamb Publishing Co. $3.

The Ruin of a Princess as Told by the Duchess d'Angoulême, Madame Elizabeth, Sister of Louis XVI, and the King's Valet de Chambre Translated by Katharine P. Wormeley. Pp. 329. New York: Lamb Publishing Co. $3.

In the first of these volumes the eager and restless society of sixteenth century France, with all its emphasis upon beauty and adornment, with its courtliness and etiquet, its turbulence and crime, is set forth in the lives of such women as Catherine de' Medici, Elizabeth of France and Marguerite of Navarre. Most of the narrative is from the pen of de Bourdeille, or Brantôme, as he was more usually called after being invested with the abbey of that name at the age of sixteen. Several short essays by Sainte-Beuve have been added, apparently for the benefit of those whose slight knowledge of the period would lead them to accept Brantôme's uncriti-

cal judgments too readily. Modern writers are not accustomed to speak of the "noble and incomparable virtue" of Catherine de' Medici or to deny that Mary Stuart granted favors to Rizzio and Bothwell. It will surprise those who have read other works by Brantôme that the ladies are all so virtuous; but, as he takes care to inform us, the numerous scandals were held back for a later appearance in his "Dames Galantes," where the names of the principals are suppressed. Brantôme was an abbot, but of the Renascence mold, less devoted to his abbey than to soldiering, intrigue and literature. There are curious and quaint passages, as where the Queen of Spain, when his teeth troubled him, sent "an herb very special for that ache, which, on merely being held in the palm of the hand, cures the pain suddenly, as it did very quickly for me." His father, playing at cards with Pope Julius and losing all he had, pledged one of his ears (even promising to eat it) against five hundred crowns—and fortunately won. The translation is excellently done, as are the reproductions of eight paintings by Rubens, Clouet and others. The chief figure in the second volume is Elizabeth, sister of the ill-fated Louis XVI. A sweet and charming character, as well as an understanding which would be very remarkable today in a girl of twenty-odd, appears in the letters written to various friends between 1786 and the tragic 10th of August, 1792. The strength and weakness of the king she knew perfectly. He has such good intentions, she says; he desires the right so much, and has kept himself so pure; but "the king returns upon his steps, just as our grandfather did. It seems to me that government is just like education. We should not say 'I will' until sure of being right. But, once said, there should be no yielding of what has been ordained." Elizabeth was sent to the guillotine in 1794 after nearly two years' imprisonment. The story of her confinement, with the king and the queen and their children, in the tower of the Temple is told simply and vividly in the journal of Cléry, Louis' devoted valet. The hardships were not so great as some sympathetic royalists have imagined. The king had his hair rolled at night and dressed in the morning; he possessed a library of 1,500 volumes; and he was allowed to walk in the garden. But the Duchess of Angoulême gives a revolting description of the circumstances of the young dauphin after the death of his father and mother: his bed unmade, his clothes not changed for a year, fleas everywhere, the solitary little window tight closed, and no sanitary arrangements whatever. Altogether, these letters and memoirs are very interesting; their publication in a moderate priced edition was distinctly worth while. Altho historians give less attention to the daily life of kings than they used to do, most of us are still fascinated when brought into close touch with those who have played a part in stirring times.

The Hoosac Valley. By Grace Greylock Niles. New York: G. P. Putnam's Sons. $3.50.

When most of us went to school we studied the history of our whole country in the space of something under 300 pages. Now comes Grace Greylock Niles' history of *The Hoosac Valley,* which comprises 600 pages, including the notes. The book is well illustrated with woodcuts, engravings and photographs and is filled with the stirring anecdote and legend of frontier life. It is mostly a story of fighting in the earlier days, but the poets who have sung the praises of the region, Bryant, Thomas Moore, and may I say Hawthorne and Irving, come in for their share of mention. Good topographic descriptions abound and the author seems thoroly acquainted with her field. The book was written because the Hoosac Valley deserves well of the historian, Miss Niles accrediting it with a leading role in the early scenes of the fight for independence. No claim to new material is made, but especial emphasis is thrown upon the relation of the history of the valley and region to that of the world.

My Demon Motor Boat. By George Fitch. Boston: Little, Brown & Co. $1.10.

A book of real humor is a rarity nowadays, and it is a pleasure to herald a genuinely funny one. This is. The author of "In Good Old Siwash" is at his best, and the many misadventures he had in learning to run the "Imp" are narrated

with delightful drollery. That maltreated and misunderstood engine becomes a ludicrous monster of ingenious maliciousness, coughing and sputtering oil into the faces of the amateur boatmen and retaliating with fiendish vindictiveness the sufferings it undergoes from their ignorant "monkeying" with its anatomy. The book is something like Jerome's "Three Men in a Boat" with an American flavor. It is an instant dissipator of gloom.

The Marriage of Captain Kettle. By C. J. Cutcliffe Hyne. Indianapolis: Bobbs-Merrill Co. $1.25.

The efficient Owen Kettle, Welshman, is mate on a British tramp at the opening of this partial account of his activities. Fearless and even a lover of trouble, which he has a way of overcoming in his own masterful way, he saves the crew of the "Norman Towers" from the incompetence of a tippling captain and an insane chief engineer. Before we come to the "Finis" page Mr. Kettle is master of the steamship "Wangaroo." The narrative of his adventures is nervous, vivid and humorous. The cruise thru lonely seas, with almost empty bunkers and gradually decreasing stores, might, to be sure, have had a tragic ending; but Owen Kettle believes in happy endings. He proves this off the African coast as well. And he marries most happily.

The Woman of It. By Mark Lee Luther. New York: Harper & Brothers. $1.30.

Mr. Luther's works are always faithful to life and interesting, but this story of official life in Washington would be more effective if it were more condensed. One can enjoy trivial details when elaborated by Mr. Howells, but they are a little tedious when not done by a master hand. The reader is tempted to "skim" the pages of this story of the social rise of a successful pickle manufacturer and his family, who go to Washington and try to adapt themselves to the unfamiliar intricacies of congressional social life. The characters are well drawn and the episodes are realistic, but there is no humor and little action in the story.

CAPTAIN KETTLE AND HIS FRIENDS
From the novel of C. J. Cutcliffe Hyne (Bobbs)

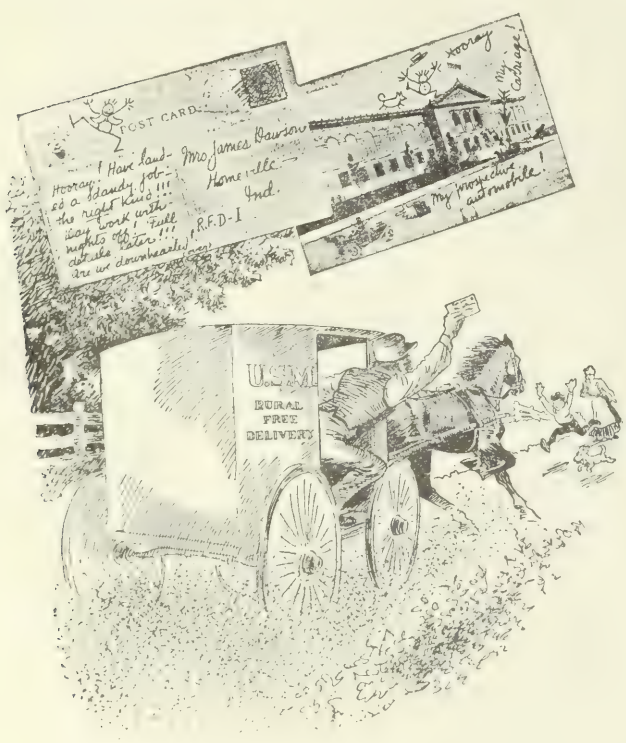
The Rich Mrs. Burgoyne. By Kathleen Norris. New York: The Macmillan Co. $1.25.

The author of "Mother," that appealing little book of last year, has written another story of American social life, which sounds the same note of warning as Dorothy Canfield's "The Squirrel Cage." These books are not so warm with humor as "Keeping Up With Lizzie," by Irving Bacheller; on the contrary, they are almost savage in their intensity—perhaps because they are written by women who have been in the squirrel cage themselves, feverishly driven by a senseless round of social exactions and ambitions. Into a little California city, where each woman in a certain set is wearing herself into nervous prostration to outdo her latest hostess, comes a certain Mrs. Burgoyne, reputedly worth eight millions, whose simplicity of dress and of living has a most wholesome effect upon the community. She is sweet natured, unostentatious and withal extremely attractive. She has the prestige of years spent abroad in diplomatic circles and of having been presented at the English court, and the tired women look at her with puzzled eyes; having unlimited means of procuring novel and luxurious possessions why doesn't she do it? Then, under her influence, they begin to see the absurdity of the little city copying San Francisco, that copies New York, that copies London or Paris. At the end they are eager to help her whole-hearted attempt to make their town a happier home for working boys and girls to grow up in, and they and the reader think very little about Mrs. Burgoyne's money, finding her so rich in all the best characteristics of lovely and useful womanhood.

Paul Rundel. By Will N. Harben. New York: Harper & Brothers. $1.30.

Mr. Harben's latest novel of the mountain people in Georgia strikes a new note —that of intense, religious feeling. *Paul Rundel* treats of that terrible time in the history of the South after the Civil War, when the Ku Klux Klan administered the law of Judge Lynch at night and in disguise; and some of their midnight assizes are portrayed with power. The hero accepts the savage code of the time, but after having shot an enemy in revenge for a wrong done his dead father feels the stirring of nobler impulses. His transformation, or conversion, or what you will, is not unnatural in a sensitive boy of fine fibre, nor is the psychology of his returning to give himself up to justice unsound. Such cases are not unknown in legal annals, and if Paul seems impossibly good after his change of heart, we must remember that it was no ordinary experience that had transformed his life. There are other characters that interest and a few that revolt by their brutality, but the book has a deeper message than the mere telling of a story; it shows a wide sympathy with those who have fallen into sin, and a belief in the possibility of their regeneration thru the power of God, so that even the brutal leader of the Klan does not entirely forfeit our sympathy. He thought himself the instrument of a wild justice; turned at last against himself, it brings a tragic reprisal. *Paul Rundel* is a courageous book, in that it dares to follow the working of God's spirit in the hearts of rough and irreverent men.

The Boy. By N. C. Fowler, Jr. New York: Moffat, Yard & Co. $1.25.



What a lot of good advice "the boy" is always getting! We cannot help wondering sometimes what would happen if he should attempt to carry out all which he receives in the course of a year or so. But the present volume should certainly be called to his attention because it contains the results of one of the most remarkable questionaires of its kind ever undertaken. Twenty-five well chosen questions designed to bring out the factors which make for success were sent out to over three hundred of the most successful men in the professions and especially in commerce and industry, and the replies, which are given in full as well as in summary, make interesting reading even for those who are no longer shivering on the brink of a career. The real distinction of most of these consulting experts on success as well as the frankness and fulness which distinguish their answers add value to what otherwise would be mere opinion. The author's own suggestions are safe and sane, but in no respect original.

Wilhelmina Changes Her Mind. By Florence Morse Kingsley. Boston: Small, Maynard & Co. $1.

With a heroine who is said to be "compellingly, distractingly, almost sinfully pretty," and who is certainly the silliest girl of the season, the author manages to get together enough highly laughable incidents to fill the 192 small pages of the volume. Hardly so good as "The Singular Miss Smith," yet this new tale will serve to while away an hour in an agreeable manner. On the stage it would go better, for the incidents and characters would gain verisimilitude by the process of objectivation.

Dawson, '11—Fortune Hunter. By John T. McCutcheon. New York: Dodd, Mead & Co. $1.

Nothing could be more touching than the courage of the boy who goes out to seek his fortune in Chicago, and writes home jolly letters to his mother, when he is half starving during his vain search for a job. One letter in particular, written from a park bench, when he has nowhere else to go, brings a mist to the eyes and a lump to the throat. The little story is happily illustrated by the author, one of the most witty and thoughtful of American cartoonists.

"CHARLEY'S GOT A JOB!"
From John T. McCutcheon's "Dawson '11—Fortune Hunter" (Dodd, Mead & Co.)

Literary Notes

....Those looking for *Light on Life's Difficulties* (Crowell; 75 cents) will find some faint glimmerings of "new thought" illumination in the volume of Mr. James Allen bearing that attractive title.

....Sicilian history, that is notably confused, is clarified, in certain aspects, for readers of Edmund Curtis's *Roger of Sicily, and the Normans in Lower Italy, 1016—1154;* an addition to Putnam's "Heroes of the Nations Series" (pp. xii, 483).

....T. A. Daly's third book of verse, entitled *Madrigali,* is announced for publication by David McKay, of Philadelphia. Very appropriately the illustrations are contributed by John Sloan, whose feeling for the folk of street and tenement is of the strongest.

....H. Noel Williams is not the least readable and certainly is one of the most workmanlike of the Englishmen who spend their time nowadays adapting from French sources the biographies of great Gauls. His latest contribution is *The Love Affairs of the Condés,* an illustrated volume of 350 pages, imported by Scribner.

....Among the autumn publications of John W. Luce & Co. will be General Morris Schaff's *The Sunset of the Confederacy,* a translation of Henri Bergson's *Introduction to a New Philosophy,* Ludovici's *Nietzsche and Art,* a volume of plays by Strindberg, a translation of Remy de Gourmont's *A Night in the Luxembourg,* and Sydney Brooks's *Aspects of the Irish Question.*

....Rev. Frank Crane always writes with the directness and snap that secure for his messages a sure place in the esteem of practical and unconventional readers. The essays on religion, gathered out of the newspapers and put into the volume entitled *Lame and Lovely* (Forbes; $1), are directed to "the common folks," and from his dissertation on these words of Charles Lamb to his own religious "Declaration of Independence," the author brings moral and spiritual truth closely into touch with the actual life of the plain people.

....It is a pleasure and an inspiration to read the succinct and eminently fair statement of the points of contact and unfortunate misunderstandings between *Christianity and the Labor Movement* (Sherman, French & Co.; $1), by William M. Balch, formerly secretary of the Methodist Federation for Social Service. Every chapter in the book has the ring of sincerity and the note of hopefulness.

....The tenth annual issue of *The Christian Movement in Japan* is more than its name implies, for, in addition to its complete survey of the progress of Christianity, it covers Japanese domestic and colonial politics, social reforms, etc. (Yokohama: Published for the Conference of Federated Missions.)

....Appropriate *Prayers for Little Men and Women* (Harpers; $1.25), aspiring toward childhood's ideals and couched in language easy for children to grasp, have been put into rhymed verses by Mr. John Martin, and tastefully illustrated by Mr. John Rae.

....Prof. George L. Raymond has selected and published about twenty of his college chapel talks as *Suggestions for the Spiritual Life* (Funk & Wagnalls; $1.40). Professor Raymond says many good things, but his chapters are too long for "suggestions," and too moralizing and dry for "spiritual" nourishment.

....The niggardliness and cold indifference which sometimes characterize missionary giving are caustically satirized in *The First Church's Christmas Barrel* (Crowell; 50 cents), by Caroline Abbot Stanley. The effect of the story is all the more striking because of the touching instance of real self-denial so appropriately introduced.

....Henrietta Maria, Henry IV's daughter, the queen of Charles II, is an ideal subject for the modern popular biographer, for this Frenchwoman who became English by marriage is touched by and vividly touches the kingdoms on both sides of the Channel. (*Henrietta Maria*, by Henrietta Haynes; pp. xv-335; twelve illustrations. New York: Putnam; $3.50.)

....A new volume in the "Wisdom of the East Series" contains *The Buddha's Way of Virtue* (Dutton; 60 cents), which is a translation of the Dhammapada from the Pali text made by W. D. C. Wagiswara and K. J. Saunders, the latter of whom has supplied the work with a short introduction and needful notes. The moral teachings of Buddhism are here found in their purest and best forms.

....Prof. J. Alfred Faulkner, D. D., of Drew Theological Seminary has written scholarly and readable chapters on some *Crises in the Early Church* (Eaton & Mains; 75 cents), in which he points out the bearing of those early struggles and decisions on present ecclesiastical issues. The conservative theological note is everywhere prominent, and there is, perhaps, a bit too much criticism of other views of history's judgments, but the book is stimulating and forceful

....Oliver Huckel, the Wagnerite, has done another of the musical dramas into English verse. This time it is *Die Meistersinger*. To those who call the composer "master" it will be a rare treat. The translation drifts away from the text, but accomplishes its purpose; it brings Wagner's conception of the gild system to those unable to grasp the speech feeling of the original. (Crowell; 75 cents.)

....Every bibliophile will want to own Frank A. Mumby's *Romance of Bookselling*, which is, besides, a work that deserves to have a place on the shelves of every reference library. It is, we believe, the first book to attempt to traverse its field *in extenso;* and part of its value lies in the bibliography compiled by W. H. Peet, printed as one of the appendices. An importation, this work is fullest in its account of publishing and bookselling in England. It is richly and most interestingly illustrated, and is replete with anecdote as well as with more formal information. (Boston: Little, Brown & Co.; pp. xviii, 491; $4.50.)

....Much of a writer's force and ability in handling his medium of expression depends upon the conscious mastery of his own thought. The ananymous author of *Voluntas Dei* (Macmillan; $1.60) thus gives one the impression that he is leading the way over what to him are well known paths of thought. In a previous volume, entitled "Pro Christo et Ecclesia," he established his claim to respectful attention and this new work gives further proof that anonymity is not a mere attempt to shield mediocrity. In the spirit of reasonableness as well as assurance the principal elements of Christian belief are set forth in a way that will appeal to thoughtful readers.

....Two new volumes in the Music Student's Library, published by Oliver Ditson Company, are William Harkness Arnold's *French Diction* ($1) and C. G. Hamilton's *Outlines of Music History* ($1.50). This latter work is marked by a certain sanity, even in its concluding chapter on the Music of the Present Day: which is, however, almost too cautious in its avoidance of critical judgments. We hold no brief for Massenet, but why does he receive only seventy-odd words—about one-sixth of the space Richard Strauss has? True, Massenet's melody is not very provocative of discussion: but how about exposition? Professor Carpenter seems to go out of his way to slap Frenchmen; all he tells us of the composer of "Carmen" is that he was the first of his nation to show Wagner's influence! A more admirable production, the companion volume, *French Diction for Singers and Speakers:* a little book which will fill a long felt want and is founded upon sound principles

....Students of music who wish to learn something of the basic theories and physical characteristics of sound will find an admirable handbook adapted to their needs in Prof. Clarence G. Hamilton's *Sound and Its Relation to Music* (Ditson; $1.25).

....There can scarcely be too many sensible and honest books published on the care of children. *Mother and Baby*, by Dr. Anne B. Newton (Lothrop; $1), contains valuable advice from a wise physician, summarizing the contents of each chapter, in a few sentences, at the end, so that it may be consulted without loss of time in an emergency, making a good addition to a mother's library.

....Volume two of *Minutes of the Executive Council of the Province of New York*, edited by Victor Hugo Paltsits, State Historian, and published by the State of New York, is a bulky folio of 806 pages devoted to the administration of Francis Lovelace, 1668-1673, containing collateral and illustrative documents (xx-xcviii) and prefaced by a portrait of Cornelius Steenwijck, mayor of New York, 1668-1670, and a member of Lovelace's council.

....Dr. Charles E. Jefferson's little volume on *The Minister as Shepherd* (Crowell; $1) is a real contribution to the literature on pastoral theology. Without departing from principles of universal application he has presented his subject in close and vital relationship to the present tasks, opportunities and difficulties of the ministry. Every one of the chapters will repay careful reading, but that on The Shepherd's Temptations is particularly striking as the passionate utterance of a mind keenly alive to the dangers and deeply devoted to the highest ideals of the Christian ministry. The book is based on the George Shepard Lectures on Preaching, delivered by Dr. Jefferson at Bangor Theological Seminary in the early part of this year.

....That theosophic speculation and science do not mix more readily than oil and water is plainly seen in *The Drama of Love and Death* (Kennerley; $1.50), by Edward Carpenter. Even the employment of that powerful medium of quasi scientific psychical research does not accomplish the desired end. Such attempts are apt to lead to peculiar complications. It is at least amusing that Mr. Carpenter should seek to expound the theories of the Upanishads in the light of the investigations of such men as Professors Wilson and Loeb, while at the same time he berates "the doctors and sky-pilots" because they do not "hurry up and tell us something really useful, instead of spending their time in vivisecting the wretched animals, or in mumbling over ancient creeds."

Pebbles

MRS. JOHN DOE is not necessarily the wife of a bull moose.—*Columbia State.*

A LONDON evening paper sent to a photographic agency for portraits of Balkan celebrities including the Sanjak of Novibazar.

"WHAT sort of a man is he?"

"Well, he's just what I've been looking for—a generous soul, with a limousine body."—*Life.*

"So our engagement is all over?" he said moodily.

"I am afraid it is, darling."

There was a note of triumph in her voice.

"You see," she explained, "I told it to my dearest girl friend as a great secret."

Then, indeed, did he realize that it was all over.—*Lippincott's.*

THE daughters of the household, ardent suffragists, were talking politics.

"Taft will sweep the country," declared Mabel.

"Wilson will sweep the country," asserted Maud.

"Roosevelt will sweep the country," answered Margaret.

At this point Dad took a hand.

"Never mind about who's going to sweep the country," said he. "Who's going to sweep the kitchen?"—*Courier-Journal.*

THE JABBERWOCKY OF AUTHORS.

'Twas gilbert. The kchesterton
Did locke and bennett in the reed.
All meredith was nicholson,
And harrison outqueed.

Beware the see-enn-william, son,
The londonjack with call that's wild.
Beware the gertroo datherton
And richardwashburnchild.

He took his brady blade in hand;
Long time the partridge foe he sought.
Then stood a time by the oppenheim
In deep mcnaughton thought.

In warwick deeping thought he stood—
He poised on edithwharton brink;
He cried: "Ohbernardshaw! I could
If basilking would kink."

Rexbeach! rexbeach!—and each on each
O. Henry's mantles ferber fell.
It was the same'sif henryjames
Had wally eaton well.

"And hast thou writ the greatest book?
Come to thy birmingham, my boy!
Oh, beresford way! Oh, holman day!"
He kiplinged in his joy.

'Twas gilbert. The kchesterton
Did locke and bennett in the reed.
All meredith was nicholson,
And harrison outqueed.

The Independent

Entered at New York Post Office as Second Class Matter. Owned and published by The Independent Weekly, Incorporated, at 130 Fulton Street, New York, N. Y. Hamilton Holt, President; Frederic E. Dickinson, Secretary and Treasurer.

A WEEKLY MAGAZINE FOUNDED IN 1848

One Year, $3.00 Single Copies, 10 Cents

Single copies over six months old, 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as those offered by any responsible agency.

An order for the change of an address should be received two weeks before the change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of the publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Binders holding in book form thirteen current issues will be furnished for 45 cents. If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We welcome unsolicited contributions, but writers who wish their articles returned, if not accepted, should send a stamped and addressed envelope. Even so, we cannot hold ourselves responsible for their return. Authors should preserve copies of their manuscripts.

Advertising rates will be furnished on application.

The Independent Under New Management

WITH this issue Clarence W. Bowen, the publisher and proprietor of THE INDEPENDENT, retires, having transferred his ownership to Hamilton Holt, who, for the past twelve years, has been the managing editor. Mr. Holt has organized a company entitled "THE INDEPENDENT WEEKLY, INC.," which will henceforth own and publish the magazine. Founded by Henry C. Bowen in 1848, THE INDEPENDENT passed after his death, in 1897, into the control of his son, Clarence W. Bowen, and is now taken by his grandson, Mr. Holt.

The editorial staff will remain the same under the new management. Dr. William Hayes Ward, who has been with THE INDEPENDENT for forty-five years, continues as editor, with Hamilton Holt, managing editor; Frank D. Root, political editor; Edwin E. Slosson, literary editor; Warren Barton Blake, assistant editor, and Franklin H. Giddings, associate editor.

The publication department will be reorganized owing to the retirement of Mr. Bowen, the publisher, and Gardner Richardson, the assistant publisher. George French becomes publisher, Frederic E. Dickinson, business manager, and J. Stuart Hamilton, advertising manager.

Mr. Holt, in succeeding to the management, takes this opportunity to pay tribute to the ability and energy which Mr. Bowen has always given to his task, and also to the thoughtful courtesy which has made it a pleasure to work with him. It is largely to his deep personal interest and his constant supervision, as well as to his persistent determination to maintain high ideals of independence and influence, that THE INDEPENDENT owes its present success and reputation.

Mr. Holt pledges himself to the readers of THE INDEPENDENT that the editorial aim will ever be to give increasing value to its pages in return for the generous support of its constituency. With this purpose in view he is considering certain important improvements, which will be announced in due time.

For in these days a journal must go forward. If it lags, it will fall behind. THE INDEPENDENT will go forward. It has never sought, however, and it will not seek, by sensational methods to attract the unthinking. It believes there is an intelligent public of sufficient size to appreciate liberally a weekly magazine which seeks to tell the exact truth and to discuss with impartial frankness all questions which interest men of thoughtfulness and character.

We trust that our readers will take a personal interest in enlarging our circle of subscribers. The added resources thus available will be faithfully used to make THE INDEPENDENT more valuable to its new patrons as well as to its multitude of old friends.

To all intelligent, fair minded and progressive men and women THE INDEPENDENT makes its appeal.

The Campaign

THE INDEPENDENT has not pretended to believe that President Taft would be re-elected. More than once it has plainly said that the election of Governor Wilson was almost inevitable. They were not safe prophets who tried to deceive Mr. Taft with the hope of success. The fates were against him from the

first, for the Democratic tide had not ebbed; and the secession of Theodore Roosevelt only made sure what was before scarcely doubtful. The party which had suffered the defection of its most famous leader, with perhaps half of its members following him, was already doomed to defeat.

This we write by way of anticipation of the result, for we must go to press before the vote is announced. We can now only give some comments on the campaign.

One is that the two old parties went on with their old bosses still much in evidence. Their candidates were not the bosses'. The public has got afraid of bosses, because some bosses are bad. They are selfish; they have no patriotism. The highest—or lowest—example of that sort of a boss is he of Tammany. Somehow he, and the boss of Democratic finance who generously gave over $400,000 for a previous campaign that had already gone against him, both in its candidate and the election, were beaten at the convention in Baltimore. Bosses were not popular with the delegates. To be against the bosses was an asset for Governor Wilson and he slew them right and left. The contributions to party funds were less than for many elections, and will be reduced in the future, which will still more weaken boss rule, while the direct primary will limit boss power. The Republican bosses were of less note. Ex-Senators Aldrich and Lodge do not belong to the boss class, and they had retired from politics in time to escape responsibility for this campaign. That leaves Barnes as chief Republican boss, and he is hardly a national character. Of the Progressive party, which the people will call the Bull Moose party, Mr. Roosevelt was easily dictator rather than boss, with Flinn, the typical boss of Pennsylvania, as his aide, and a coterie of rich men as his financial backers. The species lingers, but the boss will never again have the power he has had in the days when he ruled the conventions.

Another feature, very undesirable, that has appeared in this campaign is the prevalence of unusual vituperation. It began with the unfounded charges repeated by Mr. Roosevelt that the nomination had been stolen from him and that his opponents were thieves and robbers. Of course, some believed it. On the other hand, in seeking a third term Mr. Roosevelt was charged with trying to make himself a Diaz, a dictator, an overturner of the republic. THE INDEPENDENT opposed the violation of the tradition which allowed two terms only, but it never pretended that a third term would endanger our liberties. The repetition of this charge, which would make Roosevelt a Cæsar, accounted for a weak-minded assassin's bullet. We are happy to say that neither President Taft nor Mr. Wilson was guilty of any violation of the courtesies of strenuous debate.

One more noticeable feature of the campaign has been the ethical appeal, which, especially in the West, has risen to the exaltation of a moral and even religious passion, seen in the adoption of "Onward, Christian Soldiers" as a political song. Mr. Roosevelt is always a preacher. He claims that his are moral issues, and such an appeal is easily convincing. We have observed how large a proportion of the ministers have accepted it. We cannot see that Mr. Roosevelt would do more for justice and mercy than would either of the other candidates, but his promise so impressively asserted was very alluring and has shorn off a very large section of the Republican party.

In what we have said we have assumed the defeat of Mr. Taft and we lay it in part to the refusal of the leaders on whom Mr. Taft depended to recognize the rising tide which demanded genuine tariff reform and the devices which would bring legislation nearer to the people. They did not have the sense of the Frenchman who saw the procession passing by and cried, "I must follow them, for I am their leader." Our readers know that we have from the beginning supported these reforms. But the Administration has been represented too much by standpatters, whom the President has not so successfully opposed as to convince the people, and they have deserted to the new ensign, which shone like a meteor streaming to the popular wind.

Rutherford B. Hayes was one of the best Presidents we have ever had, but he could not hold the popular fancy and

was denied a second term. So Benjamin Harrison well deserved re-election, but he could not overcome the tide of popular discontent which demanded a Democrat. Mr. Taft's administration has been worthy of general commendation, and particularly in its foreign policy. Beaten, he is not discredited. He will retire to private life to hold the honor and affection of the country.

A Good Country for Everybody? No

INTERPRETING the words as he meant them to be understood, we heartily agree with Mr. Roosevelt that in the long run this country will not be a good place for anybody to live in unless we make it a pretty good place for everybody to live in. Mr. Roosevelt was talking about social justice. He had described conditions in East Side tenement houses, and had exprest his mind about various decisions handed down by the New York Court of Appeals. By "everybody" he meant the poor as well as the rich, the working man as well as the employer, the humble as well as the powerful.

But it would be calamitous to take Mr. Roosevelt's social philosophy too literally. Clever remarks are half truths. Substitute the simple truth for the fifty per cent. of error and they become commonplaces or pernicious nonsense. One of the chief things that ails America at present is our lazy and stupid indifference to the fact that we have made this country altogether too easy a place for some people to live in.

To begin with the quite obvious, it is altogether too easy a place for the Schranks, Czolgoszes and Guiteaus to live in. It is too easy a country for the common murderer to live in, as the dreadful record that we published a few weeks ago proves. It is too easy a country for white slavers to live in. It is too easy a country for lynchers and dynamiters to live in, and much too easy a country for gamblers and "gunmen" and Beckers to live in.

It would be bad enough if these obviously undesirable citizens were all. But there are others, and Mr. Roosevelt has rendered no greater public service than in his merciless exposure and unsparing denunciation of them.

This country has been and is much too good a paradise for land and timber thieves, for venal legislators and venal voters, for log rolling protectionists, seeking and getting special favors, for passenger slaughtering railroad directors, for criminal police magistrates, for sweatshop proprietors, for tax dodging millionaires, for monkey dinner social leaders, for cranks and freaks and founders of new religions, for trust "magnates," and for judges who understand that man was made for property, instead of property for man.

About the best symptom of intellectual and moral health that we now discover in the American people is their increasing prejudice against all these varieties of undesirables. Probably the best work that the Progressive party and its candidate for the Presidency have done has been the fostering of this prejudice. We hope that this part of its activity will go on.

The American population is "great stuff," taking it all in all. It is full of energy and hopefulness and good will. It probably has as much common sense as the population of any other land. But, like a crop well planted but not well cared for, it needs weeding out, and needs it badly. Letting wheat and tares grow together until the harvest is bad farming in the twentieth century, and bad morals, even if hell has been abolished.

We are confident that Mr. Roosevelt will not object to our amendment of his proposition. May he live long and tell us not only how to get social justice for every decent human being that has any business to be alive, and not only how to make magnates magnanimous and judges just, but also how, without offending progressives that object to capital punishment, we can get rid of the human hyenas and jackals that somehow or other ought to be dead.

Where the Voters Do Not Vote

THIS week, while our citizens are voting, and the votes are being counted, it may be well to note some extraordinary and ominous contrasts in the matter of the interest which our citizens take in the most important political duty which they have to perform.

Alabama had a population in 1910 of 2,138,093, while Minnesota had a population slightly less, of 2,075,708, and yet Minnesota polled more than three times as many votes in 1908 as did Alabama—331,304, against Alabama's 103,809. Alabama people do not vote. There is a similar contrast elsewhere. Maine has a population smaller by 10,000 than Florida, but her vote in 1908 was 106,336, while Florida's was but 49,360. The population of Kansas was 100,000 less than that of Mississippi, but its voters counted 375,946, while those of Mississippi were a scant 66,904, not one-fifth as many. South Carolina cast a vote of 66,398, with a population of 1,515,400, while little Montana, with only 376,053 inhabitants, cast 68,822. Georgia has 2,609,121 people, and New Jersey 2,537,167, but while New Jersey cast 467,198 votes in 1908, Georgia cast but 132,794. We give but one more contrast: Louisiana cast only 79,146 votes from a population of 1,656,388, while Idaho, with less than a fifth of the population, 325,594, cast 97,288 votes, more by 22,142.

These are portentous facts. They show very serious political disease in the body politic where the citizens are too enfeebled to go to the polls. The reader will observe that the States in which two-thirds or four-fifths of the voters do not vote are safely Democratic; they can be absolutely depended on to cast a Democratic vote, and have never done anything else. When their vote decides a Presidential election it is by the votes of a small minority of their own citizens. The large majority do not vote or are not allowed to vote. It is, we say, a very serious matter that a minority should vote instead of a majority. It is not sufficient to say that this minority represents the will of a majority, for we do not know it; and if it be true, that makes it almost worse, for it would show an ignorant or besotted majority too indifferent to be fit to rule.

But it is not wholly the ignorance or the stupidity of the electorate which explains the situation. It is rather the fact that in these States there has been a purposed policy of an aristocratic majority to shut out voters and so reduce the electorate. While every other civilized country has been enlarging its electorate, these States have been reducing it. They have done it by cunning legislation and constitutional amendment, confessedly for this purpose. They have required the poll tax and other taxes to be paid long before election as a condition of voting. They have imposed absurd literary tests, such as allow the registrars to shut out any one they please from the voting lists. They have invented grandfather clauses and every other means they could think of to exclude voters, and have made it known that from a third to a half of the citizens will not be allowed to vote. They have made no secret of it that these laws were designed to exclude colored people, and they did not care if they shut out also a million of poor whites. They have succeeded, as the returns show. It is successful aristocracy.

We will be told that the reason for that small vote is because the primary system has settled who will be elected, and that it is of no use to vote. That is true, for the Democratic primary makes all the State nominations, and the Democratic nominees are sure to be elected. But why are they sure to be elected? Simply because the election laws have strained out those who might oppose the party in power. In such a case the popular primary system works badly in making it of little consequence to go to the polls—it is all settled beforehand. It does not work so in Oregon or Michigan.

What can be done about it? Very little. These States that we have cited, which by way of contrast give their citizens a free vote, have no rights in the matter. Minnesota, Maine, Kansas, Montana, New Jersey and Idaho and the rest cannot police the elections in the States along the Southern tier, from South Carolina to Louisiana, nor is it practicable for the national government to do it. Nor would it be wise to reduce the representation in Congress in those States which limit the suffrage. That would be a logical penalty, but it would practically be a condonation of the wrong. If the people in those States like that sort of thing they will have to be allowed to enjoy it as long as they like it. It is not popular government,

but they do not now like popular government. They do not trust the people, at least not poor people—common people. They will learn better. It is a matter of political education. Illiteracy is decreasing rapidly in all those States, unless it be in Louisiana. The poor whites will not always consent to be slaves, and the negroes will be more restive and determined to get their rights as they get education. We must have patience with invalids, hoping that they will get well some time. Meanwhile, let those who live in such States, of either shade of color, pay their taxes, get education, and demand until they get the permission to vote. Let them learn that the privilege is a right, whatever the doctrinaires of aristocracy may say, and that a man is not half a man that does not take his share in the government of his country.

President Eliot to Harvard Freshmen

It was the president of a Southern university who some time ago warned President Eliot that in fifty years Harvard would lose its primacy among our institutions of learning. When Dr. Eliot demurred and asked the reason for such belief he was told that there were three reasons: One, that in fifty years' time Massachusetts would be a Roman Catholic State, and that parents would prefer to send their sons to an institution conducted under the rules of their own faith; second, that the Western students who had no Harvard affiliation would go to the State institutions by that time rather than Harvard, and the third, that Harvard graduates would have no sons to send to their alma mater. We do not know whether President Eliot then controverted these arguments, but the advice which he gave to the Harvard freshmen the other day might make us suspect that the last of these considerations has given him real concern.

We are glad to be allowed to print the whole of that address. It is a subject very unusual for such a talk, and yet one of real importance, which it is essential that worthy young men should consider. He told them that they were to think of themselves as prospective husbands and fathers, and that they should not think of marriage as a distant duty to be long delayed, but as a privilege as well as duty to be sought early in life. He told them that they should not imagine that marriage must be put off until they could expect to take a wife to as luxurious a home as that of her parents; but that if a young woman had been brought up in easy luxury, it would be better for her that she should learn the experience of humble economy such as her mother had not hesitated to accept.

We do not remember ever to have heard of such instruction and advice given to freshmen entering college, but it seems wise. They are eighteen or twenty years old, entering young manhood, old enough to look forward to the duties of life, and they are already preparing for them. They expect, or should expect, to marry, just as they expect to be lawyers or merchants. They should learn to think of it seriously and not jocularly or flippantly. They should be taught to think of marriage as a coveted responsibility, of course to be assumed with proud joy, in the confidence of reason and the spirit of self-sacrifice. If this were a special duty for college boys only to anticipate we might leave the address with the Harvard freshmen who will not forget it; but it applies to all young men of decent character.

We have said it is a subject for "worthy young men," "of decent character," to consider, not for others. If such is not one's character marriage is not for him. We hope the time will come when if a young man does not marry it will be understood that he is not fit for marriage. Such a young man, not worthy, not clean and decent, not only wrongs himself in his forced abstention, but wrongs some young woman, who by his fault is compelled to remain unwedded. It is better that she should die unwedded than that she should wed such a man. President Eliot hints at this when he speaks of marriage as a safeguard to character.

It is not possible to say now for what ex-President Roosevelt will be most remembered in the years to come; but we question whether any one of his claims to immortal fame will stand higher than his strong preachments against "race suicide." He may not have invented the

expression—there is another claimant—but it is he who has made it part and parcel of the English language. Ex-President Eliot has not supported ex-President Roosevelt for a third term, but in this address he has added an admirable commentary to Mr. Roosevelt's sermon.

The New November

Is November a sad month? We have often been told that it is. There is no longer the vineyard full of golden Pocklingtons and Diamonds, nor is the orchard laughing with great red apples. But when one finds a big overlooked bunch of Niagaras, hid in the curled brown leaves, he has found something worth the while, and it is worth a deal of climbing to get a pocket full of Jonathans that the pickers skipped. There are clouds most of the day, and there are drizzling rains; not genuine showers at all, but chilly spatters that come in on intemperate gusts of wind, and stagger across the valley. Yes, November is not the happiest of the months.

It was only last week that we finished apple picking, a job full of Arcadian simplicity and charm. Only where there has been delay and there is a snow fleece on the trees and in the fields, that is another thing. It is pretty enough to look at in the morning, when at six o'clock the stiffened grass crackles under your shoes, but toward noonday, when the sun has turned it all into an indefinite slush, it is then that the fingers grow stiff, and one's seat on the stalks has no romance in it, even tho the golden piles of corn grow bigger. Every half hour the gust changes; now it is sunshine and the farm roofs down the valley drip, and then comes a west wind and another fleece of snow is flung over the whole scene and into your face and neck as well. This is November, and the farmer boy understands right well that all of country work is not a poem.

But there are golden days in November, and the wind by night gets around to the south, and thru the beech woods it brings a smell all the way from Virginia and the Carolinas of jasmine and bigonia. Get all your forces together, and let the husking be hurried, for it should not be said that you are behind the times or behind the days. The girls as well as the boys may be turned out of doors. It will help the tongues to clatter, and there is nothing that will keep folk warm like a brisk conversation with plenty of laughter.

Nowadays we are boys until ninety, and soon it will be until one hundred. Why not? Machinery does our hard work, and if one have brains to keep pace with it he has little else to do. As for husking, we do not any longer do it with a twist of the wrist and a turn of the thumb. But here is how it comes out, that with lessened work and fewer babies in the crowd, one may live longer and he may fairly have his way till the end of his century. That is only fair, and the race will not die if we are slower getting across the stage. Stalwart old age, full of life to the end, that is what we are looking for.

But we have not yet quite forgotten the husking bee. There are always a few loads left in the field after the sunny days are over, and these are drawn down to the cow sheds. Now the neighbors and the neighbors' boys are invited in to wind up the work. Co-operation is not an invention of our times at all, and it is just as real around our barns as in our banking enterprises and stores. It is a sight not to be forgotten when a dozen, sitting on huge pumpkins, begin the trial for speed. The moon gives only fickle light, sifted in between great white clouds, so there are lanterns hanging where they are most needed.

The golden piles grow apace, while Tom tosses the stripped stalks into the stable loft. For half an hour there it little difference in the result, but by and by the toughened wrists of old Farmer Foot begin to tell. For sixty years he has beaten at every husking bee, since he was fifteen years old. Old Freeman, the half breed, is his only rival. But to-night there are two patent huskers at work, and the old veterans forget to boast. How shall one ever get stout wrists at this rate, for it is a machine that milks the cows, a machine that digs the potatoes, a machine that mows the grass, and a machine that husks the corn.

Grandfather goes from pile to pile and selects the finest ears, a full corn basket; and these he will shell in the old fash-

ioned way over a spade and then spread them to dry on the chamber floor about the kitchen pipe. Yes, yes, grandfather, says the little mother, but get enough, for no one ever had too much samp. And then there is silence for a few moments, and the talking wanes, for every one is thinking samp, and tasting samp in his mind; and, truly, to remember a good thing is almost as well as to have it in your mouth.

But when the tongues take charge again it is evident there has been some work up behind them. They wag of efficiency and of machinery and of agricultural education, and it is clear that every one of these corn huskers believes in progress. One of the younger men begins to tell what a short course at the State school had done for him—he is raising better calves and he is building up a herd of Guernseys. And then they tell what has come about from seed selection, and cover crops come under discussion, and balanced rations, and no one is content with what is, only with what is to come.

They tell us that everything hereafter is to be done on the score of "efficiency." Very well, the young people did not use to run away as soon as possible into large cities, only because there were no large cities in which to herd. It was a nation of farms and villages. The men planted their fields together, reaped them together, and together they threshed their grain and husked their corn. They invented the word "bee," and it rightly described their daily life. A new farm life does not throw away the past, only improves it. Our husking bees hereafter will have to be fought out with machinery instead of wrists. Whistle on November! Sing thru the leafless woods that man is master and the farmer is the man. We are coming bock to our own in country life. The school is supplement of the home.

On to Constantinople!

The minor Powers have defeated not only Turkey but the great Powers. In one brisk month they have smashed the *status quo* and upset the "balance of power." Whatever the diplomats whom Premier Poincaré has called into consultation at Paris this week may decide upon we may be sure that it will be something quite other than what they decided upon four weeks ago, that futile note telling the Balkan states that if they would keep quiet Macedonia would be attended to, and warning them that if they did make war and did succeed it would not do them a bit of good, for in any case they would not be allowed to increase their territory at the expense of Turkey. Neither the Triple Alliance nor the Triple Entente nor the whole sextuple of them would find it an easy job to dike up within their former bounds the Balkan floods now overflowing the Macedonian plains.

The Bulgars, now that for the second time they have approached within 25 miles of Constantinople, will not be so easily headed off as they were a generation ago. They do not propose this time to have the map of the Balkan peninsula, which they have drawn in blood, redrawn in ink at Berlin.

Old King Nikola, poet and patriarch of his people, wanted to see his drama, "The Empress of the Balkans," put upon a larger stage than that of the royal opera house of Cettinje. He wanted real mountains for scenery, real soldiers instead of supernumeraries, so he came forward to the footlights without waiting for his cue and undertook to play the leading role regardless of support.

The Macedonian cry for help has been heard on this side the Atlantic and the Greek consulate in New York is besieged by thousands of Greeks anxious to return home in time to fight, but also by scores of young Americans, college students, inspired by the classics to assist in the revival of Hellenic glory.

King Peter of Servia has entered in triumph the city of Uskub, no longer to be called by this Ottoman name, but rechristened by its ancient appellation, Skopia. Here Justinian, compiler of the Code and builder of Saint Sophia, was in 527 crowned "Emperor of the Serbs and Romans." And again in 1346 Skopia became the capital of a Servian empire when Stephen Dushan made himself "Czar of Macedonia and Monarch of the Serbs, Greeks, Bulgars and the Western Coast." The "Western Coast," that, too, is needed before King Peter can be happy, for Servia is, with the exception of Switzerland, the only

country in Europe without a seaport, and poor Peter has nowhere to ship his pigs whenever Austria-Hungary chooses to put up the bars on the frontier under the pretext of a quarantine against the swine plague.

The Balkan peoples have earned their freedom. Let them have it. On the whole they have done well with what small measure of self government was left to them in 1878 by the Congress of Berlin. All travelers agree that they can notice an improvement in the looks of things as soon as they pass from Turkish territory into any one of the surrounding states. The houses are better built, the fields are better tilled, the people better clothed, than in the vilayets inhabited by the same races, but left under Turkish rule. Bosnia and Herzegovina have also prospered greatly under the control of Austria-Hungary. In fact, any change in government is a change for the better to the people of the Ottoman empire. Perhaps, tho, we should make an exception of the Russian Government, considering that Bessarabia, which Russia took in her last raid on Turkey, contains Kishinef, a name of indelible disgrace.

The puppet princes have made themselves kings. They have proved that they are strong enough to expel the Turk from Europe. Why should they not be allowed to do it? Or if the Great Powers are afraid to allow Constantinople to pass into other hands let the Turks keep that, together with Tchatalja, inhabited by their own people, and let the rest of European Turkey be divided up, as nearly as possible on racial lines, into autonomous states, all held together in one great Balkan confederation. Then they would have a chance to work out their own destinies as best they may.

Countries South of Us

PEACE at the election in Cuba was not expected, but there was peace, and control of the Government is to pass from one of the republic's parties to the other. The Cuban people have shown that such a political change can take place without riots and the beginnings of revolution. This tends to confirm the political independence of the island. The coming transfer of power will serve the people's interests. General Menocal is a man of liberal education and has been a good soldier. For years the manager of the largest of Cuban sugar estates, he has enjoyed the confidence and respect of men of affairs in this country. He is a patriot, acquainted with the needs of the Cuban people, the possibilities of Cuban agricultural and industrial development, and the shortcomings of the Gomez Government. It may reasonably be expected that he will give Cuba an intelligent and just business administration. The task before him, however, is not an easy one. Mismanagement of the republic's finances has left much hard work to be done in the way of economy and retrenchment. The American people heard the news of this peaceful election with a sense of relief. A vast majority of them desire that the Cubans shall prove that they can govern themselves quietly and decently.

In Santo Domingo the success of an interesting and important fiscal experiment has been imperiled by a weak Government. which revolutionists, moved by greed and the course of an unworthy Minister of War, are striving to overthrow. Under American supervision, the customs revenue has been honestly collected and a large part of it has been set aside to pay the republic's foreign debt. The part remaining for domestic use has exceeded the entire revenue that was collected, or that went into the Treasury, when the agreement with our Government was made. In order that the experiment may be successful, our Government must assist the people by providing for a fair election and, possibly, by protecting the custom houses which the revolutionists seek to control. We assume and we believe that the people of Santo Domingo desire to be governed honestly and prefer peace to war. Our Government may reasonably assist them.

Those treaties or loan conventions with Nicaragua and Honduras which the Senate has failed to ratify were in accord with the policy adopted with respect to Santo Domingo. It is quite probable that if the convention with Nicaragua had been made effective, the recent revolutionary uprising in that

country would not have taken place. We should then have avoided a considerable expenditure, harsh European criticism, and the loss of the lives of four marines. Last week Nicaragua reached an agreement with her foreign creditors on the lines of the Santo Domingo agreement and of the pending treaties. Her revenue is to be collected under the supervision of officers whose appointment must be approved by the President of the United States, and part of it is to be set aside every month for the payment of the foreign debt.

What has been called our dollar diplomacy is a policy designed to assist the people of the countries where it has been proposed or made effective, to preserve peace and promote prosperity by preventing revolutionary attacks upon the custom houses and by satisfying foreign creditors. Our Government's attitude toward the troubled countries immediately south of us has been that of a helpful friend, not that of a greedy and powerful neighbor seeking conquest or forcible annexation. This is true of our conduct with respect to Cuba and Mexico, as well as our dealings with Santo Domingo and Nicaragua. In South America, however, and in some other parts of the world, our Government's course in Panama is regarded as an exception to the rule. We hope that in the near future there will be an amicable settlement of the controversy with Colombia.

The Farmer and the Auto

A MINNESOTA farmer tackles the automobile question with figures. He wants his brother farmers to know whether really the automobile is an economic venture or not; and he thinks it is. He has used an auto for two years on his farm, and for the year 1911 it cost for repairs $49.50; for batteries, $4.50; for cylinder oil, $8.50, and for gasolene, $28.50, which would make a little over $90. Allowing for some trifling extras, we have a bill that we can round up at $100. Keeping a horse would cost for grain about $50 and for hay about the same figure. We have still the blacksmith's bill and a possible doctor's bill to take care of. If our farmer's machine is a fair average, and the cost is a fair average, there is not very much difference in the cost of keeping a living machine and a machine without life.

The farmer drove his auto about 1,800 miles, as near as he could estimate, making the cost per mile not very far from 5 cents. This does not divide the expense between three or four persons who occupied the machine together. He tells us that on one occasion he went 80 miles with four persons in the auto, and all told the cost was $3.75; to have gone by rail for the four persons would have cost about five times the amount by auto. This is a very good tabulation for the travel side of the question. It is, however, difficult to make an estimate of this sort. The comparison with railroad travel is easy, but those who cannot have this choice must make their comparison with horse traveling, and in this case 80 miles would exhaust at least four days in coming and going, with horse feed and wear and tear of all sorts, and very probable delays. The farmer brings in a part of this item where he tells us that going 6 miles for a load was easily accomplished after his chores at night. He got his 500 pounds of flour and a package of trees to be set the next day, and was home a little after 9 o'clock.

> "To have used a team after the day's work on such an errand as he accomplished, would have been equivalent to another day's work for his horses. They would have been laid up for the next day's use."

He estimates that to have hauled grain to the elevator, taken his cream and eggs and poultry to market with his auto, was a great saving, not only in time, but because he could be working his horses at the same time. If he needed any groceries he could run to town with his auto in fifteen minutes, get what he wanted, neither be tired himself nor break into his afternoon's work. He figures that a ride in the automobile has a restful effect, a sort of recreative influence which must not be overlooked. To illustrate, he had been cultivating corn until 4 o'clock in the afternoon of a hot summer day, thermometer at 90. He took care of his team, and then with his wife and babe drove the auto 18 miles for an outing, and back in time for the evening's milking. It made him feel like a new man, and the day closed up without

any of the usual effect of hard work in a torrid sun. We think he is quite right that it is a difficult matter to put a money estimate on such a ride as that. It was quite out of the question with horse power only. The old-time farmer had nothing better than to throw himself down under an apple tree and take a sleep. If he used his horses he took so much out of his power for work, and the driving had very little soothing effect on his already tired limbs and nerves. The team would have to walk most of the time, and the auto can spin, giving fresh air and cooling it.

There is only one drawback that we can see to this estimate; yes, there are two; in the first place most farmers are not prepared to use good judgment and mechanical skill in caring for an automobile. The writer acknowledges that, farmer or no farmer, his chief hindrance would be his entire lack of mechanical taste and skill. With him an automobile would need a chauffeur, and trifles would probably amount to breakdowns. We are quite sure that the cost of an auto is at its best in the hands of our farmer friend who writes this story. Every word he writes indicates that it would be very difficult for him to get laid up on the road. Unfortunately, we know people who cannot drive an automobile twenty miles with any certainty of getting there without a mishap, and consequent delays. That spoils the whole story. We believe, however, that the coming farmer will be differently educated as to tools and mechanics in general. More of our farmers' boys are every year going to agricultural colleges, at least for a winter term. These colleges are educating in mechanics as well as agriculture, that is the mechanics of agriculture. Besides this, however, the average farmer is not yet prepared for wise storage of an auto. He certainly will find it very far from being an economic investment if garaged in the ordinary farm barn or cow shed; worse yet if left out of doors with the farm tools. The new farmer has got to have a new sort of barn, for new purposes, and there must be the garage room, as well as the other rooms for spraying apparatus, and shop for repairs.

We believe that the argument in favor of the auto stands at present strongest for the intensive farmer, for the man who runs to market every day with berries, plums, cherries, pears and apples, and whose time is really money. He is needed in two places at once, in his fruit garden to oversee the picking and the packing, and at the delivery end of his business, to see that his customers are suited and satisfied. This man has been accustomed to spending all of one day in the market place, or driving from customer to customer, making up on the next day in the picking field. With the auto he starts at 6 or 7 in the morning, drives deliberately fifteen miles inside an hour, and has his load delivered so as to be back again at his home and in the field at work by 9 o'clock in the morning. There is no possible money valuation for this sort of accommodation. Six hours are added to the man's working days, and every bit of it taken out of that time that would have been wasted by slow teaming—that is what the auto is going to do for the truck farmer.

This is a matter not very easily estimated. It means in reality that the farmer's day is doubled, for twelve hours make the average farmer's day; he knows nothing about the eight-hour day and has little interest in it. But here comes the auto, and in more cases than one gives him twice as many hours for his work. Time has been the one thing our intensive farmer has needed rather than higher prices for his goods, or easier customers, or cheaper markets for what he has to buy. Meanwhile, we are just along the border of an indeterminate income, in the way of passenger rates and rentals. For some time to come there will be a call of this sort, that can be met by the auto owner with profit. We do not see why the auto truck, easily transformable into a pleasure vehicle, is not already to be reckoned on by the judicious farmer. Our Minnesota friend has made no mistake.

Anti-Republican Agitations in France

FRENCH royalists have a systematic agitation. The pretender, the Duke of Orleans, who is forbidden by law to live in France, keeps court and signs himself "Philippe." Royalist committees exist in all departments, whose heads are

made and unmade by "Philippe." For some years the "Camelots du Roi" made themselves somewhat of a nuisance, specially about the Sorbonne and around the different monuments of Joan of Arc. The principal royalist journal, *L'Action Française,* is also clerical. The royalist efforts are well known in France and are frequently discussed.

During the past year, however, the Bonapartists are plotting. Their pretender is Prince Victor Napoleon, who married some time ago Princess Clementine of Belgium. During his lifetime King Leopold doggedly refused his consent to the marriage. While Clementine was waiting for his death, she was also saving. Today she is an enormously wealthy woman, having inherited a colossal fortune from the royal slave driver of the Kongo and its rubber. Clementine, who is now the mother of a young Bonapartist princess, is ambitious. She wishes to be empress. The first step was to buy up a number of newspapers—some put them at twenty—in the provinces, which would revive the Napoleonic legend, with its eagles. In Paris, the old Bonapartist organ is *L'Autorité,* whose two brother editors are attached to Cardinal Antonelli. Recently *Paris-Journal* has been bought, while the old royalist sheet, *Le Gaulois,* is veering from the *fleur-de-lis* to the Napoleonic eagles.

These plottings, royal and imperial, have now been brought strongly into the limelight by the instructions of Merry del Val to the Bishop of Annecy. This prelate made his visit *ad limina* recently, and on returning home gave an interview to *Le Matin* of Paris, declaring that Cardinal del Val authorized him to announce to the Catholics of France to abstain from all political movements. They should stand *sur le terrain religieux;* that is, stand by the Church. Del Val warned them against all constitutional blandishments. In plain English, the Curia wishes French Catholics to ignore royalists, Bonapartists and also republicans.

From this, it seems clear in the first place that Rome takes but little stock in the revival of a French throne, but in the next place, Rome has a free hand in case either kingdom or empire should return. Nothing is more longed for by the Vatican than the re-enactment of a concordat, which no doubt the Cardinal Secretary of State has in view. He therefore will not commit the Papacy to weak royalist or untimely Bonapartist movements.

What chance has either? The only hope, of course, is by a *coup d'etat.* To such a stroke France lends itself exposed, because the whole machinery of government is a highly centralized bureaucracy. Practically the machine is that established, or better, perfected, under Richelieu. Paris is really the heart and soul of France. Is there any possibility of such a *coup d'etat?* Formerly the army was feared. Today, however, the army is considered loyal to the republic. Germany made the army and people of one heart when she interfered in Morocco. The march, wonderful as it was, of the French soldiers to Fez, recalled to the nation the feats of *La Grande Armée* of Napoleon.

The fear today is of the politicians. As a rule, they are a slippery element in public life the world over. Sinister rumors are afloat. It is even stated that Millerand, Secretary of War in the present Cabinet, a wily, astute politician, has succumbed to the charms or the gold of Clementine. The Third Republic has lived forty years and weathered many a storm. This seems a good warrant that it will hold the upper hand. *Esto perpetua.*

Death of Vice-President Sherman

The death of Mr. Sherman left the Republican ticket incomplete, but it did not seem worth while for the committee to complete it before the election, evidently with the thought that after the election there might be no more than a formal necessity. Mr. Sherman fulfilled the inconspicuous duties of his office very creditably, and he was able to take no part in the campaign. He can hardly be said to have been one of the leading statesmen of the country, but he had been twenty years an active member of Congress when he assumed the Vice-Presidency, and his most conspicuous service was as chairman of the Committee on Indian Affairs, and as chairman of the Republican Convention Committee. He represented accordingly the regular

rather than the insurgent wing of the party and was in the inner councils. Personally he was a man of high character and was respected by all.

A Balkan Primer

In order to get a clear idea of the scene of the great conflict between Cross and Crescent, we must compare the country with one that we know. A map even with a scale of miles attached conveys little meaning to the reader, and statistics of area and population still less. But we all know how big are the States we have traveled thru, and how densely settled, even tho we may not be able to give their area or population. So the following comparisons may be useful:

Bulgaria is about the size of Ohio and has about the same population.

Servia is as large as Vermont and New Hampshire put together, and has more than three times their population.

Montenegro is smaller than Connecticut and has a fourth of its population.

Greece is about the size of West Virginia and has twice its population.

Turkey in Europe is smaller than Missouri and has twice its population.

From Cettinje, the capital of Montenegro, on the extreme west, to Constantinople on the extreme east, is about the same distance as from Chicago to Washington.

From Adrianople, where the Bulgarians are now, to Constantinople, where they want to be, is as far as from New York to Albany.

The Bulgarian Bacillus

Professor Metchnikoff would not be at a loss to explain the astonishing vigor displayed by the Bulgars in the present war. He would doubtless ascribe it to the Bacillus Bulgaricus, a photograph of which we published in our article on Metchnikoff, December 7, 1911. This is the lactic acid ferment which is now sold all over the world and used to make yoghurt, the Bulgarian national beverage, or rather food. The Turks contemptuously call the Bulgars "yoghurtji," or sour milkers, but if we may judge from the events of the past month a pretty sturdy race of men can be raised on a diet of Bulgarian buttermilk. In a national sense, if not in individual cases, it leads to a "prolongation of life."

Benzoic Acid Harmless

Extensive experiments made by V. Gerlach, of Wiesbaden, confirm the results obtained by the Referee Board as to the harmlessness of benzoic acid and sodium benzoate, and discredit Dr. Wiley's ruling against it as a preservative for food. The author, experimenting upon himself, took as much as 10 grams of benzoic acid within three and one-half hours without producing any noticeable effect upon respiration, body temperature, digestion or general condition. This is about the amount which would be used to preserve 30 pounds of meat or other food, so if a person did not eat more than that amount of benzoated food at any one meal he need not be afraid of it. In tests upon the contents of his own stomach he found that the addition of benzoic acid to his breakfast did not alter the strength of the gastric juice or interfere with the digestive process. Daily doses of a gram of benzoic acid were given to men for periods ranging from one week to twelve without in any way affecting their health. This is more than any person would get unless he lived exclusively on preserved foods and was a hearty eater at that. How much benzoic acid a man could take without injury to his health was not determined, but it must be very great, for in experiments on rabbits as much as one part per thousand of body weight was injected into the veins every day for twelve days without causing loss of weight or affecting the pulse, temperature or respiration. Since this method of administering the dose directly into the blood is more potent than taking it with food, this experiment would indicate that a man might safely take about 2½ ounces a day, tho it would be risky to take more than five ounces. So it would to take five ounces of common salt every day. In fact, injections of sodium benzoate into the suspended hearts of frogs, cats and rabbits were found to produce less effect than solutions of common salt of equal concentration. It seems, then, from these and similar experiments that we have in benzoic acid a preservative as

harmless as salt and considerably more useful, since it is tasteless and much more effective in preventing decay. If so, it is very important that the fact should be generally known, in order that the popular prejudice that has been aroused against it should be removed, for a safe, cheap and tasteless preservative would contribute greatly to the conservation of the health and wealth of the nation. The paper referred to is abstracted in the *Experiment Station Record* for September, 1912.

THE FOUR "LITTLE WOMEN"
From left to right: Beth (Gladys Hulette), Jo (Marie Pavey), Meg (Alice Brady), and Amy (Beverly West)

Two Remarkable Plays

Despite the amazing intellectual gymnastics performed by Bernard Shaw in "Fanny's First Play," the two best theatrical productions of the season are "Milestones," by Arnold Bennett and Edward Knoblauch, and "Little Women," a dramatization by Marian de Forest of Miss Alcott's famous story. Our readers who are to be in town this winter should plan to see both of them. Others should make a mental note against the day when they take to the road. In Mr. Bennett's play an idea has been carried out at once so simple and full of possibilities that one wonders it has never been tried before. The chief characters are depicted at the three great milestones of life—youth, middle age and old age. The playwright's purpose is evidently to contrast the radicalism and romantic idealism of youth with the conservatism and worldly wisdom of age. In the first act the stage is lit with candles, in the second with gas, in the third with electricity. In 1860 John Rhead, the central character, builds iron ships in the days of wooden ones; in 1885 iron ships are at their zenith and steel is coming in; in 1912 steel ships are universal. Yet the young fellow who risked his business and the hand of his sweetheart for iron ships, as a mature man opposes the introduction of steel into his plant. Ever the younger generation revolts from the older and the older does not understand why. "Milestones" is forcefully written and excep-

tionally well acted. We commend it to all—especially those over fifty. If "Milestones" appeals to the intellect, "Little Women" goes straight to the heart. It is a perfect joy. We doubt if any more wholesome, tender or beautiful picture of girl life has ever been portrayed on the stage. And best of all, the drama follows the story almost literally. Our fond recollections of Meg, Joe, Beth and Amy are ideally reproduced in flesh and blood, tho possibly Mr. Marsh is made more attractive in the play than the story. "Little Women" as now produced is the best play we have ever seen of transient sorrows, simple wiles, praise, blame, love, kisses, tears and smiles.

The Whirligig of Time

Dr. Edward J. Hanna, of Rochester, N. Y., has just been named auxiliary Bishop of San Francisco, in succession to Bishop D. J. O'Connell, now of Richmond, Va. It was the naming, some years ago, of Dr. Hanna as auxiliary to San Francisco which occasioned his denunciation to Rome by a brother professor at Rochester, N. Y. Hanna was denounced as a Modernist, because of an article on "Absolution" in the "Catholic Encyclopedia," and also because of a paper in the *American Journal of Theology,* of Chicago. Now he is appointed and not a word of the past. We have questioned whether some one —not Dr. Hanna—would denounce to Rome as a plagiarist the professor who first started the affair. Some years ago he brought out a work on Scripture which was almost entirely copied from Scrivener, the Oxford scholar, if we can trust as our authority the well-known Catholic weekly of London, *The Tablet,* which berated him soundly for literary piracy. This is, however, hardly an offense for which he would be haled before the Index.

It is a curious condition that has brought up a school question in Buffalo, N. Y. An alderman introduced a proposition to separate the colored from the white children in the public schools, and instantly the colored people were in arms against it, as they were satisfied with the system which had made no segregation these forty years. Then it appeared that the alderman had no interest in the matter, but had introduced the measure at the suggestion of the man in charge of the Western headquarters of the colored Democrats, and he promised to drop it at once. Separation in the schools would mean separation also in the street cars and places of amusement and in residence sections of cities and other properties.

If the Taft Republicans of California were disfranchised by means of that section of the direct primary law which provides that the State party conventions shall be composed of the legislative candidates, they have yet themselves to thank for it, inasmuch as they went to the courts for the right to name the Republican electors instead of making the situation sure by going on the ballot by petition. The Roosevelt men did this, but the Taft men neglected it, and when the court gave the right to the Roosevelt electors it was too late. It was bad generalship.

The sale of two horse-car lines in New York is rumored. If the deal goes thru storage battery cars will be installed. Even so, some half dozen streets in the city will still be served by horse cars. Yet New York pretends to be up to date! A little girl from Yonkers reported to her father, as the most remarkable thing she had seen in a visit to New York, "I saw a trolley car drawn by horses!"

It is very pleasant to read the congratulations of the Catholic press over the improved condition in France since separation, the larger congregations and the new churches built. Much as the authors of separation were vilified as Masons and atheists, they have turned out, as American experience could have shown, to have been the best friends of the Church.

It is reported that another Cardinal is to be given to America, and the Catholic *Fortnightly Review* says that the "logical candidate" would be Archbishop Bruchése, of Montreal. But it adds, with extraordinary frankness and freedom, that Rome does not always choose the logical candidate, or she would not have given the honor to Farley or O'Connell instead of to Ireland.

Insurance

Federal Workmen's Compensation

THE Federal workmen's compensation law applies only to artisans or laborers employed in certain specified branches of the Government service or in certain hazardous occupations thereunder. Under the law, a workman who is injured in the course of his employment is entitled to receive his usual salary or wages during the term of the succeeding year, unless sooner able to resume work, except those whose injuries are due to their own negligence or misconduct. In the event that death results from the injury, the compensation due is paid to the workman's dependants. Charles Earl, Solicitor of the Department of Commerce and Labor, has recently submitted to Secretary Nagel a compilation of his opinions relating to the operation of the law, from which we extract the figures indicating the pecuniary benefits distributed. From August 1, 1908, to December 1, 1911, the amount paid on account of non-fatal injuries aggregated $704,815; amount paid to surviving dependents on fatal injuries was $112,879. Since December 1, additional benefits of about $300,000 have been distributed. During the first year after the passage of the act 1,805 claims were made and 1,689 were allowed. During the second year 2,624 claims were submitted and 2,499 allowed.

Tontine Surplus Decision

A COURT decision of more than ordinary interest to life insurance companies and their policyholders is that rendered last week by the United States District Court at Cleveland, Ohio, Judge Day presiding. A. M. Webber, a policyholder in the Northwestern Mutual Life Insurance Company of Milwaukee, brought suit against the company for an accounting of funds alleged to aggregate $32,000,000, claiming that the company had earned an average of 4.6 per cent. on its tontine funds while it had credited but 3 per cent. to its policyholders, retaining the remainder in its general surplus fund. The company, thru its counsel, arguing on a demurrer, held that its tontine policies did not provide for an accounting of interest earnings and that under those contracts the rights of policyholders were limited by the policy provisions. Against this position the complainant contended that as the company was purely mutual, without any proprietary interests save those inhering in the policyholders, its surplus is a trust fund and the relation is one of trustee and *cestui que* trust. The court adopted the latter view. This conclusion may have far reaching results if adhered to by the higher courts, as it may result in claims for additional dividends to tontine policyholders with whom final settlements were supposed to have been made heretofore, even tho their policies had been surrendered, especially if they settled in ignorance of the possible claim they had on the general surplus.

ALBERT F. DEAN, of Chicago, who, thru the death of A. J. Harding, becomes sole Western manager of the Springfield F. and M. Insurance Company, has been connected with that department for thirty-seven years, and is conspicuous in the business as the author of what is known as the analytic system of rating, which is widely used thruout the country.

THE death of Emanuel H. A. Correa, vice-president of the Home Insurance Company of New York, is a distinct loss to American fire insurance. He had been in the service of the Home for thirty-three years, possessed a comprehensive knowledge of his business, and was highly esteemed by all American fire underwriters.

A RUMOR persistently circulated last week, and as persistently denied, was to the effect that a syndicate had secured a controlling interest in the capital stock of the Manhattan Life Insurance Company at $800 per share. That is about sixteen hundred for one.

Financial

The Steel Industry

ONE of the barometers of trade is the steel industry. Last week the Steel Corporation published its net earnings for the quarter that ended on September 30. These earnings were $30,063,512, or about $5,000,000 more than those of the quarter immediately preceding. The surplus remaining after payment of dividends was $2,434,801, against only $56,483 at the end of the June quarter. Unfilled orders on hand have risen to 6,551,507 tons, a gain of 744,000 since June 30 and of nearly 3,000,000 since September a year ago. Net earnings for two years are shown below:

	1911.	1912.
First quarter	$23,519,203	$17,826,973
Second quarter	28,108,520	25,102,265
Third quarter	29,522,725	30,063,512
Fourth quarter	23,105,115	.....

As a considerable part of the tonnage delivered in the September quarter was under old contracts and at prices lower than those now ruling, a larger net, perhaps as much as $35,000,000, is expected at the end of December.

The steel mills are running at full capacity, and products are sold for several months ahead. Orders for 140,000 tons of rails were recently placed, and orders for about 30,000 cars were given in October. The New York Central will pay $5,000,000 for steel passenger cars. October payrolls in the Pittsburgh district were the largest ever handled by the banks of that city. While the demand in this country for steel has been growing, with an advance of prices, there has also been a growth of the export trade. Exports of iron and steel in August were $25,450,107, and for the first eight months of the year they were about $194,500,000, showing a gain of $31,000,000 over those of the corresponding months in 1911.

Savings Banks

REPORTS recently submitted to the Comptroller of the Currency show a considerable increase of deposits in the savings banks of the country. There are 1,925 of these, 630 being of the mutual class (those which have no capital stock), while the remaining 1,295 are stock savings banks, which are engaged in commercial banking business. The year's gain in deposits is $238,000,000. Following are the figures for five years:

Year.	Number of banks.	Deposits	Number of depositors.
1908	1,453	$3,660,553,945	8,705,848
1909	1,703	3,713,405,710	8,831,863
1910	1,759	4,070,486,246	9,142,908
1911	1,854	4,212,583,598	9,794,647
1912	1,925	4,450,882,552	10,009,804

The average amount due to each depositor increased from $430.09 in 1911 to $444.64 in 1912.

Currency Reform

THE National Citizens' League, which was formed to promote legislation for the improvement of our currency and banking system, decided last week to maintain its organization until legislation is enacted. The league has sought to carry on a campaign of education. It should not give up the work. The aid of commercial organizations is needed. We are glad to see that the National Association of Credit Men has determined to exert its influence in this direction. If the movement for reform is to be successful it must have the earnest support of the business men of the country. Action at Washington cannot be expected before the first regular session of the new Congress, a year hence. In the meantime there should be an effort to obtain this support.

....The price of Indiana crude petroleum rose last week above the dollar mark, for the first time in eight years.

....Canada's Minister of the Interior says that Western Canada's crops this year are 200,000,000 bushels of wheat, 200,000,000 bushels of oats, 48,000,000 bushels of barley and 12,000,000 bushels of flax, grown on 35,000,000 acres, and that is only one-tenth of the land there available for cultivation. The elevator storage capacity of the Northwestern Provinces has grown from 12,700,000 bushels in 1901 to 61,500,000 in 1912.

The Independent

VOL. LXXIII. NEW YORK, THURSDAY, NOVEMBER 14, 1912. No. 3337

Survey of the World

The National Election

At the national election on the 5th inst., the candidates of the Democratic party, Governor Woodrow Wilson, of New Jersey, and Governor Marshall, of Indiana, were chosen by a great majority of the electoral votes. According to the latest returns, the result was as follows. Wilson, 429; Roosevelt, 90; Taft, 12. There is some doubt, however, concerning California, where incomplete returns give Roosevelt only 600 more votes than are counted for Wilson. There are allegations of fraud, and it may be that the question will be taken to the courts. The gain of California's 13 votes would increase Wilson's total to 442 and reduce Roosevelt's to 77. Idaho is for Taft by a narrow margin. Estimates of the popular vote vary, and the exact number of votes cast cannot at present be ascertained. The latest trustworthy estimate is about as follows: Wilson, 6,300,000; Roosevelt, 4,200,000; Taft, 3,500,000. It appears that Wilson's popular vote probably did not exceed the vote for Bryan in 1908, and that it is less than the combined votes of Roosevelt and Taft by about 1,400,000. The States voting for Taft were Idaho, Utah and Vermont. Roosevelt's States were Michigan, Minnesota, Pennsylvania, South Dakota, Washington, and, probably, California. The Democrats largely increased their majority in the House. In the new Congress it will be from 155 to 160. Mr. Roosevelt's party had complete Congressional tickets in fourteen States and had nominated candidates in many districts elsewhere. Among the defeated are ex-Speaker Cannon and Mr. Longworth, the son-in-law of Mr. Roosevelt. Changes in the Senate will give control of that body to the Democrats. There may be a tie, to be broken by the Democratic Vice-President's casting vote, or, without his vote, the Democrats may have a majority of two. In the State of New York the Democratic party will have 137 of the 201 members of the Legislature. Mr. Taft's vote in that State exceeded Mr. Roosevelt's by about 70,000. The Socialist vote, 420,000 in 1908, was probably doubled. Mr. Berger, the Socialist member of the House, was defeated by the candidate of a fusion. It appears to have been decided that no one shall be named by the National Committee to fill the vacancy on the Republican ticket caused by the death of Mr. Sherman. Before the election a majority of the committee desired to nominate Governor Hadley, of Missouri. On the 9th, in a public address, the Governor said that if Mr. Wilson should be successful in his administration he doubted whether the Republican party would "ever come to life again." If Mr. Wilson should fail, however, he expected to see the two factions of the Republican party united. Mr. Roosevelt said he accepted the result "with entire good humor and contentment":

> "As for the Progressive cause, I can only repeat what I have already so many times said: The fate of the leader for the time being is of little consequence, but the cause itself must in the end triumph, for its triumph is essential to the well being of the American people."

Mr. Taft said he sincerely hoped the change of economic policies in reference to the tariff could be made without halting prosperity. The vote for Mr. Roosevelt and Mr. Debs, he added, was a warning that their propaganda in favor of

fundamental changes in our constitutional representative government has formidable support. He urged Republicans to gather under the party standard and to organize again for the defense of their party's principles:

"We must make clear to the young men of the country, who have been weaned away from sound principles of government by promise of reforms impossible of accomplishment by mere legislation that patriotism and common sense require them to return to the support of our Constitution. Without compromising our principles we must convince and win back former Republicans and we must reinforce our ranks with Constitution-loving Democrats. We favor every step of progress toward more perfect equality of opportunity and the ridding society of injustice. But we know that all progress worth making is possible with our present form of government and that to sacrifice that which is of the highest value in our governmental structure for undefined and impossible reform is the wildest folly. We must face the danger with a clear knowledge of what it is."

We have quoted elsewhere a part of the statement made by Mr. Wilson. He said:

"The result fills me with the hope that the thoughtful progressive forces of the nation may now at last unite to give the country freedom of enterprise and a government released from all corporate and private influences, devoted to justice and progress. There is absolutely nothing for the honest and enlightened business men of the country to fear. No man whose business is conducted without violation of the rights of free competition and without such private understandings and secret alliances as violate the principle of our law and the policy of all wholesome commerce and enterprise need fear either interference or embarrassment from the Administration. Our hope and purpose is now to bring all the free forces of the nation into active and intelligent co-operation and to give to our prosperity a freshness and spirit and a confidence such as it has not had in our time. The responsibilities of the task are tremendous, but they are common responsibilities which all leaders of action and opinion must share. And with the confidence of the people behind us everything that is right is possible. My own ambition will be more than satisfied if I may be permitted to be the frank spokesman of the nation's thoughtful purposes in these great matters."

Tariff Revision

A movement for a special session of Congress, to be called in March or April next for a revision of the tariff, has the earnest support of many Democratic Senators and Representatives. Immediately after the election it was advocated by Mr. Underwood, chairman of the Ways and Means Committee, who said:

"The Democratic party is pledged to an immediate downward revision of the tariff taxes. This promise must be fulfilled in order to relieve the consumers of the country from many unjust and burdensome customs duties. The customs duties are interwoven with a large part of the commercial and manufacturing business of the country. Uncertainty as to what changes will be made in the customs taxes may delay business development. In my judgment, in the interest of both the consumer and the manufacturer, all uncertainty should be avoided by immediate action of Congress in an extra session called next spring for that purpose."

There has since been published the approval of many other Democrats, altho some, apparently a minority, prefer to wait for the first regular session, recalling the fact that extra sessions for tariff legislation have sometimes been unfortunate for the party in power. Mr. Wilson has declined to express an opinion on the subject.

Gains for Woman Suffrage

Four States were gained for woman suffrage at last week's election. The necessary Constitutional amendments were adopted in Michigan, Kansas, Arizona and Oregon. The number of States in which women are entitled to vote was thus increased to ten. From Washington was reported the election of Mrs. Josephine Preston to the office of Superintendent of Public Instruction. In that State the leader of the successful Presidential electors, representing the Progressive party, was Mrs. Helen B. Scott, of Tacoma. In New York, Saturday evening, the 9th, there was a grand torchlight parade to celebrate the accession of four States. About 20,000 women and a considerable number of men marched down Fifth avenue from Central Park to Union Square, where addresses were made. Among the speakers were the venerable Rev. Anna Howard Shaw and Mrs. Henry Villard. It is estimated that not less than 400,000 people saw the procession from the sidewalks and windows. It had been elaborately planned and carefully organized. All newspaper reports agree in saying that the marching women were treated with respect by those who came to see them.

Roosevelt's Statement In the first public announcement made by Colonel Roosevelt since the election, given out on Monday night, he congratulates the Progressives of the country and says:

"What the Progressive party has done since the theft of the Republican organization by the Republican bosses at Chicago last June is literally unparalleled in the history of free government, worked under representative institutions. Three months have gone by since some hundreds of earnest men and women gathered to found the new Progressive party.

"Without much money, without any organization, against the wealth of the country, against the entire organized political ability of the country, against the bitter hostility of 90 per cent. of the press of the country, against the furious opposition of every upholder of special privilege, whether in politics or in business, and with the channels of information to the public largely choked—the Progressive party has polled between four and four and one-half million votes; has hopelessly beaten one of the old parties, both in the Electoral College and in the popular vote; has carried several of the important States in the Union, and has taken second place in the Nation, and either first or second place in some thirty-seven of the forty-eight States.

"During the campaign I said repeatedly that this was in no shape or way a one-man movement, but a movement for great principles—a movement which has sprung, as all healthy movements in our democracy must spring, from the heart and conscience of the people themselves. This truth must be kept steadily before the minds of all of us. The Progressive party has come to stay. If either of the old parties will endeavor to put into legislation any one of our planks it can count upon our hearty support in so doing; but we will not rest contented until the entire platform is enacted into law and becomes part of our political system, national and State.

"I am proud indeed that the great, good fortune has been mine to fight shoulder to shoulder with the men and women who, in the ranks and in various positions of leadership, have waged this great battle for social and industrial justice. So far from being over, the battle has just begun. We will not rest content until every feature of the Progressive program has been put into effect; and when this has been done, unquestionably there will have opened to us new avenues, along which it will still be a duty to work for the moral and economic betterment of our people."

McManigal's Testimony An inquiry concerning the destruction of the Los Angeles *Times* building, in which twenty-one persons were killed, led to the arrest of certain persons. One of these, Ortie E. McManigal, made a long confession to Detective William J. Burns, and to this confession was due the successful prosecution of the two McNamaras, who are now in prison. For some time past forty-five labor union leaders have been on trial at Indianapolis upon indictments charging that they, or several of them, planned the Los Angeles explosion and about one hundred similar attacks upon life and property, using the funds of the Iron-workers' Union to pay those who did the foul work. At this trial, on the 9th, McManigal, as a witness for the prosecution, began to tell his story. He was induced, he said, to make his first attack upon a structure by Herbert S. Hockin, now secretary-treasurer of the union, who threatened to prevent him (by a union boycott) from earning a living if he should refuse to do the job. This was in 1907, and he received $75. Continuing his testimony he gave the history of his connection with many explosions in various parts of the country, showing how he procured the dynamite and transported it, who employed him, and how much pay he received. The confession implicates Hockin and other officers of the union, and McManigal, before he leaves the witness stand, it is expected, will give an account of nearly one hundred explosions, bringing the record down to the destruction of the *Times* building in Los Angeles.

Mexico Last week was a comparatively quiet and encouraging one for the Madero Government. At the beginning there was revolutionary disturbance in the States of Vera Cruz and Oaxaca, but the rebels surrendered a few days later. There were battles with the Zapatists within a few miles of Cuernavaca. General Blanquet commanded the Government's forces. On the 8th, after four days' fighting, the Zapatists were routed. They fled to the mountains, leaving more than one hundred dead on the field. In the north, several railway bridges south of Juarez and near the city of Chihuahua were wrecked by Orozco's men. The Government denies that thirty-eight of his followers were recently put to death near Saltillo. It was reported at Washington that Ma-

dero would not permit the execution of General Felix Diaz. The hurricane that wrecked Acapulco caused much loss on a long line of coast. In Acapulco 150 persons were killed. Four small towns in Guatemala were ruined. A steamship went down near Mazatlan, with eighteen of those on board. It is said that 1,000 lives were lost between Mazatlan and Panama. The election of Governor Wilson and the defeat of Mr. Roosevelt are regarded with satisfaction by the Government, which believes that the new President's policy with respect to Mexico will be like Mr. Taft's. The Foreign Minister says:

"The Government of Mexico views with genuine satisfaction the results of the Presidential election, and feels assured that the newly chosen President will prove another such friend of Mexico as Mr. Taft unmistakably has been. Mr. Wilson's poise and his high reputation as an author of works on the theory of government and political economy augur well for the future relations between the United States and Mexico."

The Islands

At the recent election in Cuba all the provinces were carried by the Conservatives. General Menocal, the successful candidate for President, says there must be radical changes in the tariff, to reduce the high cost of living. Before his inauguration, which will take place in May, he will visit the United States. The leaders of the Liberal party, whose candidate was Dr. Zayas (now Vice-President), have decided to convene the Liberal Assembly on the 23d inst., in order that steps may be taken for disputing the legality of General Menocal's election. It is reported that the Liberal members of the House may block legislation by refusing to attend sessions, thus preventing a quorum.——At the election in Porto Rico, on the 5th, all of the seven electoral districts were carried by the Unionists. Luis Munoz Rivera was re-elected Resident Commissioner at Washington.——In Santo Domingo, the rebels, last week, besieged Monte Christi and surrounded Puerto Plata. They were warned by the United States gunboat "Wheeling" that they must not molest the custom houses or the property of foreign residents. The commissioners sent from Washington, together with representatives of the local Government, are to have a conference with Horatio Vasquez, the revolutionist leader.

Central America

General Jose Valladares, who for some years past has promoted revolutionary uprisings in Honduras, was killed, on the 7th, by Government troops near Ojojona, his native town. At the head of 400 men he had set out to capture the capital. In the first skirmish with the Government forces he was shot, and the uprising ended with his death. He hated Americans. Two or three years ago he was in command at the port of Amapala when the new United States Minister, Mr. McCreery, arrived there, and he was directed by President Davila to receive the Minister with the customary honors. His reply was that he would not honor "any of Taft's and Knox's dogs." Having been deposed, he became a rebel. Forces were landed from American, British and German ships, as he had threatened to kill all foreigners. He surrendered and was exiled. Last March he entered Honduras from Salvador with a considerable number of followers, but was defeated. In the mountains, to which he fled, he met General Soto and killed him. Last week he began another attack upon the Government.——Rear-Admiral Southerland is still receiving letters from prominent Nicaraguans, expressing their gratitude to the United States and commending the marines who were landed during the recent rebellion. General Mena has not yet been released. It was at his own request that, after his surrender, he was taken to Panama on an American ship. ——At a meeting of the New York Chamber of Commerce, last week, the committee on foreign commerce by unanimous vote made an adverse report upon Lewis Nixon's resolution expressing approval of President Taft's assertion that remission of Panama Canal tolls on American ships is not forbidden by treaty. Action upon the report was deferred.——In an article published last week, Mr. Stimson, Secretary of War, argues that the United States has a right,

under treaties, to fortify the canal and that national expediency requires fortifications.——There is great activity in European shipyards, owing mainly to the approaching opening of the canal. The two leading German steamship companies have thirty-one ships under construction.

South America Speaking at a dinner given in his honor by the Pan-American Union in Washington, last week, Dr. Manuel de Oliviera Lima, of Brazil, said that the South American countries, while they appreciated the protection of the power of the United States, did not regard our Monroe Doctrine with favor, because they resented our assumption of the power of a protectorate. He suggested as a substitute a league or agreement of the countries of the Western Hemisphere to oppose encroachment by Europe. He has been lecturing upon international politics in several of our universities. ——It is expected that Colonel Gorgas, head of the Panama Canal Zone's Department of Sanitation, will go to Guayaquil, sometimes called "the pest hole of the Pacific," to make an investigation there and to advise with Ecuador's Government concerning the sanitary improvement of the port.——Diplomatic relations between Chili and Peru, it is said, will soon be resumed. Warships have been sent to Punta Arenas, where the Chilian garrison is in revolt.—— Stuart J. Fuller, United States consul at Iquitos, has completed his inquiry in the Putumayo rubber district and is on his way to Washington. The British Government seeks the extradition from Barbados of Andre O'Donnell, a Peruvian indicted there for the murder of natives in Putumayo.——It is reported that the Farquahar syndicate, which owns railways in Argentina and Brazil, has opened negotiations with Uruguay for the purchase of the State railways in that country, and intends to build additional roads. Uruguay's new Government Insurance Bank, in the five months ending with July, issued insurance as follows: Fire, $14,129,560; life, $10,600,000; accident, $1,549,513. The business is growing, and the losses thus far have been far below the premiums received.

Salonika Surrendered On Thursday, November 7, the commandant of Salonika and representatives of Tahsin Pasha, commander of the Turkish army, came to the Greek headquarters with the consuls of England, Germany, France and Austria to submit proposals for the capitulation of the army. They asked that the army, while engaging to remain neutral until the end of the war, should be allowed to retain their arms. The Crown Prince of Greece refused any concession, but that their arms should be returned to them at the end of the war, and gave them until 6 o'clock next morning to reply. At 5 o'clock the commandant again appeared, ready to agree to the surrender of arms, except 5,000 rifles destined for the instruction of recruits. The Crown Prince insisted that the surrender of all arms, except the swords of the officers, was a necessary condition, but extended the time for two hours. When that limit had expired he ordered the Greek troops to advance, and they had drawn near to the Turkish outposts at half past four in the afternoon, when Tahsin Pasha sent a letter agreeing to the surrender on the terms imposed. The Turkish garrison of Salonika numbers 25,000, which, added to the 42,000 prisoners of war already in their hands, puts a heavy burden upon the Greeks. Crown Prince Constantine entered Salonika on November 10 at the head of his army and marched direct to the church of St. Sophia.

The Rout of the Turks The Turks were not able to make a stand at Tchorlu and Sarai, but were driven back to Tchataldja, the last line of defense outside Constantinople. The newspaper correspondents with the Turkish army give harrowing accounts of the suffering of the starving and wounded soldiers on the retreat. Left upon the firing line with neither ammunition nor food, they held their posts as long as they could, then stoically trudged back toward Constantinople in the mud and rain without order or orders, leaving some 40,000 of their number upon the field. The troops were undisciplined and underofficered, and the commissary and hospital service

broke down completely. One correspondent relates that during the decisive battle of Lule-Burgas, October 30, Abdullah Pasha with his staff stood upon an ancient burial mound about fifty feet high overlooking the field, but was entirely without communication with the four army corps, extending over a frontage of 25 miles, which he was supposed to direct. There was no telegraph, telephone or wireless apparatus, and during the whole day only one orderly rode up with messages. We are reminded that during the Manchurian war General Oyama was 20 miles behind the firing line, but was in constant touch by telegraph and telephone with every regiment and battery of the Japanese army. Abdullah Pasha and his staff would have spent the following night without food if one of the newspaper men had not shared his stores with them and brought a kettle of hot cocoa to the house where they slept. During the retreat 120 guns were abandoned. Many of the Turkish officers proved to be cowardly or disobedient. Fifty of them have been condemned to death, and Nazim Pasha shot three with his own revolver in an outburst of rage at their cowardice. Besides the advantage of better marksmanship and ammunition service the Bulgarians are said to possess better guns. The Creusot guns of French model are superior to the German Krupps. Some experts go so far as to say that the lesson of the war will compel the German army to discard its present equipment and military methods. The rout of the Turkish right was most complete, and when forced back from Istrandja it did not rally until it reached the shelter of the forests about Lake Derkos (see map in last week's INDEPENDENT). Here the fighting is now most lively, for if the Bulgars following the coast of the Black Sea to the East can gain Derkos they will be able to outflank the Tchataldja lines and reach Constantinople. A chain of forts upon hills several hundred feet high stretches across the peninsula from Derkos to Tchataldja, near the Sea of Marmora, a distance of about 15 miles. This line of defense, 25 miles to the west of Constantinople, has been thought to be impregnable, but the Bulgars are now putting its reputation to a more severe test than it has ever suffered before. Cholera is said to have broken out among the soldiers and people of Constantinople. The Government has ordered the disarmament of all classes of the population in order to prevent a massacre of the Christians by the infuriated Mohammedans in case the city is lost. ——The Bulgars have reduced two of the leading forts about Adrianople and the food supply is so short that the city must soon surrender. The position of Great Britain was stated plainly by Premier Asquith at the Lord Mayor's banquet at the Guildhall Saturday night. The following passages indicate its tenor:

"In these anxious times it is satisfactory to be able to announce that the relations of England with the other Powers, without a single exception, were never more friendly and cordial.

"The great Powers are working together with a closeness of touch and a frankness and freedom of communication and discussion which is remarkable and which may seem almost unintelligble to those who believe that because for certain purposes the Powers have been and are ranged in different groups they must therefore in a time of a European crisis be arrayed in opposite camps.

"As a result of the victories of the Balkan allies the map of Europe must be recast and the Powers are unanimous that the victors must not be robbed of the fruits of the war that has cost them so much.

"I purposely refrain at this time from even indicating in a general way the points, some of them full of difficulty, which must inevitably emerge for solution, but so long as the state of belligerency continues this government, as far as its influence goes, will deprecate the raising and pressing of isolated questions which if handled separately and at once may lead to irreconcilable divergencies, but which if dealt with from the wider viewpoint of a general settlement may assume a different and more tractable aspect."

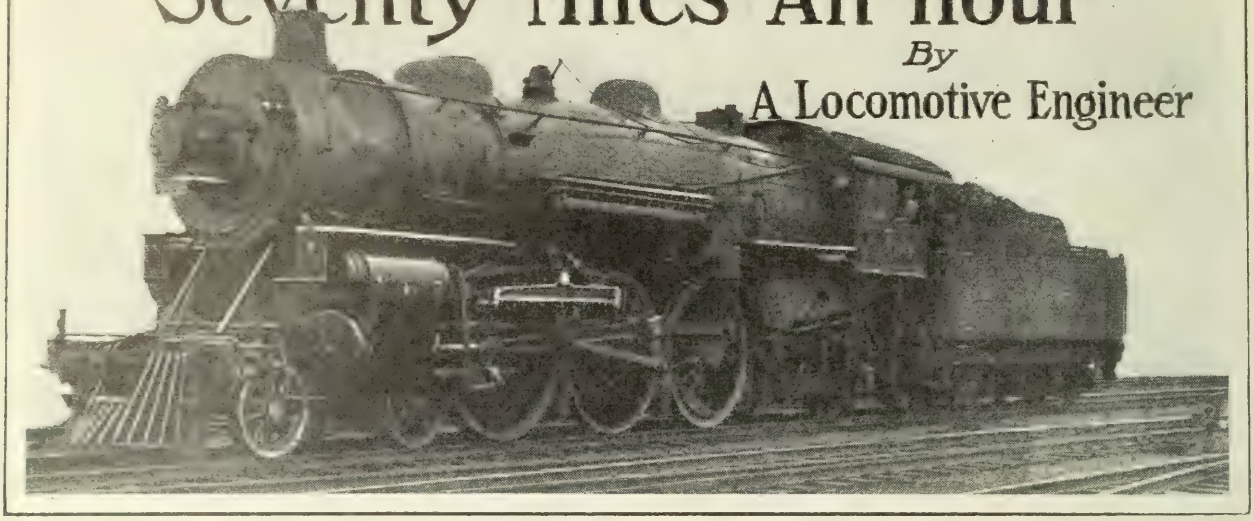
Turkey Sues for Peace

The Ottoman representatives at the European capitals on November 5 presented the following note:

"The Ottoman Government requests the great Powers to undertake collective mediation with a view to the immediate cessation of hostilities and the determination of conditions of peace."

Since the Powers have collectively and individually guaranteed the integrity of the Ottoman Empire in many treaties during the last hundred years, and since they as well as Turkey are pledged to

proffer their good offices in such an emergency by The Hague conventions, the request of the Ottoman Government is not unreasonable. Nevertheless, none of the Powers is willing to come forward to act as intermediary at this juncture, and they cannot agree upon any form of joint action. The French Premier, M. Raymond Poincaré, has been most energetic in his efforts to bring about such an agreement, but so far without success. He has asked the Powers to express a willingness to concede to the Balkan states the country conquered by their arms and to declare their disinterestedness and lack of territorial ambitions for themselves. This formula failed to gain the adhesion of the Powers, on account, it is said, of the opposition of Austria. But even Count Berchtold, the Austrian Foreign Minister, has publicly conceded the right of the allies to extend their boundaries, tho he refuses to allow Servia access to the Adriatic. If anything is done to stop it it must be done quickly, for the Serbs and Montenegrins have joined forces south of Skutari and are marching on Durazzo, which probably will soon be in their hands. Dibra has been taken by the Serbs after severe fighting, and Monastir is being attacked on the north by the Serbs and on the south by the Greeks.



The Partition of Turkey

Now that the victory of the Balkan allies is practically inevitable attention is directed toward the question of the fate of European Turkey. At the outbreak of the war the Great Powers united in a warning to the Balkan States that under no circumstances would they be allowed to extend their territory at the expense of Turkey, but the success of the allies has been so swift and decided that the Powers have altogether abandoned the expectation of reestablishing the *status quo*. Doubtless the Balkan allies had a definite understanding as to the division of the spoils, but that is still a secret and their designs can only be surmised. It does not appear that the holding of Constantinople enters into their plans, tho they doubtless hope to see the four kings make a triumphal entry into the ancient capital of the Byzantine and Ottoman empires. Bulgaria has already possession of the territory she desires with the exception of Adrianople, now practically within her grasp. If the Ottoman Government is to retain any part of its European possessions it will probably be Constantinople and the tip of the Balkan peninsula east of a line drawn from Midia to Rodosto. This is almost the only part of European Turkey where the Turkish population is in the majority. Bulgaria will doubtless claim the Ægean coast from Rodosto to Seres, if not to Salonika. Even then the area of Greater Bulgaria would be less than Russia procured for her in 1878 by the treaty of San Stefano before it was revised by the Congress of Berlin. Greece will lay claim to the country she has now gained as far north as Salonika and Veria. Montenegro will want a bit of northern Albania, including Skutari, which she has not yet succeeded in capturing. So far the demands of the allies will meet with no opposition from the Great Powers, but the question of what shall be done with the rest of Macedonia and Albania is not so easily disposed of. Servia's great ambition is for a strip of the Adriatic coast, and here she comes into conflict with Austria and Italy, both of which have long had aspirations in the same direction. The Servian Premier announces that Servia wants three Adriatic ports, San Giovanni di Medua, Alessio and Durazzo, all of which belonged to Old Servia. Austria and Italy are determined that Servia be excluded from the Adriatic and that Albania become autonomous or a Turkish province, with a Christian governor. The Prince of the Abruzzi, cousin of the King of Italy, is suggested as the ruler of Albania. There is no objection on the part of Austria to Servia's securing an Ægean seaport, even Salonika, but this will not satisfy Servia, and perhaps would not be allowed by her allies. The Austrian demands also include a permanent custom and commercial union with Servia and Montenegro. This, however, will not readily be granted, because it is feared that it will lead ultimately to annexation by the Austrian Empire, as in the case of Bosnia and Herzegovina. As it now stands the Balkan States are favored by the Triple Entente of Russia, France and Great Britain and opposed by the Triple Alliance of Germany, Austria and Italy.

Seventy Miles An Hour

By

A Locomotive Engineer

I BELONG to a railroad family. My father before me was a railroad man. I have five brothers and three brothers-in-law in the railroad business. I was brought up with railroad ideas all about me; railroading was the big business of the place where I was born and went to school, and the boys played at railroading. So, of course, when I was still very small I knew, or thought I knew a lot about railroading, and it was the hight of my ambition to become a locomotive engineer.

Locomotive engineers are often called the aristocracy of labor, and they deserve the title because they are the most intelligent and trustworthy, and they have great responsibilities on them. They must be good men, and they are good men.

But it is not so easy to become an engineer. You do not get such a place merely by wishing for it. I had to start in at the bottom and I was late in doing that. I was twenty-one years of age before I made a beginning, for I was the youngest of ten—four sisters—and one thing and another delayed me. Father was braking twenty-four years before ever he got up to be engineer.

I began on the Boston & Albany line, braking on gravel trains. One season I laid track, which is heavy work—handling rails and ties and spiking rails. Then I put in four years in the yard at Rensselaer—switching, in charge of seven men. I had to switch the cars and sort them and get them on the right tracks. And I had to pull all my own pins, going between the cars to do it. Thirty years ago there were no automatic couplings. A man had to run in and drop the coupling pin in place when the cars bumped together, and if he slipped something happened to him.

I was with the Boston & Albany for thirteen years doing all sorts of things, toward the last mostly braking and running as train conductor. Then I made up my mind that I would get a job with New York Central as fireman, leading up to engineer, and at last I did.

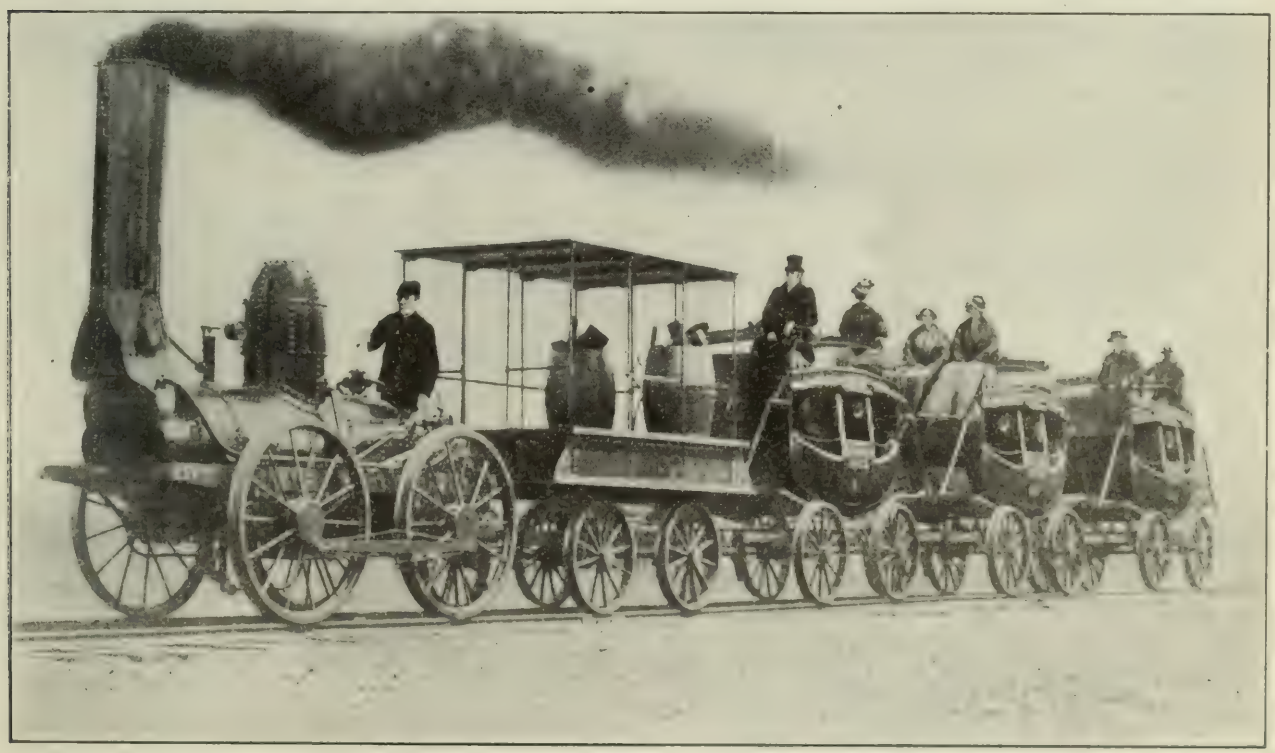
I put in eleven years firing on the New York Central, freight and passenger, and then came my promotion—the place I had been after all the time, the one it had been my ambition to fill. I was made an engineer, but even at that I was not at the top of the tree, because the old engineers have the preference. It is only fair that the men longest in service should be best looked after.

There are slack seasons in railroading as in other businesses, and that leaves roads with more engineers than they need. So some engineers have to go firemen and take firemen's pay. Naturally it's the old hands who are kept in their places. But the men who go firemen don't lose their seniority. They just have patience and bide their time, and presently when slack season comes again

they stay engineers and it is the ones younger in the service who have to take firemen's places for a spell.

Even at its best the engineer's job has its troubles. One who never tried it can't understand the wear and tear there is on a man's system when he's on an engine flying along at maybe seventy miles an hour with two or three hundred passengers behind him, and he knows that any moment he and his engine and the passengers and train may land in Kingdom Come.

What from? Why, from anything—something unforeseen—something no one could have thought of. Of course there's inspection—good careful inspection. But accidents can happen in spite of that. Maybe a rock on the track, maybe a landslide, maybe a softened roadbed in the spring, maybe slipping rails, maybe something wrong with signals that let you smash into another train, maybe a wagon at a crossing, maybe something wrong with engine or one of the cars.



Everything was inspected and the locomotive and train were all right when you started, but who is to tell that something won't come loose while you are going? No matter how careful you are, such things will happen at times. Once after running ten minutes the forward spring hanger worked loose. It had been all right at inspection. I managed to stop her without a bad break-up, but I've had accidents.

My left leg is no longer straight and I'm a little lame. That comes from a smash-up in 1902, when I lay for an hour and forty-five minutes with both my legs crushed under the boiler, my back almost broken against the seat, my head down in a ditch, and the steam scalding me.

The boys thought I was done for then, and I thought I was done for, too, at first. But finding I didn't die at once, I kept my head and made a try for life. I managed to get a handkerchief out of my back pocket and stuff it in my mouth to keep me from inhaling the steam and cooking my lungs. The boys were so excited that they couldn't do things right, and after a time when I was able to take the handkerchief out of the way I told them what to do and they got the boiler lifted and me out. Things might have been much worse, for this was a construction train and no lives lost. Supposing it had been a passenger train?

I lay a year in the hospital before I was able to go back to work again. Yet I'm almost as good as ever.

Once I was rolled between two trains. I was braking from the top on one train

AMERICA'S FIRST RAILWAY LOCOMOTIVE: THE "DE WITT CLINTON"

ONE OF THE NEW ELECTRIC LOCOMOTIVES OF THE NEW YORK CENTRAL

It pulls the Twentieth Century Limited, making a run of eighteen hours between New York and Chicago. Weight in working order (with tender) is 422,000 pounds; length of engine and tender is over 77 feet; maximum hight, 15 feet; extreme width, 10 feet 5 inches; size of cylinders, 23½ inches diameter, 26 inches stroke; diameter of driving wheels, 79 inches; steam pressure, 200 pounds.

and started to climb down the side when we came to where another train was standing and there wasn't room between them. All the time in passing I was rolled round and round between the two, and them holding me so tight that I couldn't fall. When we passed the standing train I dropped to my feet and I wasn't hurt a bit. The trains had a sort of joke on me. But while I was between them I didn't see the joke. I thought it was good-bye.

Another time when I was on top of a train and had to set the hand brakes in a hurry, both my feet slipped from under me because of the ice, and I'd have fallen off the car, but I just happened to straddle the break-head and that kept me up. When the boys saw me fall they thought I was a goner sure.

Another time I got down off a car to make a coupling and the bumper was missing off the moving car, and it looked like I'd be crushed between the two, but I put out both hands against the moving car and shoved with all my might against the standing car and got her going, and then I was able to step out safe.

Another time my train broke in three pieces and ran three miles that way before they got her braked down. Yet no harm was done. I don't know how it happened; most likely the coupling pins were smashed. Take it on the whole, tho, I've come out very well considering all the years I've been in railroad business. I have all my fingers yet, and two good eyes, and I have my strength, and my game leg is not so bad. Lots of the boys got it worse than me. My eldest brother had his leg so badly crushed in an accident that the doctors had to take it off, and he died under the operation.

Railroading now isn't as bad as it was thirty years ago. The roadbed is better, the locomotives are better, the signals are better, the new appliances in a locomotive make the engineer's duty easier. He can do things more surely and quickly. And the new rule allowing the engineer to wear goggles to protect his eyes from flying dirt—that's the best of all.

We cut down the accidents; no doubt about that. There are not nearly as many today as there were twenty or thirty years ago, in proportion to the trains running. But even at the best and with all the care taken and all the safety appliances, railroading is a risky business like going to sea in a fishing smack.

And some men get careless, even reckless. A few of the young fellows make sport of the danger. You see them in the yard jumping on the running boards of

moving engines, going in between moving cars sometimes, showing off how smart they can be and not be caught—and railroading is no business for a Smart Aleck. Sooner or later such a fellow gets snapped—maybe ground up.

A man to be a good engineer must be without fear, but without recklessness, too. He must avoid danger if he can, but if he has to face it he must be cool and steady and quick. He must not worry.

Americans are high strung, and some might think that that puts them out of line for the engineer's job—makes them too nervous. But they're the best in the world. They're steadier and cooler and hold their nerve better when the real danger comes. Give me an American every time. Most of us engineers on the Central here are Americans. Some have foreign parents, but they were born in this country.

Wages are pretty good. They average from $175 to $200 a month, and the hours are so that a man can have a good deal of time with his family. Now and then he is sixteen hours on duty, but afterwards he lays off for thirty-six hours, maybe. And the sixteen hour stretches don't come often. You can't make an eight hour day in this business. It has been tried and it can't be done. A man on this division has, say, the run to Albany, and then must wait for two or three hours before bringing his train back again. I don't think that a sixteen hour stretch is dangerous. It is exhausting, of course, but men can stand it. If a man fell unconscious in his cab the fireman would step in his place till he recovered or till they got another engineer. I never heard of such a case, tho, and I never heard of an engineer going crazy while he was on duty. I guess that those things only happen in books.

On the passenger trains now they have two engineers, so that if one does fall down there's the other. Both get the same pay.

The engineer doesn't need to be a young man. One might think that a young man would be quicker. But the old experienced man does the right thing instantly without thinking at all. He has grown to be a part of the engine. His mind runs the engine just as it runs his body. An engineer must retire when he is seventy years of age, and then he gets a pension. But I have known men of seventy years just as steady and keen as any of the young fellows; just as reliable, too. They quit because of the rule, not because they are not fit for the duty. I fired for a veteran like that one time—a fine man. He retired on a pension a while ago, but has plenty of life in him, and I guess is enjoying the holidays.

It doesn't make any difference whether a man runs a freight or a passenger locomotive. If he is a real engineer he can run anything in the yard. Supposing something happens to the engine of a passenger train and there is a freight train close by. The passenger engine is taken off, the freight engine put on, and away goes the passenger train about its business. Passenger trains have first rights on the tracks, then fast freights. Extra freights have no rights on the tracks at all, except when the others are not using them. Extra freights have to run in between, and then get on sidings when fast freights or passengers come along. I've run all kinds.

The new engines are great—these superheaters. They're powerful and they save coal and water. I'm not afraid of the new electrics. Maybe they'll run out the steam locomotives. Some say they're not strong enough for heavy loads. But I don't think there's anything in that, because it is easy enough to build them more powerful. The heaviest load a steam engine on our road pulls now is about 5,000,000 pounds, an eighty car train of fifty ton cars. Grades are good about here. The heaviest pull on this division is between Albany and West Albany, where there is a rise of ninty-five feet to the mile. One engine can't pull an eighty car train up that grade. It takes two. As to the petroleum engines, I know nothing about them. I hear that they are used in the mountains, where the line runs over a lot of trestling, because steam locomotives throw sparks which may set a fire. We never used a petroleum engine on this line.

It won't make any difference to engineers if the electric engine drives the others out. The same engineers will remain, with the older men having the preference. All we'll have to do will be

to learn how to run the electric engine, and that isn't such a hard job.

I made a mistake when I set my ambition on being an engineer. I can see that now. I got on the wrong end of the car. Railroad passenger conductor—that's the better job. If I had it to do over again that's what I'd go for. But even at that engineering isn't bad. It gives good pay and steady work, and most of us live at our terminal points, so that we can go home at the end of our runs, and if something happens so that we can't get home we have these Y. M. C. A. Railroad Branches now, and they help a lot. There's the reading room and the game room, and you meet good company, and a fellow can get a good meal or a bed. In the old days we did not have such rooms and there used to be a lot of drinking. But no drinking now. No sir, an engineer has to cut out all booze.

In regard to home life, engineers are much like other men. We're married and we stay married—no Reno for us. There is an average of six children to the family among the railroad men that I know.

We are great for having family jollifications; take the wife and kids and all go to a picnic maybe. Railroading is hard work, and when a railroad man gets home and has had a good wash and a meal he feels like enjoying himself with his wife and family. Other women don't bother him at all. He has no time to think about them.

I'm different from most of the other engineers, for I have a farm. My boys run it. I have three boys—one twenty-two years of age, one twenty and another sixteen. We have one hundred and twenty acres of land, twenty head of good cattle, thirty-five pigs, five horses, two hundred chickens, turkeys, guinea hens, and about twenty ducks and geese. We raise pretty nearly everything, and the boys do the work, except when they're getting the crops in, when I take two weeks off and help them. My eldest boy has been through agricultural college, and he knows all about farming. We made $3,000 clear on our farm last year. After all, farming is the best business there is. A man is his own boss when he owns a farm and stock. We raise pretty nearly everything we need—and that of the best. And what we don't raise we can buy at the store by exchange.

In two years I'll be seventy, and must retire on a pension, and there's the farm ready for me. Plenty to do when I feel like work, but if I want a day off that's my privilege.

My farm is near Rensselaer, where I was born. Rensselaer is the greatest railroad town in the State; that is, in proportion to its size it has the greatest number of railroad men living in it. Most of them live in detached houses with gardens. They're the greatest fellows in the world for trying to raise fruit and vegetables and flowers, and some of them make a pretty good fist of it.

Passenger engineers have the best of it in regard to home life. Their runs are more regular and hours shorter than those of the "freighters."

As to getting up in the world, an engineer has about as good a chance as another. I've seen quite a few go up from the motive power department. As many engineers as conductors make the climb.

There are grievances about pay and hours. But there won't be any strike, no chance of it. The matter is all in the hands of the arbitration commission, and whatever they agree on will bind us. We're a pretty quiet set in the Brotherhood of Locomotive Engineers. There are about twenty-seven thousand of us in the country, and the general sentiment is strong against unnecessary strikes. As to the company we feel that it is doing the right thing as far as it or any other company can.

New York City.

Woodrow Wilson: An Appraisal

BY WINTHROP MORE DANIELS

PROFESSOR OF ECONOMICS IN PRINCETON UNIVERSITY.

NOTHING in our political history quite parallels the comparative suddenness with which the President-elect has vaulted into the office of Chief Executive. We had grown accustomed to regard the office as within the reach of only the most experienced politicians. It is true that Mr. Cleveland's elevation to the Presidency was in some ways out of the accepted routine. While he was advanced from the Governorship of New York direct to the White House, he had nevertheless long been active in State and municipal politics. But for a "schoolmaster," as former Governor Griggs contemptuously dubbed Mr. Wilson when the latter ran for Governor of New Jersey, fairly to leap into the Presidency before having been in the political arena for three years, is something unique. The phenomenon suggests an analysis of the personal qualities and the varied experiences of the man who has achieved this distinction. Four distinct elements that have gone to his making may be readily recounted—inheritance, early social environment, scholarly pursuits, and political apprenticeship. Of these the first in order is ancestry, with its endowment of entailed characteristics.

A dominant seriousness of purpose was certainly a very notable parental legacy handed down from father to son. Certainly nothing has ever been more alien to the Wilson blood than lightness or shallowness of aim. A grim earnestness of endeavor has always persisted in the activities of the President-elect; and those who knew his father but slightly could not fail to discover the habitual bent reiterated in the daily habit of the son. To but "festoon the outward porch of things" was never a temptation to Woodrow Wilson. The rôle of idler, trifler, amateur, was an impossible one for him to essay. It is perhaps fruitless to try to apprehend this lineal inheritance more completely. It was and is the basic stuff and core of Mr. Wilson's personality. One so constituted may be mistaken, but he cannot be insincere. He may err, but it will not be because he is not striving mightily for what he considers the right way. Nor is this temper of mind inconsistent with relaxation; but the relaxation is purposeful. There is no overlap between the zone of striving and the zone of recreating energy for continued striving. More than any one else, perhaps, Governor Wilson, if he gave the matter thought, and if he permitted himself the disclosure of his introspection, would ascribe to his ancestry, and particularly to his father, the characteristic traits that have molded his own life activities.

Second, among the elements which have blended in his personality, is the impress of his early Southern residence and associations. In some external particulars these are not so conspicuous as they were in the Woodrow Wilson of twenty years ago. But at heart they persist. Had an untoward fortune immured him in a backward rural community, particularly in some parts of the Southern States, he might be, to all appearances, the counterpart of many a Southerner of the old school. A certain old-world deference of manner with a certain old-world pride of bearing and demeanor are native to this type. So, too, is a quick, native resentment upon slightest suspicion of intended double dealing, a feeling as quickly dispelled and atoned for if once convinced of error. They entertain a generous and sometimes almost a naïve presumption in favor of the sincerity and worth of a new or untried acquaintance. In the finest type there is a real guilelessness, which might pass for credulity in the more wary and distrustful strata of artificial and cosmopolitan society. But in reality this natural bent of disposition is one of the fine flowers which a busy, thriving age hardly suffers to flourish. And its concomi-

tants of openness, frankness, heartiness, good comradeship and large discourse are more than an offset for the small economies on which men pride themselves who are submerged by the devouring rush and hurry of the age. The traditional "visitor from Mars" would find such an unspoiled American, despite his primitiveness, well worth knowing, and would appraise many an up to date city man narrow, provincial and limited by comparison.

Of course, it stands to reason that a man of Mr. Wilson's varied experiences inevitably acquires the cosmopolitan habit, bred of close and constant intercourse with men of affairs. But the stamp of his early Southern residence and associations is too deeply ingrained for complete effacement; and without being cramped by a delimited or sectional viewpoint, he is, nevertheless, in native trend of feeling, responsive to the indelible traditions of his old home. Even in speech there peers over the edge occasionally the trace of the older and more formal age. Who but Governor Wilson, in his telegraphic acknowledgment of Colonel Roosevelt's congratulations, would employ the courtly term *"pray"*—"pray accept my thanks, etc." ?

Until his election to the presidency of a university just ten years ago, Mr. Wilson's career had been that of a student and a scholar. His books disclose the native habit of his mind. From the very outset of his political writings he kept clear—surprisingly clear—of the pitfalls of the conventionalized study of politics. At a time when constitutional questions were pursued within the strict metes and bounds of technical legal interpretation, he displayed the then unwonted virtue of raising "the previous question," as to whether these lines of inquiry yielded fruitful results of fundamental value. His "Congressional Government," offered as a thesis for his doctor's degree, pointed to the congenial origins of his speculations. Prefaced to the first chapter of this work are short citations from Burke and John Morley. The deep wells of political philosophy were the only sources from which he drew inspiration or enlightenment. His imperative quest in the study of politics was basic reality, and with the neat classifications and artfully contrived verbal distinctions which enshrined the dicta of the pundits he would have nothing to do. The citation from Morley is particularly characteristic of Wilson's own remorseless quest for fundamentals in the science of politics. It serves so well as a keynote to Mr. Wilson's thinking that it may well be quoted:

"The great fault of political writers is their too close adherence to the forms of the system of state which they happen to be expounding or examining. They stop short at the anatomy of institutions, and do not penetrate to the secret of their functions."

Against the then prevalent great American political superstition of the coeternal equality and mutually exclusive nature of the three departments of government—legislative, executive and judicial—the young essayist flung the indisputable dictum of Burke that "every sort of government ought to have its administration correspondent to its legislature." If there had been a standard of orthodoxy in American political science at the time, the daring controversialist would have been figuratively burned at the stake. But the growth of the commission government idea in our cities, and the extension of the idea of scientific budgetary legislation generally in our legislatures shows how accurate the political vision of Woodrow Wilson has proved. He was intractable in his opposition to the notion that a written constitution is identical with a wooden constitution, and that a divine deposit of inerrant political wisdom had once for all been delivered to "the Fathers." He concludes his essay with the brave and sober verdict:

"The charm of our constitutional system has now been long enough wound up to enable sober men who do not believe in political witchcraft to judge what it has accomplished, and is likely still to accomplish without further winding. The Constitution is not honored by blind worship. The more open-eyed we become, as a nation to its defects, and the prompter we grow in applying with the unhesitating courage of conviction all thoroly tested or well-considered expedients necessary to make self-government among us a straightforward thing of simple method, single, unstinted power, and clear responsibility, the nearer will we approach to the sound sense and practical genius of the great and honorable statesmen of 1787."

One who could have spoken thus at

the beginning of his career was not unsusceptible of conviction as to such political devices as the referendum or the initiative, altho with characteristic caution he approved them as political restoratives rather than as a steady diet.

Woodrow Wilson's energies were first engaged upon a large scale in administrative work when he became president of a university. It is true that prior to this he had won a commanding place in the world of letters. It is true also that among his colleagues his capacity for such tasks as fall commonly to the lot of the leading members of a college faculty was universally conceded. His rare gift of telling speech and his handsomely won eminence in his profession were, however, the basis at that time upon which his reputation mainly rested. His practical administrative talents and especially the daring initiative he speedily evinced were a genuine surprise even to those of his admirers who thought they knew him best. The scope of action which the position offered was not supposed to be wide. But when the disciplinary administration of the student body had been keyed up as never before in the history of the institution; when the heterogeneous course of study had been definitely mapped out and co-ordinated; when even the governing body of the university had been aggressively purged by an onslaught led by the new president, the university began to sit up and take notice. When first additional money in any considerable amount was put at his disposal, he had already evolved a novel scheme for using it. This was the introduction of intensive instruction, by which a personal bond was re-established between teacher and pupil. Instead of simply adding new chairs as chance permitted or decreed, he brought in a corps of capable young men to strengthen and vivify the extant courses of the college. The embargo upon the reading habit among collegians was lifted, and the preceptorial plan was permanently incorporated into the make-up of the university.

Much has been made of the differences which developed along the latter part of his college presidency. Outsiders who were without prejudice have always been puzzled over the matter, and even those who viewed the situation from near at hand have not always been able to view the occurrences without distortion of mental vision. The details are matters in which the general public have lost interest. But the president's project for reconstituting the whole scheme of university life evoked opposition from alumni, who entertained a different ideal from his own of what a university stood for. Later on, when large gifts were proffered on conditions which seemed to him to suggest an unwarrantable lodgement of control over academic policy in the donors, he sharply defined his position of opposition. Viewed retrospectively, it appears to the writer that university men, not alone in Princeton, but everywhere in America, had gradually lost the earlier and clearer vision of a university's proper function and its obligations to the nation at large. The ready influx of large gifts and the insinuating pleasantness of collegiate life had produced something akin to a materialistic acquiescence in keeping college a cultured paradise of outward comfortableness. The rude challenge which this widely held sentiment suffered from President Wilson's ringing blast of opposition was the storm center of the academic whirlwind. It was criss-crossed with some personalities, better forgotten; it was perhaps more violent than might have been the case if the president's plan of erecting residential halls as a substitute for student club houses had been more advantageously timed. His program, however, never alienated the support of the larger part of his faculty. The students who had graduated under him remained loyal, and much of the opposition of the middle aged alumni was bottomed, I believe, on their failure to realize either the changed conditions in college life or the true inwardness of the president's university policy. To the outsider's criticism that a university president should prevent acute division from arising among the university's sons, perhaps the best answer is that where the division arises from conflicting principles as to a university's function, silence on the president's part may easily be disloyalty to the supreme duty which his position casts upon him.

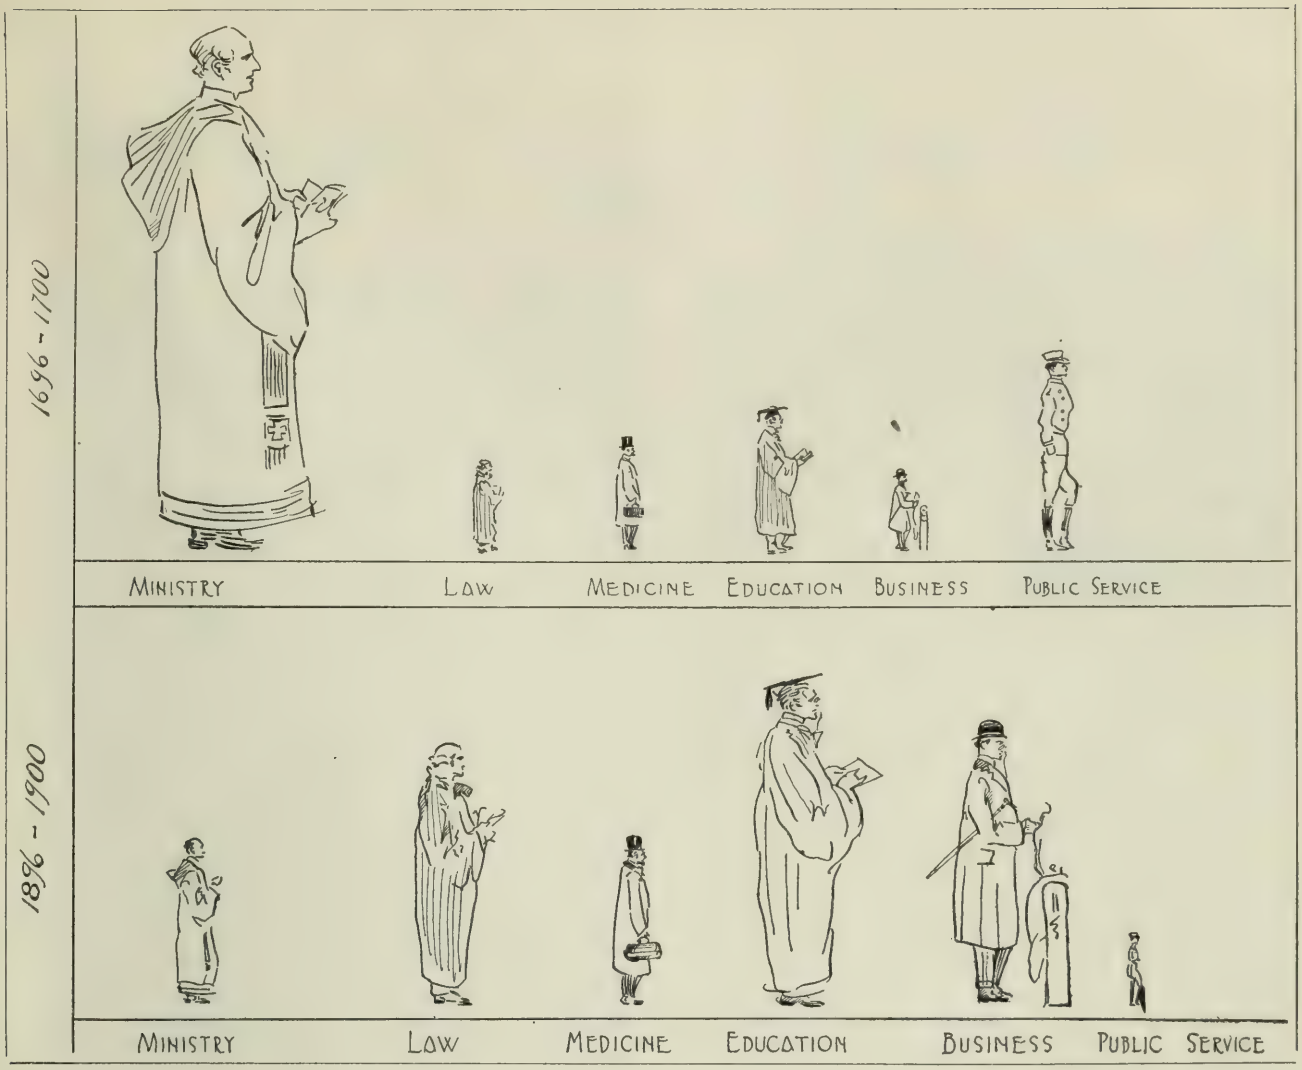
Certain it is that the administrative ex

perience as head of a university served Mr. Wilson in good stead when, having resigned the academic post and having been elected Governor of New Jersey, he essayed the more complex task of administering the affairs of the commonwealth. The task at the threshold, of repulsing the Senatorial aspirations of Mr. James Smith, Jr., was perhaps the most trying to encounter, but, despite well-intentioned advice of fearful friends to the contrary, his perception of duty was too clear in this matter to be blunted. The sure touch he had acqured in handling men and affairs, his rare persuasiveness and his tactfulness were also evinced in his first experience with a legislature in which one house was politically in opposition. He refused from the start to serve a patronage-counter and to buy desirable legislation at the price of according office. At the same time he made shrewd and commendable use of his power of appointment. He did not give away his hand by first handing out offices and then supplicating for needful legislation.

The success of a politician of the first order is in a way like that of a successful inventor. He makes practicable a project that looks desirable, but perhaps chimerical. Of all hopeless projects the enlisting of general public interest and public confidence in a thorogoing betterment of a State such as New Jersey was two years ago seemed politically the most visionary. It was not "corrupt and contented," as one of its neighbors is reported to be, but it was misrepresented and had grown cynical. The achievement of Governor Wilson was to excite public interest in bettering conditions, and to create popular confidence in himself and his party associates as an instrumentality of reform. I have heard him repeatedly express his disdain, even his contempt, for the view that politics is but a game. His strength has lain in his conviction that politics is a great opportunity for public service. But this innate conviction has served him more than once to upset the shrewd legerdemain of the old hands who sat around with knowing winks that they were up against a novice. Even if politics were only a game, the new player who sees in it something much more worth winning than place and party advantage, has so changed the rules that, albeit unconsciously, he is not unlikely to win by sheer audacity. It is not always the length of an apprenticeship, however, even a political apprenticeship, which defines its value, and the President-elect appears to have been a very apt pupil. Hosts of his supporters will be disappointed if at Washington he does not show himself a veritable Master Builder.

PRINCETON, N. J.

Ever Onward



BY ANTOINETTE BROWN BLACKWELL

SAFEGUARD with zeal the coming man;
Young Future's good in wisdom plan;
With morning sunshine hide the barb
And weavé in love new wondrous garb;
Find open doors and high new birth
For all imperfect things of earth.

Just "give and take," with no alloy,
Is flowing fount of mutual joy;
Its glowing, sparkling, freshening dew
Will everything that lives renew,
For children's children fruit and seed,
White lilies, born of surge and weed.

Life's sentient wealth has given life's race
One pulse that throbs thru time and space,
One hope that shines with meteor light
And as it speeds devours the night,
Blends soul with soul, lights eye from eye,
And wins God's own love-lighted sky

ELIZABETH, N. J.

What Becomes of College Graduates?

BY WILLIAM B. BAILEY, Ph.D.

ASSISTANT PROFESSOR IN ECONOMICS AT YALE UNIVERSITY.

TO the United States Bureau of Education we are indebted for a study covering the occupations of our college graduates, from 1642 to 1900. Statistics of thirty-seven colleges and universities furnished this material. Taking three periods a century apart, we have the following percentages:

	1696-1700.	1796-1800.	1896-1900.
Ministry	65.6	21.4	5.9
Law	1.6	30.5	15.6
Medicine	3.1	8.4	6.6
Education	4.7	5.7	26.7
Business	1.6	5.6	18.8
Public service	9.4	1.1	1.0

At the close of the eighteenth century the ministry overshadowed all other professions and was chosen by about two-thirds of all the graduates. One hundred years later only about one-fifth of the graduates adopted this profession. At the close of the nineteenth century less than 6 per cent. entered the ministry. Education, which was selected by only a comparatively small number down to 1825, has advanced with great rapidity, until now it outranks all other professions and is chosen by over one-fourth of the graduates. Law, at the end of the eighteenth century, was the profession of nearly one-third of all graduates and outranked all other professions at this time. Since then it has lost in relative importance, altho the actual number of graduates entering this field has increased. Business claims an increasing proportion of graduates, until at present nearly one-fifth enter an active business career. Less than 1 per cent. of the graduates of these thirty-seven colleges now enter agriculture. A century ago the proportion was between three and four times as great.

My Principles of Home Management

BY ERNA WEIDENBACH

AVING been a college girl I was determined to run my home as intelligently as possible in order to justify my education. The throes I first went thru in compelling my spirit to dignify its drudgery on a salary of $1,400 a year have no place in this article. I will say, however, that education and religion soon combined to show me the value of a task well done and the possibility of joy in any work well accomplished.

This article is concerned with the economic basis on which I ran my house in the early days, and on which, for the most part, I am still continuing to run it. In going over the record of fifteen years I feel that it is the telling of principles of action rather than mere figures which may be helpful to others.

In the first place, in the early days of our home making, property being low in price for its quality, we bought a home for $2,600, paying $400 down and securing the rest by mortgage and personal notes. Such was the value of the property, however, that being modernized it is well located and ample for a college professor today. The lots are large and we have done much in the way of landscape gardening to beautify them. Interest we paid at 6 per cent. and this, together with paying the principal and keeping up the place, deferred our really owning it for twelve years. During this time our salary had increased from $1,400 to $1,700, where it remained for most of the fifteen years, and then went to $2,500. During this time our family had increased from two to four, with the temporary expense of nurses and doctors and the regular additional expenses of a student girl helper and a needy friend.

If I had the fifteen years to live over again I do not see how I could manage for our family any better and keep our spirits free from petty economies. Our necessities class themselves under four heads, shelter, food, and clothing, and in addition the things of the spirit or for mental uplift.

My advice to any young couple on a limited but definite income is to buy a home early in their career which they think will be ample for some time, and pay for it gradually. There is nothing so steadying financially in family life as the necessity each month of paying something for a home. Many statisticians say that rent should be 15 or 20 per cent. of the income. It may sometimes need to be, but I always felt that to be too much, at least for us, and I rented a room to keep our rent or interest down to 10 per cent. of our income. When we really owned the house—in fact, before we did —I no longer rented the room. Living on a 10 per cent. rent basis, our heating and lighting bills were also less. If a household is not worried over too large rent or fuel or light bills, much else in domestic management comes easily. I always wished the sense of happiness which comes from living abundantly on the scale chosen or necessary no matter how simple. And by these plans I have been able to attain and keep a joy in living.

In the matter of food I worked hard to acquire a knowledge of food values and the needs of the human organism so that I might feel sure that my family are well nourished at the least cost possible.

I did not divide up the income and say we will spend so many per cent. of it each week for food, as so many advocate doing. I felt I could not allow myself that much latitude when a home and so many other things needed to be provided on a limited salary. I knew I must feed the family abundantly at the least possible cost.

I think my college training helped me to do this attractively and well at one-fourth less cost than my most intelligent neighbor was doing it. I tried to take

into consideration the age, sex, occupation of those to be fed as well as the season of the year and the cost of food in planning for my table. I did not hesitate to buy good food wherever it could be purchased at the lowest prices, and I aimed to live attractively enough, so that an occasional guest was always welcome.

My attitude on the clothes question was somewhat similar. I made all of the children's clothing and most of my own. I could make the children look as well as a fashion plate, a talent I acquired since I left college, thanks to good patterns, but for myself I needed occasionally the help of a good dressmaker. My husband's business made it necessary that we should be presentable at all times. By proper care and pressing and the making by myself of dress accessories we could make our best clothes last several years. The children's clothes, for the most part, were cut by good patterns from our old ones if possible. And here I am glad to pay tribute to the manufacturers of good patterns, who have contributed almost incalculably to the self-respect of the race in its development by making artistic and presentable clothes possible to the poor.

Of course I used foresight in buying and made use of special sales wherever possible, always bearing in mind Franklin's motto: "Do not buy anything you do not want just because it is cheap." My principle in clothes has been much the same as my principles in food, which is to avoid needless expense, but spend whatever is necessary to keep the family comfortable, neat and attractive.

The next division of the income is for the things of the spirit or for mental uplift and progress. In this field probably some will think I was too extravagant. I took the ground that as young people on a limited income if we saved for a home and saved for some insurance, and lived economically for food and clothing, because we lived intelligently, we were entitled to the rest of our income, whatever it might be, to use in developing the life of the spirit by keeping us in touch with our environment, so that if added position ever did come to us we would not be back numbers. We joined a magazine club and a book club, went riding into the country occasionally to "invite our souls," were active spiritually, socially and financially in a church and in the wider life of the community as far as time and strength would permit. We did not attend the theater much. The expense was too great in proportion to the gain, but all first-class concerts found us in the audience. At home we made our own music on violin, guitar and flute. We never had the luxury of a piano, even on the instalment plan, for we determined to go in debt for nothing except our home.

We belonged from the first to the best intellectual and social organizations of the town, and we have always tried to let originality and thoughtfulness compensate for lack of lavish expenditure and to make our home a happy social center of usefulness and pleasure.

Occasionally by means of careful saving my husband was able to attend one of his scientific meetings out of town, or we were able to take a vacation trip. If he happened to earn a little extra by writing, I always insisted on his saving it to "develop the business," that is to buy books, attend meetings, or do something in the line of his business which otherwise he could not afford. I took the ground that our ordinary living expenses must come from our salary.

In order that our children should be trained in the value of money we gave an allowance each week. Beginning at the time he was two years old each child received each week as many pennies as he was years old. This plan has worked well with us in giving the children a sense of independence and in teaching them the habits of wise saving or judicious spending of money.

In order to accomplish during the years these necessities and luxuries for our home we adopted certain fixt principles, first of which was "Pay cash." There is nothing so alluring and illusive for a young couple as credit. If they pay cash they know just what they have to count upon each day. Then we kept strict cash accounts; my husband kept his own, and I kept a separate one for myself, for household expenses, for house furnishings, and for each child, so that I could tell each week and month

to month and year to year just where the money had gone or where it could be diverted if necessary. These in later years I have found valuable, as well as interesting, by way of comparison, since prices have soared so high that even with an increased income I find it more difficult to make the ends meet than in the early days, but I do it, nevertheless, following the same principles of the early days.

These, then, are the fundamental principles for the successful management of any home: Start with a rent entirely within one's means, pay cash, make an intelligent study of the profession of home making, and maintain a scale of living within the income, and remember to keep the spirit alert and happy by congenial recreation and associations.

In general if I have been able to do much with little, as many acquaintances tell me, it is because I have tried to use what intelligence I possess in following these principles and along this pathway we are finding a happy and abundant life.

Every competent business man takes frequent account of stock, comparing his gains and losses from year to year. In order to be an efficient woman in the home I must do similarly. Yet the balancing and comparing of material accounts in the home is not the only requisite of the good home maker. She needs more to ask herself what are the permanent results of the family efforts, how effectively all this expenditure of time and money and effort is aiding in developing the characters for which the real home exists.

As I take account of values for the past eighteen years the profits seem far to exceed the losses. On the loss side I find only what my friends were polite enough in my youth to call "a brilliant career." But I know that it would probably have ended only in disappointment. On the profit side I find a normal life, a happy home, a devoted and appreciative husband, children who because of their sterling worth and ability we are proud to call our own, and an opportunity for usefulness limited only by our willingness, our finances and our ability. As long as home life can bring these returns alarmists need not fear its disintegration.

IOWA CITY, IA.

The Envoys to the Imperial Funeral

BY COUNT OKUMA

THE fact that all the leading nations of the world dispatched special envoys to the funeral of our late sovereign, Meiji Tenno, is an honor Japan deeply appreciates, and indicates a consideration for us that will greatly strengthen our international relations. Having had the honor of attending the imperial funeral myself, and seeing something of the foreign princes and other envoys of their respective countries, I may be permitted to make a few remarks in reference to them.

Japan was especially pleased that both England and Germany sent to us such high personages as princes of the blood, which shows how very intimate are the relations now prevailing between Japan and these nations. Nor were we less delighted that the envoy from America was no less a person than the Secretary of State, who is next in official rank to the President himself. And similarly all the other countries, France, Italy, Spain, Holland, Denmark, Portugal, Belgium and even the South American states, were worthily represented at our great and solemn ceremony, when we laid to rest one of the very greatest of our long imperial line.

The presence of these great representatives of the mighty world Powers made a profound impression upon me, and indeed upon all Japan. It was an outward manifestation of how vast has been our transformation and how marvelous our progress during the Meiji era. At the time of the Restoration no one could have

imagined that in the brief space of forty-five years the outside world would have itself so changed toward us, so as thus to concede us such consideration and respect. The sudden rise of this island empire in the Orient sea to such a hight of fame, attracting the attention and sympathy of the world, is something so extraordinary in the annals of history as to command the respect of the foremost minds. The honors so bountifully bestowed upon us at this period of our national mourning represent something to be long remembered, and may be taken as an earnest of the still greater future that lies before Japan. When I look back, as I can easily do, to the manner in which we were disregarded when the late Emperor ascended the throne, and compare it with the notice we receive today, I am overwhelmed with the happy change. In so short a period have we emerged from the obscurity that isolated us from the rest of the world and attained a position of wonder and respect, which encourages us to further achievements. This was the sentiment that most deeply took hold upon me as I participated in the sacred obsequies of our beloved Meiji Tenno.

Of course, the occasion itself was sufficiently imposing to leave an ineffaceable impression on the mind. But as I gazed upon the numbers of high personages uniting with our young Emperor and his people in honoring the imperial dead, I was thrilled with a feeling never to be forgotten. There, in the beautiful pavilion erected for the funeral, a structure matchless in its appropriate unadornedness and truly typical of our simple Shinto faith, were gathered the accredited representatives and ambassadors of all lands, together with our own Emperor, the Empress, the Empress Dowager, the princes of the blood, the nobles and all the great ones of the Empire; and, as I beheld the spectacle of their reverent devotion, and felt myself a part of it, I realized as never before how truly international my country had become.

Such a profoundly inimitable moment naturally fills one with humility, and suggests the question whether we are worthy of the unusual consideration now accorded us by the world. Of course, we have some brilliant achievements to our credit. The two great wars successfully waged against China and Russia, gigantic adversaries indeed, were in themselves sufficient to arrest the attention of the Western world. But to me these exploits have never seemed matters for boasting until now, when I behold that by them my country has been lifted high in the world's estimation. The foreign envoys at the imperial funeral helped to impress this fact upon my mind as never before. I was forcibly reminded that Japan is no longer the Japan of yore; she is no more the Japan of Japan, but the Japan of the world. Henceforth her politics, her diplomacy, her economics, her education, her civilization can never be peculiar to herself: they must be of the world as well. From this time onward we have to remember that we owe a debt to mankind as well as to ourselves. Japan is now expected to add something to the sum total of the nobler forces affecting the world. And so, as I beheld the brilliant array of foreign representatives at the imperial funeral, I felt for the first time the greatness of our international responsibility.

There, in the quietness of that solemn midnight hour, the sacred ceremony went on. Not a sound disturbed the religious devotions of that vast multitude, bowed before the mortal remains of the great Emperor. That long and voiceless petition was indeed a prayer of the heart. And then across the fragile silence came the sad but soothing strains of the ancient Shinto dirges, striking a chord of sympathy and heavenly exaltation in every one present. For a moment that whole multitude, foreigners and Japanese alike, were of one mind and one heart. Nay, at that moment the vaster millions of the Empire—yes, and of the entire world—were united in affectionate sympathy and respect for Japan and her departed ruler. What a revelation of beauty and power! But whence was it? We can never forget that it was the heart of the great Emperor Meiji, that made this glorious unity and friendship possible. Before him and his time it was not. It was for his sake alone that all these envoys had come from all four corners of the earth to represent the millions of

their respective countries, and unite them with the millions of Japan.. The magic personality of the great sovereign attracted to himself and to Japan the respect and admiration of the world; and the world sent its greatest men to pay a universal tribute of respect and devotion. When I say *devotion* I mean no less, for when the representatives of Japan bent low in solemn adoration, the representatives of the world Powers did likewise. What a character was his to have thus drawn the heart of the whole world to him and to his country! Who that calls himself a Japanese will ever forget or cease to heed the brilliant virtues that thus deserved the honor and respect of mankind!

Nor was I less profoundly imprest by the singular reverence displayed by the foreign representatives toward the imperial remains. Even the Japanese could not have shown more. The funeral ceremony, as the world knows, was conducted in the old way after the purest rites of Shinto. At a certain moment these involved profound obeisance before the imperial catafalque. In this sacred act of heartfelt reverence the Emperor and all the princes and other Japanese participated with becoming decorum. But the foreign envoys paid our dear departed Emperor exactly the same tribute of devotion. When it is remembered that many of these envoys and great men were Christians and unaccustomed to bend the knee before anything less than Heaven, and that they had been brought up not to worship the dead, the honor conceded our Meiji Tenno must appear all the greater, and something to be by us accordingly appreciated. I have no doubt that not a single one of these nobleminded men felt in any degree guilty of idolatry. Their religious attitude on that solemn occasion was just the same as that of our Emperor and of those of his Majesty's subjects there assembled; and for this Japan will ever be grateful to the nations of the world. Ah, what a lesson there is in this for us all! These foreign envoys, representing divers creeds and countries, for the moment forgot their differences, and felt, as we all did, that *on the greatest occasion there is but one religion.* What that religion is must be left for each to decide and define. But we Japanese believe it to be the religion of Supreme Personality: in other words, Shinto. This shall ever remain the religion of Japan; for she has never before been so perfectly incarnated as in the late ruler, Meiji Tenno.

TOKYO, JAPAN.

In the Berkshire Hills

BY LOUIS UNTERMEYER

How can the village dead remain so still—
  Surely they tingle with the winy air,
  When the skies riot. and the sunsets flare
And all the world becomes a flaming hill.
Surely the driest dust must turn and thrill
  When these wild breezes sweep out all despair—
  And lakes are bluest, pools are starriest where
The streaming heavens overflow and spill. . . .

Oh, were it I that lay like any clod,
  Tho buried under rock and gnarlèd tree,
I would arise, and thru the clinging sod
Go struggling upward, passionate and proud—
  Laugh, with the winds and mountains watching me,
And dance in triumph on my crumbling shroud!

NEW YORK CITY.

The New York School Investigation

BY ERNEST CARROLL MOORE

[Since it became known that the Board of Estimate and Apportionment of New York had determined to have a thoro investigation of the school system of the city by outside educational experts headed by Professor Hanus, of Harvard, the results of the inquiry have been awaited with eagerness by teachers and school authorities all over the country. It was therefore a cause of surprise and disappointment when it was learned that the Board of Estimate refuses to accept that part of the report, prepared by Professor Moore, in which he condemned the restrictions imposed upon the Board of Education in the control of its funds. Mr. John Purroy Mitchel, chairman of the Committee on School Inquiry of the Board of Estimate, gives the following as the reasons why that board rejected the report:

"The report contains allegations and general conclusions unsupported by any facts cited or evidence submitted, many of which to the knowledge of the members of the committee and as established by public records are absurd and false.

"Certain of these estatements, if true, reflect seriously upon the discharge of their functions by the members of the Board of Education and other responsible officials.

"The committee addressed two requests to Professor Moore for such facts and evidence as he might have in support of the above allegations and conclusions, and requested a statement of the sources from which such facts and evidence, if any there were, had been drawn.

"Professor Moore evasively declined to submit to the committee either his facts or the sources from which those facts were derived, or a statement of the offices in which his investigation had been conducted."

As this is a matter of public importance, we have asked Professor Moore to present, as briefly as possible, his side of the case. The author received his A.M. from Columbia in 1896 and Ph.D. from the University of Chicago in 1898. He has worked in the University Settlement, New York, and Hull House, Chicago, and in other philanthropic organizations. He was called two years ago from the superintendency of the schools of Los Angeles to the chair of education at Yale.—EDITOR.]

EDUCATION and the welfare of the public schools are my life interest. My never-ending obligation to them began thirty-five years ago on a wooden bench in a district schoolhouse. Since that time it has been given me to teach thousands of teachers at Yale, Harvard and California, and with their aid to consider the high import of the teacher's calling and the no uncertain duty which those who profess it have to defend the national fortress — the American public schools. And I have also had charge for a period of years of a great city school system and there fought off the sinister influences which were striving to make private property of public education.

On Saturday, February 25, 1911, my diary tells me that Mr. William H. Allen came to me at Mobile, Alabama, and told me that the Board of Estimate had appointed a committee to investigate the public schools of New York City and that I had been picked as the man who should conduct the investigation. I had never met Mr. Allen before. I was interested in what he had to say, but not a little surprised that the Committee on School Inquiry of the Board of Estimate and Apportionment should have taken just this method of getting into touch with me regarding its work. In common with most school men, I had known that a rather bitter feud had existed between Mr. Allen and Mr. Maxwell, the superintendent of schools of New York City, for some years, which had led to much criticism of the schools, not all of which was self-evidently just. I also had reason to believe that other men had already been approached on this subject and for some reason or other negotiations with them had not been completed. I have since found out from them that this was true. Mr. Allen and I have discussed the matter somewhat at length, and as I was to be in New York on Monday afternoon, February 27, on my way back to New Haven, Mr. Allen asked permission to arrange a dinner that evening and to have Mr. John Purroy Mitchel, the chairman of the School Inquiry Committee of the Board of Estimate there. Coming up on the train I had a long talk with a well-known school expert of New York City but not officially connected with its schools, who told me somewhat of the proposed changes in the New York City charter in regard to the

schools. My diary entry for that day says:

"The Mayor wants to make the schools a part of the city government and to have a small paid board in control, to all of which I am most bitterly opposed."

The dinner took place at the Grand Union Hotel. Mr. Allen brought Mr. Bruere with him. Mr. Mitchel was late in coming and had to leave very shortly to go to a banquet elsewhere. I think he stayed about thirty minutes in all. In the course of the conversation I was asked how long it would take to make a thoro investigation of the public schools of New York. I replied from three to thirty years. I was asked if I would undertake it. I replied that it was far too large a task for one man, but if they would put the work in charge of a committee, say, of three men, I would consider the matter. I was asked to suggest names of men who might be added, and because of his very great knowledge of classroom instruction, I proposed Professor Frank McMurry of the Teachers' College. At this point Mr. Mitchel was compelled to leave, and turning to the others he said, "I am satisfied; go ahead with the arrangements." We broke up with the understanding that Professor McMurry was to be seen and we were to have another meeting sometime that week.

One who undertakes a task of this sort is naturally anxious to learn as much about it beforehand as possible. I had learned one thing very clearly at this meeting—that Mr. Mitchel, the responsible director of this investigation, was not eager for it and that Mr. Allen was exceedingly eager for it. Professor McMurry was seen and another conference was arranged to take place at the Hotel Belmont on Saturday, March 4, at four o'clock. To this conference Professor McMurry, Mr. Allen and Mr. Bruere came. My diary says: "Professor McMurry thinks this the greatest opportunity to serve education which has appeared." The statement of the committee of the Board of Estimate that I was concerned about the political aspects of the proposed investigation is true. I asked particularly what their political interest was. One who has been trained in public school administration learns in time to look for possible sinister influences before they appear. I raised four points at that conference. (1) Has the committee definite and certain legal authority to make this investigation? (2) Will it define its understanding with its experts as to what they are to do, in writing? (3) How will the work of its experts be tested and approved? and (4) Since Mr. Creelman had just resigned from the Board of Education and in his letter of resignation had proposed a new plan of school administration, which the Mayor in accepting his resignation had approved, I asked whether the investigation was in any way intended to support a preconceived scheme of school administration. The answer to my first point was not definite and not satisfactory, for, as I have since found out, no sufficient legal authority for such a proceeding seems to exist. The answer to my second was that the members of this committee were gentlemen and that it was neither necessary nor usual for them to put their agreements in writing. This is still the crux of our contention with the committee. It will not state what the investigation was to include, but insists upon trying that which was done by that which was not done nor directed to be done nor undertaken. After working over its questions carefully, I am satisfied that it has not yet taken pains to inform itself what the real subject of my part of the investigation was. A public officer is so much happier if he issues only general and indefinite instructions. If their outcome is unpropitious he is then able to hop from one point of his plastic base to another and so escape responsibility. The Board of Education is being repeatedly instructed after the fact in the same way that the committee's experts were. To the third question two answers were made; one by Mr. Allen that the committee would test the work of its experts by cross-examining them and would itself determine the sufficiency of their judgments by passing upon the evidence for their conclusions. As this was plainly intended to make the committee itself the expert and responsible for interpreting the facts without studying them exhaustively or having been trained by long periods of work in connection with schools to understand their bearing or significance, this was pointed out to be a misconception of the real function of

an expert and a wholly unworkable relation for him to enter into. An example of the incompetence of this method, which is the one the committee has used, is seen in the committee's statement that my report contained the generality unsupported by facts, that the city school system has a fence about it. Yet definite reference was made in the report to the recent law forbidding the merging of new lists of names eligible for appointment until old ones are exhausted or three years have elapsed, and every school man knows that this erects a wall about the school system. The competition is no longer to the best now; all who pass must take their turn. Again, the committee has asked for tabulations of facts where tabulations were not only impossible for lack of time but out of the question because of the impossibility of reducing the facts to a common denominator. Familiarity with the facts enables one to judge them according to their kinds, whereas to lump them all together in an enumeration would do violence to them. This principle as it applies to school work is sufficiently set forth in one of the sections of my report.

But the method proposed by Mr. Allen has been adopted and put into effect by the committee. Indeed, it was Mr. Allen who applied it for the committee. For I am prepared to bring court evidence to prove that the mass of pseudo questions, most of which have no bearing upon the subject of my instructions and which is characterized by a degree of incoherence and confusion of thought approximating irrationality, was prepared for the committee by Mr. Allen, the very man who has sought to direct the inquiry from the first, and when fought off from that, according to repeated assertions from various sources, has both publicly and privately endeavored to discredit the report which Professor Hanus is making in advance of publication.

I say this advisedly, for I have gone over this mass of pseudo questions "upon the report" critically and also in conjunction with two other men, and have found but one mistake in the report pointed out in the whole installment of 223 questions. It is because of their character that I refused to answer them.

But to go back to the conference. When Mr. Allen had announced his position in the matter and exception had been taken to it, Mr. Bruere declared that the school expert would be treated just like any other expert, say, an engineer who submitted plans for the aqueduct or a city building or a report upon them. His work would of necessity be checked up by another engineer and could not be by any one not at home in engineering, or a physician, the sufficiency of whose work can be determined only by a physician. This statement was reassuring, and this is the position for which Professor Hanus has stood. It is a reasonable position, for only one familiar with school necessities and school procedure can be trusted to tell a school fact, *i. e.* a fact in its specific bearing upon the schools, when he sees it. We have reported that the method of school administration which the Board of Education must now observe is that of "the paralyzed arm," and we have proven it, but those who made the method naturally do not appreciate the proof. The school authorities do. Section 1060 of the charter, a special provision which according to the rules of interpretation is not set aside by general provisions of the charter but is a specific exception to them, says:

"The Board of Education shall have power to administer and shall administer all moneys appropriated or available for educational purposes in the city of New York."

We have reported that the counter conception which the fiscal authorities of the city seem to hold is that the school department is in all respects a subordinate department of the city government. The statement is not proven, says the committee. That contention turns upon the meaning of the word *administer* when applied to school affairs. If the city authorities first cut down the estimates of the Board of Education and then segregate their appropriations into a great number of funds which they earmark for definite purposes and then require the Board of Education to go to them for permission to transfer money from one fund to another whenever necessary, and if the Board of Education does not always get this permission and is required to have its building plans approved and its transfers of clerks approved, and tho it has the power under the law to make its own by-laws, is re-

quired to keep a system of accounts uniform with those of the several departments of the city, and must submit to have the work of its teachers, who have no contract with the city, and the work of its janitors, and the work of its superintendents officially examined and reported upon at will by the Board of Estimate, where does its right to administer the schools of the city come in? Every school man knows that this sort of thing is school administration in its most essential form, tho others may not. When the Board of Estimate and Apportionment tells the Board of Education when, what and how it may do, it reduces its power to administer the schools to a shadow.

I left that conference with serious questions as to the authority of these unofficial gentlemen to speak for and to bind the city officials who made up the committee. The conviction grew upon me that this great matter was being mismanaged and jumbled in a most distressing way, for the committee nominally in charge of it was not acting as tho it was in charge of it, and the men who were in charge of it, it seemed to me, should not have been, and were not legally responsible for it. In other words, that while one man held an office of the greatest responsibility another man was filling it. I was greatly relieved, therefore, to hear nothing more about another conference, and finally about two weeks afterwards to receive a letter from Mr. Mitchel telling me that what I had hitherto regarded as the call to a most difficult professional duty which I could not without cowardice escape, had passed me by; for the committee had decided that one man must be put in charge of the work and I had been unwilling to take it without having others joined with me in it.

Professor Hanus was finally appointed as educational expert in charge of the investigation. His experience in that position he will himself narrate when he chooses to do so. Suffice it for me to say that I am firmly convinced that there is no other man in the United States in educational work who could have triumphed finally over so many obstacles which were put in his way as he has done. The school report has been made in spite of them and it is a work the like of which has never before been accomplished anywhere in the world. It is altogether the most thoro survey of the activities of a working school system which has yet been made. Its immediate practical value to New York City cannot be overestimated, while its usefulness to the whole world, both now and to succeeding years, is beyond calculation.

After defining the plan of his inquiry and successfully fighting off certain influences which sought to wrest the control and direction of it from his hands, Professor Hanus sent up a cry for help to which I had to respond. The detail to which he assigned me was the work of the Board of Education. The text of his request read:

"The work which I should like to assign to you is an investigation into the organization, methods and records of the Board of Education or so much of this work as it is possible for you to do. What I am particularly anxious to ascertain is whether the conception of its functions which the Board of Education has is clearly defined; whether that conception is justified and whether the organization and methods of the board tend toward efficiency. Naturally whatever recommendations as to the function, organization and methods we might make should be based on some such inquiry as I have indicated."

At last I had definite written instructions, and I have carried them out to the letter. As Professor Hanus was the educational expert in charge of the inquiry, I not only got my instructions from him, but consulted with him from time to time, and at the end submitted my report to him, and after he had examined it and I had replied to a series of questions which he asked concerning particular passages in it, he accepted it. We also worked over the first galley proof together. The second galley and the page proof are yet to be gone over, and errors which further proofreading should correct certainly exist in the copy. Since he has examined, approved and accepted the report on behalf of the committee and his is the only examination of it which is authoritative, I feel no obligation to any one else in the matter and I am the more convinced of the justice of this position when I remember that it is a well established principle of the common law that one cannot at one and the same time be the defendant, the judge and the jury in a case at law. This is the unhappy position in which the Board

of Estimate's committee finds itself in condemning my report. For one who is commissioned to report upon schools and their work is in every case called upon to examine into the relation of those who employ him to the schools. If he finds them scrupulously correct and careful in all these relations, well and good. He commends them for this and his report is accepted and printed. But if he finds them remiss in their duty and failing to meet either the requirements of the law or the plain necessities of the schools, even tho they are his employers and will bury him under reproach and condemnation, yet his obligation to the truth is greater than his obligation to any man, and the truth as he finds it and nothing but the truth must be his guide.

I spent more than forty days in New York City, most of that time in the offices of the Board of Education. Every facility was accorded me there. Copies of the printed minutes and reports of the Board of Education were loaned to me. I took them home and worked at the subject night and day. I read and analyzed some 4,000 pages of the finely printed minutes of the board and its committees. Every explanation that I asked for was made, and all the documents and letters which I requested were brought to me. Methods of research differ according to the subject under investigation. My instructions were to investigate the methods, organization and records of the Board of Education in order to determine whether its conception of its function was clearly defined, whether that conception is justified, and whether the organization and methods of the board tend toward efficiency; in short, to discover and outline the present plan of school administration. I was not directed to make an audit of the books and accounts of the board nor to discover and write the natural history of its actions or those of its committees thru a period of months, or how successful its various enterprises are in their detailed workings, nor how the Board of Estimate conducts the details of its business, but simply how the results of its action affect the schools. Instead, I was instructed to examine the sufficiency of the plan by which the public educational interests of New York City are administered and are carried forward.

This was a vast undertaking, and the time was all too short for it. It was an important undertaking, for it required an exact determination of the machinery by which a building fund of $12,000,000 and an annual maintenance fund of about $34,000,000 are expended in providing schools in which nearly 700,000 children are being prepared for the struggle of adult life.

The conception which every Board of Education must have of its functions is determined for it by the law which creates it and which regulates its actions. The law which controls the Board of Education of New York City is the Education Law of New York as formulated in the Constitution and the general and special laws of the State, and interpreted from time to time by the courts of the State. To determine if possible what the law is became, therefore, our first duty. In this we had the painstaking assistance of the chief school law officer of New York, Mr. Frank B. Gilbert, head of the Law Division in the office of the State Commissioner of Education.

Section 1061 of the revised charter of New York City declares

"There shall be in the City of New York as constituted by this act a Board of Education which shall have the management and control of the public schools and of the public school system of the city, subject to the general statutes of the State relating to the public school instruction and to the provisions of this act."

The Board of Education consists of forty-six members and possesses the powers and privileges of a corporation. The Board of Education is listed as a department of the city. What is the legal status of the Board of Education thus created? Is it a separate corporation or a department of the city government? Are the public school officers officers of the State or officers of the city? Is the public school system itself a municipal or a general affair? Hear what the Court of Appeals of New York has said upon this subject in the case of Gunnison vs. the Board of Education of the City of New York (176 N. Y., 13) in its decision handed down on October 6, 1903.

"If the State has departed from the settled policy that has prevailed since its organization of keeping the work of public education and the control and management of its schools separate and distinct from all other municipal interests and business by the selection of its

own agents and clothing them with corporate powers to represent the schools, such as school boards and boards of education, and has devolved these powers and duties directly upon the city we would naturally expect to find such a departure and notable change exprest in language so clear that no doubt would arise as to this change of policy. If the board cannot be sued for teachers' wages and the teachers must resort to a suit against the city, then surely the board must have sunk into a mere city agency, and it no longer has any use for independent corporate powers. Public education then becomes a city function exposed to the taint of current municipal politics and to any and every mismanagement that may prevail in city departments. But we still have the very plain provisions of the charter that the Board of Education is the representative of the entire school system and has the power to administer all school funds and is vested with the right to manage and control all school property."

Again, at the beginning of the opinion the court held:

"The city has the custody of the money, but the board must administer and expend all school funds as the representative of the school system, and the financial officer of the city cannot pay out any part of these funds except upon the order and audit of the board."

It is a fairly general opinion among those who are charged with the duty of caring for the children that the worst misfortune that can happen to a school system is to fall into the hands of the city hall. What is the situation in New York City today? "The policy of this State for more than half a century," which has been "to separate public education from all other municipal functions and entrust it to corporate agencies of its own creation," is carried out neither in the letter nor in the spirit at the present time. The Board of Education is not "the sole representative of the school system with exclusive power to control, manage and administer all school property and school funds." The counter conception which the fiscal authorities of the city seem to hold is that the school system is in all respects a subordinate department of the city government. There has been a gradual and steadily increasing assumption of control, until at last the school department is no longer allowed to manage and control the school affairs. It is impossible in the brief space at my command to set forth the evidence for this fact in complete form. There is enough of it to make a book. Here is some of it. Section 1060 of the charter directs that "all money raised for educational purposes shall be raised in two funds to be known as the General School Fund and the Special School Fund. The General School Fund is for the payment of the salaries of teachers, superintendents, etc. "The General School Fund shall be *raised in bulk* and for the city at large," says the charter; and tho it says this in as unmistakable words as there are in English, the Board of Estimate and Apportionment, after practising for a time the habit of recommending the manner in which it should be apportioned by the Board of Education, in the budgets for 1911 and 1912 it took upon itself the apportioning of said general fund, conditioning its allowance of money in excess of the three-mill tax upon the acceptance by the Board of Education of the apportionment which it had made. This action the Board of Education quite properly refused to carry out. The destructive effect which this proceeding on the part of the Board of Estimate and Apportionment would have had upon the school work of New York City had it been carried out may be seen in the fact that in its attempted apportionment of the General Fund for 1912 it named the sum of $500,000 for "special branches," such as cooking, manual training, drawing, physical training, music, etc., an amount far below the actual salaries of the teachers in the system at the time of the preparation of the budget. If the apportionment of the city authorities had been followed teachers already employed and at work would have had to be discharged and classes abandoned.

Section 1066 declares that the Board of Education "shall have power to lease property required for the purpose of furnishing school accommodations and to prepare and execute leases therefor." Yet since 1909 the funds for the rental of school premises have been diverted from the control of the Board of Education to the Department of Finance, and the responsibility for leasing properties for school purposes has been given to the Commissioners of the Sinking Fund, by whom the Board of Education is notified, in common with all heads of departments, officers, boards and commissions, "that applications for the renewal of leases to the city should be made to the Commissioners of the Sinking Fund."

Section 1075 of the charter directs that the

"Board of Education shall provide for the purchase of all books, apparatus, stationery and other things necessary and expedient to enable the schools of the city to be properly and successfully conducted. It shall cause to be furnished all necessary supplies. . . ."

But no funds are granted to the board for the lighting of school buildings, on the theory that the lighting of school buildings pertains to the jurisdiction of the Commissioner of Water Supply, Gas and Electricity.

Section 1073 of the charter reads:

"All plans for new school buildings, for additions to school buildings and for structural changes in old buildings shall be passed upon and must be approved by the Superintendent of School Buildings, who shall submit such plans to the Board of Education, whose action thereon shall be *final.*"

But a resolution of the Board of Estimate and Apportionment bearing date of July 17, 1911, requires all boards, departments, bureaus, commissioners or officers of the city and county government authorized by this board to incur obligations and execute contracts payable out of corporate stock, be and are hereby directed to submit to this board for approval, plans, specifications and estimates of cost prior to advertising for bids. In addition, the Board of Education must send its building plans to the Municipal Art Commission for approval twice, in preliminary and in final form, in some cases to the Fire Department, to the Borough Building Department, in some cases to the Highway Department, and to the Department of Water Supply, Gas and Electricity. All this takes time, and records which are before me show that weeks and even months are required after the "final" approval of the Board of Education. Illustrations might be multiplied to show the further encroachments of a bureaucratic scheme of administration which is sapping the vitality of public education in New York as certainly as it ever sapped the vitality of administration in the Russian Empire. One gets the impression from the requirements that have been made that record making is actually held to be more important than securing educational efficiency.

The school is one of the four great institutions of civilization,—government, the home and the church are the others. At first education was a home affair, next it was an ecclesiastical affair, and next it was subordinated to government. But the time has come when it is making itself free, and free it must be, in the same sense that the Church is free under the State and the home is free under the State, and the school is related to but not dominated by the home and related to but not dominated by the Church. Freedom of thought and freedom in teaching it has already achieved. The freedom to determine its own requirements of money under general laws and freedom to direct and control its own expenditures according to the necessities of instruction and to make accounting of them to the State, and not the dictates of local governmental authorities, it must have, and in a number of the leading cities of the nation it has already secured this freedom. This is a rapidly accumulating tendency of our age. What is necessary for the welfare of education in Philadelphia, Boston and Pittsburgh, Denver, Indianapolis and Milwaukee is necessary for education in New York City.

I have found it necessary to criticise the Board of Education, but chiefly because it has not resisted the encroachments upon its legal right to manage and control the school affairs of the city; and yet I remember that after three years of fighting for freedom from city hall domination which was contrary to the Education Law, it was whispered to the department for the direction of whose schools I was then responsible that unless the Board of Education ceased to resist the city council it would not get a cent from the city for the schools next year. Fortunately, other sources of revenue had been provided by the Legislature without the knowledge of the whisperer and the danger from city hall domination was a thing of the past.

The power of the purse is a very real power. It must be strictly guarded and restrained. As all teachers must teach the children of the nation to obey the laws, it is particularly imperative that there should be no departure from or suspension of the laws of the State which guide and direct its school system.

NEW HAVEN, CONN.

The Wail of an Absentee

BY CHESTER T. CROWELL

THERE are approximately five hundred thousand men in this country who have to restrain themselves when they get to a city to keep from falling upon the expansive breast of the first Irish "copper" they meet and turning his brass buttons green with briny tears of joy. There are just about as many men who are nearly overcome with emotion when a sure-enough waiter, wearing the appropriate waiter's misfit clothes, including the spotty white shirt bosom, delivers the glass of ice water and the menu card. There are men of learning and experience and big property interests who leave home and business every year, frequently when the summer heat is worst, just to stand on a street corner or in a hotel lobby and see some human beings again.

Who are these men? They are the former residents of cities who have gone to live in some little one-night stand or cross corners either because there was more money in it or because they had read some misguided person's condemnation of the wicked city and eulogy of the small towns and new-mown hay.

There are just two classes of persons who are entitled to live in a small town; those who formerly lived in no town at all and those who have never lived in any but a small town. Any one who can glibly say "potatoes au gratin" or go thru a subway without regarding it as an adventure in wonderland or pass a fifteen-story building without dislocating several vertebræ in an effort to see the flag pole, has lost his license to live in a small town. He may think he hasn't. He may go deliberately and get into one and try to coax himself into thinking he is still on earth, but it will not work. Truth crushed to earth will get up some day when he least expects it and whisper something that will make him willingly part with the profits of months of struggle just to lean against a post somewhere on a paved street and watch the taxicabs go by under the arc lights until a policeman tells him to move on.

It is true a great many of the best jobs in the big cities are held by men from small towns. But that only proves the assertion that a small town is a fine place to come from and the wrong place to go to. Any city man who has ever made the mistake of exiling himself from tenderloin steaks produced by artists and "something doing" at the theater every night will have a great deal of sympathy with the much criticised poor who would rather starve in New York than prosper somewhere else. It is worth it to be in the vibration waves of a throbbing city. It is worth something more precious than money to see the crowds go by. It is worth something vital to the very soul of a man to see others about him doing big things and prospering; it is worth something to suffer because of the comparison and to resolve, even tho vainly, to "get there."

Some day the small town is going to be an ideal place to live in. But it will be only after those three able reformers, the undertakers, the mothers and the school teachers, have completed their work. It will devolve upon the undertakers to remove that widely and well-known class of human vinegar stills and reincarnated mummies who usually own anywhere from 35 to 99 per cent. of every small town and spend their declining years discouraging any one from trying to make the property more valuable or collect a fair share of the taxes upon it. The mothers will have to produce a new crop of humanity and the school teachers will have to remove from their minds the worm-eaten business and moral and intellectual standards that have taken their last stand in the small towns after having been driven out everywhere else by gradual effort beginning in 6000 B. C. and continuing until the present time.

The assertion is made without hesitation that a suburban ward improvement club composed of barbers and bookkeepers, all living in houses on which the mortgages amount to more than the actual value, will raise more money in one meeting to plant lilac bushes than the average town of 1,500 will raise in a year to abolish some insanitary public nuisance on Main street.

One of the first thoughts about the small town that will usually occur to a man who has lived in a city is that there ought to be something beside the motion picture shows to furnish amusement. Some of the aforementioned five hundred thousand men in this country would give $100 to see a real musical comedy and have dinner somewhere other than the railway station eating house afterward. They know they can't have musical comedy for $100, but there ought to be something. About the only thing that makes living cheaper in a small town is the fact that one cannot get three-fourths of the things he would like to have. The kind of clothes that are offered are cheaper, but the kind you are used to cost more than they would in Buenos Ayres, Melbourne or the City of Mexico. What is quite an ordinary comfort of life in a city becomes a luxury in a small town that must be paid for accordingly. And the funny thing is that you will pay a higher price for an inferior article in the small town of the neighborhood that produces the raw material than you will for the same article prepared by a high-priced man in New York after freight charges have been added. This is notably true of meats in the Southwest. Leaning against the railing of the international bridge at El Paso one can contemplate, if his mind runs in that direction, the pleasant fact that the nearest place to get a real beefsteak cooked by a master and served at a reasonable price is St. Louis, Mo., which is about two thousand miles away, with the greatest cattle producing ranges in the United States between.

And, turning from the material to the spiritual, think of being forced for months and months and years and years to bow to the public opinion of a community which labels excellent speeches and sermons and songs and instrumental music and plays and a thousand and one other things that appeal to the mind or emotions that you know very well would deserve to be set down as "rotten" if offered by admitted amateurs from a city high school! The sports, and especially baseball, ought to be mentioned in this connection, but it would not interest some, while the baseball fans could never survive an account of the sufferings of their imprisoned comrades who are inhumanly tortured every summer.

For news the back fence wireless brings all the latest reports on new babies in town and detailed information about prospective engagements between "our popular butcher" and the young lady with the golden freckles who stands next to him at the regular Sunday morning squawkfest of the village choir. Or one can get detailed information on the exact location of the pains that various aged dowagers have nursed for considerable sections of the century. But if one must discuss the movement for international peace or employer's liability legislation or currency reform it is just as well to pick out an intelligent looking fence post and then make the discussion as much of a monologue as possible. No well-behaved fence post, even tho reared in the country, will interrupt with an account of the battle of Gettysburg or an insanity charge. Think of the flat-headed prominent citizens whom you must treat as great men in order to remain in good standing! Think of the choice of ill-fed ministers and moss-backed little churches from whom you must choose a spiritual adviser or fall without the pale! Think of the politics in which you must engage and of the pleasant taste it puts in one's mouth to know that he must pick the man he will yell for and fight with among a collection of dubs who couldn't possibly be worth more than $15 a week if they ever got as far from their own back yards as the nearest town of 100,000!

And let this be set down not in malice but to keep the record straight: that neighborly spirit which we so often hear exists in small towns is so mixt up with rude and ill-concealed curiosity and a desire to intrude and find out something, that it is hard to say whether the goodfellowship or the anxiety to contribute a fair share of gossip to the next front porch gabfest is the prevailing motive. There are women in every small town who carry with them for years a mortal terror of falling ill suddenly some day when the house is not as clean as it might be because some sweet, neighborly old witch might come in with wordy sympathy and take an inventory of every grain of dust and fly speck.

Much has been said about the cliff dwellers of the apartment houses not knowing each other. If they have nothing in common they are not likely to be

friends, and it is just as well to let one another alone. They should thank the Lord that the world in which they live provides something more for them to think about than the pettiest of petty information about the affairs of their neighbors.

For Christian charity, true neighborly spirit and a feeling of good will toward all mankind commend me to a hotel clerk or a bartender, and if any one desires proof that those virtues do not exist let him get a dictagraph record of the sewing circle conversation or most any other small town scandal-bund.

Small towns, as has been said, are very delightful places for those who have never lived anywhere else and for those who are used to the open country. The most contented people in the world live in small towns; that is what makes a city man prefer to seek his excitement in some forgotten cemetery. Small towns usually look quite picturesque, and it was a clever idea to scatter them along the railroad tracks so that one might get his money's worth out of the Pullman fare. They are indispensable to writers of certain classes of fiction and quite useful to circuses. In fact, the nation would be in a sorry plight but for the small towns. The big cities would be in a sorry plight also if it were not for the small towns. People have to go from the small towns to the cities. The only trouble is that some of them proceed backward. It was with a view to reducing the number of those sufferers that these few words of warning were penned by one who has definitely located this bog of mental stagnation and now desires to hang a red lantern in the road.

AUSTIN, TEX.

A Dream of Invasion

BY DAVID STARR JORDAN, LL.D.

PRESIDENT OF LELAND STANFORD, JR., UNIVERSITY.

GENERAL LEONARD WOOD is reported to have said at Berkeley, on October 18, that "it would be comparatively easy for an enemy of any strength to land at San Francisco," unless the proposed military bill for "the establishment of three large mobile forces," one at Seattle, one at San Francisco and one near Los Angeles, should go into effect. This bill, it is said, has the "endorsement of the President and the Secretary of the Navy." "Situated as the coast at present is," General Wood is quoted as saying,

> "we are prepared to cope with the situation so far as bombardment of cities and towns is concerned, but we are not prepared to protect our people from the landing of a hostile force beyond the reach of our coast artillery. The sea coast defense is useless without a mobile army. Now, how are we to get men for this army? At present there are approximately 130,000 to 140,000 men in the various stations of the army service in the United States. We have need of 450,000 more. It is imperative that a reserve be established, as we wish to train the citizen to defend his country in time of war."

Now this may all be true from a military point of view, but it is a costly flight of fancy in fact because there is no reality in this "military point of view." As a matter of fact, it is not "comparatively easy," nor in any way humanly possible, "for an enemy of any strength to land in San Francismo," because no such enemy exists on earth.

The only nation ever pictured as a hostile invader of California is Japan. For Japan to send a land force to attack the Pacific Coast we have to imagine the following series of incidents in our future history:

(1) The abandonment of our unbroken tradition of national friendliness toward Japan. Thus far, whatever may have been done or said by individuals, our Government has preserved for sixty years an unbroken attitude of courtesy and friendliness.

(2) That such breaches of this rule as might arise in Washington should be of such a character as to arouse an insatiable feeling of humiliation and an uncontrollable spirit of revenge on the part of the Japanese people. This spirit must be so strong as to overturn the patient and conservative ministry which desires and must desire, above almost all other

things political, to retain the good will of the United States.

(3) That this supposed outbreak should take place before the American advisers in the Japanese Government could make their influence felt toward mutual understanding and before the friends of international decency in America could exert a similar influence.

(4) It would further be essential that the rulers of Japan should be determined on national suicide in the face of this assumed provocation. To send an armada to attack on her own ground 6,000 miles away a nation of twenty times her wealth and practically out of debt, with a population half greater, would be self-destruction.

(5) It would involve further the necessity that the cause of war was so flagrant as to give Japan the sympathy of the civilized world, and especially of the world of finance. This sympathy must be deep enough to induce the bankers of London and Paris to give to Japan outright the $1,000,000,000, more or less, necessary to equip this armada and to carry on the war. They could not *lend* the money, for to Japan today, lending would be giving. Japan already owes more than $1,300,000,000, and to duplicate this debt would make her securities worthless. In Japanese affairs today almost every other interest is subordinated to that of keeping her credit good.

(6) The coast of Japan itself is no better defended than that of California. "It would be comparatively easy for an enemy of any strength to land" at Matsushima in order to overrun northern Japan, to land at unprotected Kamakura to flank and starve Tokyo, to land at Sakai to march on Osaka, and to isolate Kyoto. In fact, no nation with a long seacoast can ever raise money enough, no matter how grinding the taxation, to have every foot of it protected from invasion. On the other hand, no such invading army, in the heart of a hostile country, without a base of supplies, could ever finally escape.

(7) As the United States must be responsible for provocation, whatever that may be, why do we assume that she will act only on the defensive. Is not our monstrous naval expenditure based on the theory that we shall "meet the enemy in the middle of the sea"? I have assumed, of course, that provocation would necessarily be on the part of the United States. It is not conceivable that it should be otherwise. No other nation is so careless as to civilities, tho we have not often shown real insolence. Any one familiar with affairs in Japan must know that all her resources, and more, are devoted to holding on to what she now has. The occupation of Korea is a costly and perilous experiment, perhaps necessary as a defense against Russian aggression, but nevertheless involving the nation in many dangers which unexpanded Japan would have avoided. The lease of the railways of South Manchuria, with the city of Dairen and Port Arthur, further greatly extends the danger line of Japan. The United States receives more than a third of the exports of Japan. Among nations with stable government she is Japan's nearest neighbor and most steadfast friend. Whatever the petty flurries on the Pacific Coast, the small rivalries of the European laborers with the rice field hands, the determination of the Japanese Government to cultivate friendship with us in every honorable way cannot be shaken.

If any great insurance company of the world ever underwrite against war a policy covering our whole Pacific Coast could be had for half the present cost of maintaining the Presidio of Monterey. Men sometimes speak of the "dream of universal peace" as a most desirable but quite impossible ideality. But it is a reality so far as it goes, and it goes farther and farther every year. Almost any nation could attain it at once by substituting in part a civil tongue for its reliance on army and navy. The real obsession of the world is "the dream of universal war." This is the noxious dream of our times.

It has no foundation save in the existence of armies and navies maintained in idleness. If they did not exist the world would never miss them. Meanwhile our generals and admirals have their reveries and imagine a world in which soldiery is not play, but action. To them we listen, and because their art is one we do not understand we spend unquestioned our money as the world's money was never spent before on their "great illusion," ideal defense against imaginary dangers.

STANFORD, CAL.

Literature

The Loeb Classical Library*

THE present reviewer knows two men, one a lawyer and the other a business man, who for eighteen years have met one evening in the week to read the Latin classics. Nearly all the principal works in poetry and prose they have thus read. They were simply college graduates, not at all philologians, but they thought they would not like quite to forget their Latin and hoped for some pleasure in the study of the classics. Of course, they have become proficient in the language, and have learned much and enjoyed much. But it is Latin only—they have forgotten their Greek—a busy man can't know everything. One hobby is enough. We know in the same neighborhood half a dozen men who meet once a fortnight to read Plato or Sophocles in the original Greek. They think it pays. But there is, or ought to be, a multitude of graduates who may not be able to join others in classical reading, and have no time to do regular study, and will surely forget what little of the two languages they know if some easy aid is not given them. To such there is a real boon offered in the *Loeb Classical Library,* the eight first volumes of which come to our table; of the Greek section two volumes of *Euripides* and one of *The Apostolic Fathers;* and of the Latin section two of *Augustine's Confessions,* two of *Terence* and one of *Propertius.*

For the student it is the prime advantage of these handy and very neat volumes, that the English translation has on the opposite page the Latin or Greek. One can very easily refresh his knowledge of the original tongue. One does not have to worry over unfamiliar words or difficult constructions, but can improve his knowledge in the easiest and most natural way, much as a child gets a language, without study, without a lexicon.

Mr. James Loeb is a member of the great banking firm of Kuhn, Loeb & Co., and has been much imprest by the loss that would follow the neglect of the classics. In France there have been a number of collections of Latin and Greek authors with the translation accompanying the original text, but nothing of the sort in English, only separate authors. Mr. Loeb has undertaken to assure the publication of all that is valuable in Greek and Latin literature down to the fall of Constantinople, a magnificent plan, of which these ten volumes are hardly more than an introduction. In some cases a well-known old translation will be used, where it has become in a measure classic, but in most cases the translation will be new, and even in the case of the older translations they will be revised after the most approved modern critical texts. In some cases it will be necessary to create the critical text. That a scholarly business man should have conceived so immense a plan and found a publisher able to carry it out is a boon to English and American scholarship that can hardly be overestimated. The entire series will be essential in a good library, and selections should be on the bookshelves of every scholar. Particularly we recommend this to college graduates who have the respectable ambition not wholly to forget the languages of the sources of polite learning. They should remember the words of Goethe, who bids us combine the study of ancient with modern authors:

"Study Molière, study Shakespeare; but above all things the ancient Greeks, and always the ancient Greeks."

Of the present volumes that, with the second to follow, of the Apostolic Fathers includes the two Clements, Ignatius, Polycarp, Barnabas and the Didache, works which for the earlier development of Christian doctrine are of value next to the New Testament, and should be

*THE LOEB CLASSICAL LIBRARY. *Edited by T. E. Page, M.A.,* and *W. H. D. Rouse, Litt.D.* Eight volumes, including St. Augustine's Confessions, with English translation by William Watts, 1631, two vols. Terence, translated by John Sargeant, two vols. Propertius, translated by H. E. Butler. Euripides, translated by Arthur S. Way, two vols. The Apostolic Fathers, translated by Kirsopp Lake, vol. 1, 16mo. New York: The Macmillan Co. $1.50 each.

familiar to every minister. Augustine's *Confessions* is given in the old translation, but revised according to the best and latest Latin text on the opposite page. The plays of Euripides will require four volumes in a new translation. On the ecclesiastical Latin side Augustine's *Confessions* is a classic, not so much for its Latinity as for its spiritual value. Terence's comedies are favorites, and if Propertius is less read his elegies, which tell us that youth is the time to sing of love, and age of war, may well delight both old and young. To those who try to read but find their Latin will not return to them, we commend the verse of Propertius quoted approvingly by Erasmus in his "Praise of Folly," which tells us that it is much to have wished what we cannot attain, *"In magnis et voluisse sat est."*

Two Little Girls

It is an odd coincidence which brings out at the same time two journals written by two little girls during the middle of the nineteenth century and as far apart temperamentally as Nice and New York, where they respectively wrote. One is the part of Marie Bashkirtseff's journal,[1] hitherto unpublished, written when she was a girl of twelve. The other[2] is the diary of a younger child, Caroline Cowles Richards, of Canandaigua, N. Y., begun when she was ten years old, and taking in the period of the Civil War. One is morbid, egotistical, unwholesomely mature in emotion for a girl of twelve; the other is modest, witty, and altogether charming and childlike in its unaffected recital of each day's events, giving generous space to the bright sayings of little sister Anna. The unhappy little Marie of an aristocratic Russian family was born to wealth and high position, Carrie was brought up in a village by her grandparents, and the restraints of a Puritan household, sweet and refined in its traditions, and of modest state, as the diary speaks of several servants, but simple and plain in its furnishings as befitted people of quiet tastes and unquiet consciences, for it was in the stirring times of the abolition controversy and the Civil War. One must read the book in order to get any idea of its charm, its quaint humor, and its atmosphere of happy girlhood. Many people important in their day, and not unknown to ours, figure in the child's journal:

"December 20, 1855.

"Susan B. Anthony is in town and spoke in Bemis Hall this afternoon. She made a special request that all the seminary girls should come to hear her as well as all the girls and women in town. She had a large audience and she talked very plainly about our rights and how we ought to stand up for them and said the world would never go right until the women had just as much right to vote and rule as the men. She asked us all to come up and sign our names who would promise to do all in our power to bring about that glad day when equal rights should be the law of the land. A whole lot of us went up and signed the paper. When I told Grandmother about it she said she guessed that Susan B. Anthony had forgotten that St. Paul said the women should keep silence. I told her, no, she didn't, for she spoke particularly about St. Paul and said if he lived in these times, instead of 1800 years ago, he would have been as anxious to have the women at the head of the government as she was. I could not make Grandmother agree with her at all and she said we might better all of us stayed at home. We went to prayer meeting this evening and a woman got up and talked. Her name was Mrs. Sands. We hurried home and told Grandmother and she said she probably meant all right and she hoped we didn't laugh."

In some prayer-meetings of today there would be more astonishment if a man got up and talked, but the arguments pro and con Equal Rights have not changed greatly in fifty-seven years, little Carrie!

Now, a few remarks from the other girl of twelve:

"Why do women yawn when they are jealous and curious? My mother has noticed it a hundred times, and I, too, in my short life.

"Wretched feminine position. Men have all the privileges, women have only that of waiting their good pleasure. I should be quite proud if I could make myself really loved by this man. I rate myself above everything, and the idea that I am placed on the same level with any one, that people do not consider me different from the rest of the world, the bare idea makes me angry. I wish them to forget, to trample everything under foot, to scorn and destroy all that preceded me—I desire that there should be nothing before, nothing after —except remembrance of me. Then only I should be content.

"Many things have changed since Monday. I don't wish to die, no matter where and no matter how, and I have since been ashamed

[1] The New Journal of Marie Bashkirtseff. New York: Dodd, Mead & Co. $1.

[2] Village Life in America (1852-1872). *By Caroline Cowles Richards.* New York: Henry Holt & Co. $1.30.

of myself. I meant to trifle with the man, and it seems as if the man was trifling with me. I do think of him, and yet if he loved me I would not consent to be his wife," etc.

A small girl once remarked to us: "All girls have foolish thoughts sometimes, but Marie Bashkirtseff is the only girl who was ever fool enough to write them down." Carrie has more wholesome things to occupy her mind:

"We played snap the whip at recess today and I was on the end and was snapped off against the fence. It is not a very good game for girls, especially the one at the end. . . . Grandmother kneeled down by the bed and prayed aloud for us that we might be good children and that she might have strength given to her from on high to guide us in the straight and narrow path which leads to life eternal. Those were her very words. After she had gone down stairs we sat up in bed and talked about it and promised each other to be good, and crossed our hearts and 'hoped to die,' if we broke our promise. Then Anna was afraid we would die, but I told her I didn't believe we would be as good as that, so we kissed each other and went to sleep."

Friend F. P. A.

Now that election day is come and gone, we can find time to praise Franklin P. Adams. For that is the name of the New York *Evening Mail* paragrapher and comic poet, whose fame today is as great as B. L. T.'s of the Chicago *Tribune*; who, like Mr. Taylor again, signs his initial to a column a day. What true Manhattanite does not buy the evening moose-paper to see what the modern Pepys is doing—whether he has motored with Mr. Flagg or joshed with Mawruss Perlmutter, or dined with Mistress Inez, or gone to the theater with good Mrs. Pepys-Adams? Even when there is nothing else in the *Mail* worth reading there is F. P. A.

We are glad, therefore, that Mr. Adams has gathered up some of his best verses and given them book covers. A year ago it was "Tobogganning on Parnassus"; this year, *In Other Words*.* True, we could wish that Mr. Adams's publishers had given him a better printed book and one better "made" physically; we could wish, too, that Mr. Adams had pruned more courageously, for not all his verses deserve resetting; but what a wonder it is that so many of them give us repeated increments of joy. A column a day! No wonder the humorist is moved to paraphrase from Stevenson's "Garden":

"In winter, when I have to write,
I hate to do my work at night;
In summer, quite the other way,
I hate to have to write by day.

"What time the year is at the spring,
I hate to work like anything;
And in the days of early fall
I sort of hate to write at all.

"Oh, does it not seem hard to you
That people should have work to do?
But I cannot afford to miss,
And so I pen a pome like this."

This delectable trifle is, besides, a fair sample of Mr. Adams: his cleverness, his charm and his limitations of journalist. If he wrote by the week instead of by the day, perhaps he could have given us a stronger final couplet. But why quibble? We love him just as he is. Hear him on "Us Potes." Again he is personal, you see:

"Swift was sweet on Stella;
Poe had his Lenore,
Burns's fancy turned to Nancy
And a dozen more.

"Pope was quite a trifler;
Goldsmith was a case;
Byron'd flirt with any skirt
From Liverpool to Thrace.

"Sheridan philandered;
Shelley, Keats, and Moore
All were there with some affair
Far from lit'rachoor.

"Fickle is the heart of
Each immortal bard.
Mine alone is made of stone—
Gotta work too hard."

Franklin P. Adams is a true humorist, and we regard his "literary" flavor as a distinct asset, tho we doubt whether his slangy renderings of Latin, French and German poets in *In Other Words* measure up to those in the earlier volume. Here is an echo of Longfellow:

"There was a little fluff,
And she wore a little puff
And a rat made of shoddy and of cotton.
When they were there
She looked very, very fair,
And when they were off she looked rotten."

We are grateful for F. P. A. He kept our spirits up when the campaign was running full blast, and our faith in the American sense of humor—which is proportion. One of his poems is modeled upon Henley's

*In Other Words. *By Franklin P. Adams.* Garden City, N. Y.: Doubleday, Page & Co. $1.

"I was a king in Babylon
And you were a Christian slave."

"T. R. TO W. H. T.

"Or ever the knightly fight was on,
The skirmish of smear and smudge,
I was a king in Washington
And you were a circuit judge."

We do not quote the rest. You can read it for yourself if you buy a copy of *In Other Words;* and it is not too local or specialized a volume for any one who has enjoyed "Rejected Addresses" or Calverley's "Flyleaves." We do not undertake to compare Mr. Adams with his British forerunners; and a newspaper paragrapher none too carefully edited must inevitably offer verses of uneven quality. But we regard that uneven paragrapher as a find and a friend. That he has his deep sincerity such an unhumorous poem as "The Fool" (April 10, 1912) ably demonstrates, embedded as it is in pages of gayety and kindly satire. Hats off to the Chicagoan who raised the level of New York's lighter journalism! And thanks be to his Garden City publishers for helping to widen the circle of his friends.

The Cambridge Modern History Atlas. Edited by A. W. Ward, Litt. D., P. B. A.; G. W. Prothero, Litt. D., F. B. A.; Stanley Leathes, M. A., C. B.; Assisted by E. A. Benians, M. A. 141 Maps; Pp. 228. New York: The Macmillan Company. $4.

In our various notices of the great undertaking brought to a conclusion in Volume XIV of the *Cambridge Modern History* we have referred to the work as "a catalog, whose general divisions are the chapters, explanatory of the subjects treated," and have described it as "the nursery of thought germs" (March 23, 1905). We have, too, commended it for its full and ably composed bibliographies (May 16, 1907; March 23, 1911). No other work presents the views of modern authorities on so wide a range of topics. One cannot so unreservedly praise the maps and charts which supplement the printed pages, and are provided with a valuable introduction by Mr. Benians. Tho the scope of the work will ensure its usefulness to many classes of readers, and by no means exclusively those who possess the thirteen other volumes of the history, some of the plates give an impression of muddiness, confusion and crudity of color, and technical perfection has by no means been achieved. German and even recent American map making, is superior to these examples of British craftsmanship. The information, at least, is here, however, and for that we are grateful. Such a chart as that which shows the universities of Europe, their location and their date of foundation, or that of Ireland at the beginning of the sixteenth century, with tribal and other family names indicated in the right places, is often a remarkable aid to the appreciation of one particular page of history.

Fires. By Wilfred Wilson Gibson. New York: The Macmillan Company. $1.25.

There is a new note in the poems of Wilfred Wilson Gibson. Sympathy with the toilers has been voiced by many of our modern poets since Mr. Markham's "Man with the Hoe," but there has been often a touch of bitterness, even of vindictiveness, in some of the verses. *Fires,* by the author of "Daily Bread" and "Womenkind," shows the gentlest and tenderest of spirits, an understanding of the workman's life, of his sorrows and joys as well, touched with compassion and deep sympathy, and all the more persuading because of its restraint. In such a poem as "The Machine" we feel all the maddening monotony of the reiteration of the machine-tender's task:

"But soon again he was upon his feet,
And tending that unsatisfied machine,
And printing pictures, red and blue and green,
Until again the green and blue and red
Went jigging in a riot thru his head;
And, wildest of the raging rout,
The blinding, screeching, racking yellow—
A crazy devil of a fellow—
O'er all the others seemed to shout,"

But we follow him into the street, where the Christmas shopping is in progress, and ripples of careless laughter "stole

Like waves of cooling waters thru his soul.
While sometimes he would lift his aching eyes,
And sees a child's face flushed with proud surprise,
As, gripping both its parents' hands quite tight,
It found itself in fairylands of light,
Walking with grown-up people thru the night."

And a frank, fresh-cheeked young girl becomes his companion and friend. "The Shop" is a perfect poem. In the workshop the anvils have a trick of playing a tune to any words running thru the

workman's head, and in his gentle sympathy with the shopkeeper whose little son is ill, he hears all day:

"The bellows puffing out: It's strange, it's strange
That little ones should suffer so . . .
And now, my hammer, at a blow:
I'd like to take them all, to-night!
And, in the clouds of steam, and white hot glow,
I seemed to see primroses everywhere,
Primroses, and primroses, and primroses."

Nothing could be more exquisite than the simple expression of the workman's sorrow when the bell of the shop is silenced not to disturb the sick boy, and his joy when he hears it again when the child is better. "The Crane" is beautiful, too, with the mother who has no time to talk with her crippled son, but always cleans the window pane so that he may watch the crane against the sky, with its almost human companionship for his lonely hours. The beauty and simplicity of these poems should win them a wide audience, their message is one of love and brotherliness, which makes a more effective appeal for better conditions of labor than fierce denunciations of the rich or pictures of the degradation of the poor.

The Voice. By Margaret Deland. New York: Harper & Brothers. $1.

Old Chester is one of the towns, in fiction, where one would like to live. With Dr. Lavendar for his pastor and Dr. William King as the family physician the gentle ripple of the roads over the fluted hills would lead to a home of peace for one's declining years. *The Voice* is the latest of the series of charming Old Chester tales that Mrs. Deland has told so lovingly for many years. It is a quaint and pretty story of a wholesome and natural girl, who tries the efficacy of a love potion upon a young and consequently harshly rigid Presbyterian minister, most anxious to save her soul. Philippa is a dear girl—"old-fashioned," Dr. King calls her—but it is a sweet fashion of gentleness and affectionateness that ought never to grow old. Her father is an Irvingite, patiently waiting for the *Voice*, with unshaken faith thru disappointing years, and the little unworldly household has its own fascination.

Literary Notes

....*The American Jewish Year Book* for the year 5673, which began September 12, has as its leading feature an article on the "Agricultural Activities of Jews in America." (Philadelphia: Jewish Pub. Soc.)

....An admirable little handbook of household remedies for common emergencies and minor ills is *A Stitch in Time* (Putnam; 75 cents). The directions are clear and in accordance with modern antiseptic methods, which is more than can be said for some books of this class.

....The Bancroft Co. announces for publication a new edition of *The New Pacific,* by Hubert Howe Bancroft, for sixty years a resident of California, and *Retrospection,* a political and personal review of the nineteenth century, by the same writer.

....Many men of distinction have borne witness to the help and encouragement they have received from their wives; that others have owed as much to their sisters is the theme of Sarah G. Pomeroy's new book: *Little-Known Sisters of Well-Known Men* (Dana Estes; $1.25). These biographies from Mary Sidney to Eliza Parkman are pleasing and unpretentious—like their subjects.

....An edition of plays by *William Congreve* comes to us from the American Book Company in a series of "Masterpieces of the English Drama." The general editor is Professor Felix E. Schelling, of the University of Pennsylvania; the editor of the present volume is William Archer, who contributes a satisfying introduction. There are notes, also; and the general form of the volume is altogether pleasing. (Pp. 466; 70 cents.)

....Since color enters into the dress of women more extensively than used to be the case, it is important that it should be used judiciously. *Color Harmony in Dress* (New York: McBride, Nast & Co.; 75 cents), by G. A. Andsley, is a useful shopping companion if a woman who is not primarily an artist wants to avoid inharmonious color-effects in her attire. Dr. Andsley makes a scientific study of the subject of types of beauty and the colors to be worn or avoided by each.

....The *New Richard Grant White Shakespeare,* a revised edition, "supplemented and annotated" by W. P. Trent, B. W. Wells and J. B. Henneman, published in twelve volumes, 18mo, by Little, Brown & Co., appears half a century after the original Grant White Shakespeare, issued by the same house. The work is, however, less a new edition than a reprint, with only minor alterations in text. As books

the little volumes are delightful: large type, pleasing illustrations, and varying styles of binding, to suit the purse. The volumes are sold separately at $1.50 each.

....*The Lover's Calendar* is a compilation of appropriate verse and a few passages of prose, too, by Mrs. Havelock Ellis (Dutton; pp. 423; $1.75). The anthology is arranged by months and days and includes some contemporary authors.

....A plea for history written with human interest rather than from the standpoint of an assumed impartiality and aloofness from life is made by Dr. A. S. Draper, New York Commissioner of Education, in an address published as *No Mummified History in New York Schools* (Syracuse, N. Y.: Bardeen). He says:

"The Confederate veterans would rather read the story by Colonel Haskell of what happened on the Union side at Gettysburg; and the Union veterans, that by General Pickett, of what happened on the Confederate side, than any story by an historical philosopher who was not there and who tries to write judicially, when the whole thing was one of arms and had gone beyond the possibility of judicial determination."

....Most of our readers will want interest in and sympathy for work translated in Mr. Jethro Bithell's *Contemporary French Poetry* (Pp. 227; London: Walter Scott; 1/). His poets are (to name a few of the best known) Henri Bataille, Paul Fort, Remy de Gourmont, Fernard Gregh, Francis Jammes, Kahn, Lahor, Jean Moréas, the Comtesse de Noailles, Regnier, and the Americans—Stuart Merrill and Francis Vielé-Griffin. The translations as translations are creditable rather than brilliant. The little volume opens with a critical introduction devoted to the Parnassians, Symbolists, and Decadents, and to "color audition"—with frequent references to Professor Irving Babbitt's "New Laocoon." It closes with bibliographies and notes.

....An unusual literary skit, or shall we call it an educational work? has the title, supposed to be reproduced in facsimile from a London volume of 1714; with the startling title "An Original Canto of Spencer [*sic*]: Design'd as part of his Faery Queen, but never printed." It is said to have been found by Nestor Ironside, Esq., great grandson of a near friend of the poet Spenser. The preface and the poem of forty-six stanzas are much in the style of Spenser. We take it that it is presented to pupils in literature as a study of the indicia of a forgery. We advise candidates to begin the study with the title page and its spelling of the poet's name, and proceed to the motto ascribed to Horace, "*Ficta voluptatis causa sint proxima veris*" and to compare with it the following genuine and scanable words of Horace, "*Nova fictaque nuper habebunt verba fidem.*" The classes which engage in external and internal criticism will hardly fail to consider whether Spenser could ever have thought to represent Britomart, the mirror of Queen Elizabeth, as shamed by the foul magician. (New York: Arthur H. Nason; 30 cents.)

....A story of summer seas and of an island beside them, a runaway yawl, and of a group of interesting people, ashore and at sea, is entitled *Blue Anchor Inn,* by Edwin Bateman Morris (Penn Pub. Co.; $1.25). There is a husband who had never seen his wife's face, because he had given her his name, in order to secure a large fortune to her left by an eccentric will, and various complications arising from the fact that the bride had gone West at once to secure her divorce, had changed her mind and returned to Lugger Island. A pleasant story for an idle hour.

....The Société du Mercure de France, of Paris, publishes an *Essai sur la littérature chinoise,* by Georges Soulié, in which one finds an account, not only of the classic literature, but even of contemporary journalism. "The press," writes M. Soulié, "which the foreigners created to augment their popularity, was the means by which the Chinese nationalism found expression, and developed with a surprising rapidity. The editions, even now, are limited: the chief newspaper publishes only 15,000 copies. But these are passed from hand to hand; are commented upon and discussed; their contradictory articles enlighten opinion. Finally, the necessities of journalism transform style, little by little, and . . . the language used approaches more and more nearly to the spoken tongue."

....An exceedingly ambitious compendium is the *Petite Histoire Contemporaine (1789-1910)* of J. Isaac (Pp. 231; Paris: Hachette; 2 fr.). Modern history is summarized from the French standpoint, but the New World as well as the Old is included, and the United States has over four pages. Within that space our national record is most skilfully condensed, with but one glaring error: a reference to coffee plantations in our Southern States. As a desk manual, the book will be found convenient by the journalist and by many another, and not only for its summary of French political and military events, and European relations and alliances, but also for its sections on such subjects as the African partition, the East and the Near East, the Sciences and the Economic Revolution, the Catholic Church, and the General Characteristics of Civilization. There is even a section on the Romantic Movement in Literature and Painting.

....Now that the triumph of aviation is assured we will view with greater interest than ever the mysterious genius who long ago foretold the day when man should fly, and even tried to make himself wings. To get a vivid impression of the artist-engineer of the Renaissance there is no pleasanter way than to read *The Romance of Leonardo Da Vinci*, the second volume of Merijkowski's strange trilogy of which Julian the Apostate, Leonardo Da Vinci and Peter the Great are the central figures. In THE INDEPENDENT of November 15, 1906, we devoted an article to the analysis and interpretation of the novels of the great Russian mystic, so here it will only be necessary to note that Putnams have brought out part *The Romance of Leonardo Da Vinci* in two volumes, illustrated by photographs of the many distinguished personages who figure in its pages.

....The first chapter of George A. Birmingham's *Lighter Side of Irish Life* is a good-natured protest against the contemporary tradition of what the Irish are: a tradition that is in many respects flattering, but founded upon ignorance no less than the older and less kind tradition. Other chapters describe the Irishmen of the past, those of Lever, those of today; the Irish clergy; the Irishmen who write verse and the Irishmen who write plays: enemies, for the most part, to illusion and old-fashioned sentimentality; Irish officials, peasants, servants, and "Yanks" (Irish Americans); Irish humor and superstition and speech. This book by a distinguished writer of fiction is not brilliant, but is understanding, sympathetic and interesting thruout. Illustrations in color are contributed by H. W. Kerr, R. S. A. (Stokes; pp. 271; $1.75.)

....The tremendous expansion of our literature is shown by the fact that the new edition of *The United States Catalog* is two and a half times as large as the last edition publisht ten years ago. The books of 3,000 publishers are included in the directory. This mammoth volume is indispensable for all large libraries and book-buyers, for it contains the names of all the books now in print, with particulars of binding, price and date, arranged and cross-indexed in the convenient manner devised by the H. W. Wilson Company, of Minneapolis, for their *Cumulative Index* of current publications. We have consulted the *Index* and the *United States Catalog* about once a day on the average for the last ten years and have been amazed at its invariable accuracy. If any of the ladies who assist Miss Marion E. Potter, its editor, in copy-writing and proofreading want to move east we should like to know it so we can get their services on THE INDEPENDENT.

Pebbles

"A TIP is a small sum of money you give to somebody because you're afraid he won't like not being paid for something you haven't asked him to do."—*The Bailie, Glasgow.*

FRED.—How would you like me for your husband?
Isabel.—Oh, I should like nothing better.
Fred.—Er—ahem! Good evening.—*Judge*

CHAP about to wed was nervous;
To the young best man he cried:
"Tell me, is it kisstomary
For the groom to cuss the bride?"
—*Woman's Home Companion.*

"YES, madam, I can get you the divorce. For five hundred dollars I can get you a divorce—and get it without publicity, too."
"But what would it cost with publicity?" she asked.—*East and West.*

"WHAT has become of your hyphenated friend?"
"My hyphenated friend?"
"Yes; your friend, Mr. Wombat-Wombat."
"He is ill of beri-beri.'
"Where?"
"In Walla-Walla."—*Louisville Courier-Journal.*

THE girl with the ruby lips we like,
The lass with teeth of pearl,
The maid with the eyes like diamonds,
The cheek-like-coral girl;
The girl with the alabaster brow,
The lass from Emerald Isle.
All these we like, but not the jade
With the sardonyx smile.
—*Boston Transcript.*

"BANG!" went the rifles at the manœuvres. "Oo-oo!" screamed the pretty girl—a nice, decorous, surprised little scream. She stepped backward into the surprised arms of a young man. "Oh," said she, blushing, "I was frightened by the rifles. I beg your pardon."
"Not at all," said the young man. "Let's go over and watch the artillery."—*Cincinnati Times-Star.*

AT WORK.

I bid my desk a glad farewell,
Yes, that's about the way it looks.
The boss must get another man,
For I am done with office books.

And, mother, don't rely on me
For doing any household chore,
For I have got a task on hand
That takes all day and night and more.

Best take the children out of school
That they may bring the shekels in.
For I sha'n't have a bit of time
To waste on gathering the tin.

Yes, I have got a steady job
Till January, you can bet
I'll spend my waking moments all
In picking Wilson's Cabinet.
—*McLandburgh Wilson, in the New York Sun.*

The Independent

Entered at New York Post Office as Second Class Matter. Owned and published by The Independent Weekly, Incorporated, at 130 Fulton Street, New York, N. Y. Hamilton Holt, President; Frederic E. Dickinson, Secretary and Treasurer.

A WEEKLY MAGAZINE FOUNDED IN 1848

One Year, $3.00 Single Copies, 10 Cents

Single copies over six months old, 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as those offered by any responsible agency.

An order for the change of an address should be received two weeks before the change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of the publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Binders holding in book form thirteen current issues will be furnished for 45 cents. If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We welcome unsolicited contributions, but writers who wish their articles returned, if not accepted, should send a stamped and addressed envelope. Even so, we cannot hold ourselves responsible for their return. Authors should preserve copies of their manuscripts.

Advertising rates will be furnished on application.

The Recent Election

FOUR years ago Mr. Taft had a large majority in the electoral college, and his popular vote exceeded that of his Democratic opponent by 1,250,000, or about 20 per cent. At the beginning of his term the tariff was revised by a Republican Congress. A political revolution followed, in 1910, when his party's majority in the House was displaced by a Democratic majority of more than sixty. Congressional districts in which Republicans had been elected for many successive terms by majorities of from 5,000 to 10,000 sent Democrats to Washington. Since that time the tariff duties have not been reduced and there has been scarcely any change in the attitude of the public toward those who were responsible for the revision of 1909. Now we have had another Presidential election, and the Democratic party has won a sweeping victory. Governor Wilson has 442 of the 531 electoral votes, while Mr. Roosevelt has 77 and Mr. Taft only 12. In the new House there will be a Democratic majority of nearly 160, and it is expected that by the aid of the Vice-President's casting vote, or possibly without such aid, the Democratic party will control the Senate. But the popular vote cast for Mr. Taft and Mr. Roosevelt exceeds by 1,500,000 that which was given to Governor Wilson.

The Democratic party won because the Republican party was split in two. Its popular vote appears to have been less than Mr. Bryan's in 1908. In States having more than 350 electoral votes the combined popular vote of Roosevelt and Taft exceeded Wilson's, but the Republican division gave these electoral votes to the Democratic party. That party was practically united in support of Wilson, altho in some States a few of its voters were drawn to Roosevelt. On the other hand, however, it is well known that a considerable number of Taft Republicans voted for Wilson, to emphasize their opposition to Roosevelt. We think it is fair to say that a very large majority, or nearly all, of the Roosevelt voters were Republicans. It will be remembered that at the preliminary election in Vermont the Roosevelt movement was supported by 37 per cent. of the Republican voters and was not perceptibly aided by Democrats, whose party gained 4,000.

The meaning of the figures is that the Republican party was divided, Mr. Roosevelt taking a little more than half of it. We are not saying, however, that Taft could have been elected if there had been no Roosevelt movement. For a long time we had felt that, because of the revolt against the Payne-Aldrich revision, it would be difficult, probably impossible, for the party to re-elect him. The excess of the combined Roosevelt and Taft popular vote over the Wilson popular votes does not prove that Mr. Taft would have been successful if there had been no Roosevelt opposition.

In the history of American politics there is shown no greater blunder than the tariff revision of 1909. Our opinion to this effect has repeatedly been exprest. The Republican party, virtually committed to downward revision, left the tariff substantially unchanged, as a whole, so far as its effect upon consumers was concerned. Governor Dix said that the Republicans "increased the duties on all the necessaries of life." This was not true, for the duties on many necessaries of life were reduced, but the reductions were ineffective with

respect to the cost of living. The party lost its opportunity, and that was the beginning of its downfall. While the tariff bill was pending, Mr. Taft either knew little about tariffs or was badly advised. After the enactment of the bill his defense of the new law deprived him of much of the respect and confidence which otherwise would have been given to him because of his policy concerning other questions. That this error at the beginning of his term was followed by many most commendable acts is admitted and asserted by so prominent a partisan opponent as the New York *World,* which says:

"As President Mr. Taft will leave a record of many triumphs and a single conspicuous and fatal blunder. He has been a constitutional magistrate, governing by law and not by caprice. He has given us the greatest Supreme Court since the days of Marshall and Story. He was the first President to enforce the criminal clauses of the Sherman law. He has powerfully supported the cause of arbitration. He has worked for reciprocity. He has suppressed jingoism. He has promoted civil service reform. He brought about the corporation tax. He has had regard for economy."

Mr. Henry Watterson says the Republican party has gone down, "never to rise again." Senator Dixon, who was at the head of the Roosevelt campaign bureau, remarks that it will never again muster strength enough to nominate a candidate for President. In our opinion, both of these gentlemen are wrong. The history of our country shows parties that were said to be dying or dead, because of some great reverse, rising again and exercising great power. The Republican party has had a grand record. It has been a great agency in the interest of the public welfare. It will survive. Even in the near future it may regain its strength. Its policies may undergo some change, but it will not die. We hope to see the two factions united, under the old name, with the best things of both platforms in one new one. In several States the influence of the Roosevelt branch will probably prevail in any reorganization that may take place; in others this influence will be much weaker; but it is quite possible that there will be a reunion upon a basis involving mutual concessions.

Governor Wilson approaches his task with a solemn sense of responsibility. He is a good American, a man of broad culture, excellent record, admirable environment, intelligent courage and high ideals. His bearing thruout the campaign was most commendable. His public addresses were free from partisan bitterness or denunciation of individuals. His appeals were made to reason, not to passion or prejudice. He may fairly be regarded as a representative of the people, rather than the agent of a party. We shall expect to find him, in office, more conservative, or more reasonably cautious, than some members of his party in Congress. Much of the legislation to be proposed will be closely related to business interests. Remarks in his recent addresses or statements may now be recalled. He has said that tariff changes should be made "only at such rate and in such way as will least interfere with the normal healthful course of commerce and manufacture"; that his party is "not seeking disturbance of any sound or honest thing, but merely the rule of right and the common advantage"; that Democrats have not come to the conclusion that they "had better pull the house down about their ears." And he has spoken as follows since the election:

"The result fills me with the hope that the thoughtful, progressive forces of the nation may now at last unite to give the country freedom of enterprise and a government, released from all selfish and private influences, devoted to justice and progress. There is absolutely nothing for the honest and enlightened business men of the country to fear. No man whose business is conducted without violation of the rights of free competition and without such private understandings and secret alliances as violate the principle of our law and the policy of all wholesome commerce and enterprise need fear either interference or embarrassment from the Administration.

Wrongs have been done, but they have not been done malevolently. We must have the quietest temper in what we are going to do. We must not let any man divert us. We must have quiet temper and yet be resolute of purpose. Let us hear them all patiently, and yet hearing all let us not be diverted. Prosperity has carried us into devious paths. There is much to reconstruct, and it will take a generation to work out what America must achieve."

Mr. Underwood and other prominent Democrats in the House say that there should be a special session of Congress, beginning in March next, for tariff revision. Probably the new President will

call such a session. As the party is distinctly committed to revision, the work, it seems to us, should be done without delay. Postponement, causing prolonged uncertainty, would affect business interests unfavorably. It may be expected, therefore, that at the beginning of his term President Wilson will be associated with the Democratic Congressional majority. This majority is a very large one. In opinion and policy it may not always be in agreement with the new occupant of the White House. We sincerely hope that President and Congress majority will be able to work together harmoniously for the public good.

THE INDEPENDENT supported the candidacy of Mr. Taft in the recent campaign, but it believes Governor Wilson will be a good President. It desires and intends to show a sympathetic and helpful interest in the work of his Administration and all commendable legislative projects of his party.

The Defeat of President Taft

WE had anticipated the defeat of Mr. Taft, but his defeat is more spectacular and absolute than we or any one else had expected. In a sense it is humiliating, for the popular vote has placed him third in the race, beaten by Mr. Roosevelt as well as by Mr. Wilson. However humiliated he is not disgraced. He has been beaten for no fault of his, for no failure to give his most honest and faithful service to the country.

The conditions have been utterly against him, and his own error early in his administration he could never overcome. Yet it was not so much his error as it was that of the leaders of the party. On his inauguration they were pledged to a substantial reduction of the tariff. He desired it. He had influence enough to secure a slightly greater reduction in some items than that which they had put in the bill, but it was not what had been promised. Meanwhile the cost of living was soaring, and people laid it to the tariff, which was really a minor element in the problem. Mr. Taft had been a student of law and an administrator, not a student of finance. It is fair to believe that he had no great knowledge of the tariff, and that he trusted his official advisers. He signed the bill, and then made the mistake of praising it in speeches in the West. The people did not believe in it or like it, nor did they like his advisers. Then began the insurgent movement within the party. President Taft, believing in a reduction of the tariff, then attempted to reduce it across the Canadian border, an admirable piece of statesmanship. He turned to Mr. Roosevelt for advice and help and got his pledged support, and carried the measure thru Congress. Then came the foolish rejection of it by Canada, but meanwhile the insurgents, who had been so eager to reduce the tariff, concluded that they did not like this sort of reduction; they wanted full protection for their wheat and corn which they had to sell, a tariff on the necessities of life. Mr. Taft was blamed for what was to his credit. One or two other smaller and personal matters also were used noisily against him, particularly related to the action of his Secretary of the Interior in Alaska, who was compelled to resign, and whom Mr. Taft defended too long.

Then came the elections of 1910, which showed an alarming drift toward the Democratic party and a growing rift in the Republican party. It gave the House of Representatives to the Democrats, with the insurgent Senators voting with the Democrats on critical occasions. The country anticipated Republican defeat at the next Presidential election. Mr. Taft was swimming already against the tide.

Then came the appearance of Mr. Roosevelt as the leader of the insurgent hosts against the President, himself the candidate for the nomination. That created a friction and portended the break-up of the party, which came when Mr. Roosevelt refused to submit to the decision of the convention. The schism could not be healed, and the defeat of Mr. Taft, which was not improbable before, was now certain, and both Taft and Roosevelt went down before it. This can fairly be said for Mr. Taft, that in the very trying position, with the friend whom he had served leading the hosts against him, his attitude was restrained and courteous. His Democratic foes show him full respect, and recognize the great achievements of his administration. In a previous editorial column we quote

the enumeration of his worthy achievements from the leading Democratic journal in the country, noted for the ability of its editorial comments. It is only some of the new party's spokesmen who spice with venom their charges of weakness; but against that put the list of his achievements and the testimony of his Democratic opponents. For his faithfulness in breaking up monopolizing trusts and thus carrying out the policy laid down by his predecessor he has had scant thanks where they were most due. The support of corporations left him, and half the party ran after his popular rival, while others of his party, knowing that defeat was sure, in their anger with Mr. Roosevelt swelled the vote for Mr. Wilson.

Mr. Taft will retire to private life, beaten but not dishonored, with the right to cherish the memory of a term of critical service honestly, ably and fruitfully accomplished, and deserving and receiving the grateful honor of the people. We trust that President Wilson will receive from his party a better support than the Republican party has given Mr. Taft.

The Progressive Proposition

THAT there has been neither "landslide" nor "slump" is the fact from which any estimate or interpretation of Progressiveism must start. Mr. Wilson has received the normal Democratic vote, neither increased nor greatly diminished. Therefore the belief of Mr. Roosevelt and his supporters that they were founding a party which would not merely split the Republican party, but would draw impartially from Republicans and Democrats alike, has not as yet been fulfilled. The expectation of stand-pat conservatives that a fear of radical departures in our political system would drive cautious men into the Democratic ranks as the only way of defeating Mr. Roosevelt after the third ticket was put in the field, has not been very largely borne out. So far as the returns show, both the Democracy and the Taft Republicans have alike been standing pat.

There is something to be said accordingly, for that view of the general result which we understand Mr. Taft himself takes. The country has voted three to one, as Mr. Taft and a good many of his friends see it, against a progressiveism that is really radicalism. In this view the real question before the people was the one propounded by President Nicholas Murray Butler, "Why should we change our form of government?" And by an overwhelming majority we are assured that no reason why is in sight.

If, however, it is legitimate to combine the votes for two candidates against the vote for a third, or against the field, it becomes interesting to inquire how the situation looks if we put together all the votes that apparently express an essentially radical interest. The Socialist vote has not reached the million mark of Socialist aspiration, but it comes so near to it that the Roosevelt vote and the Socialist vote in combination will almost certainly round out over five millions. We have, then, the rather startling showing of a presumably radical vote within a million or so of the Democratic vote, and more than half as large as the Democratic and Republican votes combined.

Consequently, it is of prime importance to ask in just what sense the Progressive vote is radical. Altho details are not yet to be had, there can be no doubt that it is chiefly a wage-earner vote, and very largely a foreign-born vote. A major part of it was cast in the industrial towns. It represents, therefore, elements in the population substantially like those that support the Socialist ticket. These elements are year by year becoming a larger proportion of the total population and of the population legally qualified to vote. Apparently, if they could get together they could not only have a large representation in Congress, but could look forward to the day, not far distant, when they could hope to elect the President. They could at least hope to play as large a part in American politics as the Socialist party plays in Germany.

Mr. Roosevelt and his most active supporters have frankly appealed to these elements. They have told us that old issues are dead and that the new issues are industrial. The supreme issue, they have assured us, is "social justice," by which they mean, specifically, distributive justice.

If there were nothing more to say,

there could be no escape from the conclusion that, altho for the time being the country has voted for a conservative regime, we are nevertheless unmistakably drifting into the politics of class struggle, and that the day is already in sight when the line will be sharply drawn between the allied interests which for short we call "property" and the allied interests which for short we call "labor."

But there is more to be said. The Roosevelt vote was not drawn exclusively from the wage-earning population, nor even from that population reinforced by a contingent of humanitarians, academic and literary folk and sentimentalists. It was drawn also in part from the farmers of Michigan and Minnesota and from the multi-millionaires. Mr. George W. Perkins and Mr. Frank Munsey were not the only gentlemen of notorious solvency who espoused the cause of "the Colonel."

Now Western farmers and New York magnates have not joined the Progressive forces because they are tainted with socialism. Quite the contrary. One and all they are rank individualists. Neither are they in the least disposed to throw in their fortunes with a class conscious proletariat. They think of themselves as belonging to and having their being in a different world from that of the proletarians.

Here we come to one of the most curious phases of the Progressive movement when looked at from a sufficiently detached viewpoint to command its broader outlines. Rural insurgents, industrial progressives, and trusts yearning for national regulation have been drawn together for campaign purposes by the personality of Mr. Roosevelt, but they are queer comrades. The trusts and the industrial workers want to restrict competition, the one by getting rid of the Sherman act, and legally recognizing big combinations; the other by establishing standards in wages and shop conditions, and by restricting the employer's freedom of contract. The insurgents, on the other hand, want the initiative, the referendum and the recall in order that they may extend the area of competition. They want to do as they please with their own.

Is there, then, any one character, tendency or purpose which the various progressive, or, if you please, radical elements in American politics have in common, and which may, therefore, unite them for effective political action in the immediate future? Quite obviously, we think, there is. It is not, on the one hand, a great concern over our form of government as a form. It is not, on the other hand, class consciousness. Nor is it either a sentiment or an ideal of social justice. It may perhaps be called a principle, but it is not a theoretical or academic principle. It is purely a pragmatic principle, a practical proposition. Five million voters who disagree among themselves about most other things agree in believing that government should be a more flexible and effective instrument for the promotion of human wellbeing than it now is. They believe that our legislation, our administration and our judicial procedure are clumsy and that they are run in much too slavish adherence to antiquated rules. They object to a limitation of the functions of government by a *laissez faire* philosophy, and to a restriction of the methods of government to devices that were invented before the railroad and the telegraph. They believe, in short, that mankind is quite as able today as it was a hundred years ago to decide what things to leave to individual enterprise, what things to command government to undertake, and how to make government perform its task.

A union of forces for immediate action, however, and a permanent political organization may be different things. A Progressive party will endure only if, after uniting men to work for an effective governmental expression of collective purpose, it embodies also the collective purpose. The collective purpose of socialism is well known. What is the collective purpose of progressivism?

The Expansion of Equality

It is no wonder that 20,000 women marched thru the streets of New York City, with music and banners and many colored lights last Saturday evening. Their feet fairly danced upon the pavement and their faces were bright with smiles, for they rejoiced in the tri-

umph of their sisters of the West and in the hope that their own emancipation might not be long delayed. In truth they have good reason for the hope that is in them. The tidal wave of equal rights has swept over the Great Divide and is rolling down upon the plains and coast. It cannot be stopt, because it is part of a great worldwide movement; it is merely the political phase of feminism, of the demand that woman shall be treated as an independent personality and freed from the artificial restrictions imposed upon her in days of bygone barbarism because of her physical weakness.

It is the topmost State in the Union that bears upon its arms the motto "Equality." It was Wyoming that first of all the world put the ballot into the hands of wives and mothers. That was forty-three years ago and the people of that State have never since had occasion to doubt the wisdom of the experiment. One by one the neighbors of Wyoming, seeing the workings of the policy, adopted it, first Utah (1870), then Colorado (1893), Idaho (1896), Washington (1910), and California (1911). Last week four more States fell into line—Oregon, Arizona and Kansas, all adjacent to the suffrage States, and Michigan, the first case where non-contiguous territory has been attained. The manner in which the movement has spread, slowly, steadily, and by example, not by bluster or violence, is in itself the best assurance of success.

And now in a fourth part of the United States a man may look his wife in the face without blushing with shame at the thought that she is deprived of rights which he holds dearer than life. This area, nearly a million square miles, is larger than all of the States east of the Mississippi, and its population, over ten and a half millions, is as great as that of all the New England States with New Jersey, Delaware and Maryland added. It is also worthy of note that the population of the ten suffrage States, with the exception of Kansas and Michigan, is increasing from three to six times as fast as that of the nonsuffrage States. This is not from immigration altogether either, for in the States where women have long been voters there are more wives in proportion to old maids than elsewhere, more mothers in proportion to childless wives, and more children in proportion to the number of mothers. The common allegation that woman suffrage destroys the home is most baseless of lies, as it is the most infamous of slanders.

Kansas narrowly missed the glory of being the leader in this great reform. In 1867, two years before the Wyoming Legislature adopted equal suffrage, a band of courageous women, Mrs. Elizabeth Cady Stanton, Mrs. Lucy Stone Blackwell, Miss Susan B. Anthony and Rev. Olympia Brown, carried on a campaign in Kansas, riding over the prairies in such conveyances as were available, and speaking in churches and schoolhouses. But the people were not ready for it and the two amendments to strike out from the Constitution the words "white" and "male" were both defeated by votes of nearly two to one. It is curious to observe that the people of Ohio are today in the same state of mind as the people of Kansas were forty-five years ago, for last September they voted against eliminating either the word "white" or "male" from their Constitution. The Kansans again rejected woman suffrage in 1894, altho they had given women the ballot in municipal elections in 1887. Michigan voted against woman suffrage in 1874 and Oregon in 1884, and several times since. But in this campaign negative votes do not count. They only cause delay and more bother. Heads or tails the "antis" always lose in the end.

THE INDEPENDENT cannot forbear some elation at the growing popularity of the woman's cause, since we labored for it in the days when it was the object of contumely and contempt. Nowadays quite respectable magazines and newspapers can openly advocate votes for women without loss of reputation or subscriptions, tho some of our esteemed contemporaries do not realize it. We cannot think of anything that would shock the people of today as much as our espousal of the women's cause did their fathers, unless perhaps it would be to advocate the burning down of all schoolhouses and the dispensing with all clothing during the hot weather; neither of which we are disposed to take up. It

used to be charged that THE INDEPENDENT had two hobbies, abolition and woman's rights. The charge was unjust, for it was only one hobby, the hobby to which we still cling, that no human being should be discriminated against because of color or sex. We have lived to see this generally, tho not altogether, accepted. The black man today is conceded the right to control his own person, to possess property, to acquire education, to enter professions, and in some States to vote. The white woman is today conceded the right to control her own person, to possess property, to acquire education, to enter professions and in some States to vote. Our endeavors in the future will be directed toward the completion of these rights and their profitable utilization.

What we have said above about the way the woman suffrage cause has advanced is put into more spirited and poetic language by Mr. McLandburgh Wilson in the New York *Sun:*

THE MARCH OF WOMAN SUFFRAGE.

One little suffrage State, lonely to the view,
Didn't go and bust the home; then there were two.

Two little suffrage States, where the sex was free,
Didn't take men's jobs away; then there were three.

Three little suffrage States, hollerin' for more,
Didn't seem to blight the crops; then there were four.

Four little suffrage States, helping men to strive,
Didn't go and put on "pants"; then there were five.

Five little suffrage States, deep in politics,
Didn't scorn the frying pan; then there were six.

Six little suffrage States, voting just like men,
Didn't lack for chivalry; then there were ten.

Ten little suffrage States where the Right is great,
Heaven speed the happy day there'll be forty-eight.

Thessalonica

THESE are the days when the Sunday school scholar is in his glory. The geographic and ethnographic details that puzzle others have no terrors for him. It is familiar ground to him, for he has been over it more than once as a child. When he reads in his morning paper that the Turks defeated at Veria retreated to Salonika he recalls a more modest and momentous retreat in the opposite direction, and turning to Acts xvii he reads how Paul and Silas left Thessalonica by night for Berea. If the paper fails to provide him with a war map he uses the one in the back of his Bible. Such changes as the softening of a B to a V and the dropping of a prefix are but slight disguises. Besides, he and his Sunday school teacher have always been a bit uncertain about the accent and pronunciation of these words anyway. But whether you call it Berea, as it used to be on the top of the lesson leaf, or Veria, or Verria, or Varria, as it is on the maps nowadays, he has an ineradicable impression that the Jews there were more noble than those of Salonica and took more readily to Bible class work.

He does not need to be told by any cub reporter that both cities have a mixt population of Jews and Greeks, and that in Salonika the Jews are strong enough to put political pressure on the officials and practically to run the city to suit themselves. The Jews now number more than half of the population and the prevailing tongue is Ladino, a dialect compounded of Spanish and Hebrew, as Yiddish is of German and Hebrew. This is due to the large number of Jews who took refuge here when expelled from Spain by Ferdinand and Isabella in 1492 as a thank offering for the capture of Granada from the Mohammedans.

On account of the predominant Jewish interests in Salonika, Israel Zangwill, the author of "The New Religion" and "The Melting Pot," makes the interesting suggestion that it be made a free city under Jewish control. Mr. Zangwill has long been in search of a suitable site for Zion. Jerusalem being unavailable and also unattractive he has taken into consideration Africa and various other places, but this is the best proposal yet. No place offers better opportunities for the enterprising business man. The commerce of the port is over twenty million dollars a year now and the town is bound to boom when the railroad is completed thru the Sanjak of Novibazar, as it will be now whoever gets possession of that neck of timber. Mr. Zangwill has the idea that the Jews would flock to Salonika from

all parts of the world in order to live under a ruler of their own race instead of a Christian, and he suggests that President Wilson nominate Oscar S. Straus, former minister to Turkey, as governor of Salonika. This shows that Mr. Zangwill, for all his brilliancy, fails to understand the intricacies of American politics or the psychology of his own race.

In New York State the Jews—about twenty times as many as there are in Salonika—had a chance the first Tuesday in this month to elect Mr. Straus as their governor, and with one accord they knifed him and cast their votes for Mr. Sulzer instead. We imagine that when it comes to the first municipal election of the free city of Salonika a good Catholic candidate with Tammany Hall back of him will stand a better chance than the most orthodox and honorable of Hebrews.

But whatever disposition may be made of Salonika, we have no doubt it will be happier than it has been for the last 482 years, since it was captured by the Turks.

Crown Prince Constantine, when he made his triumphal entry into the city last Sunday at the head of his troops, marched first to what was formerly the cathedral, but which since 1589 has been a mosque, St. Sophia, built, like its more famous namesake in Constantinople, by Justinian's architect. The church of St. Demetrius is even older, and the Greeks at Athens take grateful cognizance of the fact that it was on the day of St. Demetrius, patron saint of Salonika, that his city past into the hands of the Christians. Fortunately there appears to be no truth in the reports that there was a massacre at Salonika. Surely that city has suffered more than enough of such atrocities in its long life. In 390 there was a terrible massacre by order of the Emperor Theodosius. In 904 the Saracens took the city by storm and carried off into slavery 22,000 of the inhabitants. In 1185 the Normans took Salonika after a ten days' siege, and again the people were punished unspeakably. At last let us hope they will realize the benediction which Paul bestowed upon them in his second letter:

"Now the Lord of peace himself give you peace always by all means."

Amending the Monroe Doctrine

The United States certainly ought not to object to such an amendment of the Monroe Doctrine as is suggested by Dr. Manuel de Oliveira, of the Brazilian Legation. He declares that the southern republics are resentful of the assumption by the United States that it exercises a protectorate over all the lands south of us; and he suggests the communal action of the American republics for their protection against European or Asiatic aggression. When the Monroe Doctrine was enunciated there were no nations to the south of us able to defend themselves, and the position of the United States has been a great protection to them. Now Mexico, Brazil, Argentina and Chile have strong and reasonably settled governments, and their union with the United States in enforcing the Monroe Doctrine would be of value, and we ought to welcome it. Indeed, we have already begun to share with Mexico our benevolent influence, as shown in the combined establishment of an international court for the Central American states. The regular meetings of the representatives of all the American nations to consult on matters of common interest is another step in the same general direction. We doubt if there is quite as much resentment toward American assumption as Dr. Lima represents, but our Government ought to be ready to share its responsibility with any nation that will take it up.

"The Independent" in Ido

The October number of *Progreso*, published in Paris, selects two articles from THE INDEPENDENT for translation into Ido, in order to demonstrate the capability of the new international language for different styles of writing. The following paragraphs will show how they look:

"Ma sive la kauchuko esos facata de terpomi e maizo o kreskinta en plenterii, la kauchuko esos liberigita de la reda makulo, quan ol partis. La subita grandega demando por la lakto di la kauchuk-arboro, dum la maxim recenta yari, koaktas viri serchar ol en la neacesebla loki di la du sudala kontinenti. En la sekreta loki, for la kontrolo di legi e religio, l' avideso genitis kruelaji, e la mondo hororis pro rumori di sklaveso, tormentado e mutilado; en Kongolando da la Belgi; en Peruo da la Angli. Tala abominaji

esos neposibla sub la nova kondicioni di ta industrio. La nova deskovro signifikas progreso morala same kam ciencala."

"Ante sisdek yari, Emerson dicis: 'la maxim bona politikala ekonomio esas la sorgado e kultivado di la homo.' Ta, tamen, semblas esar la lasta punto konsiderata da la guvernantaro.

"La Eugenikala Edukado-Societo esas fondita, e multi de la maxim eminenta homi di Anglio esas lua membri. En ica somero, la societo aranjis la unesma internaciona kongreso.

"La cienco eugeniko esas tre yuna, e la punti studienda ne esas ankore klare definita, ma omna-die la konoci augmentas."

Ido is so simple in structure and utilizes such a large part of the vocabulary common to all languages descended from the Latin that it may almost be read at sight. But, for the benefit of those who used a "pony" we will say that the first quotation is from an editorial on the making of caoutchouc from potatoes, published July 11, 1912, page 106, and the second from an article by Henry J. Forman on eugenics in England, published June 20, 1912, page 1375. The promoters of Ido are pursuing a different policy from that adopted in the case of Volapük and Esperanto. Instead of attempting to secure a large number of profest adherents to a language invented in advance by a single man, they are devoting their energies to the scientific development of the language. All proposed words and grammatical forms are thoroly discust in *Progreso*, and then if approved are tentatively adopted for trial. This is slower and less spectacular than the other way, but promises a better result.

A Fairy Play for Children

The youngest member of THE INDEPENDENT staff can remember having seen in his extreme youth, as plays for children, only a performance of "Cinderella," and Joe Jefferson's masterly study of "Rip Van Winkle." But that is all changed now, and the managers of New York theaters mount plays for the children as well as for their grown-ups—staging more of them this season than ever before. Do you remember the Brothers Grimm and their "Snow-White?" Of course you do! and so will take your daughters, nieces, granddaughters, and grand-nieces, to say nothing of your sons, nephews, grandsons, and grand-nephews, to see Jessie Braham White's dramatization of the fairy tale at Winthrop Ames's Little Theater. You will do so, at least (and not be disappointed) if you live anywhere near New York, and haven't too many small relations; for the theater is little indeed, but not the prices. The stage pictures are as beautiful as if they had been devised for the most critical and esthetic of all Mr. Ames's fifty year old patrons, and except for a very few moments of somewhat intense emotion, the play of "Snow-White" is just what a small girl might wish to make—and act out with her playmates. From the grown-up point of view, all this is inferior in depth to Maeterlinck's "féerie" and to Mr. Barrie's "Peter Pan," but the children dote on "Snow-White," its beauty of setting, finish of acting, and mingled sentiment and humor. And for whom is a children's play intended, if not for children?

The Disciples Against Sectarianism

The Disciples of Christ are one of the largest of our American denominations; they count about a million and a quarter members, mostly in the West and South. In their polity they are hyper-Congregational, and they have had no delegated national organization, only annual missionary assemblages attended by thousands of people. The proposal to make these meetings hereafter representative meets with much opposition, but is likely to prevail. Much more important, however, was the sentiment on the subject of baptism and Christian fellowship. The denomination, which has been in the habit of declaring that it is not a denomination, has been very strict as to believers' baptism by immersion, as the rule definitely commanded in the Bible. But the Disciple Foreign Missionary Society has united with Presbyterians and Methodists in supporting a university in Nanking, China. Does not that show a weakness in the faith? And, here at home, the Hyde Park Church in Chicago accepts "associate" members, not immersed, and it has a missionary in China. A motion to disfellowship the Hyde Park Church because of its laxity was pronounced out of order, and this was supported by a two-thirds' vote of the six thousand members present. That will not end the discussion. There are two leading Dis-

ciple papers, *The Christian Evangelist,* of St. Louis, liberal, and *The Christian Standard,* of Cincinnati, conservative. The latter paper has pronounced for several years against the Foreign Missionary Society, and has supported a small independent mission in France. It attacks the plan of delegated meetings, which seemed to find approval, and declares that the late "mass meeting" had no authority, indeed that the saying *"Vox populi vox Dei"* is utterly untrue. We judge it would amend it to read *"Vox populi nux vomica."* It publishes complaints that the late convention failed to call attention to "the distinctive things for which this paper stands," and that representatives of other denominations were allowed to speak in the interests of Christian unity. We rejoice to gather that the denomination is breaking down its sectarian walls, just as the Baptists have been doing, and that the victory is in sight. *The Christian Standard* gives most prominent place to this saddened confession:

"Neither in the Convention in its entirety, nor in its single sessions, was emphasis placed upon 'our position.' Faith, repentance and baptism were mentioned, but frequently in such a way as to intimate that we had in the past overstressed baptism. It is no longer heresy to belittle the ordinance of baptism—when in convention assembled. . . .

"It is my belief that we as a people have shifted in our point of view. Some things once respected are today become of very secondary importance. The old-time message was not spoken in this Convention, and if what was spoken is *the* message we would bring the world, the time has come for us to move out of our narrowness into the largeness of the denominational Churches, where, I am free to say, with rare exceptions, we would be received with great applause."

This registers the progress of Christianity against churchianity.

A Holy War

That was a very unfortunate expression in the address of King Ferdinand to his Bulgarian subjects, that this is a war of the Cross against the Crescent. It is not and should not be such a war. If it were then other Christian nations would be involved in the crusade. It is a war between nations only, one nation Moslem, four others Christian. King Ferdinand's provocative language has given a fair occasion to the Moslem Sheikh ul-Islam to assert that the King of Bulgaria has called a holy war, and he has responded by proclaiming such a holy war on the Mohammedan side. That may very likely provoke wholesale assassination. There are six hundred thousand Christians in Constantinople and millions more in Asiatic Turkey, and they are quite unprotected against religious fanaticism. We fear that the ships of war sent to Constantinople by the nations of Europe can do little to prevent such an outbreak. At best they could enter the narrow streets after the killings had begun; or the Bulgarian army entering would be likely to find it too late to save many lives. We presume that in case of immediate danger American residents, missionaries and teachers could escape to any of the foreign vessels, but the two cruisers sent from this country will be too late to do any good, unless they find dangerous conditions extended to the other Mediterranean ports, such as Smyrna and Beirut.

Perhaps not as notable a result of the late election as was the gain of four female suffrage States, and yet very notable is the increase in the Socialist vote in the country, from 420,000 to 712,000. This does not mean that there are that many who believe in Socialism, but that many believe that reforms urged by the Socialists, as in Milwaukee, must attract their votes. We are not as much afraid of what is called Socialism as we were.

Great Britain sent her best man to be her Ambassador at Washington, the one whom we would honor most. We cannot be surprised that at the age of seventy-four Mr. Bryce resigns the post to retire to private life. He will carry back the admiration and honor of all our people.

Our sincere felicitations to Col. George Harvey. Had it not been for his inspiration and exploitation, the American people would probably never have thought of Woodrow Wilson as a Presidential possibility.

"Remember, remember
The Fifth of November."

runs the old English song about Guy Fawkes's Day. There will be no difficulty about remembering this year's fifth of November.

Insurance

Workmen's Compensation in Washington

A COPY of the preliminary report of the Industrial Insurance Commission of Washington for the first year ending September 30, 1912, reviewing the operations of the Workmen's Compensation Act is before us.

A summary of the year's operations shows 5,750 firms listed and assessed; 130,000 employees listed and protected; 11,896 accidents reported; 6,984 claims allowed; 2,256 claims disallowed, suspended or waived; 953 claims in process of adjustment, and 1,703 accident reports incomplete. During the year the Commission received $980,446 for the accident fund and paid out on claims against it $445,528. It has, invested in interest bearing securities as a reserve to guarantee pensions, the sum of $243,985 and a net cash balance of $290,933. The total funds handled by the Commission amount to $1,088,314, while the expense incident to doing the work aggregated $107,868—a ratio of 9.9 per cent.

The Commissioners call attention to the low expense ratio as an answer to the claim made by the opponents of the law to the effect that no State can do business as cheaply as a private company. "And yet," they say, "where the private casualty company is spending over sixty per cent. to handle its business, the State is doing it for nine and nine-tenths per cent." There is an element of inexactness in this statement which may tend to an erroneous conclusion; in the first place, the management expense ratio of the casualty companies is slightly exaggerated; and in the second place, the casualty experience of the companies is not fairly comparable with that of workmen's compensation, a line of business wholly unlike any of those transacted by the casualty companies.

A point of interest in the report is that dealing with the rates fixed by the Legislature for the different trades and occupations and the actual cost during the first year. For lumbering, logging, etc., the rate assessed is $2.50 per $100 of pay-roll. Seven assessments at that rate were levied, bringing in $324,103, from which $206,146 was paid on claims and $117,366 invested for pension reserves, leaving a balance of $590 in the fund. The cost of compensation is reported as being $1.46 per $100. Coal mining, assessed at $3 per $100, secured a fund of $82,399 on six calls, paid out $40,817 on accidents and reserved $28,041. The compensation rate worked out at $1.23 per $100. Laundries, referred to in the report as "a particularly troublesome class," were rated at $2, and resulted in an experience of 17 cents. Another class in which the experience was unexpectedly low during the year was street railways. Rated at $3, after applying the most liberal methods in appraising claims, the average cost was but 23 cents per $100 of pay-roll. In this class, to illustrate the freedom with which awards were made, the report states that compensation was made to a conductor who was beaten by a passenger, to a motorman who was assaulted by a truck driver and to a conductor who was bitten by a dying dog that had been run over by the car. Other occupations cited, with the legal rate and the actual rate experienced were: Fish canneries, legal, $3, actual, 14 cents; brick manufactures, legal, $2, actual, 13 cents; textile manufactures, legal, $1.50, actual, 12 cents; food stuffs, legal, $1.50, actual, 9 cents.

From the awards, suspensions and rejections made by the Industrial Insurance Commission on the 11,896 accidents reported to it, but twenty-one appeals were taken to the courts, of which three were subsequently withdrawn, three were tried and the remainder are yet in litigation. Only one appeal is by an employer, three are by dependents and the others are by workmen. The Attorney-General has instituted forty-three suits against employers who defaulted in their payments to the Accident Fund, of which seventeen were settled before judgment, four following judgment, seven in which judgments were entered, but remained uncollected. Thirteen cases are yet to be disposed of.

Financial

After the Election

THE New York Stock Exchange was closed on Election Day. On Wednesday, the day following, the course of the market excited much interest. Some thought that the sweeping victory of the Democratic party would cause a decline of prices. Opening with slight advances here and there, the market then receded for a time, but in the middle of the day a heavy buying movement set in, there were gains of from 2 to 4 points, and prices were highest at the close. This was the first million share day in several months. A large short interest had been obliged to cover. Those who had sold for a fall saw that there was no frightened public to aid them. A considerable part of Wednesday's gain was lost in the closing days of the week, owing mainly to the effect of European war complications, but still there was a net advance for nearly all the active issues. American Beet Sugar, with a loss of 10 points, was a notable exception. Sales for the week were 3,040,300 shares against 2,183,600 in the week immediately preceding.

Ordinary domestic news of the week was of a favorable character. It included an official report largely increasing the corn crop estimate, a record-breaking output of pig iron, great activity in the steel industry, and good railroad earnings. So far as the political contest was concerned, there was a sense of relief because the voting had been so decisive. There were no complications. The election was not to be thrown into the House, and the successful party would be free to enforce its policy by legislation. There was a prevailing belief that Mr. Wilson's influence would be exerted for conservatism in legislation affecting business interests. This was indicated in published interviews with prominent financiers and manufacturers. *Bradstreet's* said:

"The Presidential election has come and gone with the barest possible apparent effect upon trade and industry. Neither the election itself nor its results have thus far changed the optimistic undertone previously characterizing trade sentiment, the situation in this respect presenting one of the most notable phenomena of recent times. Natural conditions coincident with heavy crop yields and consequent heavy consumptive requirements continue predominant in trade and industrial circles. Buying is large, and in lines that may in the long run feel the effects of prospective tariff revisions business continues heavy, with no talk of cancellations."

Crops

THE corn crop has grown steadily with each successive official report. Last Friday, the final statement added 153,000,000 bushels to the October estimate, making the total 3,169,137,000. Last year's crop was only 2,531,488,000, and the high record had been the 2,927,416,000 bushels of 1906. The yield per acre this year is 29.3 bushels, against a ten years' average of only 26.7. In the Government's report additions were made to the estimates of certain other crops. There are 414,289,000 bushels of potatoes, the largest crop ever known, and it is noticeable that the yield per acre is 112.3 bushels, against 81 a year ago, and a ten years' average of 94.3. The farm value of the crops of corn, wheat, oats, rye, barley, buckwheat, flaxseed, hay and potatoes on November 1 was $4,171,134,000.

A new high record has been made in pig iron. October's output was 2,689,933 tons. The largest quantity reported for any preceding month was 2,635,680 tons, for December, 1909.

....South Africa's production of diamonds in the first half of the present year was valued at $22,100,970.

....Deposits in our postal savings banks now amount to $28,000,000, and the number of depositors is about 290,000.

....A dividend of 50 per cent. has been declared by the Quaker Oats Company, and a special meeting of stockholders will be called this week, Wednesday, to authorize an increase in the common stock from $5,500,500 to $10,000,000. The stock dividend of $2,500,000 will be declared out of the $4,500,000 new stock. The remainder will be held in the treasury for future use. The stock sold last week at 355, a gain from 145 in January.

The Independent

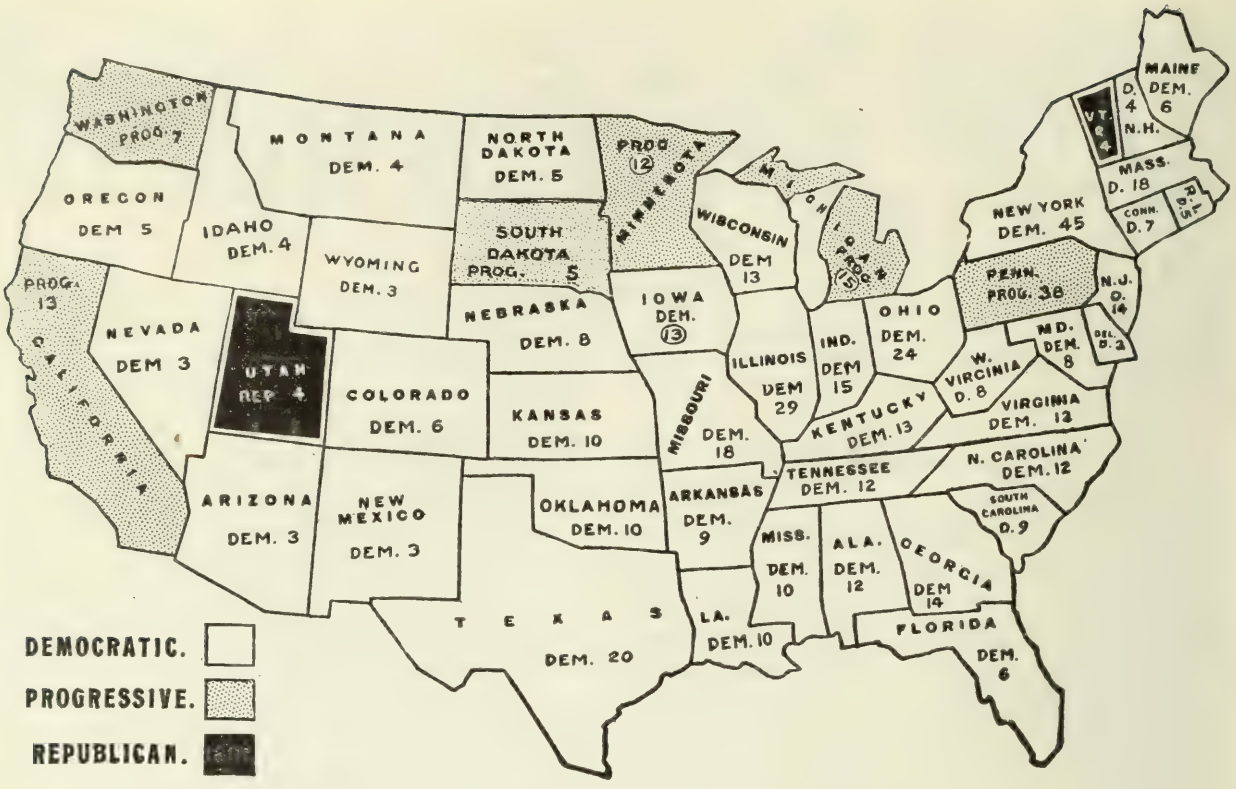
VOL. LXXIII. NEW YORK, THURSDAY, NOVEMBER 21, 1912. No. 3338

Survey of the World

An Extra Session

Mr. Wilson, the President-elect, let it be known on the 15th, just before he sailed for Bermuda, where he is to rest for a month, that he had decided to call an extra session of the new Congress in April next. He said:

"I shall call Congress together in extraordinary session not later than April 15. I shall do this not only because I think that the pledges of the party ought to be redeemed as promptly as possible, but also because I know it to be in the interest of business that all uncertainty as to what the particular items of tariff revision are to be should be removed as soon as possible."



A majority of the newly elected members of Congress had said that, in their judgment, there ought to be such a session. Among these were Speaker Clark, who will be re-elected, and Mr. Underwood, who will again be chairman of the Ways and Means Committee. Mr. Underwood has said:

"I am sure the committee will give a fair and reasonable opportunity for every one to be heard on every schedule before action is taken. The bills passed by the present Congress indicate the line of revision that will probably be followed by the committee, but this does not mean that the committee will be hidebound and will not amend these bills if new facts are presented that warrant a change. I am not in favor of protecting any man's profits, nor would I injure any legitimate business."

Governor Marshall, Vice-President-elect, had predicted that such a session would be called. In an address made on the 14th he said:

"The Democratic party has promised to take away unjust privileges from those not entitled to them and to lift unjust burdens from the shoulders of those who bear them. There is no occasion for any man to fear a panic. Democracy does not propose to overthrow at one stroke all the existing institutions. It is not our policy to destroy in thirty minutes that which it has taken thirty years to create. There is no objection to big business except that big business does not do the things for which it was created. When giant corporations use their power to stamp out competition, to create a standard of false prices and to grind down the workingman, it is time to cry halt. Evil Trust magnates should disabuse their minds of the idea that they will be able to play the ostrich, hide their heads in the sand and escape unscathed, for the Democratic administration proposes to hunt down the evildoers relentlessly."

Mr. Henry, chairman of the House Committee on Rules, said the Payne-Aldrich tariff ought to be torn up by the roots. His program for the extra session was that the protective tariff should be repealed, that a bill for a general income tax should be passed, that the Sherman act should be supplemented by definitions and an increase of penalties, and that the financial system and laws should be revised. Mr. Underwood said a complete revision of the banking and currency system was needed. The excise tax bill of last session, it is said, will not be taken up, because it was proposed to take the place, in part, of an income tax. The party leaders now expect that the way for an income tax will be cleared before April by the action of certain State legislatures. Three of the Democratic members of the Ways and Means Committee will not be in the new House. Two of these will be in the Senate. The Republicans will lose five, the most prominent survivor being Mr. Payne. In the Senate there will be a contest, it is expected, over the chairmanship of the Finance Committee. Mr. Simmons, of North Carolina, the ranking Democratic member of that committee, is opposed,

HOW THE STATES WENT

because he is regarded as a protectionist. Mr. Bryan's influence, it is asserted, will be exerted in behalf of Mr. Gore, of Oklahoma.

National Politics At the end of last week the count in California showed that Mr. Roosevelt was leading by 119 votes. Idaho was carried for Mr. Wilson by a little more than 1,000. Governor Hawley, a Democrat, at first consented to resign and to be appointed United States Senator to fill the vacancy caused by the death of Mr. Heyburn, but he changed his mind and appointed Judge K. I. Perky. In Nevada, the official returns elect Key Pittman, Democrat, to the Senate, to succeed the late Senator Nixon, by 89 votes. In Washington, Lister, Democrat, was elected Governor, over Hay, Republican, by a plurality of 472. As no candidate for Governor in New Hampshire had a majority over all, the Legislature, which has a Republican majority of 11, will fill the office. Mr. Wilson carried the State by about 1,800. The Socialist vote was nearly doubled, rising to about 800,000. In the new House, at Washington, there will be 297 Democrats, and the Democratic majority over all will be 159.——The national Democratic campaign fund was a little more than $1,100,000, contributed by 91,000 persons. The largest contributions were those of Charles R. Crane, $40,000, and Cleveland H. Dodge, $35,000.——Reports from Washington say that A. Mitchell Palmer, of Pennsylvania; A. S. Burleson, of Texas; and Josephus Daniels, of North Carolina, will be members of the Cabinet.——The serious and probably fatal illness of Senator Rayner directs attention to the fact that his death would make a tie in the Senate, as the Governor of Maryland would, it is expected, appoint a Republican. More than a year will elapse before the Legislature assembles.——Leaders of the Roosevelt Progressive party will attend a conference in Chicago on December 10. Senator Dixon predicts that the party will "sweep the country" in 1914. In Maine the party will oppose the election of Mr. Burleigh, Republican, to the Senate, and will nominate candidates for all the offices to be filled by the Legislature. At the recent State election the Republican party there was not openly divided. The Progressives say they have more than half of it. ——Mr. Taft, on the 12th, addressing the United Daughters of the Confederacy, who laid a cornerstone for a monument to General Lee, said that his im-

mediate Republican predecessors, as well as he himself, had labored to remove the sectional antagonism which followed the Civil War. He continued:

"But I am free to admit that circumstances have rendered it more difficult for a Republican administration than for a Democratic administration to give to our Southern brothers and sisters the feeling of close relationship and ownership in the Government of the United States. Therefore, in solving the mystery of that providential dispensation which now brings on a Democratic administration to succeed this, we must admit the good that will come to the whole country in a more confirmed sense of partnership in this Government which our brothers and sisters of the Southland will enjoy in an administration in which Southern opinion will naturally have greater influence, and the South greater proportionate representation in the Cabinet, in Congress, and in other high official station."

He was confident, he added, that his "worthy and distinguished successor" would use his greater opportunity for the benefit of the nation. Speaking, on the 16th, at a dinner given in his honor by the Lotos Club, of New York, he recommended that the Presidential term should be made six years, with no reelection, and that members of the Cabinet should be permitted to sit in Congress and take part in debates. His chief regret, he said, was concerning his failure to secure from the Senate ratification of his peace treaties with Great Britain and France.——John Schrank, who shot Mr. Roosevelt, pleaded guilty in court, at Milwaukee, last week. He explained that he sought to kill the ex-President because the latter was a menace to the country and ought not to have a third term. The prosecuting attorney exprest the opinion that Schrank was insane, and the court appointed a commission of alienists to inquire and report concerning his mental condition.

Trusts

Mr. Taft desires that all pending suits against Trusts shall be brought to a conclusion, if possible, before the end of his term, but several of them, including the Steel Corporation case, must go over. Final decisions in the Anthracite coal and cotton corner suits will probably be announced within a short time. During Mr. Taft's term there have been seventy-one prosecutions, against sixty-two during the terms of Mr. Harrison, Mr. Cleveland, Mr. McKinley and Mr. Roosevelt.——Attorney General Wickersham said, last week, in a public address, he was satisfied that the effect of the Trust dissolutions ordered by the courts had been beneficial. The use of unfair methods in competition had been checked, and in the last four years no new combinations had been formed.——It was reported, a few days ago, that the Government was about to proceed against the United Fruit Company under the Sherman act. Later, it was said that the company would have an opportunity to explain and also to improve its methods. This corporation, capitalized at $35,000,000, has a large fleet of steamships and is extensively interested in the banana and sugar trade.——South Dakota's law, forbidding unfair discrimination in selling prices by a corporation or Trust for the discomfiture or ruin of less powerful rivals, was brought before the Supreme Court, last week, by a defendant company which questioned the constitutionality of it. After the opposition had made argument, the court declined to hear counsel for the State, thus indicating that its decision would be in support of the statute. This was said to be unexpected approval of a policy recently advocated by Governor Wilson, and of certain bills pending in Congress, but Attorney General Wickersham points out that such unfair competition can be prevented under the Sherman act. Several defendant corporations, among them the General Electric Company and the Aluminum Company, have been restrained from practising such competition by decrees of the Federal courts in suits brought by the Government under that statute. Therefore, he says, no new legislation on that point is needed.——It is understood that objection has been raised by our Government against the German Government's bill for a monopoly of the sale of illuminating oil. This bill is aimed at the Standard Oil Company's subsidiaries in Germany, and appears to be in the interest of powerful German banks whose investments in Galician and Roumanian oil fields have not been profitable. The establishment of the monopoly, it appears, while increasing prices paid by consumers, would reduce our exports of oil to Germany by promoting the sale of the Galician and Roumanian product.

Panama Canal Tolls President Taft, on the 13th, issued a proclamation announcing the rates to be paid by ships passing thru the Panama Canal. These rates are based upon a long report submitted by Professor E. R. Johnson, of the University of Pennsylvania, who, as a special commissioner, has been at work on this subject for a year. They are to be $1.20 per net ton for merchant vessels carrying cargo or passengers, or both, each 100 cubic feet of earning capacity to be counted as a ton; 40 per cent. less, or 72 cents per ton, for vessels in ballast, without passengers; 50 cents for each displacement ton of warships; $1.20 per net ton for army or navy transports, colliers, hospital ships and supply ships. There is to be no per capita charge for passengers. The rates are practically the same as the reduced rates which are to go into effect on the Suez Canal in January next. It is estimated that the cost of the canal will be $375,000,000, including the payments to the French company and the Republic of Panama, and that, to make the canal self-supporting, about $19,250,000 annually will be required, as follows: Operation and maintenance, $3,500,000; sanitation and government of the Zone, $500,000; annual payment to Panama, $250,000; interest on the investment, at 3 per cent., $11,250,000; 1 per cent. in a sinking fund for ultimate amortization, $3,750,000. The toll revenue, it is expected, will rise from about $12,000,000, in the first year, to about $20,000,000 in 1925. In his report, Professor Johnson opposes the exemption of American coastwise shipping, saying that this shipping does not need such aid; that if it should pay tolls the steamship and railroad rates would not be appreciably increased; that it has a monopoly of coastwise trade, which will be increased by the canal, and that such subsidies as are given to the American merchant marine should be paid to vessels in the foreign trade. Mr. Taft will not recommend a repeal of the act exempting coastwise shipping.——By a new act of Congress, Colombia has authorized a suit against the Panama Railroad Company for $20,000,000, the claim being that annual dues to Colombia for fifty-eight years have not been paid.

Philippine and Other Islands In Manila, on the 11th, there was a notable public demonstration in celebration of the election of Mr. Wilson. Ten thousand Filipinos took part in a parade, carrying banners bearing the words "Immediate Independence," and 20,000 attended a mass meeting at which addresses were made by Delegate Quezon, Speaker Osmena and Emilio Aguinaldo, formerly leader of the insurrection. The speakers exprest their confidence, the dispatches say, in "the Democratic promises of immediate independence for the Philippines." The Democratic bill now pending in Congress, however, grants qualified or tentative independence for eight years, with complete independence thereafter.——In Cuba the representatives of the defeated Liberal party still prevent organization in Congress by absence or by refusing to vote. Colonel Acea, a hardened criminal, who had been sent to jail under a sentence of imprisonment for ninety-eight years, was recently released by President Gomez and appointed to the secret service. In the Havana election riots he killed a lieutenant of the rural guard. Last week he was shot and killed by the police.——At a conference, last week, between the United States commissioners and General Vasquez, leader of the revolutionists in Santo Domingo, it was agreed that President Victoria and the members of the Council at the capital should resign at once, and that a provisional government should be proclaimed, with Archbishop Nouel as President. There will be a new cabinet, the electoral laws will be improved, and a convention will be held to amend the constitution.

Mexico At the beginning of last week there were reports about new revolutionary plots in Mexico. A manifesto circulated at the capital, and signed by followers of Orozco and Felix Diaz, named General Trevino (who recently retired from the army) for Provisional President. Another proclamation, copies of which were found in the pockets of Zapatist prisoners, assured rebel soldiers that Zapata would set up a guillotine in the capital, cut off the heads of the rich, and imprison other promi-

nent supporters of the Government in a Mexican Bastille. In the south the Zapatists, recently defeated by General Blanquet, sought revenge by many atrocious crimes in unprotected districts. They murdered the conductor of a railway train and thrust the engineer, alive, into his firebox. In the north, American officers arrested, in Texas or New Mexico, the father of General Orozco and seven other prominent rebels, holding them for violation of the neutrality laws. On the American side of the boundary they had been planning an attack upon Juarez. In Morelos, Madero caused the arrest of several rich land owners, among them being ex-Governor Escandon and a son-in-law of Porfirio Diaz, believing that they were aiding Zapata. For lack of evidence, however, they were released. To Kentucky there came by mail, from Oaxaca, a story that Felix Diaz had escaped from prison and made his way to Galveston or New Orleans, and that the news had been suppprest. Orozco's junta in San Antonio said the story was true, but denials were telegraphed from the Mexican capital. The cash bail of $10,000, given by Gen. Bernardo Reyes when he was arrested in Texas, has been forfeited. He is in prison at the capital. In the Hearst newspapers, last week, there was published an assertion that the Japanese Government, thru the agency of a steamship company, whose officers advanced money needed for the payment of an engineer contractor making improvements in the harbor of Manzanillo, has obtained control of 500 acres on the shore of that harbor for a coaling or naval station.

South America

Deplomatic relations between Peru and Chili were resumed last week, and it is said that the controversy about Tacna and Arica has practically been settled. The agreement, which awaits approval by the two Congresses, provides that the proposed plebiscite shall be deferred for twenty-one years, Chili in the meantime paying rental for the provinces. There is to be a new treaty of commerce and navigation. A settlement of the boundary dispute with Ecuador also is at hand, the Argentine Minister, acting as arbitrator, having returned to Lima from Quito, bringing the terms of an agreement which, it is thought, will be accepted.——Testifying before a committee of Parliament, in London, last week, Sir Roger Casement repeated his story about the atrocious treatment of natives in the Peruvian rubber district of Putumayo. The company's books, he said, showed that the local authorities had been bribed. The Peruvian directors knew what the company's agents were doing, but the British directors did not. ——There is anarchy in Fortaleza, the capital of the Brazilian State of Ceara, where rival factions are fighting for control of the legislature. Factories owned by the family of ex-Governor Accyolis have been burned by a mob.——Argentine has employed a Japanese expert to promote the cultivation of rice, and prizes have been offered to cotton growers.——Uruguay's Government has undertaken to assist the poultry industry, and has employed an expert from the United States.

Tumult in Parliament

The discussion of the Home Rule bill has been interrupted for a week by the riotous demonstration of the Unionists. The trouble began on Monday night, Nov. 11, when by a Tory trick the Government was defeated on an amendment presented by Sir Frederick Banbury, a Unionist from the City of London. This restricted the assistance which Ireland could receive from the imperial treasury in case the local taxation proved insufficient to $12,000,000. Premier Asquith explained that $30,000,000 might be needed, so the Government could not accept the amendment, but when the division was called the Opposition members were hurried into the House by means of a tunnel from the club where they had been in ambush and the Liberal whips could not muster enough votes to match them. So the amendment was past by 228 to 206. The Unionists shouted "Resign!" and the session broke up in disorder. Since the amendment was obviously sprung as a trap and the Government has a majority of about 110, Mr. Asquith, when the House of Commons reassembled the next night, moved to rescind the Banbury amendment. The Speaker declared that the motion was in

order altho there was no precedent for it. Then the Unionists resorted to uproar in order to prevent the ministers from being heard and the scenes that ensued almost rivaled those of the Hungarian parliament. Sir Frederick Banbury declared that "the Government is only a circus led by rebels" and called members of the Cabinet "grinning apes." H. P. Craft, Unionist member for Christchurch, shouted, "The name of this Government stinks in London." The Speaker adjourned the House for an hour, but when it reconvened the disorder was worse than ever. Sir Edward Carson, who organized the Ulster revolt, declared: "There will be no more business ever in this House." The Speaker then ruled that a scene of disorder had arisen and adjourned the House until the next day. The Unionists, not content with insults, hurled hats and paper wads at Premier Asquith as he stood facing them with folded arms. The members of his Cabinet gathered around to protect him when a Unionist member, Ronald McNeill, seized a heavy book from the table and threw it at the head of Winston Churchill, First Lord of the Admiralty, hitting him in the eye. A general fist fight seemed imminent when Will Crooks of the Labor party restored good humor by starting the singing of "Should auld acquaintance be forgot." Bonar Law, leader of the Opposition, in a speech before the National Unionist Association, justified the disturbance and said that he never would try to quell an outbreak under similar circumstances. The King is using his influence to bring about some solution of the difficulty acceptable to both parties.

Assassination of Canalejas The Spanish Premier, José Canalejas, was assassinated at Madrid November 12. The Premier was on his way to the Ministry of the Interior as usual, about noon, and had stopt for a moment to look at the books in the window of the San Martin Library, on the public square, when a young man approached and fired two shots at him from a Browning revolver. He was carried into the Ministry and died a few minutes later. The King came as soon as possible, but too late to see his esteemed Premier alive. The assassin was Manuel Pardinas, an anarchist, thirty-two years of age, who had been expelled from Buenos Aires last March and had been in Paris ten days before. A number of documents in cipher were found on his person. As soon as he had accomplished his deed he shot himself in the temple and died the next day. The funeral of the Premier was a remarkable manifestation of the respect in which he was held by all classes. King Alfonso, accompanied by Prince Charles of Bourbon and Prince Ferdinand of Bavaria, walked behind the hearse, which bore the body from the Chamber of Deputies to the Pantheon, where it was entombed while 250,000 people stood about with uncovered heads. Canalejas was one of the greatest statesmen his country has produced in modern times and was regarded by many as the only man capable of leading Spain along a path of orderly progress. He had been an active advocate of liberalism from the age of eighteen, and on account of his service as sub-secretary to the President when the republic was established in 1873 he was regarded by the ruling classes as a dangerous agitator. But in 1905 the young King heard him deliver an address at the Academy of Jurisprudence, and on making his acquaintance liked him so much that when the Moret Ministry fell, February 2, 1910, he called Canalejas to the head of the Government, the first time that a man of such advanced views had held this position in Spain. His first reform was to grant permission to the Protestants to display the signs of their religion on the walls of their churches and on public notice. This aroused the wrath of Rome and when Canalejas proposed to restrict the amount of real estate held by the friars and to prohibit the entrance of the religious orders expelled by France the breach with the Vatican became definitive. But the Premier kept steadfastly to his policy, suppressing Clerical and Socialistic riots with an impartial hand. Canalejas has been often called "the Roosevelt of Spain," because of his robust personality, his radical opinions and his love of books and of hunting. His last act was the successful negotiation of the treaty with France in regard to Morocco, which was signed two days

after his death. Count Romanones, Minister of the Interior in the Canalejas Cabinet, and formerly President of the Chamber of Deputies, succeeds him as Premier.

The Defense of Tchataldja

Since the battle of Lule-Burgas, very little reliable information has been received and the military movements are quite obscure. The despatches from the war correspondents on the Turkish side are chiefly filled with graphic descriptions of the retreat toward Constantinople and of the distressing scenes in the beleaguered capital. Most of the correspondents who joined the Bulgarians have thrown up the job in despair because they could get no nearer the front than at best Mustafa Pasha, from which point they were occasionally escorted to a hill overlooking the valley of Adrianople and allowed to watch the bombardment of that city for a while. Even Lieutenant Wagner of the *Vienna Reichspost,* who has been almost the sole source of news or channel from the Bulgarian side, has failed us at this crisis, for he telegraphs Nov. 16: "I am not in a position at this moment to give any information on the course of the war. The leaders of the Bulgarian army wish to creat a *fait accompli* before allowing further information to be published." So far as can be ascertained, however, the Turkish army was not closely pursued by the Bulgars after its defeat at Lule-Burgas, but allowed to retreat behind the Tchataldja lines without other embarrassment than that caused by their lack of food and means of transportation and the crowds of wounded soldiers and starving people. The Bulgarian army doubtless suffered almost as severely as the Turkish, if not more, and besides the need for recuperation, supplies, ammu-

nition and siege guns had to be brought to the front before the attack upon the Tchataldja line could be begun in earnest. This delay gave the Turks time to strengthen their fortifications with barbed wire entanglements and mines and to bring up fresh troops from Asiatic Turkey. The Bulgarian attack seems to be directed chiefly at the extreme ends of the Tchataldja line, which rest respectively upon the Sea of Marmora to the south and upon the Black Sea to the north. To the south of the railroad between the station of Tchataldja and the Sea of Marmora the country is marshy and the lake of Biyuk Chekmeje affords a natural barrier, for it is not fordable nor suitable for pontooning. The causeway crossing the estuary leading to the lake is defended on the landward side by forts and on the seaward side by four Turkish warships. The report from the Bulgarian side that Rodosto, a seaport on the Marmora west of Tchataldja, was occupied on Nov. 3 by the Bulgars without opposition is denied by the correspondents with the Ottoman army, who assert that the city was defended until the 12th, chiefly by the guns of one of the Turkish battleships in the harbor. On the north end of the Tchataldja line the Bulgars appear to have been astonishingly successful. If we may credit the reports from Sofia they have turned the Turkish right at Lake Derkos and, passing beyond the Belgrade forest, have reached Kilios, about 12 miles north of Constantinople, near where the Bosphorous enters the Black Sea. The most dangerous enemy of the Turks is the cholera, which is now epidemic both in Constantinople and in the army at Tchataldja. The deaths during the week are said to number thousands and the mosques and public buildings are filled with the victims, who receive little medical attention.

Prospects of Peace

The Ottoman Government, finding that the Great Powers were unwilling to intervene, has decided to ask the Balkan allies for terms of peace, and Nazim Pasha, the Turkish commander in chief, sent envoys thru the lines at Tchataldja to the Bulgarian headquarters to arrange an armistice. It is understood that the allies will refuse a truce and insist upon immediate compliance with the terms proposed by them. What these terms are is a mere matter of speculation, but the prospect of avoiding a general European war is much improved by the refusal of Russia to back up with arms Servia's demand for a port on the Adriatic. Austria has despatched 14,000 troops into Dalmatia, but they are not likely to be needed, as Servia will probably withdraw her claim in the face of the opposition of the Triple Alliance, and content herself with free access to the Aegean instead of the Adriatic. One of the Adriatic ports in question, San Giovanni di Medua, is being attacked by the Montenegrins, who have captured the hills dominating the city. The Austrian Minister at Cettinje warned the King of Montenegro that the operations of his troops against Allessio and San Giovanni di Medua were regarded by Austria as inconsistent with the integrity of Albania, but King Nicholas retorted sharply that he disagreed with the Austrian view and should pay no attention to it. Skutari still holds out against the Montenegrins, and the Turkish commandant declares that he will never surrender, even if he receives orders to do so from the Sultan himself. The Servians, on November 18, captured the fortress of Monastir. Fifty thousand Turkish soldiers laid down their arms. The Greeks have not yet taken Janina. King George, coming from Athens for the purpose, entered Salonika on horseback November 12, and in spite of a pouring rain was received with enthusiasm by crowds in the streets, as well as by the Servian and Bulgarian troops which have joined his own since the surrender. The bombardment of Adrianople has been actively continued, and there has been some fierce fighting due to Turkish sorties, but the city shows no signs of capitulation. A Russian aviator in the Bulgarian service flew over the city from Mustafa Pasha, twenty-two miles away, and dropt handbills, from a hight of 4,000 feet, printed in Turkish, calling upon the inhabitants to surrender. He was fired upon and rifle balls and shrapnel struck the wings of his aeroplane, but did not hit him or his motor, so he returned safe to Mustafa Pasha.

The New Ladies of the White House

BY HESTER E. HOSFORD

[Our readers will remember the interesting sketch of Governor Wilson by Miss Hosford that appeared in THE INDEPENDENT, July 11, the week after his nomination at Baltimore. As Miss Hosford is the author of a comprehensive biography of Governor Wilson, which was of inestimable service in the recent campaign, and enjoys an intimate personal friendship with the Wilson family, no one is more competent than she to write on the Wilsons. The following article contains much new material never before given to the public. All the photographs, except the one of Professor Wilson when at Bryn Mawr, are from the personal collection of Mrs. Wilson and are now published for the first time.—EDITOR.]

IN Princeton, New Jersey, there are three fun-loving, genuinely American, thoroly democratic girls. They ride horseback, play tennis, golf and basket-ball. Like their parents, they are fond of the theater when the attractions are worth while. They are a trio of human, big-hearted, wide awake, sensible girls.

Miss Eleanor Randolph Wilson, the youngest, is "Nell" Wilson to her friends. She is probably the best horsewoman of the three. They all ride well, but Miss Eleanor has lived more in the South than her sisters, where the riding habit is more common. She formerly attended St. Mary's School in Raleigh, North Carolina, and since that time has been a student of art at the Academy of Fine Arts in Philadelphia.

Miss Eleanor and her father, the President-elect, are the funmakers of the Wilson home. For Miss "Nell" can take off a character well, with any brogue you please, and her father can supply his share of the laughs by telling funny stories, as those who have listened to him in the recent campaign well know.

THE MISSES JESSIE AND MARGARET WILSON
As children, when taught by their mother in their own kindergarten.

Miss Margaret, the eldest daughter, is an enthusiast in everything which she attempts. She has the natural intensity of both her father and mother. She is the musical member of the family. Her voice is a rich soprano, and Mrs. Wilson insists that she inherits her vocal talent from her father, whose voice is a deep, smooth tenor. At present, Miss Margaret is studying with Ross David, of New York, and she will not even allow herself a vacation with the family, following the strenuous days of the campaign. Her reading covers a wide range of subjects. She is fond of philosophy and remarkably well versed in the masterpieces of English literature. Her development has been co-ordinate in every way.

Miss Jessie Woodrow Wilson wears a Phi Beta Kappa key awarded for special honors at the Woman's College of Baltimore, and she is now a member of the executive board of the national Young Woman's Christian Association. She is

very modest concerning her attainments, altho she has pronounced natural ability as a public speaker, and uses this talent in a philanthropic way. She has helped to make the Lighthouse in Philadelphia one of the most successful church settlements in America. For a long time she wished to be a missionary, but her parents believed that she was not sufficiently robust to take a journey to foreign lands, and she decided upon settlement work as a compromise. Miss Jessie is most companionable, cordial in manner, and has the temperament which schoolgirls call "likable." She is of the Joan of Arc type of beauty.

Mrs. Edward Axson, mother of Mrs. Woodrow Wilson, was a popular Southern belle. She was, before her marriage, Miss Margaret Hoyt, the daughter of Margaret Bliss and Dr. Nathan Hoyt, a distinguished Presbyterian clergyman, of Athens, Georgia. "You certainly is a pretty gal; but you ain't one half so

MRS. WOODROW WILSON

From the portrait by Fred Yates, the English artist of Westmoreland. Governor and Mrs. Wilson spent the summer of 1911 at Rydal in the English lake country, a village famous as the home of William Wordsworth. One evening when the artist was the guest of Governor and Mrs. Wilson, the former read aloud from Sidney Lanier, and the artist, observing the expression of keen appreciation on Mrs. Wilson's face, caught the suggestion for this admirable portrait.

MRS. WOODROW WILSON'S MOTHER
Mrs. Edward Axson (Miss Margaret Hoyt, of Athens, Georgia), from a daguerreotype.

pretty as your ma. She was a plum angel! Milk and roses! Milk and roses!" Thus ejaculated an old family servant of the Axsons when she saw Mrs. Woodrow Wilson a few years ago.

When I visit the gracious wife of the President-elect, it is hard for me to believe that the dear old colored "mammy" made a correct comparison.

Mrs. Edward Axson was no doubt beautiful; but I am a believer in spiritual evolution, and to know Mrs. Woodrow Wilson well means the privilege of breathing an inspiration from one who represents the highest and most spiritual type of American womanhood. I should say that her chief attractiveness is the warmth of her spiritual nature, altho her complexion would make any girl of eighteen envious. Her soft brown hair curls naturally about her round, plump face, and her eyes bespeak kindness, affection and sympathy. To understand the Wilson home life is to know that ever since Governor Wilson's advent into a political career, Mrs. Wilson has expressed more solicitude for her husband's strength and happiness than for his official advancement. She is essentially domestic, and shrinks from the limelight of publicity. She inherited sterling qualities from both the Hoyt and the Axson sides of the house. Both the Bliss and the Hoyt families were descendants of the old New England families of those names who were among the first settlers of Massachusetts.

Mrs. Wilson's paternal grandfather was Dr. Isaac Stockton Keith Axson, who for thirty-five years was pastor of the Presbyterian Church at Savannah, Georgia. Dr. Axson was also engaged in the cultivation of rice, and owned a large plantation near Savannah. He was one of the ablest and most beloved clergymen of the South. He married Miss Rebecca Randolph, a direct descendant of Edward FitzRandolph, who married the beautiful "Bessie" Blossom, who came over in the "Mayflower." Nathaniel Randolph, donor of the Princeton campus, was of this line. Four generations of the FitzRandolphs, ancestors

ELEANOR WILSON AT THE AGE OF THREE

THE HOME OF THE WILSONS AT PRINCETON

This house was designed by Mrs. Wilson and occupied by the family while Woodrow Wilson was a Professor in the University prior to his election as its President.

WHERE MRS. WILSON WAS BORN AND MARRIED

The home of Dr. Isaac Stockton Keith Axson, grandfather of Mrs. Woodrow Wilson, in Savannah, Georgia.

of Mrs. Wilson, lived in Princeton. Dr. Edward Axson, father of the wife of the President-elect, was pastor of the Presbyterian Church at Rome, Georgia, for eighteen years.

Both Mrs. Wilson's father and mother died while young, leaving four children, three of whom are now living; Professor Stockton Axson, of the English department of Princeton University, called to this chair by former President Patten; Mrs. Edward Eliot, wife of Professor Eliot, of Princeton University, and Mrs. Woodrow Wilson. In fact,

son possesses conspicuous talent in the field of pictorial art, and before her marriage to Dr. Wilson she studied at the Art Students' League in New York, where she made an admirable record. After her marriage in June, 1885, Professor Wilson took his bride to Ardendale, a romantic and picturesque village ten miles from Asheville, North Carolina. Here they spent their honeymoon. In the Fall they went to Bryn Mawr, Pennsylvania, where the young groom had a professorship.

Now Mrs. Woodrow Wilson settled

WOODROW WILSON AND MRS. WOODROW WILSON AT THE TIME OF THEIR MARRIAGE

Governor and Mrs. Wilson acted as the foster parents of the younger Axson children. They took Edward Axson and Miss Margaret Axson into their home and gave them the same care as they did their own children. Edward was drowned soon after his marriage, and Miss Margaret became the wife of Dean Eliot.

Both the Hoyt and the Axson families were deeply intellectual, and they took special pains in the training of their children to develop the ethical and esthetic sides of their natures. Mrs. Wil-

down to the sober, practical things of life, and she did her work well. The three Wilson daughters were taught at home by their parents until they were eleven years of age. After they had grown up, Mrs. Wilson devoted her spare time to painting, specializing in landscapes. Her friends have vainly urged her to exhibit her canvasses. Mrs. Wilson's artistic talent is practical. If the reader could visit, as I did, her flower gardens at Sea Girt and Princeton, and see at first hand the rare and exquisite flower harmonies as I saw them, he or she

would be tempted to venture a guess that the flower gardens in Washington will come under the direct supervision of the Lady of the White House herself; a novelty in the floral culture of the Capitol grounds. Americans may look forward to a reign of Democratic hospitality, for

WOODROW WILSON AND HIS GRANDNIECE, JOSEPHINE COTHREN
The President-elect has invited his niece, Mrs. Perin Cothren, to make the White House her home during his administration, and to bring Josephine, too.

the traditions and principles of both President-elect Wilson and his accomplished wife are first, last and all the time those of real democrats.

Much has already been written and published concerning the ancestry of Woodrow Wilson. The Woodrows were for centuries prominent in the literary and church life of Scotland. As to the Wilsons, there are two theories of their origin; one that some English soldier or adventurer settled in Ireland about 1654, and was the progenitor of the race of Irish Wilsons, who were Protestants; the other, that they were descended from the native Irish who loom large in Connaught history. The fact that the Irish Wilsons were not land-owners makes the latter theory probable.

The old Irish Wilsons were descended from a branch of the Irish Burkes or De

Burgos, who descended from Adelm de Burgo or Burke, who married Agnes, the daughter of Louis VII, King of France. Adelm de Burgo was the chief ancestor of the Irish Burkes. He was the grandson of Robert de Burgo, who came from Normandy with William the Conqueror in 1066. The son of Adelm de Burgo was William Mor de Burgo, who married Isabel, the daughter of Richard First, Cœur de Lion, and later married Una, the daughter of Hugh O'Connor, King of Connaught, settling at Castleconnel in Limerick, where his descendants live in affluence today.

Dr. Joseph R. Wilson, a distinguished clergyman of the Presbyterian Church, was the father of Woodrow Wilson. He was a native of Ohio, and a descendant of a long line of clergymen and editors devoted to literary and religious ideals. Before the Civil War, he was called by his Church to the South. He served as pastor of churches at Augusta, Georgia; Columbia, South Carolina, and Wilmington, North Carolina. He closed his career as a professor in the Theological Seminary at Clarksville, Tennessee.

Governor Wilson's mother was Jessie Woodrow, of Chillicothe, Ohio. She was an ardent church worker and an adept in the culture of flowers. She knew the Scriptures, and she lived by them. I once heard Governor Wilson say: "It is very difficult for a man, for a boy, who has been taught the Scripture ever to get away from it. It haunts him like the memory of his mother; it inspires him like the word of an old and revered teacher; it forms part of the warp and woof of his life."

To know Woodrow Wilson is to know that he has an immaculate conception of duty and public trust. He believes that the influence of every leader impregnates the entire body politic. If I may venture an opinion thus early, I believe that when historians pass their final judgment on Woodrow Wilson, they will say: Here was a man whose invigorating statesmanship took such a hold of the generation in which he lived that that generation was revivified; liberty asseverated; representative government restored, and public officials reinspired with a new consciousness of their responsibilities. The secret of Governor Wilson's leadership is, I believe, to be found in the purity of his moral vision. *He will democratize democracy.*

On the day of Governor Wilson's nomination for the Presidency he chanced to tell me this story: "When my first book, 'Congressional Government,' was accepted for publication, the publishers sent me a copy of a contract, in which it was provided that they should control the copyright, and among other things in the contract form, the firm reserved the right to dramatize all books printed by them. When I returned the contract to them I inserted the words: 'Congressional Government has already been dramatized.'" True it has. Congressional government is always a drama; a moving-picture show! We look forward with keen interest to the next administration. The last time I saw Governor Wilson was in his home at Princeton, a few days after his election. He told me that he had just received a present of a live American eagle, sent by one of the Louisiana electors. "And I forgot to tell those newspaper men about it today!" he said.

All hail to the eagle, the emblem of strength! All hail to Woodrow Wilson, the man of the hour!

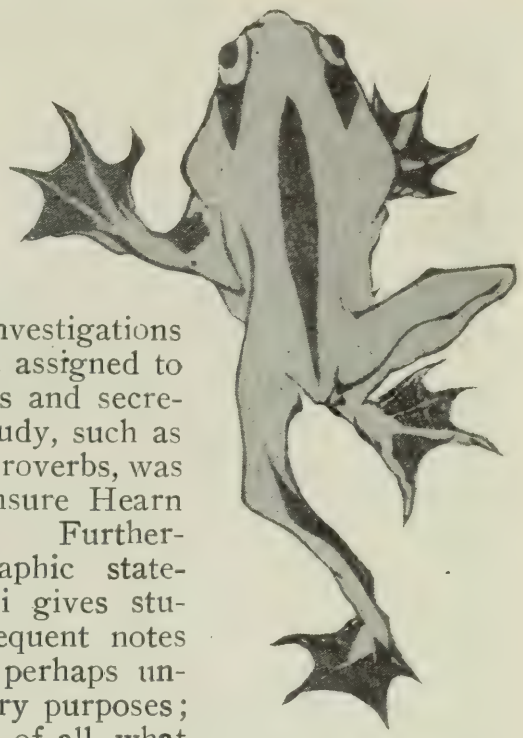
CLEVELAND, OHIO.

JAPANESE SOURCES OF LAFCADIO HEARN

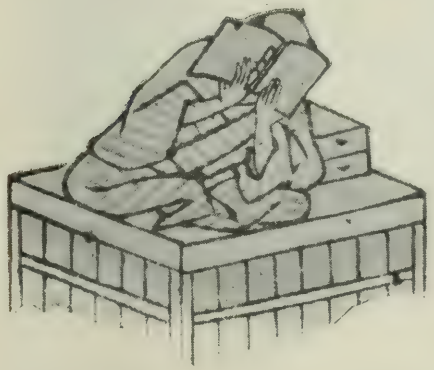
BY GEORGE RUSC BEDINGER

AT the time Mrs. Wetmore's "Life and Letters of Lafcadio Hearn" was published there appeared in the *Atlantic Monthly* an excellent appreciation of Hearn by Mr. Ferris Greenslet. The critic defined the impression that persists after first reading a story by Hearn to be "that of weird, sad, delicious savor, of ghostly thrill." He wrote of the volumes of letters that "it is vastly impressive to see so many regions of this colored world, so much of the grey realm of philosophy, of the black universe of modern science, thru the temperament of a shy and passionate dreamer, forever peering thru the kaleidoscopic lens of his solitary eye." And very rightly Mr. Greenslet notes the change that was exercised over the style and craftsmanship of Hearn by the subtle influence of Japanese environment when he said in the same article:

"The tropical luxuriance of his [Hearn's] earlier manner has been replaced by quieter tints and subtler cadences, and henceforth he gives free rein to his faculty only in rare hightened passages. . . . In part this was the result of his sensitive perception of the peculiar color of Japanese landscape, a domesticated nature, which loves man, and makes itself beautiful in a quiet gray-and-blue way like the Japanese woman'; which must be reproduced in water-color rather than in the oils in which he had been working."



JAPANESE GOLDFISH



Certainly among the scores of books that deal with Japanese characteristics none equal, in sympathetic interpretation combined with exquisite grace of style, the works of Lafcadio Hearn. Those familiar with the strange life of this gifted man know that, tho he became a Japanese citizen by legal adoption into the family of his wife, Hearn was no scholar of Japanese. He himself refers to his Japanese patois as the "Hearnean Dialect." Outside the circle of his own family, he associated with few even among the Japanese. How then could he fashion for our delight such subtle studies of Japanese character, such minute details of incense-burning parties, such fascinating legends and ghost tales of the people? How was he able to reveal so much of their popular poetry, their superstitions, their inmost feelings? Is there any clue available as to how Hearn, who was unable to read Japanese, could collect such varied data as his Japanese volumes show? How did the master gather the materials that, made over again by him and retold in his marvelously rhythmic English, fairly live again?

Mr. Yone Noguchi's little volume on "Lafcadio Hearn in Japan" has already shown how helpful Mrs. Hearn was to her husband; how in her simple Japanese she told him stories that appealed to him, which later he set to most musical prose. But Mrs. Hearn could not have communicated to her husband one-twentieth of the strange studies that fill his pages. A glimpse of this master workman in his

literary researches is given by what Mr. Masanobu Otani has told us. In November, 1904, shortly after Hearn's death, Mr. Otani wrote a memorial article on his famous teacher for the *Bungaku*, the literary monthly of the Imperial University of Tokyo.

While in Japan I came across this article and had it translated. Not only does it show us in many cases just how Hearn obtained material; it shows, too, how, month by month, investigations in Japanese poetry, religion and literature were assigned to this young student, acting as Hearn's amanuensis and secretary. Often we can trace just when a certain study, such as that on the singing insects or Japanese Buddhist proverbs, was made; and can further know what praise or censure Hearn gave the devoted and conscientious investigator. Furthermore, this autobiographic statement of Mr. Otani gives students of Hearn frequent notes on what he found perhaps unsuited for his literary purposes; and, most important of all, what material he was probably working on and might have given us if death had not stayed his hand.

A READER—BY HOKUSAI

Mr. Otani had been a student in the school in the remote province of Izumo where Hearn first taught, where he first came in touch with the Japanese and of which he has left such graphic accounts in "Glimpses of Unfamiliar Japan." From this province Hearn took the wife who proved such a loyal help to him and devoted mother to his children. As Mr. Otani tells us, when Hearn became legally a member of his wife's family and his name became Koizumi, he took as his personal name Yakumo, meaning Eight Clouds, an ancient poetic term for the Province of Izumo. Also the word Yakumo (八雲) may be pronounced in Sinico-Japanese, Ha-un, and this is almost the sound of Hearn. Mr. Otani thus explains the relation

BUDDHIST PRIESTS—FROM A DRAWING BY HOKUSAI

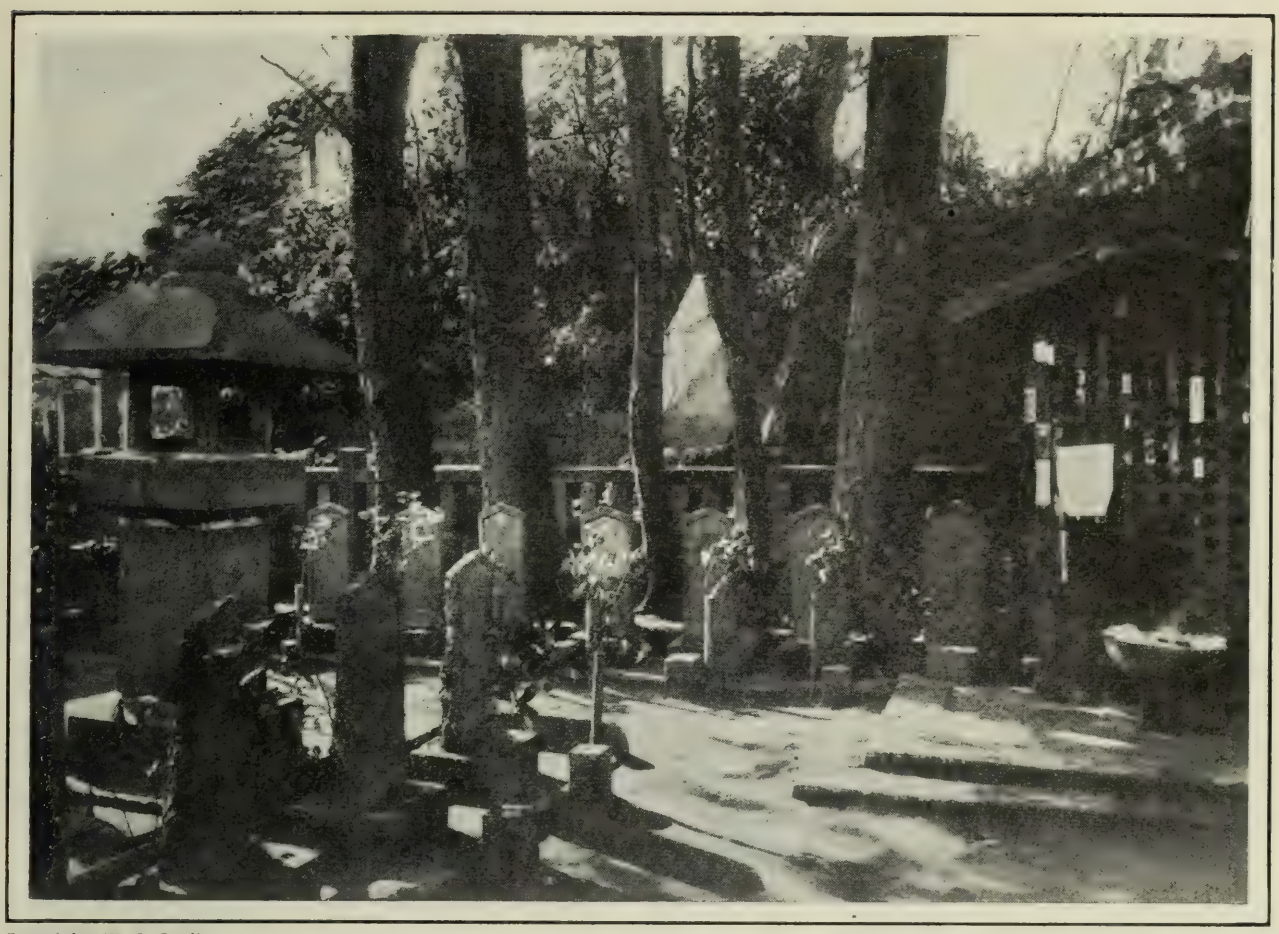
A JAPANESE BURYING-GROUND

with his old teacher that developed into such an intimate one for both, when the former Japanese schoolboy, seven years later, having entered the Imperial University's College of Literature, was again a student of Lafcadio Hearn:

"In the 29th year of Meiji (1896) I entered the University when Hearn was an instructor of the English literature. Many times I called on him. And I became his assistant. So my benevolent teacher became my patron. From January, 1897, on, he assigned subjects to me and I wrote one composition per month.



"The theme for January was 'The Life of the Policeman.' I wrote a composition of 180 pages and he said 'good.' The subject for February was 'An Essay on the Lives of Priests and Nuns, from the Time of Childhood. Suggestions—Reasons of Choice of a Religious Life—First Duties — Education — Range of Learning—Daily Duties—Observation of Vows, etc.—Probable Number of Priests and Nuns—Average of Life.'

"He wrote me that the subject for March was 'A Collection of Poems of Students—only Meiji of course—and especially University Students.' He used only the seventeen-syllable *hokku* from my collections for his 'Bits of Poetry' in 'In Ghostly Japan.' The May subject was 'A Collection of Japanese Proverbs containing Allusions to Buddhism.' As there was no such work published, I made my best efforts in the Uyeno and University libraries, and the result was better than I expected at first, and I even thought that I had collected all the proverbs in that line. Mr. Hearn was much pleased, and used the material for 'Japanese Buddhist Proverbs' in his 'In Ghostly Japan.' The subject for June was the short popular songs concerning the China-Japan war; I do not know where he used my collection of these songs.

"The theme for July and August was 'Inscriptions and Sculptures in Buddhist Cemeteries.'

I. Inscriptions upon *Sutpa* [tall wooden stakes with inscriptions, found in Buddhist cemeteries].

A list of these inscriptions (1) in Chinese characters, separately; (2) in Romaji under the Chinese characters; (3) in literal English

Copyright, W. O. Inglis

A BUDDHIST CEMETERY IN JAPAN

under the Romaji; (4)' explanatory. (Some reference should be made to sect usage. Group if possible under respective sects: Shinshiu, Zenshiu, Tendai, Shingon, etc.)

II. Inscriptions upon *Haka* [tombstones]. Arrange similarly. Group by sects.

III. Sculptures. Carvings of Buddhist symbols in Use by different Sects: Swastika, Lotos, etc.; but only Sculptures in *Graveyards.*

"I had read many books upon the *sutpa;* and I made many calls to the priests of each sect; and I went around every graveyard in Matsue during one month. And the result which I presented to Mr. Hearn to his delight served as material for his 'Literature of the Dead' in 'Exotics and Retrospectives.'

"The subject for September was the relation of Fuji Mountain and Shintoism; and my essay was utilized somewhere in 'Fuji-no-yama' in the same book. And the subject for October was 'Singing-insects that are Kept in Cages. (What kind of music they make, what they feed on, what beliefs or traditions or poems refer to them, what their capture and sale signifies in the small commerce of Tokyo, etc.)' His pleasure was great and he used it as material for his 'Insect-Musicians.' In November my work was to collect old children's songs which he used for 'Songs of Japanese Children' in 'A Japanese Miscellany.' 'Poems on Cicadas and Frogs' was the subject for December. He was delighted with my work on this subject; his study on Frogs in his 'Exotics and Retrospectives' relied on it.

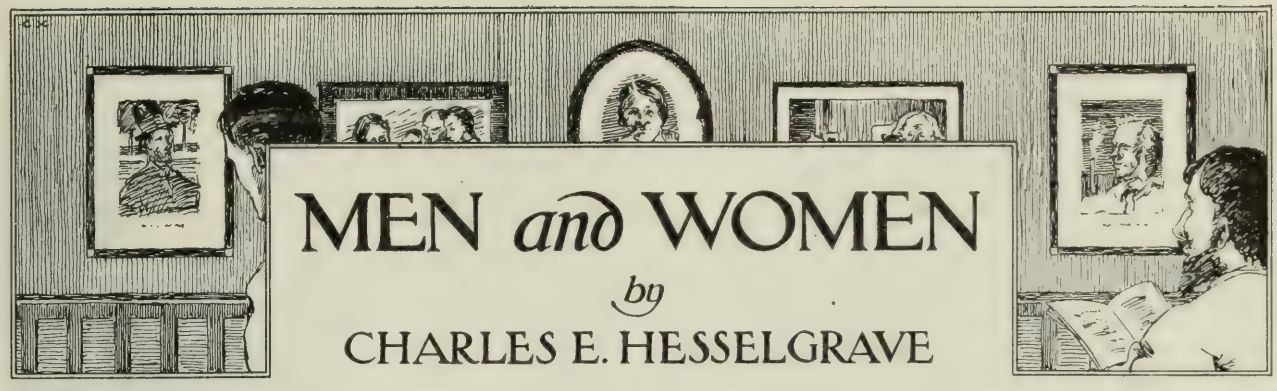
"The imposed subject for January, 1898, was 'Poems on the Sound of Sea and Wind.' It is strange even to us that we have very few such poems; he was surprised about that, of course. 'About Incenses and also the Poems on them' was my February work, which was used for his 'Incense' in 'In Ghostly Japan.' I was given in March the subject of the deities and poems attached to a Japanese ink-stone (*suzuri*), which, however, was a failure, as I could find nothing at all about the deities, and the poems, too, were extremely poor. The subject for April was the 'Buddhist Conception of Hell'—chiefly a description of it. I tried my best with it, but he did not make any use of my effort, which, however, pleased him. He gave me the subject of 'Gold-fish' in May; and my June subject was the *Horai* (Elysium) and its traditions.

and the conceptions of the ancient poets.

"The subject for July and August was 'Folklore and Mythology of Japanese Plants,' and in his 'Buddhist Names of Plants and Animals' in 'A Japanese Miscellany' he made good use of my investigations. I received the subject of 'Footprints of the Buddha' in September. This served him in the essay of the same title in 'In Ghostly Japan.' October was spent collecting the Japanese ballads which he used for 'Old Japanese Songs' in his 'Shadowings.' The subject for November was poems on death and graveyards; and songs with refrains were for December.

"January of 1899 was used to collect more songs with refrains, and also the popular love-songs; and February and March were spent in translating ancient poems; he used them for 'Old Japanese Songs' in his 'Shadowings.' I received the subject of *utai*-drama for April. It is true that my translation could not succeed in making itself understood in spite of the great labor I had given to it. It is sad for literature that he died without touching his marvelous hand to it. I was asked in May to collect the women's names according to their ethical and esthetic relations. I had the lists of many girls' schools; and, besides, an essay on that subject was written in some magazine; with these helps I was able to write one article to my satisfaction, and he used the material I offered him for 'Japanese Female Names' in his 'Shadowings.' My writing on *semi* (cicada) in June was developed by his magic, and he put it in his 'Shadowings' also.

"The month of July was the time of my graduation from the University, and then I stopped working for him as his literary assistant. He wrote me a few days before my graduation:



"I have gone somewhat into particulars, only because I want to feel that you have really paid for your own education like a man, and have no obligation of any sort as far as I am concerned. . . . The work must have sometimes been tiresome. But the results to yourself have not been altogether bad."

Thus for practically the whole of Mr. Otani's three years' course in the College of Literature he was making literary investigations for his teacher and patron. That he was abundantly grateful for the opportunity thus offered him is quite clear by what he writes; and the tasks were by no means easy ones.

How many of the themes Mr. Otani put into English from various Japanese sources were finally allowed to see the light by the fastidious and careful master of prose style? Of the twenty-six subjects mentioned here I find essays on only fifteen in Hearn's works. Doubtless some subjects after investigation proved disappointing or would require too much explanation to make them appreciated in the West. Mr. Otani himself, by his report that his master did not live to finish the study of *utai* poems, seems to show that had Hearn but lived a few years longer we might have had several more of his delicate, sensitive essays. It also opens up the question, always interesting in the case of a literary man of genius, in what condition his papers were left; whether some considerable number of such studies as were made for him by Mr. Otani might not have been virtually rewritten by Hearn, and simply be waiting for the kind hand of his literary executors to bring them to light.

Both in virtue of his style and subject matter Hearn occupies so unique a position in English letters that speculation as to what posthumous material there is must occur to the mind of every one of his admirers. Hearn is not a fad. Disagree with his conclusions as you may, say that his views on Japanese character as shown in his books present strange contradictions with expressions on the same subject in his private letters, it remains that as a master of a most exquisite style Hearn deserves the closest study. His literary methods are of real value; his criticisms often keen and sensitive; and it is interesting to see just what kind of studies among a strange Oriental people appealed to him and how many of these investigations he thought would find a response among his readers. Among the unpublished studies of such young men as Mr. Otani (and doubtless others helped Hearn, tho not perhaps as systematically nor with so much semi-filial devotion), there may be some material that has little value; and, again, there may be some of those perfectly cut and marvelously polished gems of phrase and story that Lafcadio Hearn knew so well how to give us.

NEW YORK CITY.

MEN *and* WOMEN

by

CHARLES E. HESSELGRAVE

BIOGRAPHY has a many-sided interest. Here lie scattered about the raw materials that go into the making of historical, literary and social studies. It has the coherence and unity of a narrowly centralizing theme and the diversity of life itself. At its best we hold familiar fellowship with the spirits of the great and find the secret springs of noble action, and even at its worst we cannot deny its subtle attractions for that gossipy side of our nature which leads us to probe with endless curiosity into the lives of others. *Humani nihil alienum* is hardly less the sentiment of the average individual than of him who reaches the sublime hights of wisdom and universal sympathy. Biography is more sober and restrained than the novel, is susceptible of a lighter touch than history, and is unencumbered with the "problems" that bristle before the reader when he scans much of the other literature of the day. In fact, one may easily enter thru the door of biography into whatever phases of literary, institutional, or social interest he will, and only so far as his taste inclines him, without breaking his connection with the personal embodiments of his chosen theme. This variety of interest and appeal is well illustrated in the dozen and more volumes of American biography lying before us as the output of the last year. None of these books are of the highest order, but the range of thought and material for consideration is quite sufficient to command the attention of a wide circle of readers. Politics, religion, literature, education, social movements, war, genealogy and our foreign relations are some of the subjects upon which sidelights are thrown by the profusion of biographical works offered for our enjoyment and edification.

If we begin our survey in accord with the lines of historical precedence, we plunge at once into some of the most stirring scenes of American history. *John Hancock*,[1] who, as president of the Second Continental Congress put his name first to the Declaration of Independence in letters "so plain that George III might read it without spectacles," is one of the most conspicuous and striking figures of the Revolutionary epoch, and Professor Sears has well styled him the "picturesque patriot." A man of large wealth, liberal education and high social standing, he was the first of the Colonial aristocracy to join the struggling forces of the liberty party, and his aid and influence were valuable assets at a critical period. His long and varied service in the cause for which he spent his fortune and risked his life has been somewhat obscured by the more prominent achievements of many of his contemporaries and by the vanity and ostentation which kept him from becoming an idol of the common people. Professor Sears for the first time adequately sets forth these personal traits and public services and shows beyond doubt that Hancock had a sincere and self-sacrificing devotion to liberty and the uplift of his country.

But lest undue importance be placed upon the contribution of the "Fathers" to the founding of the Republic, we are able to place side by side with this sketch of a Revolutionary hero the equally picturesque, far more romantic, and sometimes quite legendary stories of *The Pioneer Mothers of America*.[2] Two of the three sumptuous volumes devoted to

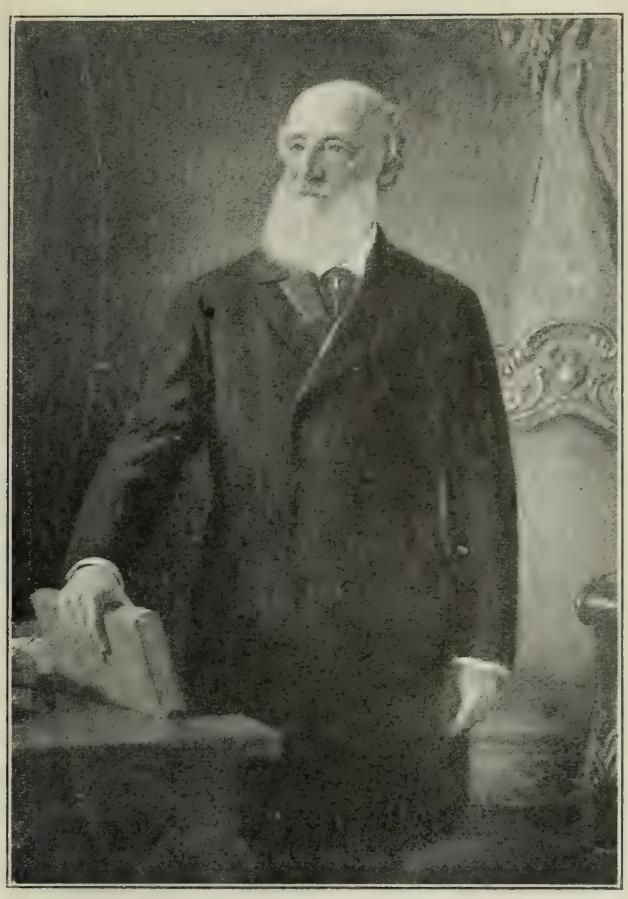
[1] JOHN HANCOCK. The Picturesque Patriot. *By Lorenzo Sears.* Boston: Little, Brown & Co. $1.50.

[2] THE PIONEER MOTHERS OF AMERICA. *By Harry Clinton Green and Mary Wolcott Green, A.B.* Three volumes. Illustrated. New York: G. P. Putnam's Sons. $4 per volume.

the record of their lives are concerned with the same period to which Hancock belonged and give glowing accounts of the "Wives of the Signers" of the Declaration of Independence. From Dorothy Quincy Hancock to Molly Pitcher, from Martha Washington back to Pocahontas, we are entertained by traditions and historical glimpses of feminine achievement and influence in laying the foundation of the Republic's greatness. These volumes will be of special interest to the Daughters of the American Revolution.

The most delightfully written of these volumes on our biographical shelf is *A Retrospect of Forty Years,* by William Allen Butler.[3] The author of "Nothing to Wear" had a vivid imagination, a retentive memory and a finished literary style. His earliest recollections as a small boy were associated with the very room in Albany in which his distinguished father, Benjamin F. Butler, and two associates were then making the celebrated New York code, completed in 1830. From that time on, thru all the trying period of anti-slavery agitation and the war for the Union, Mr. Butler was closely in touch with some of the most prominent men and movements of our country. His political sidelights, estimates of men and measures, literary ventures and associations are presented in that clear, leisurely and dignified manner that bespeaks the man of culture and high character. Some of his poems appeared in THE INDEPENDENT, and it is interesting to know that he published his most noted anonymously because he "feared that if he were known to be a writer of verses it might injure his standing as a lawyer."

Quite another side of American life and high souled endeavor is seen in the memoir of *George Palmer Putnam,*[4] founder of the great publishing house which still bears his name. Born in humble circumstances, and pushed out into the busy world with little education, he slowly made his way into a position of prominence in the publishing business, and thereby came into special and often intimate relations with many of the distinguished literary men of the middle decades of the last century. His life was always moulded by the highest ideals of business and moral integrity, and the unselfish and efficient service he rendered in the cause of international copyright gives him a title to the respect and gratitude of the whole gild of authorship.



We can hardly leave the realm of the makers and publishers of books without reference to the famous trio whose notable contributions to American cyclopedia making and to the spread of accurate knowledge among our people, are duly commemorated in the volume entitled *Michael Heilprin and His Sons.*[5] Sprung from a long line of Jewish scholars and thinkers, Michael Heilprin carried forward the torch of learning in one hand and that of liberty and justice in the other. Fleeing early in life from the oppressive conditions of his native Poland, he resided in Hungary, where his sons were born, until his revolutionary tendencies made it advisable for him to emigrate to America, where he arrived in 1856. Not long after his settlement here, his wonderful powers of memory, accuracy, good judgment and clear expression found a proper field for exercise in work on the "American Cyclopedia." His special knowledge of European and Oriental questions and his acquaintance with a large number of European languages were again brought into requisition when the second edition of that cyclopedia was prepared in 1872-76. In this work he had the help of his sons, Angelo and Louis, who afterward became noted for their scientific researches and the making of cyclopedias in their own right. The story of these lives bound so closely together by traditions, home ties, sympathy and common labor and ideals, is peculiarly inspiring in its wealth of courageous achievement in the face of great difficulties, and most exacting in the standards of excellency which it raises.

The collection of letters,, documents and other materials relating to the short career of *General W. T. Sherman as*

WILLIAM ALLEN BUTLER
From "A Retrospect" (Scribner)

College President[6] just prior to the Civil War throws some light on the General's capacity for business management, and gives many suggestions of the confusion and indecision which widely prevailed for some time preceding the outbreak of hostilities. Like the *Letters of U. S. Grant to His Father and His Youngest Sister,*[7] the volume claims attention largely because its subject attained greatness in other spheres. Most of the letters from the pen of General Grant were written during the war period and reveal the loyalty, intense conviction and restless energy of the man.

Of a far higher order is the choice volume describing *The Personal Traits of Abraham Lincoln.*[8] Miss Nicolay tells us in the preface that when her father began collecting materials for the work which he and Mr. Hay wrote on Lincoln he put certain things into an envelope marked "Personal Traits," meaning to make a chapter with that heading. These items grew in number till they filled many envelopes, but were never used, as the proposed chapter found no place in the finished work. Miss Nicolay has now undertaken the task of giving permanency to this collected material in an intimate, authoritative and sympathetic sketch of Lincoln's private life, modes of thought, and habits of action. The work is well done and will be all the more gratefully received because it avoids undue adulation and presents these personal characteristics with that simplicity which befits the large-molded but still very human subject.

When Mr. Lincoln was elected President, Congressman Anson Burlingame, one of his most enthusiastic supporters, failed in the effort to retain his seat in the House of Representatives, and was appointed by Lincoln minister to China. In seven years Mr. Burlingame had won the confidence of the Chinese Government, had resigned his post as minister, and, as the head of the first Chinese mission to the Western Powers, was back in his own country negotiating a treaty extremely favorable to his new constituency. The story of this famous Burlingame treaty, which afterwards aroused so much contention, is well told in Professor Williams's *Anson Burlingame and the First Chinese Mission to Foreign Powers.*[9] The author's vindication of Burlingame and his policy goes far to substantiate the assertion of Professor W. G. Brown that "if Burlingame's name be not forever associated with an epochal readjustment of the world's civilizations, then few names have missed immortality more narrowly."

We come much nearer to our own day in the biography of *T. DeWitt Talmage,*[10] the preacher and lecturer, whose work was mostly done after the Civil War, and that of *Frances E. Willard,*[11] who is called by Lady Henry Somerset

THE LATE SENATOR HANNA
From Mr. Croly's "Life" (Macmillan).

"the greatest woman philanthropist of our generation." Both volumes are characteristic of their subjects, one highly spiced and bewildering in its chaotic variety, the other restrained and developed along lines of simplicity, strength and winsome modesty.

In the last three biographies before us we meet face to face the living questions which absorb public attention today. Altho *Marcus Alonzo Hanna*[12] has been dead for eight years, the later development of his life was so rapid and his career focused so much that was dominant and typical in national affairs, that no better introduction to present political conditions, currents and counter currents could be found than the story of his phenomenal rise to the leadership of the "big business" interests in political spheres. More limited in its immediate circle of influence and more local in its activities, but not less significant for understanding the temper and aspirations of a large section of our people, was the life of Governor *Charles B. Aycock,*[13] of North Carolina, whose career was so dramatically cut short in the early part of this year. In *The Autobiography of an Individualist*[14] we are led from a humble home in Scotland to South America, South Africa, and finally to New England, as we follow the steps by which Mr. Fagan has arrived at his full development as a railroad signalman, an investigator of labor problems, and a writer on social movements. It is easy to see that his experience has made the man only because of his fine native endowments, and that his social program has been wrought out on the pattern of his own life, but his independence, initiative, moral courage, economic prudence and unfailing perseverance are just the correctives that need to be infused into the wavering social ideals of our time. His volume is characterized by an unusually direct, clear and concise style that any writer might well covet.

Looking at these biographical works as a whole, one cannot escape the reflection that a marvelous variety of human material has been found available and useful in building up the life of our great Republic.

TRAVELS *at* HOME *and* ABROAD

BY WARREN BARTON BLAKE

DO we travel to go away or to arrive? To see other people, to escape ourselves, or perhaps only to find "copy" for a new book, like clever, complacent Arnold Bennett?[1] Out of avarice or curiosity, cowardice or intelligence or empty headedness? These are questions too embarrassing for most of us to answer *viva voce;* it is certain, in any case, that we often travel without leaving our arm-chair. One may even read chapters out of a curious compilation, a new kind of keepsake for more sophisticated keep-sakers, entitled *Wonders of the World;* descriptions of the Egyptian pyramids and the New York skyscrapers, the towers of Babel and Eiffel, the Alhambra and the great wall of China—by I don't know how many celebrated authors.[2] And what high-spirited traveler (especially if he appreciates style) would not have Théophile Gautier or Pierre Loti for a companion rather than a guide sent out by the London tourist agency?[3]

Time was when good people made the grand tour just as they had the children baptized. Once done, it was done for a lifetime. "Et ce serait une belle chose que de voyager," wrote La Fontaine, "s'il ne fallait point se lever si matin." Those were the days when a chauffeur was not a make-believe mechanician, but a highway robber, altogether frank about it. Travel in those times is described for us in the vivid chapters of M. Humbert de Gallier's *Usages et Mœurs* and in those of Professor Bastide's *Anglais et Français.*[4] Travel during the Middle Ages and later, such as we read of in the French of the authors named, or in the English of Richard Cœur de Lion's admirer, Maude M. Holbach,[5] was, as even in the eighteenth century, equally adventure and initiation; one writer likens it to a life membership in a club. But today one travels every year, as well as everywhere; Canada[6] and South America are on our visiting list.[7]

[1] YOUR UNITED STATES. Impressions of a First Visit. *By Arnold Bennett.* Illustrated by Frank Craig. Pp. 191. New York: Harper & Bros. $2.

[2] WONDERS OF THE WORLD. As Seen and Described by Great Writers. *Collected and Edited by Esther Singleton.* Pp. xii, 359. Illustrated. New York: Dodd, Mead & Co. $1.60. Another anthology for the traveler at home or abroad is J. Walter McSpadden's compilation, THE ALPS AS SEEN BY THE POETS (illustrations in color; pp. xxi, 222; $1.50), published by T. Y. Crowell Co.

[3] Gautier makes his reappearance in a convenient, well-printed edition published by Little, Brown & Co., at $1.50 per volume. (THE TRAVELS OF THEOPHILE GAUTIER. Pocket edition. Seven volumes, 18mo, Illustrated. Limp leather, $10.50.) The titles included are TRAVELS IN SPAIN, TRAVELS IN ITALY, CONSTANTINOPLE, PARIS BESIEGED, THE LOUVRE, TRAVELS IN RUSSIA—the last named in two volumes. The good translation is that of Prof. F. C. de Sumichrast.

Pierre Loti's latest book, UN PELERIN D'ANGKOR (pp. 234; published by Calmann-Lévy, Paris; 3 francs 50) has come out very recently. Apparently Loti has had enough of wandering; the world, even at its most wonderful and most mysterious, charms him today less than it disappoints. Yet an American magazine, the *Century*, promises an account of his American impressions for the new year.

[4] USAGES ET MŒURS D'AUTREFOIS. *Par Humbert de Gallier.* Pp. iii, 426. Paris: Calmann-Lévy. 3 francs 50. See also ANGLAIS ET FRANÇAIS DU XVIIE SIECLE *par Charles Bastide,* pp. xii, 362 (Paris: Félix Alcan. 4 francs). Both these diverting volumes instruct one about much more than mere travel.

[5] IN THE FOOTSTEPS OF RICHARD CŒUR DE LION. *By Maude M. Holbach.* Illustrated. Pp. xii, 357. Boston: Little, Brown & Co. $4. This author has really visited most of the scenes of the agitated life of this hero of romance.

[6] TEN THOUSAND MILES THROUGH CANADA. *By Joseph Adams.* Illustrated. Pp. xx, 310. New York: F. A. Stokes Co. $1.50.

[7] SOUTH AMERICA: OBSERVATIONS AND IMPRESSIONS. *By James Bryce.* Maps. Pp. xxiv, 611. New York: The Macmillan Co. $2.50.

LES DEMOCRATIES LATINES DE L'AMERIQUE. *Par F. Garcia-Calderón.* Préface de M. Raymond Poincaré, de l'Académie Française, Président du Conseil des Ministres. Pp. 383. Paris: E. Flammarion. 3 francs 50.

(These works deserve more extended notice than can be given here, and will receive review in a later issue of THE INDEPENDENT.)

THE FLOWING ROAD. Adventures on the Great Rivers of South America. *By Caspar Whitney.* Maps and Photographs. Pp. 319. Philadelphia: J. B. Lippincott. $3.

THE PATH OF THE CONQUISTADORES. Trinidad and Venezuelan Guiana. *By Lindon Bates, Jr.* Illustrated. Pp. 308. Boston: Houghton Mifflin Co. $3.50.

VENEZUELA. *By Leonard V. Dalton, F.G.S., F.R.G.S.* London: T. Fisher Unwin.

THROUGH SOUTH AMERICA. *By Harry W. Van Dyke.* Introduction by Hon. John Barrett. Illustrated. Pp. xxiv, 446. $2.

Travel is, indeed, less an action than a state of mind. We of the twentieth century are great travelers less because we would improve ourselves than because we are restless folk: uneasy in our very libraries; utterly irresponsible within hearing of the train-announcer. Nor is travel for the few. It is as a strong democratic toxin—whether one is a passenger in elevator, subway, or jinriksha. Here is an impressionistic writer who throws his brisk descriptions into the moving-picture genre, and calls them *Around the Clock in Europe*: spending the hour from one to two p. m. in Edinburgh; that from two on in Antwerp; in Rome till four; Prague next; Scheveningen from five to six; Berlin till dinner-time; London, then; Naples till nine; and the rest of his evening in Heidelberg, Interlaken, and Venice, with Paris in the place of honor: midnight to one a. m.[8]

And tho not all our voyages are travels at home, many of them, in these days of "seeing America first," involve displacement without expatriation. There is, for example, the historical pleasuring-ground of New England — that too many of us have regarded only as a collection of way-stations on our route for the Maine woods. Mr. Bullard proves a well-read and amiable guide to all the mysteries of our new antiquity, and the book in which his impressions are gathered up is charming in form and illustration.[9] But is not all America "home" to the roving Yankee? New Mexico—in spite of all the exoticism we find there—is only one great chamber of our forty-eight roomed mansion. Charles Francis Saunders tells us of this New Mexico in his book of *The Indians of the Terraced Houses*,[10] and the many illustrations which this work affords

[8] AROUND THE CLOCK IN EUROPE. A Travel Sequence. *By Charles Fish Howell.* Illustrated by Harold Field Kellogg. Pp. xvi, 356. Boston: Houghton Mifflin Co. $3.

[9] HISTORIC SUMMER HAUNTS FROM NEWPORT TO PORTLAND. *By F. Lauriston Bullard.* Illustrations by Louis H. Ruyl. Pp. xii, 329. Boston: Little, Brown & Co. $2.50.

[10] THE INDIANS OF THE TERRACED HOUSES. *By Charles Francis Saunders.* Illustrations. Pp. viii, 293. New York: G. P. Putnam's Sons. $2.50.

THE INSISTENT HURRYING STREAM OF SUBWAY TRAVELERS

One of Mr. Craig's illustrations for Arnold Bennett's "Your United States" (Harper). "I had lived long in more than one metropolis," writes Mr. Bennett, "and I knew the real and the shamefully unmistakable marks of the real thing. . . . I liked New York irrevocably."

A TAOS INDIAN AND MEXICANS ON THE WAY TO A FIESTA
From Charles Francis Saunders's "Indians of the Terraced Houses" (G. P. Putnam).

bring the marvels of the Southwest very near to us. As a guide, too, Mr. Saunders's volume has its value: and as a study of the art and architecture of the Pueblos. What immediately differentiates his book from that of Carl Lumholtz on Old Mexico is the strong interest of the latter in scientific matters —for he has traveled thru the republic south of us as an expert looking into the economic possibilities of the Sonora desert, some of whose trails have taken him into southwest Arizona.[11] Yet Mr. Lumholtz is not a person forbidding in his erudition. He even quotes the barber's sign that he read in a far-western town of our own States: "Don't shoot us. We are doing our best. Ears washed without extra charge." Such, he adds apologetically, are the actualities of frontier life: but his book is by no means a compendium of such observations. It is very fittingly dedicated "to those who love nature in all its aspects." There is more individuality here than in the instructive and up-to-date account of *A Mexican Journey,* by E. H. Blichfeldt, founded on articles written for the *Chautauquan* magazine.[12]

Travel, and accounts of places comfortably remote from our every-day surroundings, are so fascinating for some readers that they will welcome even stereotype volumes about familiar regions: like *Switzerland in Sunshine and Snow,*[13] and *Burgundy,*[14] and Francis Watt's book about *Edinburgh.*[15] There is, of course, a great deal of information in their chapters, as in those of earlier writers on the same subjects. None of the three authors is, however, so good a companion as Mr. E. V. Lucas —whose wanderings have now taken him to Florence;[16] there is wanting, too, the

[11] NEW TRAILS IN MEXICO. *By Carl Lumholtz, M.A.* Illustrations. Pp. xxv, 410. New York: Charles Scribner's Sons. $5.

[12] A MEXICAN JOURNEY. *By E. H. Blichfeldt.* Illustrated. Pp. viii, 281. New York: T. Y. Crowell Co. $2.

[13] SWITZERLAND IN SUNSHINE AND SNOW. *By Edmund B. d'Auvergne.* Illustrations. Pp. viii, 307. Boston: Little, Brown & Co. $3

[14] BURGUNDY: THE SPLENDID DUCHY. Studies and Sketches in South Burgundy. *By Percy Allen.* Illustrated. Pp. xiv, 302. New York: James Pott & Co. $2.50.

[15] EDINBURGH AND THE LOTHIANS. *By Francis Watt.* Illustrated in color. Pp. xv, 333. New York: Frederick A. Stokes Co. $3.50.

[16] A WANDERER IN FLORENCE. *By E. V. Lucas.* Illustrated. Pp. xiv, 390. New York: The Macmillan Co. $1.75. Mr. Lucas as a cicerone in the city of flowers is not so diverting a guide as in London and Paris, yet he succeeds in making his historical and artistic pills altogether palatable.

personal flavor of Douglas Goldring's *Ways of Escape,*[17] and the humorous, airy touch of Louise Closser Hale's *Motor Journeys* thru Italy and Germany, France and Spain and Algeria.[18] Mrs. Hale is actress and novelist as well as traveler, but I cannot see that her work is any the less interesting for the coincidence. And her husband, the illustrator of *Motor Journeys,* contributes a chapter on the Cost of Motoring Abroad which adds to the book a suggestion of practicality that will commend it to many a reader. Evidently motoring need not be prohibitive in its costliness, if one is one's own chauffeur, and uses common sense generally. For 3,980 miles the four travelers paid $117.30 each—less per mile than first-class railway fare. "And surely motoring, with its escape from the bondage of time-tables and early trains, and its freedom from the monotony of the beaten track, can be figured as first-class travel!" exclaims the motorist.

WACHAGGA PEOPLE ON THE LOWER SLOPES OF MT. KILIMA N'JARO, EAST AFRICA
From Goodrich's "Africa Today" (McClurg)

Some readers there may be who insist that the scene they read of shall be one that figures in the day's news. Such as these may find pleasure even in so scrappy a volume as Mrs. Todd's *Tripoli the Mysterious,* which would certainly have small excuse for being if it did not tell of a land of "actuality"—and a land little known, in spite of all the news-

[17] WAYS OF ESCAPE. *By Douglas Goldring.* Illustrated by Edgar Lander. Pp. xiii, 228. New York: Duffield & Co. $1.50. (Travels through France.)

[18] MOTOR JOURNEYS. *By Louise Closser Hale.* Illustrated by Walter Hale. Pp. 324. Chicago: A. C. McClurg & Co. $2.

WHEN FREDERIC CARVED A DUCK AT THE TOUR D'ARGENT
From a drawing by Mrs. May Wilson Preston, in Julian Street's "Paris à la Carte" (Lane).

paper despatches.[19] Yet there is nothing inherently "difficult" about North Africa as a theme: what could be more entertaining than Norman Douglas's account of *Fountains in the Sand*?[20] Tunis is described here, and the author's adventures in and out of the oases. An interesting traveler always meets other interesting people: the French engineer, for instance, who observed that "we all know each other in Africa. It's quite a small place—our Africa, I mean. You could squeeze the whole of it into the Place de la Concorde." So much for humor. But Mr. Douglas has more than humor. For instance, he professes the philosophy of clothes, and discusses the burnous as a hopeless garment summing up in itself the Arab character, and unfitting the wearer for every pleasure and every duty of modern life. The difference in point of view between this Anglo-Saxon pilgrim and a wandering artist like Loti (whose praises of the burnous are sung in *Au Maroc*—"Into Morocco") is striking, and altogether diverting. Book-travelers who want to penetrate more profoundly into the Dark Continent are recommended to follow up Mr. Douglas's book with E. Alexander Powell's *Last Frontier,* and Joseph King Goodrich's *Africa Today* and Robert Milligan's *Fetish Folk of West Africa.*[21] Many of us are still children enough to open a new book on such a subject as "the White Man's Grave" with an anticipation of its mysteries quite unstaled, and here is a book for the folk-lorist no less than for the traveler.

When the rest of the world has lost its attraction for the traveler, Paris remains. For Paris may be in the process of Americanization, but will never be Americanized. Fortunately, too, it is not only *good* Americans who have gone there (whatever Tom Appleton may have said), and the fact that all kinds of us go, and have gone, and still insist on going, helps, however slightly, to make up its charm for us. For the tra-

ditional American, "London was a duty, but Paris was a joy," as Mrs. John Lane writes in her introduction to a book by Mr. Conway.[22] She might well have quoted Holmes's remark, as a young man, that it was more pleasure to work in Paris than to play in London. The list of Famous Americans in Paris is little less than a list of Famous Americans: Franklin, Jefferson, Morris, Monroe, Fulton, Paul Jones, Morse, Longfellow, Hunt, Margaret Fuller, Dr. Evans, St. Gaudens, John Howard Payne, the Wright brothers—to cite some of the most distinguished names of Mr. Conway's collection. Whistler, and Whistler anecdotes, furnish one of the most diverting chapters in this diverting book.

But it is not only *famous* Americans who go to Paris, any more than it is only good ones. Mr. Julian Street in the clever little volume which he calls *Paris à la Carte* (dedicated to William Richard Hereford "in memory of menus met and conquered") reports upon the eating places of the capital.[23] He is only one of many Americans who look to the great city for good things to eat and drink, and interesting table companions; nor is he disappointed, in spite of what another American, Mr. H. J. Forman, has lately had to say of Paris as "one of the most melancholy cities in the world," in the *Saturday Review*. Some Americans are saddened in Paris by the bills they have to pay for *canard à la presse* and other delicacies; but Mr. Street bore up bravely, for his investigations were subsidized by the magazine which he represented. Fortunate pilgrim! "One is inclined to puzzle, at first, as to how the Café de Paris exists while the Americans are absent, but presently one gets one's bill and understands," he writes. "I ceased to wonder even before the bill was brought, for I saw a gentleman from Indiana drop a golden louis on the floor and give it to the waiter as a tip for his pains in having it picked up."

THE ENGLISHMAN IN PARIS IN THE EIGHTEENTH CENTURY
From an old print reproduced in H. C. Shelley's "Old Paris" (L. C. Page)

[22] FOOTPRINTS OF FAMOUS AMERICANS IN PARIS. *By John Joseph Conway.* Illustrated. Pp. xxxi, 315. New York: John Lane Co. $3.50.

[23] PARIS À LA CARTE. *By Julian Street.* Illustrated by May Wilson Preston. Pp. 79. New York: John Lane Co. 60 cents.

Surely it is unnecessary to add that Mr. Street's Paris is the gilded city—not the Paris natives know. But I have gained one painful piece of belated news in reading the book. Frédéric—Frédéric Delair of the Tour d'Argent—is dead! He will serve no more Rouen ducks, crushing the carcass in a silver press, and anointing the tender slices with a sauce achieved by no other. Frédéric in action was a sight most reverently regarded: as you will perceive by studying the drawing made by Mrs. Preston.

It is *Old Paris* that another American describes: but here, too, there is no scarcity of data concerning inns and cafés.[24] Mr. Shelley writes too of the streets, gardens, salons, and theaters of the city. "Old Paris" is, as he confesses, "a protean term"—which may as well mean the capital of Clovis as the *Ville Lumière* of the Bourbons. "According to a native historian, the houses of Paris in the thirteenth and fourteenth centuries were nothing better than cottages; only four streets in the city were paved"—but even then there were edifices that were, obviously, not cottages. To the lover of gossip, often termed with dignity "social history," Mr. Shelley's book will prove a delight.

NEW YORK CITY.

Virginia to Woodrow Wilson

BY IRENE P. McKEEHAN

ALL the men of my blood and my birth
  Who have walked in the ways of fame,
Have been gentlemen born and gentlemen bred
  And utterly void of shame.

The land of our hope they served full well
  In the anxious days of her youth,—
Kings of the people by right divine
  Of loyalty, light, and truth.

Steady and strong, they faced the foe
  In the fight to play their part,
Or threaded the tangled paths of peace
  With the clue of a fearless heart.

There needs no herald to cry their names
  Who led the nation of old;
They are built in the walls of the commonwealth
  In radiant letters of gold.

These are they who have fought and won,
  And sit in the judges' seat,
As a cloud of witnesses round about,
  My latest hero to greet.

Come into the lists, O son of mine,
  And take the head of the field;
To a man's clean hands Virginia trusts
  Her white and stainless shield.

And still I may boast as in olden days
  Of my sons who win to fame,—
They are gentlemen born and gentlemen bred
  And utterly void of shame.

A FEW BOOKS *of* POETRY

By JAMES HERBERT MORSE

THE eccentric Knight of La Mancha had a kindly feeling for poets, and he would not burn *all* their books. Some "do not deserve to be punished like the others, for they neither have done, nor can do, that mischief which those stories of chivalry have done, being generally ingenious books, that can do nobody any prejudice." His more practical niece could not always agree with him. She would have them all burned, lest the errant knight should betake himself to the reading of them. "We should have him turn shepherd, and so wander thru the woods and fields; nay, what would be worse yet, turn poet, which they say is a catching and incurable disease."

Being inclined to the good knight's view, we take up a few, both of the good and the not so good. In Clinton Scollard's *Songs of a Syrian Lover*[1] there is everywhere a glint of the beauty of an old time. Tho he prints this latest book in London and takes us to the Hill of Hermon in the far East or lingers with the Syrian lovers where the citron ripens, he is always a poet, and never to be burned. Take this for a sample. He speaks as a Syrian lover:

"Once, at the tide of Ramadan,
Afar I rode to Kandahar,
And every night, to my delight,
I seemed companioned by a star.

"And lo, my loneliness was naught,
Though desert sands were as a sea,
And all because I felt it was
Her spirit that companioned me."

In Samuel John Alexander[2] San Francisco has its competent poet. None better than he has sung the fateful day, when that city went up in flame and down in ashes. Especially good is he in such poems as "Chi-ca-go! Chi-ca-go!" which gives the fierceness of fire in action, or "Our Lady of the Gate," which is well up in the best sort of feeling. The "Seekers" is fine and vivid. Of the wreckage of the terrible days—the human wreckage,

"One was more fair than the rest;
He lay with his face on his arm, in the strong, careless grace of a boy,
Struck out by the gods in their pastime, and broke in their wrath as a toy.
My soul, to his soul that was passing, by the name that the lips may not speak,
Adjured him with august compelling, that brought the faint flush to his cheek;
And he tarried a space at my bidding on the brink of the Great Divide,
And he looked in my face, and his eyes smiled into my eyes, and he died.
There was never the time for a tear, nor ever the time for a sigh,
But my face grew white in the light of his soul as it passed me by.
And the hand of a God had lingered on the finer clay and the soul.
But we laid him the one, with the many, and a part of the broken whole."

Perhaps the best in the thirty or forty songs in Robert Munger's book, *The Land of Lost Music and Other Poems,*[3] is the one that gives name to the whole:

"There is a land uncharted of meadows and shimmering mountains,
Stiller than moonlight silence brooding and wan,
The land of long-wandering music and dead unmelodious fountains,
Of singing that rose in the dreams of them that are gone."

Of this land and its beautiful or sad reminiscences of the past the poet sings well. He is a true poet, of singing values, musical cadences, fresh turns of

[1] SONGS OF A SYRIAN LOVER. *By Clinton Scollard.* London: Elkin Matthews. 2/6.

[2] THE INVERTED TORCH AND OTHER POEMS. *By Samuel John Alexander.* San Francisco: A. M. Robertson. $1.50.

[3] THE LAND OF LOST MUSIC AND OTHER POEMS. *By Robert Munger.* New York: Dodd, Mead & Co. $1.25.

thought and unstaled expression. Now and then he sharpens his quill for a stroke, greatly needed just now,—as, for instance, in "The Lie," of which we can give only the first stanza:

"The Lie rose up in the morning,
His feet with fleetness shod.
In the beautiful, blooming morning
That glistened the fair, green sod,
The Lie came forth in the morning
And looked on the world of God."

Elsa Barker's collection of poems, *The Book of Love*,[4] makes a volume of high art and passionate expression of the nobler sort of love. The last of a long sequence of admirable sonnets may be printed as a fair specimen of the beauty and charm of the whole:

"I sing of Love, dreaming the world may know
Something of that pure beauty that I feel;
I sing of passion till the senses reel
With the full rhythmic volume and overflow
Of my own being; and then, soft and low,
I sing of mystic visions that reveal
God's mirrored eyes in Love's—His visible seal
Set in the dust for all who come and go.

"But of Love's final secret, being wise
I do not sing,—Love's terrible demand
To lay his jewels for a sacrifice
Upon the Spirit's altar. . . . Thru the land
Should I go singing that, with unveiled eyes,
Hardly a soul would even understand!"

Henry R. Gibson prints a ballad poem of great length,[5] and here the mind of the curious critic runs back to that scene in the library of "our ingenious gentleman," the Knight of La Mancha—They are culling books for burning:

"Here's a bigger," cried the barber, "called the Treasure of divers Poems."

"Had there been less of it," said the curate, "it would have been more esteemed. 'Tis fit the book should be pruned and cleared of some inferior things that encumber and deform it."

Mr. Gibson's story proceeds thru some hundreds of pages, with highly strained descriptions of heroic deeds, love and wanderings; mishaps which are always foreseen by the reader and provided for, much to the reader's satisfaction, for this foresight enables him to skip extensively, which he does without hesitation. But no one would care to skip anything in Elizabeth C. Cardozo's very pretty verse, especially in that pithy, short, dramatic piece called the "Swan-wife,"[6] which is so well told and so effective.

Tho the name of the author of *Surf Lines*[7] is not given, it will hardly be found among the higher orders of artistic versifiers. As a writer of versified prose, he trains his guns, charged with varied and abundant material from the philosophic arsenals, at the numerous temples that have been erected in modern times for the worship of the "unknown god." As, one after another, he finds them a "patchwork of unrelated parts" quite unsatisfying to the soul of man, and their altars reeking with myrrh and frankincense that have no other purpose than to smell sweetly to a mass of protoplasm, he gradually reverts to the old forms of temple worship, with some changes in the personnel of the attendants at the altar, and thus apostrophizes Holy Church:

"O Holy Church! Thou witness true
Of all the best man ever knew;
By creed and form and mystic rite,
Floating high truths thru darkest night;
The simplest child who follows thee
At one with sage and seer may be;
And sweet and pure thru life may go,
With conscience clean as driven snow,
And spirit bathed in heaven's dew.

"We love thy altar and thy dome,
Thy lectern, with the sacred tome;
Thy lofty arch and buttressed pile,
Thy storied panes and hallowed aisle.
A presence high is surely felt
By all who have devoutly knelt
Communing with the God within
Our very soul, His grace to win.
'Tis here the soul finds her true home."

An interesting study in blank verse of the dramatic order and fine poetic quality is *The Iscariot* of Eden Phillpotts.[8] Judas is in the foreground, before the Sanhedrin and the high priest Caiaphas. He has done his work. The money lies before him, glittering. He is pleading for a stay in proceedings. Jesus is in the hands of the soldiers, awaiting what may be an almost desirable temporary death, while the betrayer foresees for himself an eternity of dying. His plea

[4] THE BOOK OF LOVE. *By Elsa Barker.* New York: Duffield & Co. $1.25.

is an explanatory justification of the Mephistophelian order, and when it fails before the stern court, his outburst is also of the Mephistophelian sort, giving ample evidence of his own double nature in venomous curses of the jury:

"Your cursèd hearts are stone,
But in the fury of the nether fires
They'll crack at last, and tear your bosoms out,
And leave you empty for the undying worm
To fret and gnaw for all eternity."

There is a charm in the verse of Mr. Yeats,[9] in spite of the difficulties that sometimes make a third reading necessary to find out just exactly what he is driving at. A dash of pepper and one of mustard, with a sprinkling of cynicism over the whole, and one has a dish that somehow is palatable enough to justify the second reading, if not always the third. The author recognizes the trouble and admits it.

"The fascination of what's difficult
Has dried the sap out of my veins, and rent spontaneous joy and natural content
Out of my heart. There's something ails our colt."

Perhaps one guesses correctly, when he imagines that at an earlier stage in the airy race the poet outran his wind, or, as he versifies it:

"When I was young,
I had not given a penny for a song
Did not the poet sing it with such airs
That one believes he had a sword upstairs."

The reader is sure of something unhacknied and saucy, and isn't greatly troubled about the ultimate steady trot of the "colt."

Mr. Patterson's *Lure of the Sea*[10] is a breezy volume in sea verse—the ocean in storm, the sailor in action, well brought out, with an inweaving of the old legend of the sirens less happily effective, Pluto rather inefficiently presiding at the weaver's loom. The high artistic quality is lacking that is strongly needed to make the siren alluring or Pluto exciting. When the siren sings, it is not so much the sailor who drowses as the reader, and when the storm raised by the god of the underworld on his travels is at its hight, it is the author, not the sailor, who labors at the oars.

The author of the *Roadside Fire*[11] carries out very prettily the promise given in her title, that she will keep "in the open," build her home fires wherever the home is for the time, regret, long for, but not grumble because she is a wanderer. This feeling is well exprest in a little song called "The Loser":

"I heard the scream of a passing train
Across the desert today;
It took me back to the town again
And the clatter of old Broadway,
The snatch of a song, the clang of a gong,
The glare from a hundred bars—
Do I envy him still, in this hush and chill,
Galloping under the stars?

"The fight he wins is the fight I lost—
I in my desert camps,
Who hardly save in a year the cost
Of one of his motor lamps.
My face is not, and my name's forgot
In the world that I once called mine.
Do I greatly care, in this desert air
That is headier far than wine?"

Modern life with its strain and tussle, its hitting and missing, is here well characterized. Life with us is all on the go—all among the "movies." To the author there is a sad side to it all, which she touchingly expresses.

In *The Call of Brotherhood and Other Poems*[12] the motherly and at the same time the altruistic mood predominates. The writer lives clearly behind the battle line of modern progressivism, finding her best themes in the fray and its echoes in the moving tents. Heroism is the keynote—heroism, and love—marital, maternal—all exprest in verse sufficiently under artistic control not to jar on the cultivated ear. If there is a tendency to seize upon the latest excitement and make a "lesson of the hour" out of it, she at least makes a good lesson, and drives it home with skill, as in the eight poems on the "Titanic" disaster, particularly in the seventh of the series, "The Wireless Tower." A more personal touch, in poems highly subjective, is notable in the eleven variations on a sadder theme, under the heading "Grief."

Fostering American-Mexican Amity

BY ANDRE TRIDON

THE International Committee for Peace and Amity was organized in June of this year by prominent Mexicans and American merchants residing in Mexico City to promote a better knowledge and understanding of Mexico in the United States and of the United States in Mexico. Among the Mexican directors are Demetrio Sodi, president of the Supreme Court; Alonzo Rodriguez Miramon, judge of the Supreme Court; Luis Cabrera, director of the National Law School; Urbano Balmaceda, president of the Society Siglo Veinte; David Bernard, president of the Students' Club, and Antonio Ramos Pedrueza, head of the Department of Labor.

The committee will organize branches in the largest American cities, and lectures will be delivered under their auspices by speakers well acquainted with both countries. An exchange of students and professors between Mexican and American universities is contemplated.

Señor Barron is at work preparing for the opening of the Mexican Information Bureau and permanent exhibit housed in the building of the Pan-American States Association, New York City. This bureau will furnish free of charge prompt and accurate information on all phases of Mexican-American commerce.

The committee will shortly bring to the United States several representatives of the Mexican press, who will visit all the large cities and especially the Southern settlements, where, according to the "yellows of Mexico," Mexicans are subjected to shameless treatment.

This organization organized the impressive Fourth of July festivities which took place in Mexico City. President Madero acted as chairman. Ambassador Wilson was guest of honor. The organizers obtained free of charge from the Governor the use of the Municipal Theater and the services of the artillery band and of the orchestra of the National Conservatory of Music.

Collectors and Collecting

BY DUFFIELD OSBORNE

Author of "Engraved Gems."

THE human instinct for "collecting," using the term in the sense of accumulating "objects of bigotry and virtue," as a rural philologist has put it, dates from pretty early times. We have records of collections of engraved gems made by Mithridates, the great king of Pontus, Pompey, Julius Cæsar, and other worthies, but it may be doubted whether the habit has ever been quite so widely spread as it is today.

The direction in which it manifests itself varies with the individual, and the submotives which prompt the selection of special fields can be classed all the way from innocuous to high, from primitive to eminently intellectual.

I fancy there are not many bright boys who have not, at one time or another, collected postage stamps. It is distinctly the fashion, and the flock motive controls, as it influences most children of larger growth in choosing fields of like activities. First, of course, there is the primal instinct based on the desire to possess competitively; that is, to gather objects which, by their degrees of rarity and difficulty of attainment, represent readily comparative achievements. Most of us can well recall how we besought right and left for foreign letters, how keenly we traded our duplicates, how some of us even diverted part of our allowances from playthings and candy. We can remember how the inevitable volume of "easy" stamps grew and, above all, the exultation or the envy with which we viewed a "hard" stamp in our own album or in that of a rival.

So the game went on, and it was a good game for the boy in many ways. He learned, perforce, something of history and geography; perhaps he imbibed a taste to delve deeper in these studies, and it is fair to say that his general intelligence gained ground. At last the stamp collection began to lose its place in our hearts. First it became stationary, then forgotten, until the time came when it was sold or given away. A few albums still lie somewhere among our relics of younger days, and may now, for all their owners know, be rather valuable, since with many grownups the boy's interest has maintained its place and expanded into a collecting mania which represents large sums of money and elaborate refinements. To the man who has dropped stamps for other desiderata, whether in the lines of necessities or more advanced dilettanteism, the adult philatelist always seems rather "young": a case of suspended development who merits the name of faddist rather than that of rational collector.

To consider the best phase of collecting, the benefit to be hoped for from its encouragement, the collector apotheosized; begun, usually, as a fad born of an instinct, it often ends as a study, a source of knowledge, work in legitimate fields of research; with the collection that started it all standing by, probably growing, doubtless with some of the old competitive spirit of acquisition still clinging to it, but become primarily a means rather than an end. The real student is sure to specialize and to become an authority. For him, outside the pleasure of research, is the rich harvest that springs from knowing more than one's neighbor. His is the joy of picking up for a song that which is really worth while, the fair assurance of standing safe

from the wiles of the forger, that omnipresent terror and curse that hangs like a cloud over all the collecting field.

Across the line from the specializers, our general collectors, many of them millionaires, occupy a ground of their own, good in its way. They gain something intellectually, as one can hardly fail to do; their collections are apt to go ultimately to the museums and thus benefit the public, but no man can know much personally about such. General collectors usually rely on the trained expert or pay the price of their own ignorance, and among them the clever forger finds his easiest and most productive victims.

A word may be said here about the selection of a fortunate or unfortunate field, tho perhaps it would be more accurate to speak of the luck of dropping into one, for, from the nature of the case, the power of selection in such a matter lies more or less in abeyance. Certainly this is so where the collecting and the collection are born of a definite taste and are thus rational evolutions. Most men are mere sheep. They feel the old instinct of competitive acquisition stirring in their natures and they follow the fashion and pay the price—in several ways.

Now it stands to reason that in a fashionable line of collecting such as, today, in Japanese art, prints, old furniture, Sheffield plate, etc., the prices are forced up by the demand. Moreover, the peril is greater, because it follows, naturally, that the forger is attracted toward the field of best returns for his nefarious art. These gentry seldom work for mere amusement, and hence it is in buying high-priced articles, those that many seek, that the greatest knowledge and care are needed to save one's pocket—and one's face.

Perhaps the most illuminating example of what I mean, in all its phases, is the story of ancient engraved gems. As I have said above, these give us our earliest records of collecting. The taste for them and hence their production died along the third and fourth century of our era, to be revived in the Renaissance along with other branches of classic art. Their beauty, their close personal associations with the ancients, whose signets they were, and the archeological knowledge to be gained from their study, all united to make them desirable, while their numbers, born of general use thru many centuries of antiquity and protected by their small size and almost indestructible material, made them especially available for men of lesser means—the rank and file of collectors. Above these towered the humanist Popes, the princes, of the house of Medici—in fact, most of the European potentates who aspired to a reputation for culture. Benvenuto Cellini and Michael Angelo gloried in their acquisition, and, with the enthusiasm for the antique examples, rose artists of the times who almost rivaled the best of the classical schools. So the taste grew thru the seventeenth and eighteenth centuries, numbering kings and queens among the enthusiasts: Frederick the Great, Josephine, even poor bucolic George III—together with such commoners as Winckelmann and Goethe. It became practically a universal craze; a study and a sane enthusiasm among the learned, and a general fad among the would-be dilettanti. Prices soared, and, with the eighteenth century, came the inevitable sinister development. Many clever gem engravers of the times, tempted by the demand and the prices paid, degenerated into forgers of the antique and fattened on their gains. So, for a hundred years, and then the equally inevitable collapse! Up to the middle of the ninetenth century the collectors had greedily absorbed anything and everything, critical judgment was not high and the game was easy; but knowledge was growing slowly, while the forgers grew more presumptuous in their immunity, until the dispute over the Pistrucci "Flora," which crippled the standing of such a connoisseur as Richard Payne Knight, and the scandal of the Poniatowski gems, sold in London in 1839, precipitated the smash. No one knew where his collection stood, he rushed from vain confidence to despairing doubt, and the gem that ten years before would have sold for £1,000 could hardly be given away. The fashion was dead, the forgers died, and, naturally, no new generation took their place. That is why the collecting of engraved gems would be the sanest branch in which a man of moderate means could indulge himself today. With the advance of knowledge on the subject such efforts as the Poniatowski gems, so fought over in their time, would not deceive the veri-

est tyro, and what little later work there is is not very dangerous. Incidentally, since there is no fashionable demand, the prices are absurdly low and the beauty and interest of the objects themselves are very great. As Frederic Harrison has written: "If I had ever been able to collect anything, my hobby would have been antique gems, which seem to me to possess the very aroma of the Old World."

Generally speaking, in all collecting the exercise of judgment and a little common sense based on some specific study will save the collector from disaster. It is usually the sheep-man who suffers; witness the exceptionally clever trick of a certain London dealer in antique furniture. He had sold a very perfect set of "Chippendales" to Lord ——, a well known collector, for—I do not recall the exact figures, but let us say £3,000. Later, my lord was inspired with grave doubts by an expert, and, as the set had been sold with a guarantee of its genuineness, he demanded the dealer should take it back. That worthy protested the verity of the "Chippendales," assured his customer of his own honesty and told him that, as the value of such articles grew greater each day, he could not fairly take them back under the guarantee. If, however, His Lordship was dissatisfied, why, he would gladly *buy* the set from him for £3,500. Naturally, the late purchaser agreed, and the transaction was closed, due receipt being given for the money. So far so good. Later, Mr. Dealer disposed of the pieces to a wealthy American for £4,500 on the strength of the receipt showing that he had paid £3,500 for it and that it had come from the famous collection of Lord ——. Now, if our American had not been a sheep and, perhaps, a bit of a snob into the bargain, he might have taken advice and been saved; but the trick was pretty nearly clever enough to succeed on its merits. Fortunately, it was *unusually* clever. Many of the popular subterfuges of the forger and the fraudulent dealer are well known, such as the "planting" of bogus Italian primitives in old palaces and of Colonial furniture in country houses. Such wiles are in line with the "talk" of the prestidigitator. They disarm the critical judgment of the buyer and distract his mind from too close a scrutiny of the object, but every trade has its tricks and it behooves each collector to learn of those that are used or may be advantageously used in his especial province.

Much more serious are the really artistic coups to which some of the great museums have fallen victims. The tiara of Sitaphernes, which long deceived the authorities of the Louvre, is perhaps the most spectacular example. Of course, there was big money in such a fraud, but it is easy to believe that the adventure itself may have served as an added inducement, and forgers have been known, fortunately not many, to whom the pleasure of fooling an expert has counted for even more than sordid profits. The Leonardo da Vinci bust at Berlin is probably a lower type of this line of forgery.

Among the cleverest of purely commercial fakes are the Tanagra figurines that deceived many museums and private collectors, for the manufacture of which the fragments of genuine figures were ground up so that the material, always difficult to imitate, should be identical; and "ancient coins" have been made at Catania, in Sicily, so admirable that, even as known forgeries, they bring high prices. Of the mass of cheap "antiques" manufactured for and only capable of fooling ignorant tourists nothing need be said.

After all, we should not expect a museum director to be omniscient. We laugh when one is cheated, but he who is never cheated will not be apt to get the big things. Over caution is almost as bad as recklessness, and the wise public attitude is to be tolerant of a certain percentage of "breaks" in the interest of general acquisition. If museum experts exceed that percentage they may be justly criticised; if they fall within it, count the cost philosophically to legitimate profit and loss. After all, exhibits of clever forgeries, properly labeled, would be illuminating additions to most collections. A few museums have recognized this to a limited extent, but it could wisely be featured much more broadly.

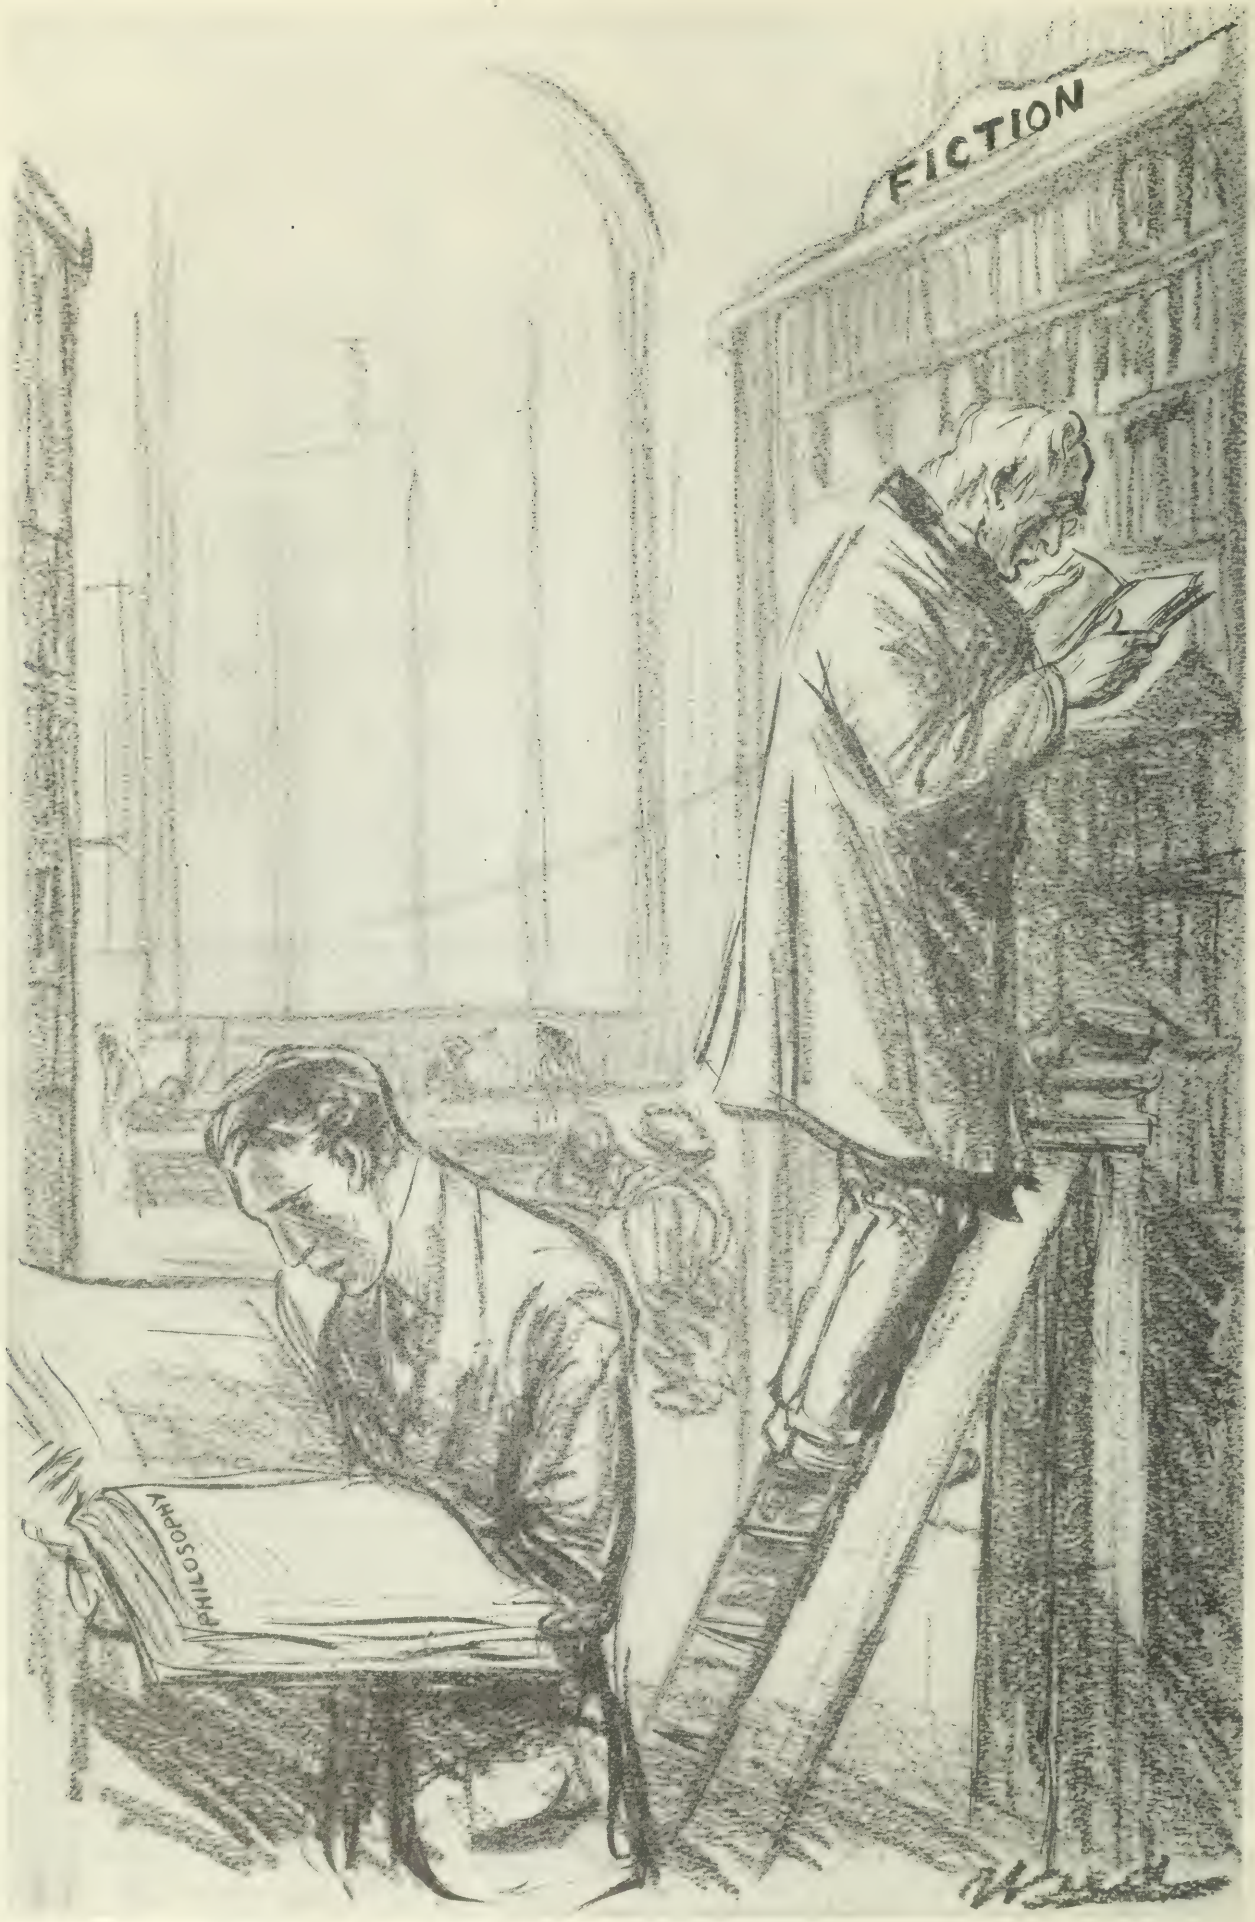
It may be stated as a general proposition that, theoretically, it is possible to imitate anything, so that detection is impossible. Practically, the pitfalls are too

numerous and, sooner or later, the fake is found to be vulnerable when it and its history come under the eye of the right man.

There is, however, a curious psychological development that goes on in the mind of the collector; an abnormal exaggeration of the tendency found, more or less, in most people to believe what they want to believe. But for this idiosyncrasy, the forger would have a far harder task, and the extent to which it will carry a sane man was shown most spectacularly in the case of M. Chasles, member of the French Academy, geometrician and astronomer of world-wide repute, but, alas! also an enthusiastic collector of autographs. It seems unbelievable, but, between 1861 and 1870, this expert and man of science bought for 140,000 francs, from one Vrain Denis Lucas, 27,320 forged autograph letters, among which were many that purported to be from Rabelais, Galileo, Shakespeare, Plato, Pompey, Thales, Cleopatra, Alexander the Great, Alcibiades, Socrates, Archimedes, Anacreon, Sappho, Cicero, Plutarch, Diocletian, Mahomet, Jeanne d'Arc, Pilate, Herod, Lazarus, Judas Iscariot, and two addressed to Jesus Christ.

That nothing might be lacking in absurdity, all of these forgeries were written *on paper and in French.*

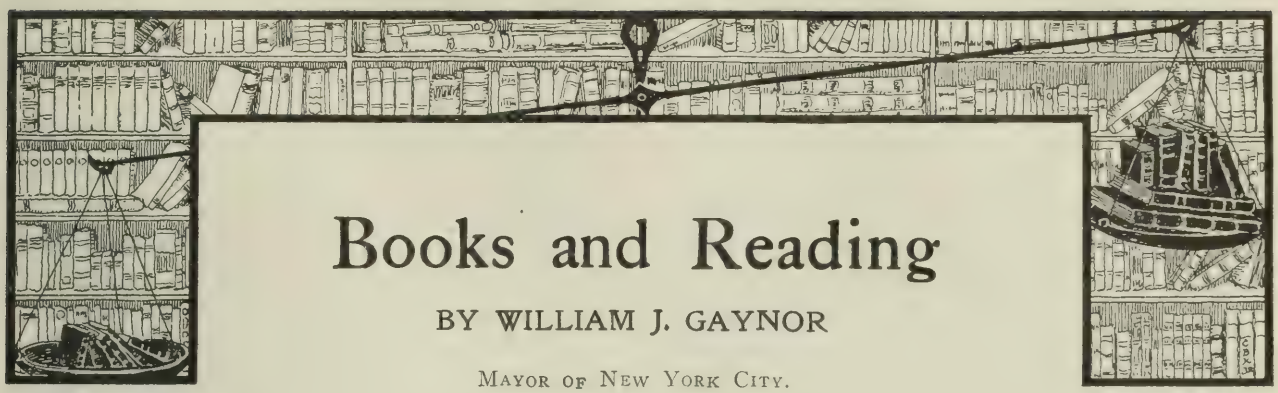
In another way, collecting, when it degenerates into a mania, has exerted a strangely demoralizing influence. Men, otherwise honest, will steal shamelessly in the line of their hobby, and the story of the two old coin collectors, friends and rivals, is in point. During the absence of one of them, the other had secured a unique coin, and the absentee, on his return, hurried to his friend's home and asked casually to look over his collection. Not finding the new piece he at last referred to it and inquired where it was. "It's in my mouth," replied the host, "and it's going to stay there till you leave this house."



In view of such things and of the fact that opinions count for so much in fixing the label of authenticity, it is not surprising that the dealer in curios and even the marchand-amateur, as the French term the cross between collector and dealer, are, as a rule, not accounted especially reliable persons. Truth is, trade in such lines is apt to prove demoralizing.

Perhaps, after all, the collector is fortunate who looks only for art merit in his quest. Some few have assumed this attitude: that they care not if a painting be by Corot or John Smith, so it be good, and that it's all one to them if a fine piece of furniture be Florentine, Colonial or Fourth Avenue. I cannot regard their position as quite sound, seeing that it ignores the romantic interest born of associations, not to say the element of archæological value as such which a genuine piece has in most lines. I know one man, tho, who certainly carries his views to their logical extreme and who, when closely pressed, announced that, for him, a beautiful intaglio gem would possess no added charm could it be shown conclusively to have been the signet of Julius Cæsar. Consistency could go no further—only, well, I would rather like to see his sincerity put to the test.

I have often thought that, could we analyze the basis of certain hobbies that, on their face, seem far from our subject, we would find that, after all, it was the collecting instinct that controlled. Take mountain climbing. Of course a man is drawn to it primarily by the love of adventure, and scientific data and even "views" doubtless influence some; but your genuine mountain climber is apt to pride himself on his list of difficult peaks scaled, and, if so be there is one among them that he alone has conquered, his attitude differs little from that of the boy with the "hard" stamp owned by none of his fellows or the numismatist who has secured a unique coin. Truly a fine collection of mountains is a most glorious thing to have, and even Mark Twain's story of the man who collected echoes may be more satirical than farcical.



A closing word is this. Love of art is good, desire for knowledge is better, even "sheep" collecting is apt to be of some advantage in the long run; mania is bad; but, thru them all, it may be said that if competition is the life of trade, it is certainly the soul and spirit of collecting, and the museum, tho it be the art parallel to the monopolistic trust, steadily acquiring, never giving out—even the museum can never kill a soul.

New York City.

Drawn by C. R. Weed.

THE READERS: A CONTRAST

Books and Reading

BY WILLIAM J. GAYNOR

MAYOR OF NEW YORK CITY.

AND so you wish to visit me here in my library and get from me an article on libraries, and books, and reading, and learned men, and bookish men, and bookshops, and so on. It is a large subject. I can only skim over it with an every day recollection. You can help by asking a question here and there. There are so many public libraries here now that people do not need to buy books. And these libraries have all kinds of books, even rare and curious ones. The number of familiar old bookshops diminished as these public libraries grew. According to Professor Mahaffy there was a bookshop in ancient Athens. I never think of the burning of the great library of Alexandria without a pang. It is said that when consulted by his general who had captured that city in the seventh century the Arabian Caliph Omar said that if the books of the library contained only what was in the Koran they were superfluous, if anything else they were heretical, and that therefore in either case they should be burned. This story was invented long afterwards. The Arabians were a learned people. They were not burners of books. Every department of science was enriched by their learned men. Western civilization owes them much. The very numerals in which we keep our accounts we got from them. Libraries preserve errors as well as truths. I suppose there are as many errors as truths in them. The errors as well as the truths of each age are stored in books. That written down in books as the height of wisdom in one age often becomes the height of folly in the next. This is so in science, in theology, and in everything. And so books lead us into many false paths unless we are wary. I suppose we all know a few very wise people who are unable to read at all. There is a large amount of innate knowledge in all of us. It develops with the growth of our minds and bodies from birth. It is the same with all animals. Who taught the ant to bite every grain of corn she carries into her hill lest it take root and grow? She did not read it in any book. But I fear I am wandering away from what you want. Reading, you say? Reading is to no purpose without thinking, except for pastime or amusement. Reading is thinking with the head of another person instead of your own. One who reads without thinking gradually fritters away his power of thinking. Reading may be an aid, but to possess a thought we have to work it out ourselves, and make it a part of ourselves. The self-thinker is equipped for action. He who reads without thinking is not. When called upon for action he is all the while trying to recollect the words or thoughts of others which he has read, and to shape his words or acts thereto. No one ever did a considerable work in the world who was not a self-thinker. Too much reading weakens the judgment. What we absorb by reflection becomes part and parcel of our mental processes and comes forth spontaneously for use when the mind enters the society of facts or ideas to which it belongs. Mere feats of memory are of little or no use. To be able to remember and repeat many names, or verses, or the like, may be likened to the physical feats or tricks of acrobats. They excite the same attention by their novelty, and are alike of little worth. The Roman general who is said to have been able to repeat the names of all of his soldiers seems to have had no

other distinction. Absorption, not verbal memory, forms judgment. There was for a long time in this country a distrust of scholarly and bookish men in respect of business or public affairs. We have not altogether got over it yet. They were called "literary fellers." But history shows that such men have given the best government and achieved the best results when given the opportunity. We elected a learned, literary and bookish man President of the United States the other day in Woodrow Wilson. Such men acquit themselves well when called into government. But that happens only to a few. It is the same in general business and affairs. Men who make themselves learned in a certain calling or business by means of study excel the men of long experience but without learning. Of great rulers who were learned it is easy to cite instances. Alexander the Great was a student, philosopher and learned man. He possessed all the learning of his time. Aristotle was his tutor, and he served for a time as his amenuensis. When he went into Asia on his great military expedition he took a retinue of learned men with him. Wherever he went he sought out learned men and philosophers and conversed with them. He called to see Diogenes in his tub at Corinth, and after conversing with him said as he turned away: "Were I not Alexander I would wish to be Diogenes." Cæsar was also a man of learning, an orator, and given to philosophy. He wrote a book of apothegms which is unfortunately lost. The philosophical mind has always been prone to express itself in parable, or aphorism or fable. As an orator he was capable of holding his own against Cicero. His "Commentaries" have not been excelled as a model of pregnant narrative. At the same time he could be nimble and jocose of wit, as when being hailed as king by some of the populace he responded that his name was not King but Cæsar—King being a surname with the Romans as with us. The emperor Marcus Aurelius left his philosophical thoughts in writing. He seems never to have had any desire or intention of publishing them. In the midst of camps and great affairs he mused over them and wrote them down on tablets as a solace to his own soul. He had a true conception of God and the universe. As I finished reading his book again not long ago I could not help writing on the flyleaf as follows: "Consider that the great universe, of which thou art only a trivial speck, is governed by fixed laws, and be therefore content in all things, and especially to die at any time, and abide God's will of thee, whether of individual future life, or dissolution into universal mind and matter." That is the sum and substance of what his mind leaves other minds pregnant of. Napoleon was one of the greatest readers of his time and much given to the society of learned men. He took a large body of scientific and learned men along with him in his military expedition to Egypt. When he came back he dressed in the garb of the academicians for a time and consorted with men of learning. He read in his coach as he traveled on his campaigns, and if a book impressed him as worthless he threw it out of the window. It is said his route could be traced by the litter of books along the roadside. But I suppose this is an exaggeration. Lord Rosebery in his book on Napoleon says that he had a library of 800 volumes on the field of Waterloo. Did you ever hear of a more astonishing thing? You cannot help

doubting it, you say. Nor can I. But it is true that he carried many books about with him, and had special editions printed and bound for his own library. Frederick the Great was a literary man. He kept Voltaire, the greatest thinker and literary genius of that age, by him for a time to commune with him over poetry, philosophy and learning. Do you not think the minds of these two men were much alike? No? Well, it has always seemed so to me. They were each what some call queer, jealous of each other, and spat and quarreled like cats. Queen Elizabeth was learned to a singular and rare degree. To the end of her long life she had set hours for study and reflection. She was fond of men of learning and philosophy. There never seems to have been any objection to literary men in public affairs or as statesmen in Great Britain. England presents a long list of literary men who came to eminence in public affairs, as Burke, Disraeli, Gladstone, and I hope you will let me add Balfour. His book, "Foundations of Belief," has been taken too little note of. Nor should the present Churchill be omitted. Gladstone was the most bookish of English statesmen. He thrust his spoon into every dish. But he was superficial. He will not survive either as orator or writer. He was a rhetorician, but not an orator. Seldom have the rhetorician and the orator united in the same person. Most of the world's orators have been only plain, some of them poor, speakers. It is hard to believe that Demosthenes being asked for the first, then the second, and then the third requisites of an orator, answered each time "action." Instead of being a requisite, action can be dispensed with. The three requisites for an orator are, first, the man (an honest man with a purpose), second, a message to deliver (something to say), and last and least, the way of saying it. Some orators have been stutterers. Francis Bacon says Moses stuttered. Rhetoricians have always been distrusted as dishonest. Orators never. The Roman Republic banished the rhetoricians several times. How would it do for us to do the like? The name of Francis Bacon cannot be omitted when learned men and philosophers who were eminent in public affairs are mentioned. His writings are one of the world's marvels. It is seldom so prodigious a mind has ever been conferred on any of the sons of men. It might not be easy to give a list of literary men among the Irish statesmen. A few of them were orators. Parnell does not seem to have read anything. He was the bookless statesman. He was ignorant even of Irish history. And he was neither rhetorician nor orator. We had philosophers and literary men in public affairs in this country at the beginning, more than later on. Benjamin Franklin stands out incomparable at the head of them all. Jefferson was a great student, as the writings he left after him attest. He was also a philosopher. Hamilton does not seem to have had even a touch of philosophy, but in political economy, in history, and in the art of government was the ablest man of his time in all the world. Nearly all of the men developed by the French Revolution were learned or literary men. The only exception I can think of at this moment is the brewer Santerre, whose name survives only because he had a voice which could be heard all over Saint-Antoine, and, as I think some say, half way out to Saint-Cloud. We find Robespierre at the age of nineteen corresponding with Benjamin Franklin on a scientific topic. Even Marat was an educated and scientific man. He was an eminent and fashionable physican in Soho Square, London, for ten years. He returned to France to participate in the French revolution. Carlyle tries to damn him by calling him "horse-leech." He also pictures him as unclean, even nasty, in his person. He hints even worse than he says. You may know what I mean if you read Gibbon's Latin footnote concerning the same thing said of the Emperor Julian. But, all the same, Marat was murdered while in

his bathtub in his own home—rather conclusive proof that he was of cleanly personal habit. At the head of the Champlain delegation which recently came over here from France was Hanotaux, formerly head of the French Foreign Office. He is a bookish and literary man. He is often seen in the bookshops of Paris, or groping along the long row of little bookstalls on the opposite side of the Seine—more than a thousand in number. The late John Hay in this country was also the better equipped as Secretary of State by his literary accomplishments. But I must not run on this way further. You want me to say something about my own library and books and reading? I would rather pass that over. I have collected my books one by one. As I wanted a book I bought it. In that way a library grows fast enough and you have the books you want. And your library is part of you all the time. My advice is not to buy a whole library at once. Yes, I have spent some time in the old bookshops of New York. They are now, alas, nearly all past away. I saw men in them who have since come to eminence. It would serve no purpose to enumerate the names of these old bookshops. You could get any sort of book in Leggatt's. One of the last of them was Miller's in Nassau street. How he liked to talk with you about books, and what infinite trouble he would take to get a book for you. One day I went in and asked him for "Goschen on Exchange." He scratched his head and said he did not have it, but would get it and send it to me next day. After three days I got a letter from him that there was not a copy of it to be found in the city of New York, and that he had sent to England for it. I had recently heard the debate in the British Parliament in 1893 on the closing of the Indian mint to the coinage of silver, and the speech of Balfour on bimetalism, and had bought and read the best books on that subject. I then wanted to read the leading books on exchange, as the growing disparity between gold and silver was dislocating the international exchanges of the world. I mention this incident as it made me doubtful of following the lead of our bankers and financiers and business men on these subjects, then much rife among us, for if they were students thereof the standard books treating of them would have been for sale here. By the way, Goschen is an example of how a man of learning on any subject may come to the front in public affairs in England. The appearance of his book on exchange caused him to be made Chancellor of the Exchequer over the heads of others, at a bound—*per saltum,* as the phrase is. Uncut editions are annoying to those who frequent bookshops. And the "expurgated edition"—what will I say of that? Just think of an expurgated edition of Rabelais. I picked one up in a bookshop in London some years ago. I think it had a very short sale. What places of infinite solace the old bookshops were. You ask me to give a list of ten or fifteen of the greatest books. I would rather not try to do that. But I have no objection to giving you a list of the books which have affected or shaped me the most. They are as follows: The Bible, Euclid, Shakespeare, Hume's History of England (especially the notes), Homer's Iliad, Milton ("Paradise Lost"), Cervantes ("Don Quixote"), Rabelais, "Gil Blas," Franklin's Autobiography and Letters, Plutarch's Lives, The Autobiography of Benvenuto Cellini, Gibbon's "Decline and Fall of the Roman Empire," Adam Smith's "Wealth of Nations," and Bacon's Works. I should add the leading books which deal with what I may call the philosophy of history, such as Draper's "Intellectual Development of Europe," Lecky's "History of European Morals," Buckle's "History of Civilization" and the late Emil Reich's "Success Among Nations." The "Imitation of Christ," filled with religious philosophy line after line, should not be omitted. More copies of it have been read in the Christian world than of any other book save the Bible. It has soothed the hearts of more than forty generations of Christians. The author of it is not known with certainty. Protestants and Catholics claim it and read it alike. The Bible is incomparably the greatest book of all. The philosophy, the poetry, the imagery, the elevation of thought, of the Old Testament have never been approached. No one has since come into the world capable of writing the Twenty-third Psalm,

for instance. By the way, Shakespeare was born on the day Cervantes died, wasn't he? Some of the commentators on Shakespeare say that the word "handsaw" in Hamlet is a copyist's error for "hernsaw," some sort of a bird. It occurs in the passage, "I know a hawk from a handsaw." But here is the same thing in "Don Quixote," namely, "There is some difference between a hawk and a handsaw." The most jaunty and nimble piece of narrative in our language, if not in any other, is Lord Bacon's "New Atlantis." Just read it and see. To bring your style down from stilts, and make it easy and plain, read Newman's "Apologia." We must not fail to mention Burton's "Anatomy of Melancholy," which is the greatest collection of curious learning to be found in any book, ancient or modern. It is a marvel of learning and research. The Baconians claim that Bacon wrote it as well as the Shakespeare plays. They say they trace his cypher thru it. I hope you will not think I am loquacious if I tell you how I once convinced three of my four associates when I was a Justice of the Appellate Division of the Supreme Court by citing Burton's "Anatomy of Melancholy" as an authority. It was a divorce case against a man. The proof showed that he met the woman at the railroad station, that they came together in a hack with their baggage to the hotel, that the man registered them as man and wife, and that they went to the bedroom assigned to them. One of the Judges wrote an opinion that this evidence was not sufficient. I wrote an opinion that the legal inference of misconduct could and should be drawn from it, that they did not go there to say their prayers, and cited that passage of the "Anatomy of Melancholy" which says of a man under such conditions, "it is presumed he saith not a paternoster." The case is known as the "paternoster case." Now we cannot keep on this way, and maybe we might as well stop here. We have looked all along the shelves, and you see that some of my books are below the mark. If they had been in Don Quixote's library when his books were put on trial by the curate and the barber, after he got home from his first sally and was put to bed by his housekeeper and nurse, I am quite certain they would have been burned up in the same heap with the foolish books they condemned and committed to the flames. The comparatively few books which were printed in the first century or less after the art of printing was discovered are called the "Incunabula." The images of the minds of writers are preserved forever in their books, while images of the body are lost after a few ages. I am all the time wondering if in the excavations of houses at Pompeii and other places they will not finally discover the lost books of Livy. Yes, artistically bound books are great sources of pleasure. I have not talked with any one on that subject since the death of the late William Matthews. He had a choice collection of exquisitely bound books. As good an authority as I know on that subject, and particularly on inlaid books, is Mr. Daniel Treadwell, who still survives among us at a fine old age. How do I read? If the book be worth while, always pencil in hand. Many of my books are spoiled in that way. Just look at them. Yes, I often copy into notebooks the passages I mark. See this passage marked in the Odyssey — how Ulysses in his wanderings sighed to see again "the smoke rising from the hearths of his native land." And this one, that "When he escaped from the den of Cyclops he did not go back for his cap and belt." He was out of danger and knew enough to stay there, unlike some other people. There are a large number of proverbs and wise maxims in "Don Quixote"—more than in any other book I can now think of save the Bible. See this curious one I have marked: "Between the yea and the nay of a woman I would not undertake to thrust the point of a needle." And here is this marked: "The mountains breed learned men, and philosophers are to be found in the huts of shepherds." But we cannot go into this. I have several times thought of publishing a full collection of them.

New York City.

The Presidency

BY WILLIAM HOWARD TAFT

[The President was the guest of the Lotos Club in New York City on the evening of November 16 and delivered what many persons regarded as his best speech—which we print herewith. We believe that the suggestions with regard to the Presidential office made by the chief executive whose term of office is now drawing to an end deserve the consideration of the country and a wider publicity than the newspaper publication of the speech in condensed form has assured. The President's address is notable also for the geniality and humor which have ever characterized his personality and no one can fail to admire the cordial sincerity of his toast to the leader whom the people have chosen as his successor.—EDITOR.]

THE legend of the lotos-eaters was that if they partook of the fruit of the lotos-tree they forgot what had happened in their country and were left in a state of philosophic calm in which they had no desire to return to it.

I do not know what was in the mind of your distinguished Invitation Committee when I was asked to attend this banquet. They came to me before the election. At first I hesitated to accept lest, when the dinner came, by the election I should be shorn of interest as a guest, and be changed from an active and virile participant in the day's doings of the Nation to merely a dissolving view.

I knew that generally on an occasion of this sort the motive of the diners was to have a guest whose society should bring them more closely into contact with the great present and future, and not be merely a reminder of what has been. But after further consideration I saw in the name of your club the possibility that you were not merely cold, selfish seekers after pleasures of your own, and that perhaps you were organized to furnish consolation to those who mourn, oblivion to those who would forget, an opportunity for a swan song to those about to disappear.

You have given me the toast of "The President," and I take this toast, not merely as one of respect to the office and indicative of your love of country and as typical of your loyalty, but assume that a discussion of the office which I have held, and in which I have rejoiced and suffered, will not be inappropriate.

It is said that the office of President is the most powerful in the world, because under the Constitution its occupant really can exercise more discretion than an Emperor or King exercises in any of the Governments of modern Europe.

I am not disposed to question this as a matter of reasoning from the actual power given the President in the Constitutional division of governmental functions, but I am bound to say that the consciousness of such power is rarely, if ever, present in the mind of the ordinary individual acting as President, because what chiefly stares him in the face in carrying out any plan of his is the limitation upon the power and not its extent.

Of course, there are happy individuals who are able entirely to ignore those limitations both in mind and practice, and as to them the result may be different. But to one whose training and profession is subordinate to law, the intoxication of power rapidly sobers off in the knowledge of its restrictions and under the prompt reminder of an ever-present and not always considerate press, as well as by the kindly suggestions that not infrequently come from that hall of Congress in which impeachments are initiated and that smaller chamber in which they are tried.

In these days of progress, reform, uplift and improvement, a man does not show himself abreast of the age unless he has some changes to suggest. It is the recommended change that marks his being up to date. It may be a change only for the sake of change, but it is responsive to a public demand, and therefore let's propose it.

It is contrary to my own love for the dear old Constitution to suggest any alteration in its terms, lest it be regarded as a reflection upon, or a criticism of, that which has been put to the sacred use

for 125 years of maintaining liberty regulated by law, and the guarantee of the rights of the minority and the individual under the rule of the majority.

But yielding to the modern habit, and just to show that tho I am a conservative I am not a reactionary or a trilobite, I venture the suggestion that it would aid the efficiency of the executive and center his energy and attention and that of his subordinates in the latter part of his Administration upon what is a purely disinterested public service if he were made ineligible after serving one term of six years either to a succeeding or a non-consecutive term.

I am a little specific in this matter because it seems necessary to be so in order to be understood. I don't care how unambitious or modest a President is, I don't care how determined he is that he himself will not secure his renomination (and there are very few indeed who go to that extent), still his subordinates equally interested with him in his re-election will, whenever they have the opportunity, exert their influence and divide their time between the public service and the effort to secure their chief's renomination and re-election.

It is difficult to prevent the whole Administration from losing a part of its effectiveness for the public good by this diversion to political effort for at least a year of the four of each Administration. Were this made impossible by law I can see no reason why the energy of the President and that of all his subordinates might not be directed rather to making a great record of efficiency in the first and only term than in seeking a second term for that purpose. Four years is rather a short time in which to work out great governmental policies. Six years is better.

Another suggestion I would make is that legislative steps be taken, for there is nothing in the Constitution to forbid it, bringing more closely together the operation of the executive and legislative branches. The studied effort in which we maintain these branches rigidly separate is, I think, a mistake.

I would not add any more actual power to the Executive in legislative matters, nor would I give the legislative any more actual power in Executive matters. The veto on the one hand and the confirmation of appointments and the ratification of treaties on the other I would not change. But it does seem to me that they need not be at arm's length, as they now are under our present system.

It has been proposed twice in our history, after the fullest consideration by some of the wisest statesmen we have ever had, to pass a law giving to each department head a seat in the Senate and in the House, and a right to enter into the discussion of proposed legislation in either of the national legislative bodies.

This would keep Congress much better informed as to the actual conditions in the executive departments. It would keep the department heads on the *qui vive* with reference to their knowledge of their own departments and their ability to answer appropriate questions in respect to them. It would necessitate the appointment to the Cabinet of men used to debate and to defend their positions, and it would offer an opportunity for the public to judge of the Executive and his Government much more justly and much more quickly than under our present system.

The ignorance that Congress at times has of what is actually going on in the executive departments and the fact that hours of debate and pages of *The Congressional Record* might be avoided by the answer to a single question by a competent Cabinet officer on the flood of either house is frequently brought sharply to the attention of competent observers.

I think, too, it might perhaps promote the amenities between the two branches if this system were introduced. The rules of the two houses, as I am advised, forbid the use of abusive language by one member against another, and by a member of one house against the other house or its members. A somewhat close examination of the rules, however, of both houses does not show that there is any limitation upon the parliamentary character of the language which may be directed against the President.

As to him, the members pursue their own sweet will, and that sometimes leads them into language and epithetical description of the Chief Executive that could hardly be called complimentary. If members of the Cabinet were allowed the

floor, their very presence would suggest in the possibility of reply, moderation in discussing the Administration, which does not now at all times prevail.

The strongest reason for advocating this change, however, is that the influence that the Executive shall have in shaping legislation may be more in harmony with the responsibility that the people hold him to in respect to it. He is the head of the party that elected him, and as such, if Congress is controlled by the same political party, as it generally is, he is looked to to shape the Congressional policy and to secure the passage of the statutes which the party platform has promised. Now, with such a burden on him, he ought to have a greater means of bringing about what he wishes in the character of the legislation to be considered by Congress, and greater powers of persuasion to secure the adoption of such legislation than those which the mere right to send messages and the mere opportunity of personal consultation with leading members of the House and Senate give him.

I doubt not that the presence of able Cabinet officers on the floor of each house would give greater harmony of plan for the conduct of public business in both houses, and would secure much more valuable legislation in accordance with party plans than we have now. On the other hand, the system would enable Congress to come closer to the Executive, and pry more effectively into each act and compel a disclosure of the reasons justifying it immediately at the time of the act, and keep the public more quickly advised by the direct questions of hostile critics which must be answered, of the progress of business under Executive auspices.

Of course this is not the complete English system, because it does not give to the Cabinet the power to lead and control legislative action, as the British Government may in Parliament. But it combines so much of that which is valuable, and as it can be done by a mere act of Congress, I think it ought to be tried.

One of the results of my observation in the Presidency is that the position is not a place to be enjoyed by a sensitive man. Laurence Sterne said that "The Lord tempers the wind to the shorn lamb." The experience in the Presidency toughens the hide of the occupant so as to enable him to resist the stings of criticism directed against him from the time he takes office until he lays it down.

I don't know that this evil has been any greater in this administration than in a previous administration. All I know is that it was my first experience and that it seemed to me as if I had been more greatly tried than most Presidents by such methods.

The result in some respects is unfortunate in that after one or two efforts to meet the unfounded accusations, despair in the matter leads to indifference and perhaps to an indifference toward both just and unjust criticism. This condition helps the comfort of the patient, but I doubt if it makes him a better President.

Of course the reassuring formula that history will right one and will give one his just meed of praise is consolatory, but it is not altogether satisfactory, because the thought suggests itself that the time for remedying the injustice may be postponed until one is gathered to his fathers, and when he is not then particularly interested in earthly history or mundane affairs.

I think the period for successful muckraking is gradually drawing to a close. I hope so. The evil of the cruel injustice that has been done to many public men in this regard will certainly show itself in the future, and we must consider that the ebullition in muckraking literature is only one of the temporary excesses of the times, which is curing itself by tiring those whose patronage formed the motive for its beginning and rise.

In so far as those criticisms are just, of course they ought not to be avoided. In so far as they are based on facts, whether they are just or unjust, they must be taken at their value upon the consideration of the facts. But the query arises in respect to those criticisms and attacks that are made without the slightest reference to the facts, and merely for the purpose of invoking popular opposition and distrust, and with the hope that by constant repetition they can escape any possible refutation.

The Presidency is a great office to hold. It is a great honor, and it is sur-

rounded with much that makes it full of pleasure and enjoyment for the occupant in spite of its heavy responsibilities and the shining mark that it presents for misrepresentation and false attack.

I consider that the President of the United States is well paid. The salary by no means measures the contribution to his means of living which the generosity of Congress has afforded, and unless it is the policy of Congress to enable him in his four years to save enough money to live in adequate dignity and comfort thereafter, then the salary is all that it ought to be.

Of course, the great and really the only lasting satisfaction that one can have in the administration of the great office of President is the thought that one has done something permanently useful to his fellow countrymen. The mere enjoyment of the tinsel of office is ephemeral, and unless one can fix one's memory on real progress made thru the exercise of Presidential power, there is little real pleasure in the contemplation of the holding of that or any other office, however great its power or dignity or high its position in the minds of men.

I beg you to believe that in spite of the very emphatic verdict by which I leave the office I cherish only the deepest gratitude to the American people for having given me the honor of having held the office, and I sincerely hope, in looking back over what has been done, that there is enough of progress made to warrant me in the belief that real good has been accomplished even tho I regret that it has not been greater.

My chief regret is my failure to secure from the Senate the ratification of the general arbitration treaties with France and Great Britain. I am sure they would have been great steps toward general world peace. What has actually been done I hope has helped the cause of peace, but ratification would have been a concrete and substantial step. I do not despair of ultimate success. We must hope and work on.

The sustained mental work in the Presidential office is not, I think, so great as is generally supposed. The nervous strain is greater. As it should be, the President has a great many assistants to furnish him data and actually to prepare his letters and his official communications. If he is careful, of course, he corrects and changes these enough to put his own personality into them. His time is very much taken up with social functions, state and otherwise. This is inevitable with the affairs of state, and his actual time for real hard intellectual work is limited. That part of his time which is taken up with the smaller patronage of the office, that is, I mean the local patronage, the postmasters and collectors, is, in my judgment, wasted, and ought to be removed by putting all the local offices in the classified civil service system, so that it shall be automatic in its operation and the President may not be bothered, and the Congressmen and Senators may not be bothered with that which is supposed to aid politically, but which in the end always operates as a burden to the person upon whom its use is thrust.

I observe that the question of how receptions are to be accorded to those who have business at the White House is now under consideration, and I have been considerably amused at the suggestion that it would be possible to do the public business in the presence of everybody, so that all who are interested might draw near to the Executive Office and stand and see and hear the communications from those who enjoy appointed consultations with the head of the nation.

This matter is always the subject of consideration at the beginning of each Administration, and it always settles down to an arrangement which satisfies few people, but which allows those who have the most important business generally to have the easiest and longest access to the President. A President has just so much time to see people, and if the number of people is very great, as it always is at the beginning of an Administration, the amount of time he can give to each is very limited. No matter what is done, it will be certain that somebody's toes are stept on, and when I am asked what is the proper way of arranging receptions of people under conditions which exist, I am forced to tell the story of the gentleman who lived on "Sascatchequarle" Creek. He was asked how he spelled the name of the creek, and he said, "Some spells it one

way and some spells it another, but in my judgment there are no correct way of spelling it."

And now, my friends, I come to the final question which is of immediate moment to me, and in respect to which I observe some discussion and comment and suggestion in the press of the day. "What are we to do with our ex-Presidents?"

I am not sure Dr. Osler's method of dealing with elderly men would not properly usefully apply to the treatment of ex-Presidents. The proper and scientific administration of a dose of chloroform or of the fruit of the lotos tree and the reduction of the flesh of the thus quietly departed to ashes in a funeral pyre to satisfy the wishes of the friends and the families might make a fitting end to the life of one who had held the highest office and at the same time would secure the country from the troublesome fear that the occupant could ever come back.

His record would have been made by one term, and his demise in the honorable ceremony that I have suggested would relieve the country from the burden of thinking how he is to support himself and his family, would fix his place in history and enable the public to pass on to new men and new measures. I commend this method for consideration.

I observe that our friend, Mr. Bryan, proposes another method of disposing of our ex-Presidents. Mr. Bryan has not had exactly the experience of being a President. He has been a "near President" for three times, and possibly that qualifies him as an expert to speak of what we ought to do with our ex-Presidents. He has been very vigorous in this campaign in helping to make me an ex-President, and if I have followed with accuracy his public declarations and his private opinions he is anxious to perform the office of making my successor an ex-President after one term.

As a Warwick and as a maker of ex-Presidents, I think we should give great and respectful consideration to his suggestion. Instead of ending the ex-Presidential life by chloroform or lotos eating, he proposes that it should expire under the anesthetic effect of the debates of the Senate. He proposes that ex-Presidents should be confined to the business of sitting in the Senate and listening to the discussions in that body. We may assume that he proposes that the ex-Presidents shall share the burden of the Vice-President as he listens to the soliloquies which the various members of that body pour into *The Congressional Record,* while the remainder of the Senators are engaged in more entertaining and less somnolent occupation.

The ex-Presidents are to have seats in the Senate and join in the discussion, but not to vote. Why Mr. Bryan should think it necessary to add to the discussion in the Senate the lucubrations of ex-Presidents, I am at a loss to say. I can not conceive of any reform in the Senate which does not lead to a limit in their debate.

For many reasons I object to Mr. Bryan's disposition of ex-Presidents. If I must go and disappear into oblivion, I prefer to go by the chloroform or lotos method. It's pleasanter, and it's less drawn out.

But, my friends, I have occupied your time too long in my cursory remarks, the subject of which at times may have seemed too sober and grave for lotos eaters, but as the office of the Presidency is still in my keeping, and as the thought of parting with it is perhaps the most prominent one that figures in my mind, I have ventured to discuss it in accents both grave and gay. I wish to express deep gratitude to you for the honor which you have done me in making me your guest tonight, and I close with a sentiment and a toast to which I most sincerely and cordially ask your unanimous acclaim:

"Health and success to the able, distinguished, and patriotic gentleman who is to be THE NEXT PRESIDENT OF THE UNITED STATES!"

The Independent

Entered at New York Post Office as Second Class Matter. Owned and published by The Independent Weekly, Incorporated, at 130 Fulton Street, New York, N. Y. Hamilton Holt, President; Frederic E. Dickinson, Secretary and Treasurer.

A WEEKLY MAGAZINE FOUNDED IN 1848

One Year, $3.00 Single Copies, 10 Cents

Single copies over six months old, 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as those offered by any responsible agency.

An order for the change of an address should be received two weeks before the change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of the publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Binders holding in book form thirteen current issues will be furnished for 45 cents. If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We welcome unsolicited contributions, but writers who wish their articles returned, if not accepted, should send a stamped and addressed envelope. Even so, we cannot hold ourselves responsible for their return. Authors should preserve copies of their manuscripts.

Advertising rates will be furnished on application.

The Republican Party

ADDITIONAL returns cause but little change in the original estimates of the popular vote. It appears that the votes cast were distributed about as follows: Wilson, 6,450,000; Roosevelt, 4,200,000; Taft, 3,500,000. Here is a total of 14,150,000. The total in 1908 was 14,088,000, but that included the votes cast by the Socialist and Prohibitionist parties. Those who say that this year's popular vote is practically equal to that of four years ago, and infer that many must have refrained from voting, fail to make allowance for a Socialist gain this year of 400,000 or 500,000. The early estimates have taken into account only the votes cast for the three leading candidates. It is to be noticed, as we have said heretofore, that Mr. Wilson's total scarcely exceeds Mr. Bryan's in 1908, which was 6,409,000. In none of the published estimates is it more than 6,500,000. The combined Taft and Roosevelt vote is larger by 1,250,000, and such a combination would have been successful in States giving nearly 100 more electoral votes than are required for a majority.

The 4,200,000 and the 3,500,000 could not have been brought together under Mr. Taft or Mr. Roosevelt. Are these two great bodies of voters to remain separated? There is nothing in the attitude of their leaders, or of many of the rank and file, at present, that points to reconciliation and union. There can be no union under Mr. Roosevelt's leadership. If he should withdraw from the field of militant politics, a union might take place, on a platform including a considerable part of the platform of his new party. But he does not intend to withdraw. Already his friends have nominated him for President in 1916. It seems to us that if they should obtain control of the old organization and name him in that year, he would be defeated.

"It behooves us, as Republicans," says Mr. Taft, "to look forward to the time when, in the natural course of events, the Democrats shall have disappointed the public, and to be ready to prevent that disappointment from being used by the Bull Moose and Socialist combination to get into power." In our judgment, this is not the sole duty of the Republican party. It is true that the Democrats are menaced by their extraordinary majority in the House. In April next there is to be a special session, mainly for a revision of the tariff. Mr. Henry, chairman of the powerful Committee on Rules, adds to the program the enactment of an income tax bill, heavier penalties for violation of the Sherman act, and "revision of the financial system and laws along Democratic lines." A great many of our people expect that the cost of living will be reduced by Democratic legislation. If they should be disappointed, and they may be, the party and its leaders will suffer in public estimation. But the Republican party, or those who are at the head of what is left of it, should not be content to await the partial failure of Democratic legislation. Its leaders should strive now, and continually strive, to reclaim those who have gone away. They should broaden their party's policy, adopting such parts of the Progressive party's program as can be accepted by a great majority, and seek to satisfy the seceding good men that the old party's aim is not less philanthropic and just than that of the new one. What the old party needs now is new leaders, or one new commanding voice. Old leaders have failed to read the signs of

the times and to measure public sentiment correctly. It is not necessary that new leaders should accept certain propositions that the old ones have justly condemned, but continued disapproval of these would not prevent the adoption of much that can be heartily approved, and much to which sufficient recognition and support have not been given.

Shall We Drop the Philippines?

A QUESTION of the very first importance will be brought before the next Congress, that of the fate of the Philippine Islands. It is certainly not second to the reduction of the tariff. We have more than once called attention to the fact that the Democratic party is pledged by its platform to give complete independence to the islands. It is true that the voters gave little attention to this matter and cannot be said to have given a mandate upon it; and yet the presumption is that the Philippines will be made an independent nation, under such guarantees as may seem to excuse this action. We would now call attention to one or two considerations out of many.

The cruelty of our leaving the Philippines is suggested by facts given in *The Journal of Race Development* by Dr. V. G. Heiser, Director of Health for the Philippine Islands. Since the Philippine question is somewhat more to the front, it is but just that the American people should know the leading results of American occupation during the past decade.

The sanitary situation in the islands when American administration actually began is summarized by Dr. Heiser. "Forty thousand persons were dying annually from smallpox." "Five thousand deaths occurred annually from beriberi." "More than five thousand lepers were at large thruout the Philippine Islands." "There was no pure food law and the vilest class of food products were shipped into the country without let or hindrance." "There was no hospital in the entire islands which had modern surgical equipment, and persons died on every hand of disease which could have been easily relieved by very simple medical procedures." "There was no governmental provision for the insane, and it was no uncommon sight to see these unfortunates tied to a stake under a house or in a yard, with a dog chain." "With the exception of a system of polluted water for Manila there was not a reservoir, pipe line or artesian well in the entire archipelago." "The capital, Manila, had no sewer system."

This was the situation ten years ago, and the efforts of American sanitarians were ridiculed by the foreign medical men of the East, who pointed out that it was customary to safeguard the health of the Europeans, but that the wisest policy was to let the masses of the Orientals live as they would.

Today smallpox has almost entirely disappeared in civilized sections. American vaccination is saving at least thirty thousand lives a year. The new water system in Manila is now saving eight hundred additional lives a year in that city. Artesian wells introduced in the country districts have reduced the average death rate by one-half; in some cases the rate has dropped 50 per thousand, saving many thousands of lives a year in the islands on this score alone. Beriberi is fast disappearing. Lepers are segregated. New cases have been reduced 50 per cent. "Bubonic plague has been completely extirpated, and no cases have occurred since April, 1906. Cholera has been absent now for nearly a year." "A modern insane hospital has been constructed in Manila. A large general hospital has likewise been constructed, unquestionably the most modern and best equipt in the Eastern hemisphere." "A campaign against tuberculosis has been organized; camps for the treatment of incipient cases have been constructed at various places and many dispensaries opened."

The American sanitation experts are now leading the whole Far East. During the past four years representatives from practically every country in the Orient have visited the islands to study the methods by which these results have been obtained. No missionaries of religion have ever worked with greater zeal or withstood greater dangers than the American sanitation experts in the Philippines.

These are but the more striking results achieved under American admin-

istration of the islands. The Filipinos never would have inaugurated this work, for they opposed it when it was introduced. They could not carry it along unaided today, for they have not sufficient trained men, even if they have the desire to do so.

We may assume at the start that the guiding principle of the hierarchy will be what effect will Filipino independence have on the well being of the Roman Catholic Church in the Philippines.

Since the occupation of the Philippines an American archbishop has been appointed to the see of Manila and several American bishops have been chosen for other sees in the islands. Catholic priests from this country are also engaged in educational and ministerial work there. Two are now here collecting money for their schools. It seems to be the general opinion of these men that the only hope of bettering the condition of the Roman Catholic Church in the Philippines lies in having a good leaven of bishops and priests from this country to work in these islands. They describe the present generation of Spanish and native priests as inert and inactive and wholly incapable of rising to the emergency and stirring up the Filipinos to the zealous practice of their religion. One has but to skim over Senate Document 190, Fifty-sixth Congress, to learn the sad facts.

If the United States flag is to be hauled down in the Philippines it would be likely that the inflow of priests and bishops from this country would cease. If a Filipino republic were to be inaugurated it is not improbable that the influence of the Katipunan Society would predominate and be quite hostile to the Catholic Church, procuring the enactment of laws that would hamper the free exercise of the Roman Catholic religion. Or if Japan were to step in and assume sovereignty over the Philippines, bishops and priests from this country would not enjoy the influence and prestige which they now possess. It will be clear from this that independence would not make for the well being of the Roman Catholic Church there.

Of course there are many things connected with United States sovereignty which the Catholic hierarchy does not approve, and particularly the secular education in the public schools, which, in the view of the hierarchy, is bad for the Philippine Catholics. Still they must realize that the action of other religious bodies and organizations there has roused both bishops and priests to greater activity in stirring up the Filipinos to the practice of their religion.

It appears likely that the influence of the Catholic hierarchy, if there is to be any, will be exerted in favor of not hauling down the United States flag in the Philippine Islands, and thus leaving the inhabitants of the islands to their own devices. The Catholic Church is nowhere less hampered or better protected than it is under the equal government of the United States.

Hetch-Hetchy

Four years ago San Francisco's camel was in spite of much protest allowed to thrust its muzzle into Yosemite National Park. Many held that it would be only a short time before its head would be followed by the uncouth body. Their worst fears are being realized. Our readers will remember that the Garfield grant contained a clause which required the city to develop the Lake Eleanor system to its utmost capacity before entering Hetch-Hetchy.

Following an investigation of the Geological Survey, which reported the Lake Eleanor system as alone sufficient to provide for the population of the Bay cities, the Interior Department called upon San Francisco to show cause why the part of the permit relating to Hetch-Hetchy should not be at once revoked. Upon the city's request two extensions of time were granted for a study of different sources, and an advisory board of army engineers was appointed to make an independent investigation and to pass upon the engineering features of the city's report. The latter is out now, and its demands are amazing!

It frankly abandons all earlier claims that there are no adequate alternative sources. More than a dozen of these are shown to be available. It is purely on the ground of relative cheapness that the Secretary of the Interior is asked to sanction the immediate destruction of

Hetch-Hetchy and the sanitary segregation of nearly half of Yosemite Park. Hetch-Hetchy water, argues the city's highly paid advocate, is soft and would save annually a handsome outlay for soap. Free electric power amounting to two hundred thousand horse-power, would help to build the system and reduce the taxes. Even the wonderful Wapama Falls are to be harnessed with surge-shafts for the benefit of San Francisco. Free building materials from park lands are demanded, and title to extensive grants of public lands. Poopenaut and other beautiful valleys are to be held in reserve for future extensions of San Francisco's system. These amazing demands could not be made more unblushingly if Yosemite National Park had been established expressly for San Francisco's private use.

Will it be necessary to exclude recreation seekers from the watershed? The city's engineer advocate says no, and appeals by way of illustration to the "simple rules" governing an alleged satisfactory double use of the water supply areas of Seattle and Portland, Ore. But the truth is that both cities absolutely exclude all persons from their watersheds under severe penalties. Nine years after the Bull Run reservation was established for the water supply of Portland the city applied to Congress and secured the passage of a Federal statute providing five hundred dollars fine for any one caught trespassing on the watershed, or even driving a domestic animal into it. This rule is simple enough, in all faith, but rather discouraging for future visitors to the Tuolumne Yosemite.

A specious argument is based upon long storage systems like those of New York and Boston where a limited roadway use of parts of the catchment area has been permitted under strict police supervision. But the report fails to state that bathing, boating, fishing, camping, and a variety of other indispensable natural uses of a national park are prohibited. Even those laxer rules, if applied to Yosemite, would end its use as a national playground.

The report is so evidently a piece of special pleading and so full of reckless and misleading statements that it merits criticism in no uncertain language. Fortunately Secretary Fisher is known to be deeply interested in our national parks and can be depended upon to resist such selfish schemes to appropriate them for the comparatively private uses of contiguous municipalities.

Surely the nation will not sit idly by while a municipality, that admits it can obtain water from a dozen other sources by paying a little more, converts to its own uses half of our finest national park. Engineers who have examined the report have pointed out that the cost of rival systems outside of the park has been systematically overestimated in order to make them appear more expensive. But even if it were a matter of greater cost, that would not constitute a reason weighty enough to excuse the invasion of a people's playground, and the destruction of one of its two greatest scenic features.

Only four years have elapsed since the city was given a contingent right to flood Hetch-Hetchy. It has done nothing since then to develop the Lake Eleanor system. Nevertheless it already asks to have the first grant modified so that it can appropriate the famous valley at once. Where will this end? No Secretary of the Interior can make rules which his successor cannot modify. Once secure in the possession of Hetch-Hetchy San Francisco can force the enactment of rules that will prevent pollution of the water and oust the public from its own park at the same time. Since no public necessity exists for inviting such a danger the city's advocates should be told to pack up their cheap soap and power arguments and as soon as they are outside of the park a strong padlock should be put on the gate and the key handed over to Congress.

The New York School Inquiry

THE article published in last week's INDEPENDENT in which Prof. E. C. Moore of Yale explained his action in regard to the investifiation of the New York school system by the Board of Estimate and Apportionment, attracted a great deal of attention. Several of the New York dailies quoted it at length and it was extensively commented upon elsewhere. The Board, which rejected Pro-

fessor Moore's report, has appointed Dr. Frank J. Goodnow, Professor of Administration Law at Columbia and Dr. Frederick C. Howe, author of "The City the Hope of Democracy," to make another investigation of the same subject, that is, the organization of the Board of Education and its relation to the city government.

In order that our readers may have both sides of this very interesting and complicated controversy, we have asked Mr. W. H. Allen of the Bureau of Municipal Research to reply to the charges made by Professor Moore and to explain briefly the position of the Board of Estimate and he has kindly furnished us with the following statement:

Among the significant facts regarding New York's School Inquiry which were omitted in Mr. Moore's article in last week's INDEPENDENT the following deserve emphasis:

1.—The purpose and the only purpose of the New York School Inquiry was to get facts, i. e., as stated by the Board of Estimate and Apportionment, October, 1910, to get "sufficient and satisfactory information in explanation of requests for appropriations."

2.—Opinions, allegations and charges unsupported by facts were never requested by anybody. New York could have gotten these for nothing without an inquiry. They are serviceable because for every outside distinguished educator New York City has ten distinguished educators whose mere unsupported opinion it would rather accept.

3.—The inquiry was to be conducted by a committee of three members of the Board of Estimate and Apportionment; the experts were to "assist it in the conduct of this inquiry."

4.—Mr. Moore is only one of several investigators who were asked and paid to get facts. Among the educational aspects to be inquired into were: Vocational training, efficiency of teaching, efficiency of supervision, part time, high schools, intermediate schools, compulsory attendance, visiting teachers, non-promotion, defective children, etc. Mr. Moore's subject was "organization and methods of the board of education and local school boards."

5.—"In order that the reports might have their full weight and effect which your committee has always desired for them," letters were addressed to the various specialists by the school inquiry committee, as reported to the Board of Estimate, October 31, 1912, requesting additional supporting facts or further explanatory matter. "Absolutely no change of conclusion or recommendation was requested of any one of the specialists. Facts where lacking were requested." (Page 1, School Inquiry Committee's statement.)

6.—Mr. Moore not only declined to produce facts as requested but told you last week that only "pseudo-questions," which have no bearing upon the subject of my instructions and are characterized by a degree of incoherence and confusion of thought approximating irrationality," had been asked him. He failed to tell you that the questions were like these:

Will you indicate some cases in which (as you say) the board has "tied the hands of its administrative staff"?

Will you quote charter provisions specifically to justify (your) statement that the superintendent has "no authority to guide and direct the schools whatever"?

Will you make clear what functions our New York school board is assuming to itself which you feel should be given to educational experts?

Will you give illustrations of "recommendations and suggestions which its own experts have made for the improvement of its work" and which (you say) it has not "sufficiently considered"?

Will you give illustrations of interference (which you allege) by local school boards in class work?

7.—The first set of questions I never saw and the second set of 223 were dictated not by me as Mr. Moore says, but by President Mitchel after reading Mr. Moore's report line for line, with the help of a digest furnished by three experienced school men with this bureau and his own examiner, Mr. B. G. Lewis.

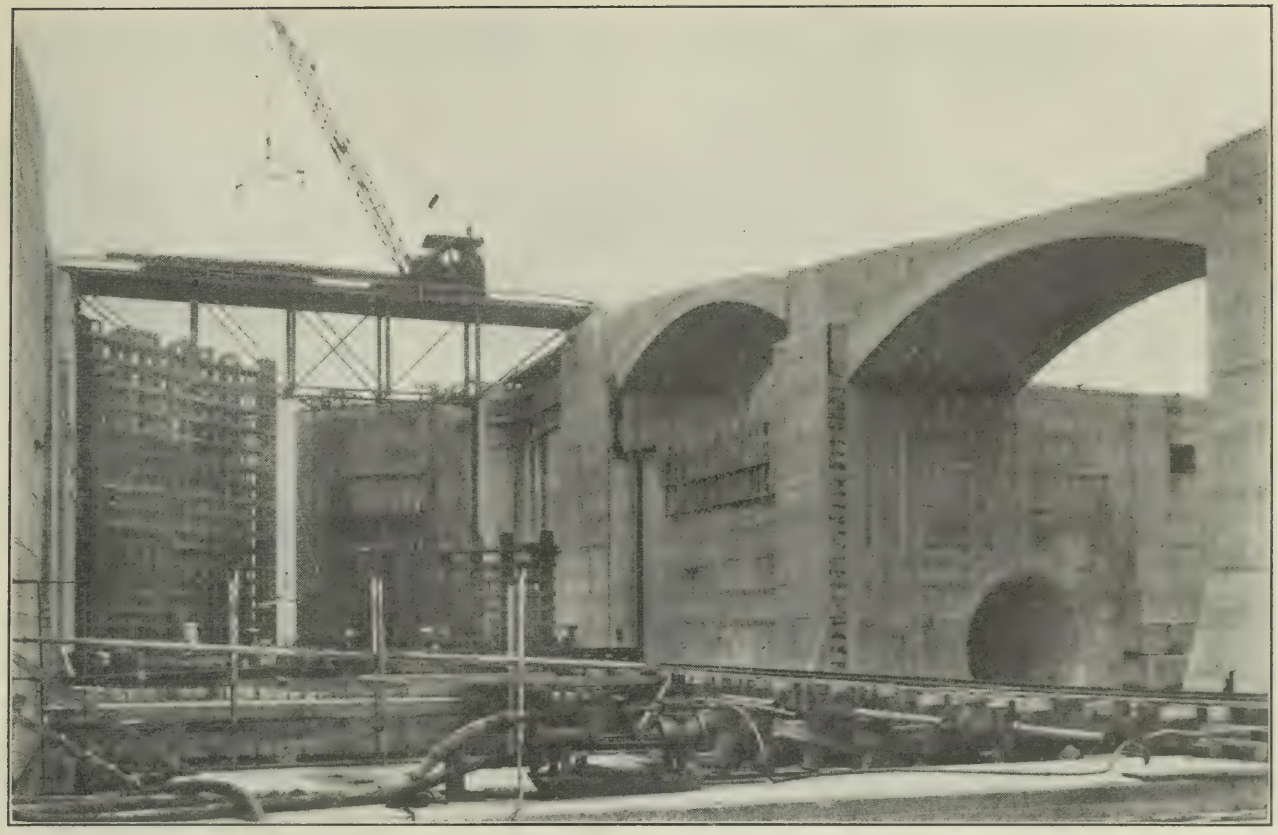
8.—The Board of Estimate did not refuse publicity to Mr. Moore's report. It merely said that it was unwilling to print it as a public document and to give currency and permanency to unsupported opinions which might injure the whole school inquiry and the New York schools.

9.—It was understood all last year that writers of reports would confer with the Board of Estimate regarding them before acceptance. For purposes of convenience galley proof was submitted first instead of manuscript. Mr. Moore was told in August that New York could not use his report unless he furnished the facts upon which he based his charges and recommendations.

10.—When asked by Professor Hanus what the effect would be of the committee's refusal to accept Mr. Moore's report Chairman Mitchel replied, "I think the chief effect would be to save Dr. Moore from conviction for inaccuracy, carelessness and reckless confusion as an investigator, and a lack of candor and fair dealing with his employer, the City of New York." Not becouse Mr. Moore's report was unpleasant, but because it was unfounded and could not be used to settle anything, did his employers reject it.

Any reader of THE INDEPENDENT who wishes information regarding the New York School Inquiry with its many lessons for every community will do well to address Honorable John Purroy Mitchel, chairman, 51 Chambers street, or the Bureau of Municipal Research, 261 Broadway. The latter private organization has spent over $600,000 in the last seven years upon increasing efficiency in the public business of New York and other cities. With what care it has worked, and with what results, is stated in its "Six Years of Municipal Research for Greater New York" (Price, 25 cents). In-

stead of "both publicly and privately endeavoring to discredit the report which Professor Hanus is making," as Mr. Moore told you, the Bureau of Municipal Research spent a great deal of time and a great deal of money last summer (while Mr. Moore was in Europe, by the way) doing everything it could to prevent the school inquiry from discrediting itself by making charges and allegations without facts to support them. Its trustees and directors believe that in insisting upon facts before accepting allegations, criticisms, charges and recommedations the New York Board of Estimate and Apportionment has done a service to the cause of education in the United States which will do more to help 20,000,000 school children than could millions of dollars spent thru educational foundations.

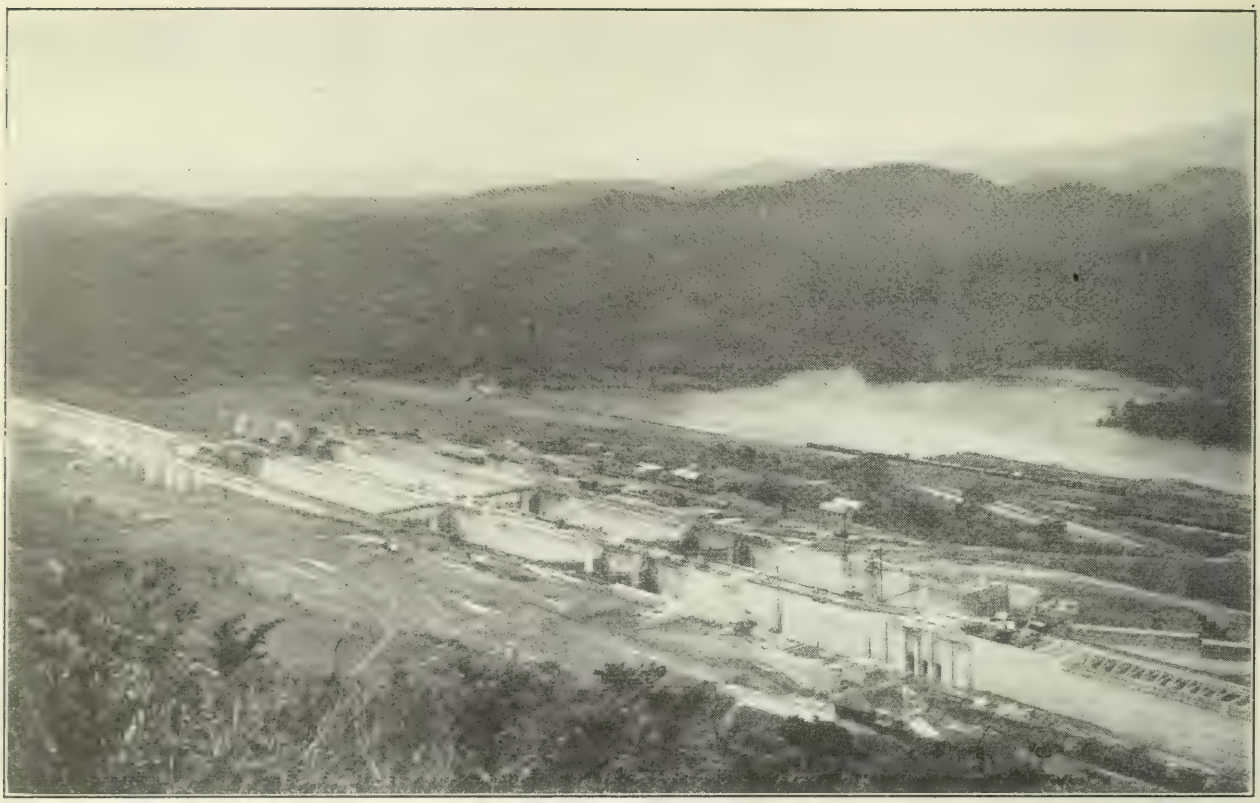


The Opening of Panama

It really begins to look as tho our dream is at last coming true, the world's dream of the four centuries since Balboa first fought his way thru the jungle and over the hills of Darien; the dream that sent Hudson into Hudson Bay to perish of cold and hunger, and Magellan thru the Straits of Magellan to be killed in the Philippines, and a host of gallant voyagers from many lands to sacrifice their lives in trying to find a direct waterway from the Atlantic to the Pacific. What Spain projected and France attempted the United States is actually accomplishing. But the dream is coming true, as is apt to be the case, in a very different way than was anticipated. We have given up the idea of finding a channel or of cutting a channel thru the barrier, and instead we are going to hoist the ships to the hight of an eight-story building and carry them over the land by water.

The four new photographs we present herewith show the fulfilment of the dreams. In one we see the mammoth monolithic chambers fit to receive the largest vessels afloat. In another we see the great gates, 77 feet high, already expectantly ajar. In a third we have a birdseye view showing in the foreground the double flight of locks and in the distance the chain of hills which form the connecting link between the Rockies on the north and the Andes on the south. And in the last the entrance to the Culebra cut, where the steam shovels have already touched bottom.

Another sign of approaching fulfilment of this world's desire is the proclamation by President Taft of the rate of tolls thru the canal. This looks like business. It encourages us to hope that at last we are to get some returns for our money, some dividends on the $375,000,000 that we have invested in this Panama project. Not so much of a return as we hoped, not so much as we might have had, if the last Congress had not tied the President's hands by that iniquitous measure granting a free pass to American vessels engaged in the coastwise trade. As we pointed out at the time, this is a surreptitious subsidy, virtually a rebate in perpetuity, granted by the Government at our expense, while the Government is doing its utmost to put a stop to the practice of rebating by the railroads. Those who favored the exemption of American shipping, even in violation of the Hay-Pauncefote treaty, argued that it would be possible to make the foreigner "pay the freight," but that is disproved in advance by the estimates of Emory R. Johnson, the traffic expert, upon whose advice the President has established the toll rates. In an article on "Panama Traffic and Tolls," contributed to The Independent August 15, Professor Johnson shows that an annual revenue of about $20,000,000 will be required to meet the stipulations stated by President Taft in his message to Congress, that "we ought to labor to secure from the canal tolls a sufficient amount to meet the debt which we have assumed and to pay the interest." This revenue, according to Professor Johnson's figures, might be expected to be attained at the end of the first decade at the rate established, $1.20 a ton, if all vessels, American and foreign, are charged tolls. But if American vessels are exempt, then the revenue will fall short by three or four million dollars a year. That is, the American people will have to pay out annually three or four million dollars to the financiers of divers races who have their money invested in ships plying between American ports.



But it is doubtful if we can come as near as this to making both ends meet. The President has acted in accordance with the good old rule and put on "all the traffic will bear," perhaps more. He matched the Suez tolls and came close to the maximum limit allowed by Congress,

PEDRO MIGUEL LOCK

$1.25 a ton. But, as Professor Johnson says: "It is more than probable that the Suez Canal Company will reduce its tolls below that rate within a few years." The Suez company could cut its tolls in half and still make a profit. To divert any considerable proportion of traffic from the Suez would require a substantial reduction in the Panama rates. That, however, we cannot afford to do, so Congress, by exempting the coastwise trade, has destroyed the hope of making both ends meet in the first decade and perhaps forever.

Now that we know approximately how much the canal is going to cost us it is interesting to turn back and see how much the experts said it was going to cost us. It will be remembered that in 1905 President Roosevelt called an international board of consulting engineers to pass upon the rival plans and that the majority of the board, including all the foreign and part of the American engineers, reported in favor of a sea level canal. President Roosevelt, however, acting upon the advice of Mr. Stevens, the chief engineer; Mr. Shonts, the chairman of the commission, and Mr. Taft, Secretary of War, rejected the majority report and decided upon a lock canal. Whether they were right in thinking that the lock plan had certain intrinsic advantages over the sea level it is not worth while to discuss now, for it will be put to the test of experiment within the coming year. But it is curious to observe that the chief argument advanced in favor of the lock plan was the saving in time and money. In the matter of time the promise has been more than made good. The commission said that a lock canal could be constructed in eight and a half years, and it is likely to be ready a year ahead of time, a surprising record for Government work. But it is otherwise with the money part of the proposition. The advocates of the lock canal said that it would cost $100,000,000 less than the sea level; it really will cost $40,000,000 more. They said that the annual expense of the lock canal after construction would be $2,340,000 less than for a sea level; it really will be from $7,000,000 to $10,000,000 more. We understand, of course, that a large part of this increase over the estimates is due to improvement in the conditions of labor and in the design of the canal. We do not question the wisdom of this increased expenditure, but would merely call attention to the fact that the lock canal has cost more than its advocates said that a sea level canal would cost and that one of the chief reasons for adopting the lock canal, that is, its cheaper construction and maintenance, is now seen to be an argument against it.

Three Poets

THE long time need of humanity finds its voice just now everywhere, and notably among the poets—most notably among the poets of the gentler sex, whose senses are keen, to whom idealism is native, and whose power of expression is taking on more than ever before the high forms of art. In lyric verse, in drama, and, recently, in the epic of the Miltonian hight and sublimity, many women have developed ability, but three in particular have, in late days, come to the fore, with imagination all compact, with intensity of feeling flashing out in shining words. There is no polish to be acquired from art that has not found itself a glad lender of charm to their verse. They express sanely, in lines beautifully feminine, the aspirations that are distinctively woman's aspirations, leading their own sex in a field where they have no successful competition from the band of master poets, and in that wider field, open to all whose genius is so often said to be peculiarly "virile," they are by no means behind the present masters of dynamic energy, of philosophic depth of thinking. They have sentiment without sentimentality. They have intensity—theirs since Sappho sang of the Greeks; idealization, the birthright of all women and of some men; constructive imagination, the fortunate gift of all master poets and of some women; restraint, the most difficult acquisition in the richly dowered gild of song; and they have not sacrificed to any of the heathen gods. They have not marched in the wild procession of the maenads. Yet a beautiful march of those who carry torches in the interest of womanhood they rightly lead, each in her own field of service.

Who better than Anna H. Branch (in

her "Nimrod") has jousted in the front ranks of the epic poets? Her spear is tipt with a metal not shaped for use in Milton's armory. Who better than Josephine Peabody Marks, in her last series of poems, "The Singing Man," has entered the field of labor with a bugle note as clean, clear, and sonorous as Lowell's or Whittier's, summoning the sisterhood of song to the ripening harvest? Who, like Edith Matilda Thomas, with finest touch, has past all the women singers of today in pure melody of verse, in soaring flight, where only the subtlest spirits can sustain themselves? Her maturest work is in the magazines of the last three years, not yet put into book form. Of such verse, evidencing a wide range of sympathy and power in a field where "knowledge absolute" is denied to the philosophers, and power efficient is to be found only among the master poets, like Wordsworth in "Tintern Abbey" and "The Cuckoo," Keats in "St. Agnes's Eve," and Shelley in "The Skylark." Two of Miss Thomas's recent magazine poems, "The Beloved—The Beautiful" and "Kasha and the Young Prince," surely place her with these creative singers in illuminative imagination, the subtle insight that reaches as near as may be the unattainable. Of her other verse we might instance "To Return," a poem of rare beauty, which pushes the sadness of our moan for the dying thru all our days up to the point where immortality becomes a necessary and permanent hope, the basis of a faith which renews itself as often as it is shattered by the colder reason. "The Overflow" and "The Fools' Paradise" again mark a high level, the latter very tender, exquisitely poetical and intense with feeling. A plea it is for a future in some uninvaded corner of Eternity for a postponed share in the joy and gladness here denied to those imperfect by reason of congenital defect, environment, neglect, or perhaps because of an uninvited incursion into the denser tangle of passion. Few tenderer pleas have ever been made in behalf of that unimproved talent that gets no happy investment in this world. "They Asked For the People's Highway" is another beautiful expression of sympathy with the unrest of the lower strata of toilers—beautiful for its pathetic appeal in behalf of such as are in bonds to labor and to locality at the same time, who are denied a fair share in the common inheritance of sunlight, an appeal that escapes the taint of an ill-digested socialism, a rational protest against the over-enlightened hog who so often in these days usurps the privileges of the trough. Over against this fine plea one may set "The Water of Dirce," a subtle interpretation of a mood of Epictetus. "Is the Marcian Water worse than that of Dirce?"—"But I was *used* to the Water of Dirce." What argument is there against such a refrain? These three poets may serve as typical of the singers at the front of the bright band of women who make hopeful the somewhat dark path of the world's progress beyond the frontier of the present.

President Taft's Recommendations

In his remarkable speech last Saturday night to the Lotos Club, published elsewhere in this issue, President Taft gave his support to the proposition that by an amendment to the Constitution the Presidency be limited to one term of six years, and that members of the Cabinet be allowed the right of discussion, but not votes, in both Houses of Congress. The latter of these we support heartily. It works admirably in the British Parliament. It cannot control Congress, but it would bring the administrative and legislative powers into touch with each other to the mutual advantage of both. At present if Congress needs to know about business the Administration has in hand, say a treaty or the necessity of proposed legislation, the chairman of a committee has a private talk with the President, and what the President said is told to his committee or to his associates in Congress; while under the proposed rule, which requires no amendment of the Constitution, the responsible representatives of the Administration in the Cabinet could address either House of Congress, or both, with no danger of being misunderstood, or he could be questioned freely. The other proposition, of a single six-year term, is of more questionable advantage, altho we appreciate President Taft's argument that it will give the President time to work out his policy, and will save him

the burden and confusion of trying to get re-elected. But it will not prevent his being equally interested to secure a successor who will please him. In his fine speech Mr. Taft tells us that his greatest regret is that he could not persuade the Senate to approve the arbitration treaties with France and Great Britain; but that will come yet, and must come. We are very glad he tells us that when the question comes of arbitration over the Panama tolls the Senate ought to give its consent. That President Taft, while disappointed, yet will leave office with good will to the coming administration, appears in the toast with which he ended his address:

"Health and success to the able, distinguished and patriotic gentleman who is to be the next President of the United States."

So say we all of us; and health and honor to the able, distinguished and patriotic gentleman who will on the 4th of March next retire to private life.

White Voters in South Carolina

In our issue of November 7 we said of Southern legislation intended to shut out negro votes:

"They have made no secret of it that these laws were designed to exclude colored people, and they did not care if they shut out also a million of poor whites. They have succeeded, as the returns show."

Our much respected contemporary, the Columbia, S. C., *State,* admits the purpose of these laws, but denies that one white man is shut out from the ballot:

"All the various suffrage restrictions, employed at various times and places in the Southern States, to prevent undue influence in the elections falling to the negroes, have been framed with special care to bar the least possible number of white men; and that, as a matter of fact, there is probably no Southern State in which any white man of voting age, not a lunatic or a felon, cannot obtain a registration certificate."

This may be true, if there are registrars who will register white men who cannot read, or have not paid their poll-tax, or fail of other conditions provided for the very purpose of shutting out voters; that is, if the registrars are perjurers. We have not forgotten the extensive opposition to these laws in Georgia on the ground that they would shut out such multitudes of white men. And they have done it in actual fact, as we showed. South Carolina has a white population double that of Montana, but its total vote was less than that of Montana. The operation of the suffrage laws has practically excluded some 70,000 white voters of South Carolina from the polls.

The Surgical Congress

Very few physicians are competent to perform a serious surgical operation. The main duty of the family physician is to attend to diseases, not to cases that require the knife. Yet the number of skilful surgeons is so large that 2600 attended the Clinical Congress of Surgeons of North America in this city last week. The chief direct advantage of this meeting was the opportunity given to see in the great hospitals of this city hundreds of operations by surgeons of the highest repute, who have themselves developed new ways of operation. The inspiration of such a meeting cannot be overestimated. Apart from this, a definite further advantage appears in the movement inaugurated to separate more definitely the office of a surgeon from that of the physician. It is proposed to establish a special college, or colleges, of surgery, with its post-graduate degree, to be added to that of Doctor of Medicine, much as in England there is the degree of F. R. C. S., Fellow of the Royal College of Surgeons. There has been in the last ten years a great advance in medical education, in the standardization of medical colleges, and the proposed college of surgery will be a further gain. During the session of the surgeons the Nobel prize was presented to Dr. Alexis Carrel, of the Rockefeller Institute of Medical Research, by the French Ambassador in the presence of the President of the United States in recognition of the extraordinary discoveries in the preservation of vitality in organs removed from the body and their transplantation.

Mysticism in Religion

Dr. Inge, Dean of St. Paul's, has lately been calling attention to the value of mysticism in religion, defending its reality and importance. Professor James, in this country, has been the chief late investigator in this field, gathering the experiences of religious feeling. Religion may rest on two sources, one the rational faculty, which finds reason to believe in God and

acts intelligently accordingly, whether in worship or service; and the other an internal experience which to one who has it brings evidence of God and spiritual verities and asks nothing better, for nothing better can there be. The danger is, that those who believe they have this mystical experience may be deceived by their own imaginations; but those who do not have these experiences should not be hasty to deny the validity in others of power of which they are incapable. Few of us are mystics. We should never require mystical experiences of others. If some people have the consciousness of the presence of God in prayer, and floods of joy and light come over them, it is their privilege, and those who do not have them can be just as religious under mere rational control. Feelings may be and are concomitants of religion, but religion rests in the will to serve God and man and to do right. It may be passionate and it may be phlegmatic, but it must be purposeful and controlling. The mystical power may be good for those who have it, but those who do not have it are just as well off.

Depopulation

The seriousness of what is called in France the problem of depopulation, and which we call race suicide, appears in the appointment of a large and notable French commission to make a careful study of it, with a view to legislation. It is composed of leading members of the Government, Senators, Deputies and Mayors of the principal cities of France. For many years there has been partial and fragmentary treatment of the subject, but the evil has now become so serious that it requires a more complete study. The commission will be divided into five sub-commissions. One of these will take in hand the simplification of the laws of marriage, the repression of infanticide, the propagation of neo-Malthusianism, and naturalization of immigrants. Another will consider the military side of the evil, its effect on recruiting the army, and in what way to maintain its strength. A third will investigate the social causes of depopulation, particularly infant mortality, the care of women before and after childbirth, the protection of the health of children, and particularly how "to combat alcoholism and one of its sad effects, tuberculosis," to organize insurance, to ameliorate the condition of places of residence and hygiene generally. A fourth sub-commission will consider what measures are needed on the financial side, to aid families having children, and to encourage childbirth, whether by tax relief or by direct aid in case of numerous families. The fifth sub-commission will take the investigations of the four others and coordinate them, and suggest the legislative action that will be needed to increase the population and to raise recruits for the defense of the country in case of war. In France the births do not keep pace with the deaths, and that is a very serious matter in a country which, unlike ours, is in constant dread of war and which saw its capital occupied by an enemy within the memory of middle-aged men. The United States is suffering from the same evil, which follows the discouragement of early marriage and the love of social ease.

"The Unspeakable Turk"

We dislike much to hear any race of men condemned and abused in the general mass, instead of as individuals. Such an expression as "the unspeakable Turk" is indiscriminating and unjust. Some Turks have done unspeakable things, but the general character of the Turks is not at all inhuman. Those who have had most to do with them find many of them likable and honest, and some of them intelligent and gentlemanly, such as would be a credit to any race. Under excitement the ignorant Turkish populace will do unspeakable things, but so will such classes among our own people, as we confess with shame. The main complaint to be made against them is that they seem to have lost the power of efficiency, whose loss brings dishonesty and governmental chaos in its train. They are shockingly bad rulers, and that is the reason why Bulgarians and Servians and Montenegrins and Greeks have combined to drive them out of Europe. They have got to go — bag and baggage, as William E. Gladstone declared September 9, 1876— 36 years ago:

"An old servant of the Crown and State, I entreat my countrymen, upon whom far more than perhaps any other people in Europe it depends, to require and to insist that our Gov-

ernment which has been working in one direction shall work in the other, and shall apply all its vigor to concur with the other States of Europe in obtaining the extinction of the Turkish executive power in Bulgaria. Let the Turks now carry away their abuses in the only possible manner, namely, by carrying off themselves. Their Zaptiehs and their Mudirs, their Bimbashis and their Yuzbashis, their Kaimakams and their Pashas, one and all, bag and baggage, shall, I hope, clear out from the province they have desolated and profaned."

That much was accomplished, the deliverance of Bulgaria, or, rather, of a portion of the larger Bulgaria. Now the Turk must go, bag and baggage, out of all European Turkey, except possibly the city of Constantinople; and if he stays there it will be under surveillance and control. Then Macedonia will spring up into peaceful prosperity like grass in April, as Bulgaria has developed since 1876. But alas for poor Asia Minor and Mesopotamia unless a regenerated Turkey learns how to rule with intelligent honesty and equal justice to all its people.

It is well to keep it in mind that the Federal Council of the Churches of Christ in America will meet in Chicago, December 4 to 9. From the standpoint of Christian unity it will be the most important meeting ever held in this country, always excepting the meeting at which this federation of the Protestant denominations was concerted. Of the Protestant Churches only a very few, such as the Southern Baptists and the Episcopalians, have not accepted it, and remain in what might be called a schismatic position; but one of these is ashamed of it and is trying to save its face by studying the question of a world-wide federation which it will take years to reach. The meeting in Chicago will devote special attention to those sociological subjects in which we are all so much interested now.

Wastefulness and self-indulgence do not befit those who are complaining of the rise in prices of meat and eggs. And yet the Commissioner of Internal Revenue reports that there were sold in the three months, from July 1 to October 1, in this country, more than 3,800,000,000 cigarets, or one billion more than in those months of the preceding year. At a cent apiece, and they average as much as that, the country is impoverished by $38,000,000 every three months, besides the physical deterioration of the smokers. But who cares for economy? Is the talk of high prices serious? And how about the nearly two billion cigars sold in the same months, again a new record, and the large increase in the consumption of beer and whisky?

In his delightful essay on "What English Poetry May Still Learn from Greek," in the *Atlantic Monthly*, Professor Gilbert Murray writes: "A poet should always remember that poetry excels prose threefold and fourfold in sheer boring power." This is said in praising the Aristotlean precept that a poem or tragedy should be εὐσύνοπτον or capable of being seen as a whole, and is good sense; but it reminds us for all that of a paragraph in Bacon's "Apothegms": "Mr. Savile was asked by my lord of Essex his opinion concerning poetry; who answered my lord: 'He thought them the best writers, next to those that write prose.'" We doubt not that there are more Saviles than Bacons today—as there ever have been.

Last year there came to this country 1,114,989 immigrants, and they each added wealth to the country. Under the old condition of slavery the infants of them were worth one or two hundred dollars each, and the adults from a thousand to five thousand dollars. At the average of a thousand dollars they were worth to us, as human laborers, $1,114,089,000, something worth considering. Besides their own intrinsic value they brought in $46,712,697 in cash. Yet there are those who would shut out the immigrants.

Two more New York Episcopal clergymen have embraced the Catholic faith. It is very natural; we do not wonder. They have followed a long line of their brethren. If they had learned to believe in the importance of ritual and the mystical virtue of the sacraments, the transfer of spiritual power by unbroken tactual succession, and the binding value of ecclesiastical authority, they ought to leave any Protestant body for the unquestioning Church of Rome.

Financial

New England Railroads

A SUDDEN suspension of work on the Grand Trunk's new railroad line between Palmer, Mass., and Providence has caused disappointment and protest in many parts of New England, notably in Providence and Boston. The Grand Trunk has procured charters not only for this road, but also for a road from Windsor, Vt., to Boston, and for lines to that city and Worcester from points on the road to Providence. All this involved formidable competition with what may fairly be called the monopoly of the New York and New Haven company, and this company was planning, it is said, retaliatory parallels of parts of the Grand Trunk system. It is now understood that the roads to Boston will not be built. The reason given at first for the suspension of work—an unsettled money market—appears to have been used to mislead the public. It is now admitted that there have been negotiations with the New Haven company, and the prevailing expectation is that a trackage and traffic agreement will soon be announced.

It seems to us that the public, and those who represent it in the executive and legislative branches of the Governments of Massachusetts and Rhode Island, have not been treated wisely or fairly by the railroad companies in this matter. The economic waste involved in costly railway parallels and sharp, even destructive, competition, should be avoided, but monopolies must submit to regulation in the public interest, must keep their promises, exprest or implied, and must cultivate the good will of the people if they desire to escape punishment. It is possible that the public interest will be served by such an agreement as is said to have been reached, but the companies should have sought to convince the public that such would be the effect of it. There was nothing to be gained by concealment or deceit or an arrogant disregard of the people. They control Legislatures, and in these days are in no mood to overlook discourtesy or, it may be, something worse.

The sharp disappointment of business interests in Boston, Providence and some other cities indicates that there was a great desire for competition. Was this desire due to a belief that the existing monopoly was unjust in its charges, unsatisfactory in its service and arrogant in its dealings with shippers? There are men who say it was. Those who direct the affairs of such a transportation company should be both just and conciliatory. In this way they can best serve the interests of their shareholders.

Exports of agricultural products in October exceeded those of any previous October, and were the largest for any month in the history of our foreign trade, December, 1910, excepted.

During the four years ending with June last, the banking resources of the country increased from $19,583,000,000 to $24,986,000,000. The increase of individual deposits was $4,239,000,000.

On October 1 there were registered in the United States 990,738 automobiles, 35,978 of which were trucks. The value of these automobiles is estimated to be $1,188,885,600, and the registration fees amounted to $5,229,459.

In the first completed dividend year since dissolution of the Standard Oil Company was ordered, the company and its subsidiaries have paid about 52 per cent. in dividends, against a high record of 48 per cent. in the past.

Reports from Pittsburgh say that rail orders for 140,000 tons were placed last week; that orders for as many tons more will probably be given this week, and that railway companies' orders for material and supplies of various kinds to be delivered in the first half of next year call for at least $300,000,000 worth of finished steel.

The Independent

VOL. LXXIII NEW YORK, THURSDAY, NOVEMBER 28, 1912 No. 3339

Survey of the World

National Politics

A court decision concerning the votes cast in thirty precincts of Los Angeles probably gives the State of California to Wilson by about 150, but the Roosevelt party's demand for a recount in several counties leaves the final result in doubt.——At the end of last week, the official count in Michigan, with three precincts not yet included, showed that the woman suffrage amendment had been lost by 447 votes.——In New Orleans, a grand jury has indicted Arthur H. Brown, United States Commissioner, and nineteen other men for false and fraudulent certification of the vote. There is much evidence of a miscount. ——In Steubenville, Ohio, a grand jury is inquiring concerning charges that the result was affected by wholesale bribery of voters.——The Roosevelt Progressive party will open permanent headquarters at Washington on January 1. At a conference of the New York leaders of the party, last week, Mr. Roosevelt earnestly advised against any fusion or coalition with voters or representatives of other parties, in legislatures or elsewhere. The members of the party should stand by themselves, he said. A resolution was past, providing that there should be no union or coalition or co-operation by the State party or any local organization without the consent or approval of the State committee. Mr. Roosevelt's policy is opposed by many, and notably by Comptroller Prendergast, who says it is suicidal. He and others agreeing with him desire to enter into a coalition or fusion against Tammany in New York City.——The committee of physicians appointed to examine John Schrank, who shot Mr. Roosevelt, reported that he was insane. Therefore he was sent to an asylum. He sharply resented the decision. To the committee he made a long address, part of which was as follows:

"The shot at Milwaukee, which created an echo in all parts of the world, was not a shot fired at the citizen Roosevelt, not a shot at an ex-President, not a shot at the candidate of a so-called Progressive party, not a shot to influence the pending election, not a shot to gain for me notoriety. No; it was simply to once and forever establish the fact that any man who hereafter aspires to a third Presidential term will do so at the risk of his life. If I cannot defend tradition, if I cannot defend the country in case of war, you may as well send every patriot to prison. If I knew that my death would have made the third term tradition more sacred, I am sorry I could not die for my country. Prison for me is like going to war."

Washington Notes

The first legislative business before the Senate at the opening of the coming session will be the Cummins joint resolution providing for the submission to the States of a constitutional amendment making the Presidential term six years, with no re-election. It has been reported favorably in the Senate and the House.——There are signs of some disagreement on the Democratic side concerning tariff legislation at the special session. Speaker Clark would have the entire tariff revised, with a separate bill for each schedule. Senator O'Gorman says the session's work should not be limited to the tariff. He thinks the currency question will be taken up. It is expected that Mr. Gore, the blind Senator from Oklahoma, will be the Democratic leader of the Senate. He was recently entertained at luncheon in New York by prominent bankers, with whom he discussed the currency question. There is some talk of repealing the corporation tax law and enacting a law for an income tax, as it is expected that the

approval of the two additional States required for the income tax amendment will be given before April next. The Pujo Money Trust Committee will resume its hearings on December 9. Leading financiers will be asked to testify. E. H. Farrar, of New Orleans, associated with Samuel Untermyer as counsel for the committee, has resigned, "owing to complications and exigencies which have arisen" in his "professional affairs." In his letter of resignation he asserts that a financial ring in New York "created" the panic of 1907. The committee is not entirely harmonious.——Secretary MacVeagh asked for the resignation of G. C. Bantz, Assistant Treasurer, because the latter was not in sympathy with his policy. Mr. Bantz had been in the Treasury Department forty years. The resignation of Treasurer McClung has been followed by the appointment of Carmi A. Thompson in his place.——Theodore Marburg, a prominent resident of Baltimore, has been appointed Minister to Belgium. Mr. Marburg, president of the Maryland Peace Society, was chairman of the executive committee of the American Peace Congress in 1911, is a trustee of Johns Hopkins University, is widely known as an advocate of international peace, and is the author of several books on political and international questions.——An attack upon the constitutionality of the new press law was begun, in the Supreme Court, last week, by counsel for the New York *Journal of Commerce*.——The Post Office Department shows that if the mail matter franked last year for the departments and members of Congress had been carried at the usual rates the receipts from this source would have been nearly $20,000,000, and $3,200,000 of this would have been paid for political documents.

Trust Cases By unanimous vote, the Supreme Court has sustained the judgment of the lower court in Maryland against what is called the Bathtub Trust. There are fifty defendants, and sixteen of them are corporations. They were held together in a combination by means of license agreements based upon a patented article used in the manufacture of sanitary enameled iron ware. This patent was used to exact from manufacturers contracts in which they bound themselves to buy from no one outside of the combination and to observe a fixed schedule of prices. The decision is regarded as one of much importance in its bearing upon the use of patents to create a monopoly of the goods produced by the use of patented devices. Criminal suits against several of the defendants will now be taken up for a retrial. At the first trial of these there was a jury disagreement.——The trial of the Government's suit against the National Cash Register Company was begun in Cincinnati, on the 19th.——In the suit against steamship companies engaged in trade between our Atlantic ports and the Far East, ten of the companies filed their answers last week.——Members of the Railroad Commissions of Massachusetts and Rhode Island were told, on the 19th, by Mr. Wickersham, that the Government would proceed against the Grand Trunk and the New Haven railroad companies, under the Sherman act, owing to the suspension of work on the Grand Trunk's projected new roads in New England, due, it was said, to a traffic agreement. Officers and directors (J. Pierpont Morgan included) were summoned to appear before a grand jury in New York. On the following day these proceedings were suspended by Mr. Wickersham, in order, he said, that a search for the facts might be made in the New Haven Company's books, which had been opened to him. It is understood that he sought to avoid granting immunity by taking the testimony of the officers. It is said that a traffic agreement for a period of twenty-five years has been submitted by the New Haven Company to the Grand Trunk, but has not yet been accepted.

Railroad Engineers' Wages The board of arbitrators appointed to settle the wage controversy which arose in January last between 30,000 locomotive engineers and fifty-two railroad companies whose lines are in the Eastern States, has published a report, granting a part of the increase demanded and recommending that provision be made for a settlement of such disputes by means of Federal or State

wage commissions having powers like those of the Interstate Commerce Commission. This is virtually a recommendation for compulsory arbitration. President Daniel Willard, of the Baltimore & Ohio, was at first chosen as arbitrator for the companies and P. H. Morrissey as arbitrator for the engineers. Chief Justice White then appointed Oscar S. Straus, of New York; Dr. Charles R Van Hise, of Wisconsin; Albert Shaw, of New York; Frederick N. Judson, of St. Louis, and Otto M. Eidlitz, of New York. These five sign the report unconditionally, Mr. Willard assents, and Mr. Morrissey files a minority report of dissent, holding that the proposed arbitration by means of Federal or State commissions is "wholly impracticable." The decision dates back to May 1, and is binding for only one year. It may then be terminated on one month's notice. Mr. Morrissey says the settlement can only be temporary. The engineers' original demands, if granted, would have increased wage payments by a little more than $7,000,000. It is estimated that the increases granted will amount to about $5,000,000. The addition for the large companies is slight. For example, on the New Haven Company's lines it is about 2 per cent. But on the small roads, where wages are now lower, the percentage of increase is large. The arbitrators recommend that settlement be made by means of commissions because, they say, the interests of the public, when menaced by a great railroad strike, with all the hardships and suffering involved, far exceed those of the parties to the controversy.

Cuba and Other Islands

Dispatches from Havana say there is a growing disposition in all parts of the island to accept the result of the recent election as an honest expression of the majority's will. President Gomez is not seeking to embarrass his successor, but has shown a desire to aid him. General Menocal, when he takes office, will have the support of fourteen of the twenty-four Senators and of a good working majority in the House. He will have the counsel of Cuba's most distinguished men.——A newspaper in Havana, *La Opinion*, regarded as the organ of Vice-President Zayas, the defeated candidate for the Presidency, says that General Monteagudo, commander of the army, had planned to assassinate Dr. Zayas on election night, if the returns had shown his election. Three sharpshooters, it is asserted, were to do the work.——The National Railways of Cuba, a company which was incorporated in Delaware last week, with a capital of $20,000,000, will build 250 miles of road in the provinces of Camaguey and Santa Clara. The company's president is Roland R. Conklin, a New York banker.——A very severe hurricane, beginning on the 15th and continuing for five days, caused much loss in western Jamaica. About 100 persons were killed. A great tidal wave ruined the towns of Lucea and Savanna la Mar. A coasting vessel was carried by the wave half a mile inland. At Montego Bay, forty-two were killed. Wharves were destroyed and banana and sugar plantations greatly injured. The loss is about $1,500,000.——In Santo Domingo there is to be a special session of Congress, beginning on the 26th. President Victoria will resign and his successor will be elected. The rebels have recently been gaining, but a cessation of hostilities has been ordered.——There has been published the following extract from a letter sent by Speaker Clark to a gentleman in California:

> "I fully agree with you that the Philippines should be given their independence, guaranteed by the United States and such other Powers as are willing to join us. If no other Powers are willing to join us, I think our guarantee would be sufficient; but I am for freeing them, regardless of what the other Powers do."

He adds a prediction that the Philippine independence bill will be passed in the House this coming winter.——There were eight fatal cases of plague at Iloilo in September, and one at Manila.

The Panama Canal

It is expected that at some time next summer or fall a vessel will pass thru the Panama Canal, carrying Colonel Goethals and his staff of engineers. He says in his annual report that the canal will be practically completed on July 1, 1913. To supply power for opening the lock gates and

valves and for moving the locomotives which will draw ships thru the locks, a great hydro-electric plant is being erected adjacent to the spillway of the Gatun dam. This plant will give light to 7,000 lamps at the locks. Appropriations thus far made, those for fortifications excluded, amount to $322,541,468.——Large deposits of petroleum have been discovered 178 miles from Panama City. In quality the oil is much superior to that of California. Three companies are negotiating for concessions.——In an address at the annual dinner of the New York Chamber of Commerce, on the 21st, Senator Elihu Root reviewed the history of the treaties relating to Panama and spoke of the recent legislation exempting our coastwise shipping from the canal tolls. "We have now approaching," said he, "a question which will test the willingness of the American people to be true to the ideals of self-government." It had been specified in the treaty with Great Britain that the ships of all nations were to have the same treatment. He continued:

"Our Congress past a law which gives free transit to American ships engaged in coastwise trade while passing between our Atlantic coast and our Pacific coast, while tolls are to be imposed upon British ships passing between British ports on the Atlantic and British ports on the Pacific, and upon all other foreign ships. Now, Great Britain claims that this is a violation of the treaty which we made with her and in accordance with which by express provisions contained in our grant from Panama we were to build and open the canal. Congress takes a different view of the construction of the treaty, and it has past this law which Great Britain says violates it, and the question is now to come, What is to be done about it? We have a treaty with Great Britain under which we have agreed that all questions arising upon the interpretation of treaties shall be submitted to arbitration, and it seems hardly conceivable, yet there are men who say that we will never arbitrate the question of the construction of that treaty, and I say to you that if we refuse to arbitrate it we will be in the position of the merchant who is known to all the world to be false to his promises. (Applause and cheers.)

"With our nearly four thousand millions of foreign trade we will stand in the world of commerce as a merchant false to his word. Among all the people on this earth who hope for better days of righteousness and peace in the future we will stand in the light of our multitude of declarations for arbitration and peace discredited, dishonored hypocrites, with the fair name of America blackened, with the self-respect of Americans gone; with the influence of America for advance along the pathway of progress and civilization annulled, dishonored and disgraced. That question stands among us and no true American can fail to use his voice and his influence upon that question for his country's honor." (Applause.)

Central and South America

The Supreme Court of the Canal Zone has refused to order the release of General Mena, of Nicaragua, and his son. It says they are held by order of the President of the United States, who is acting within his constitutional authority. General Mena is in the Ancon Hospital. He and his son will be under guard until normal conditions in Nicaragua are restored. There are now only 400 American marines in Nicaragua.——Costa Rica's Government, desiring to improve the republic's educational system, has sent to this country Senor Brenes-Mosen, Assistant Secretary of Public Instruction, who will examine our schools, agricultural colleges and universities.——Vice-President Johnson, of the Bethlehem Steel Company, returned to New York last week from Chili, where the company obtained an order for several million dollars' worth of heavy ordnance, including fourteen guns, for coast defense, which will throw projectiles nine miles. These will be the most formidable coast defense guns in South America.——Next year the sixth Pan-American conference will be held in Lima, and, at the same time, the fifth Latin-American Medical Congress. Peru's Government is now organizing an International Exposition of Hygiene, to be held in connection with the Medical Congress, and by invitations widely circulated is asking for exhibits and drawings relating to water supplies, the treatment of sewage, the disposal of refuse, sanitary dwellings, etc.

Mexico

Madero decided, last week, to bring 3,000 soldiers from the north to the states of Puebla, Mexico, Guerrero and Oaxaca, in which the rebels were showing much strength. Several small towns in Oaxaca were destroyed by Federal artillery, in order that the rebels there might be imprest by the Government's power. Two of these towns were Ixtepegi and Zia. They were strongholds of the rebellious Serrano In-

dians. There was still need of troops in the north, for, on the 18th, the rebels there captured the customs entry port of Palomas, near Columbus, N. M., overcoming a garrison of 100 men, several of whom fled across the boundary. They also took possession of the Cedros ranch of 2,000,000 acres, owned by the International Rubber Company, in Zacatecas. Two bands of rebels in Chihuahua were attacked and beaten. The death of General Rojas was reported. He had looted many ranches and destroyed many railroad bridges. In Guanajuato, rebels wrecked and attacked a railway train. It was defended by twenty-four rural guards who were in the cars. The rebels were driven away. Four guards and two passengers were killed. In Chihuahua the rebels held William M. Fink, the American manager of a mining company, for a ransom of $5,000. Madero, at a banquet, denounced the press, saying that it was largely responsible for the ills of Mexico, that it caused disrespect for authority and encouraged the foes of the Government. New laws for the restraint of the press, he said, were needed. An earthquake, on the 18th, caused much loss of life. At Acambay, in the state of Mexico, more than 100 were killed. Many of these were women, who were attending mass in a church whose walls fell on them. The priests also were killed. No house in Acambay was left standing. Several villages were destroyed. Some estimates made the entire number of those killed more than 1,000. At the capital only three lives were lost. One of the victims was crushed by a railway car as he dropped on his knees to pray when the shock was felt. Water mains at the capital were broken and a few brick walls fell.

Checked at Tchataldja

The Tchataldja line of fortifications, constructed in 1877 for the purpose of protecting Constantinople against the Russians, is now serving the same purpose against the Bulgars. It consists of a chain of thirty redoubts and field works, extending across the Thracian peninsula, a distance of about 15 miles. Behind this shelter the retreating Turks have rallied, and now, reinforced by fresh recruits from Anatolia, they have in a measure regained their courage and are prepared to put up a stout resistance. At the beginning of last week the Bulgarian attack was hotly prest, as usual, both with artillery and bayonet, but after a few days the fire slackened and the Bulgars even withdrew from some of the outposts they had carried. The determining cause of this relaxation of effort is not clearly understood, tho several plausible reasons can be alleged to explain it. For one thing the Turks are now only 25 miles from their base of supplies at Constantinople, thru which they can draw the unlimited resources of Asia for men and food, while Bulgaria put almost all her able-bodied men into the field at the start, and has lost, some say, a quarter of them already. The ammunition and supplies for the Bulgarian army have to be brought from the frontier at Mustafa Pasha by the single line of railroad. So long as Adrianople holds out a large part of the Bulgarian army must be engaged there, but since Turkish armies in Macedonia have been crushed by the Serbs, a contingent of Servian troops has been sent to join the Bulgars at Tchataldja. The rumor last week that the Bulgars had outflanked the Tchataldja line to the north and reached Kilios, near the Bosphorus, was false. The Bulgars do not appear to have got beyond Lake Derkos on the north. [See detail map of Tchataldja in last week's INDEPENDENT.] On the south the Bulgars captured the railroad station of Tchataldja and directed their attack on the forts to the eastward. Their attempt to force the causeway at Bijuk Chekmeje (Buyuk Tchekmedche) was frustrated by the cross fire from Turkish warships in the bay. The cholera is still raging inside the Tchataldja lines and perhaps in the Bulgarian camp also. The mosque of St. Sofia is utilized as a hospital and 2,000 plague-stricken patients are quartered there. Ellis Ashmead-Bartlett, the correspondent of the London *Daily Telegraph,* who rode out to Hademkeui, the headquarters of the Turks at Tchataldja, paints a picture of the horrors of war that rivals Vereshchagin:

"I never actually entered that village, because the sights I saw from the outside caused me to turn my horse's head in the opposite

direction and filled me with a vague terror I had never known before.

"Three days ago I rode over the hills, intending to visit Hademkeui. I mounted the last slope which hid the valley in which it lies, and then I was brought to a standstill by the awful babel of sounds which arose beneath me.

"I looked more closely, and found I was gazing into a valley of the Shadow of Death. There was the station of Hademkeui, and a train was in the station. It was delayed by wretched specimens of sick humanity seeking to escape from the dread spectre.

"The train was leaving for Constantinople, and all who could crawl were endeavoring to secure a place on it, hoping thus to reach a haven of refuge. Some were wounded, some down with dysentery, others with enteric, others were feeling the first spasms of the scourge itself, others were merely sick at heart. Unable to stand longer the constant strain of waiting for their natural deaths, all were trying to escape.

"In the centre of Hademkeui lay a large square, formed on one side by some barracks, on two others by lines of white hospital tents, on the fourth by the high road. This square resembled a successful flypaper in midsummer —it was covered with corpses of dead and writhing bodies of living in all attitudes, some prone, some sitting, some kneeling, some constantly shifting, some with hands clasped as if in supplication.

"In some parts of the area dead were piled in heaps, in others those still living were almost as closely packed.

"This shocking lake of misery was being constantly fed by rivulets of stretcher-bearers bringing in fresh victims from the camps and forts, and by others who crawled in of their own accord, seeming to prefer to end their days in company with their fellow-men, or else expecting to find succor or release from their immediate torments.

"All of the tracks leading to this impromptu morgue were dotted with the bodies of those who had died on the road. From time to time empty bullock wagons would pass thru and the bodies of those in whom life was extinct would be dumped into them, carted out of the village, and thrown into great pits, where sleep thousands of poor Asiatic peasants.

"Hademkeui is the immediate prize for which the armies of two nations are now engaged in deadly struggle."

Peace Proposals

The most probable explanation of the cessation of the attack on Tchataldja is that the Bulgars expected an armistice and did not wish to sacrifice any more of their men in taking Constantinople, which they had no intention of keeping in any case. The Ottoman Government, thru the intermediary of the Russian Ambassador at Constantinople, asked for an armistice with a view to arranging terms of peace. The Balkan allies after consultation agreed on condition that the Turks surrender certain strongholds, including, it is said, Adrianople and Tchataldja, to the Bulgars, Skutari to the Montenegrins, Durazzo to the Serbs and Yanina to the Greeks. These terms, when communicated by General Savoff to Nazim Pasha at Hademkeui, were at once rejected as too onerous. If Bulgaria demands all this for an armistice what will she want for peace? was the natural query of the Sublime Porte. It is expected, however, that the Bulgarian terms will be modified somewhat rather than let slip this opportunity of concluding the war. A second conference in regard to the armistice is said to have taken place near the town of Tchataldja, at which Turkey was represented by the Commander in Chief, Nazim Pasha, General Hadi Pasha, and the Minister of Commerce, Rechid Pasha. General Savoff and two representatives of the Servians and Greeks constituted the delegation of the allies.——While there are good prospects of peace between Turkey and the Balkan States, the danger of the greater Powers becoming involved appears to be greater than ever. Austria, besides refusing to allow Servia a port on the Adriatic, has brought forward charges against Servia for abusing Austrian consuls in Macedonia. In particular it is alleged that the Austrian consulate at Prisrend was invaded by Servians, who murdered the Albanian women and children who had taken refuge there, and that the consul, Herr Prochaska, was wounded by a bayonet thrust while attempting to defend them. The Servian Government denies all the allegations.——The Archduke Francis Ferdinand, heir to the Austrian throne, has visited Berlin in company with Field Marshal von Scheuma, chief of the Austrian General Staff, and their conferences with Kaiser Wilhelm and Count von Moltke, chief of the German Staff, have increased the apprehension of a greater war. The censorship in Austria-Hungary prohibits all mention of military movements, but it appears that mobilization is imminent, if it has not already taken place. Six army corps are said to have been called to the colors. In Bosnia

Copyright by Paul Thompson.

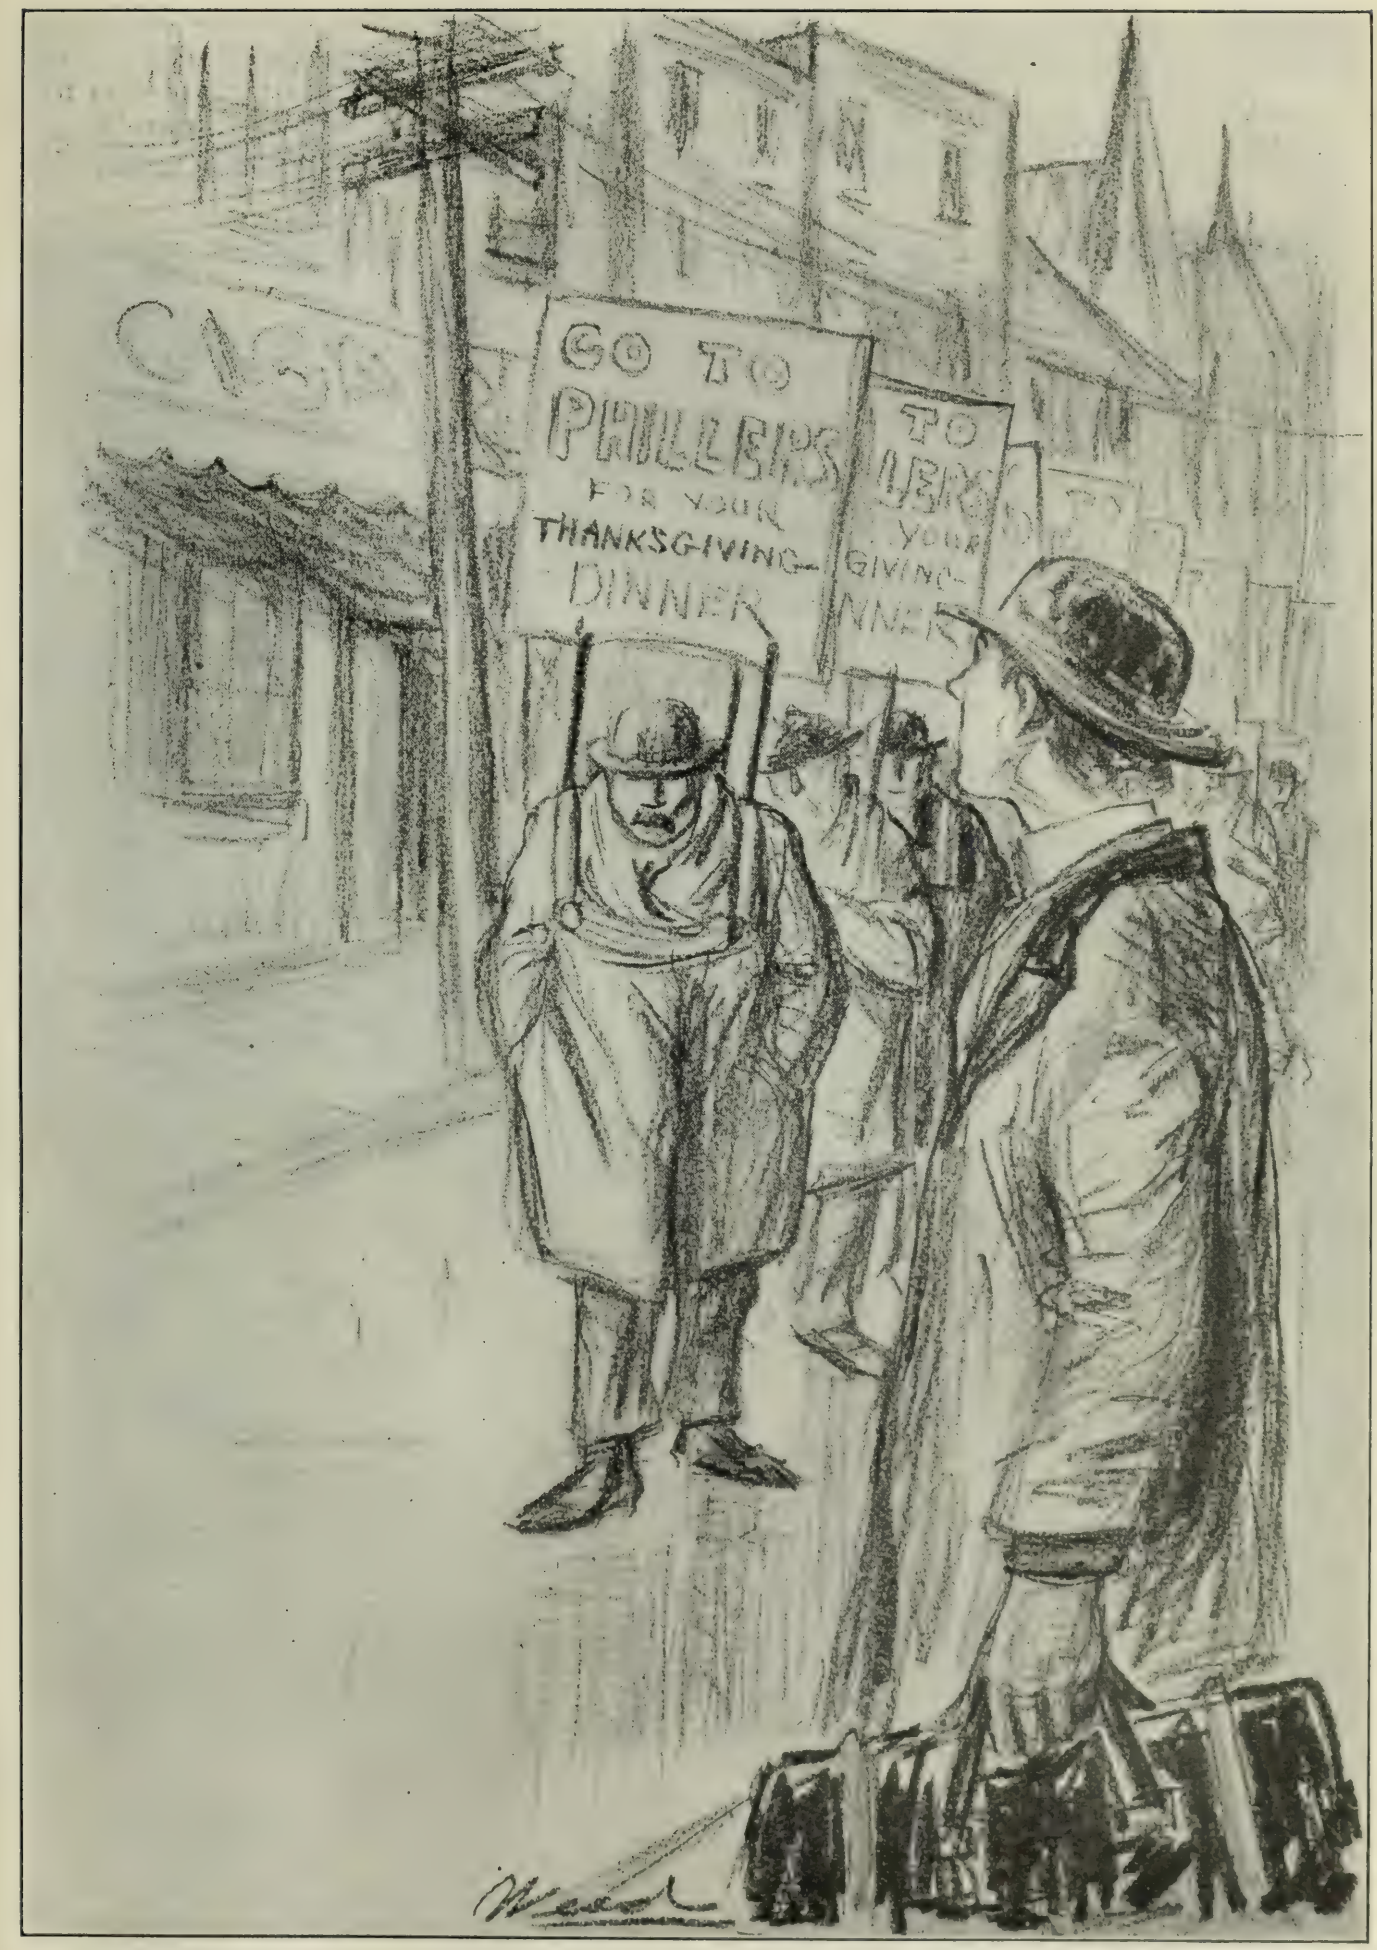
MACEDONIAN REBELS ON THE SALONIKA ROAD

These rebels have blown up railway bridges and great stretches of the line between Skopia and Vitolia.

80,000 troops have been concentrated, ready for the invasion of Servia. It is semi-officially announced from Berlin that Germany will stand by her ally Austria in case the latter becomes engaged in war with Servia and Russia.——Russia is also said to be preparing for war by the mobilization of the Don Cossacks and the commandeering of all the available rolling stock on the lines running to the Austrian frontier. Large bodies of troops are concentrated in the Polish provinces.

Monastir Evacuated

On November 18 Monastir, one of the chief cities of Macedonia, surrendered to the Servians after two days of hard fighting. The garrison of 50,000 escaped in the direction of Florina, 15 miles to the southeast, but there they encountered the Greeks coming up from Salonika. The Turkish loss is estimated at 20,000 killed and wounded, but the Servian loss is not reported. The Crown Prince of Servia made a triumphal entry into Monastir on the 19th. Fethi Pasha, who at the outbreak of the war had the bravado to invite his friends to dine with him in Belgrade, was found dead on the battlefield, in the uniform of a private soldier. It is said that he was shot, while trying to escape in disguise, by one of his own officers, who afterward committed suicide. The Servians clothed the body in a general's uniform and buried it with full military honors. ——The Bulgarian lines about Adrianople are being drawn closer, and several of the outlying forts have been captured during the week. The Bulgars, by withdrawing their outposts, encouraged the sorties of the Turks on ground covered by their batteries and infantry fire. The Turks charged during the night, but met with a terrific fire, which cut down half their number and drove the rest back to the shelter of their fortifications.——It is rumored that the Greek troops occupying Salonika looted the houses and shops of the Jews, who constitute the major portion of the inhabitants of that city; also that the Bulgars and Greeks in Salonika have frequently come into conflict.



Both rumors are denied.——A joint force of Servians and Montenegrins has captured San Giovanni di Medua and Alessio, two of the Adriatic ports claimed by Servia, but the third port, Durazzo, has not yet been reached by the allies. At Durazzo, a proclamation of Albanian independence has been made and a provisional government established by Ismail Komal Bey, who was conveyed from Trieste by an Austrian steamer for that purpose.——The Turkish cruiser "Hamidieh" was attacked off Varna by two Bulgarian torpedo boats and was so badly disabled that she was towed stern foremost to Constantinople.

Mongolian Independence

Russia is taking advantage of the critical situation of the Chinese Government to press her claims to Mongolia. The Russian Government has dispatched to Kulon Mr. Korostovetz, ex-Minister to Peking, in order to confirm the autonomy of northern Mongolia. This is regarded as virtually a recognition of Mongolian independence and would lead ultimately to practical annexation of outer Mongolia by Russia. The Mongolians demand that a clear territorial demarcation should be established between China and Mongolia and the Chinese Government should cease its attempts to bring the Mongolian provinces into closer union with the empire by colonizing with Chinese. The Chinese State Council has endeavored to counteract the Russian movement by calling a conference of the Mongolian princes at Changchun, but only four of them responded, and the others insist upon negotiating thru Russia instead of directly with the Chinese Government. President Yuan Shi-kai is trying to settle the matter by diplomatic methods, but the sentiment of the people is so strong for war that he may not be able to prevent it. Offers of volunteers for service against Russia are coming in from all sides. Ten thousand troops have been sent to Kalgan and five times that number are ready to be sent into Mongolia at short notice. An anti-Russian society has opened headquarters at Canton, and the Governor-General of that city is preparing to dispatch a force of Cantonese to protect Mongolia from the Russians.

Foreign Notes

Premier Asquith has withdrawn his motion to rescind the amendment to the Home Rule bill carried by a snap vote on November 11 because the Speaker of the House declared such action to be unprecedented. A new financial resolution was introduced in place of the one amended by Sir Frederick Banbury, and this substitute was carried by a vote of 318 to 207. Joseph Martin, member for East St. Pancras and former Canadian, has given notice of a motion to censure the Speaker because he did not suspend the members who interrupted the proceedings by their shouts and disorderly conduct.—— Premier Romanones announced to the Cortes that he would continue the policy of the late Premier Canalejas. The Conservatives demand severe measures for the repression of the anarchists, but Count Romanones stated that any other measures except those prescribed by law would set back Spanish history for thirty years. Señor Senantes, a Traditionalist, then pointed at the extreme left and denounced Señor Pablo Iglesias, the only Republican deputy, as morally guilty of the assassination of Señor Canalajas. There was a great uproar at this, and Señor Iglesias protested that he had never preached killing. The announcement by the new Premier that the question of administrative autonomy in Catalonia would be postponed until after the budget has caused dissatisfaction to the Spanish home rulers.——In Germany there is active opposition to the invasion of American trusts. A Government bill has been introduced in the Reichstag for the establishment of a Government monopoly in petroleum and all of its products. This would absorb the German subsidiary of the Standard Oil Company and would develop the Rumanian, Galician and Russian oil fields. At Dresden and Cologne meetings of the associations of German tobacco dealers have been held for the purpose of organizing a boycott against the American tobacco trust, which controls five big factories, one in Prussia, three in Saxony and one in Southern Germany. The associations resolved to refuse to handle, advertise, buy or sell the goods imported by the American corporation.

The Spirit of Bulgaria

BY ALBERT SONNICHSEN

[No one is better qualified to interpret the spirit which animates the Balkan peoples, for Mr. Sonnichsen has himself fought for the freedom of Macedonia side by side with some of the men now leading in the attack on Turkey. In his "Confessions of a Macedonian Bandit" (1909) he narrates his experiences during that rebellion.—EDITOR.]

WHILE storming Shipka Pass during the Russo-Turkish War in 1878, the Russian troops were joined in the attack by armed Bulgarian peasants. J. A. McGahan, the famous American war correspondent, whose dispatches are the most vivid descriptions of that campaign, refers with unmeasured contempt to these native allies of the Czar as brigand bands that hindered rather than assisted the operations.

Years later one of those "brigands," who lost his hand at Shipka, became prime minister of the nation which is now driving Turkey out of Europe. Others of his comrades-in-arms are now generals whose tactics are attracting the astonished attention of all the military experts of Europe.

I was walking down the main street of Sofia one day with an old Russian exile, practising civil engineering in Bulgaria, when we met Genadieff, the Minister of Agriculture, who greeted my companion with great warmth.

"You seem very intimate with him," I said later.

"Surely, why not? He was only a little, barefooted shepherd boy when I took him into my office. I taught him how to trace maps."

In the lives of these individual men is represented the growth of modern Bulgaria as a nation. A little over thirty years ago all Bulgarians were illiterate, as illiterate as the mujiks of a Russian province. There was no native aristocracy conserving the literature and the brains of a past culture. The people were even forbidden to speak their native tongue. All the government officials were Turkish and the church dignitaries were Greek, appointed from Stamboul to rule and tax the Bulgar peasantry.

Then, suddenly, four million of these slaves found themselves free, without masters.

What followed is not yet recorded in general history, but men not yet old tell of it from first hand knowledge. At first they felt their way, under foreign guidance, under hired tuition, bought and paid for, as you engage a dancing master. Then, one by one, the big men arose, such men as Stambouloff, another of the old "brigands," lifted up by the democracy, and they took the task of construction over into their own hands.

As I lived in Bulgaria some years of this period it would seem, in the light of current events, that the military spirit of the people should remain as my most vivid impression. But I cannot imagine a people to whom the glamor of militarism would appeal less than it does to the Bulgarians.

It is true that the army was extensively obvious; it was the passing stranger's first and last impression. But as you became acquainted with the people you soon realized that influences outside the country had created Bulgaria's army. I recall an incident now that seemed very trivial to me at the time it occurred, but it serves to illustrate my point.

From Rotterdam to Sofia I had as a traveling companion a young Macedonian Bulgar, just graduated from Cornell. Aside from viniculture and forestry he had also imbibed a quantity of socialist literature and all thru Germany he entertained me with a lengthy dissertation on the evils of militarism.

Some months after parting from him in Sofia I met him in Austendil, a small frontier town, decked out in the full regimentals of a reserve officer.

"Is this the uniform of the socialist party?" I asked him.

He laughed, then nodded his head toward the frontier.

THE MONTENEGRIN SHEPHERD LEADING HIS FLOCK

It was the unconquerable peasant of this Black Mountain Kingdom who set the Balkans ablaze by attacking Turkey single handed and in defiance of the Great Powers of Europe.

"When we get that job over with," he said, in his colloquial English, "we can settle down to family life."

"But why not let evolution take its natural course?" I quoted him, from memory.

"They won't let it," he replied, "so we have to hunch them out of the way. You know," he added, "they've got us by the left foot yet, so we have to train our right leg for one hard, final kick."

He meant, of course, that half of the Bulgarian people were still in the Turkish grip down in Adrianople and Macedonia.

Of that veneration accorded to the military profession in other continental countries there was none in Bulgaria. In a carnival I saw one of the masqueraders parading in the uniform of a Bulgarian general, exaggerating the pompous strut of a military man, bringing forth laughter all along the line of march. Nor did the officers, on their part, demand any special consideration. I was aware that there was an inner circle of them who had entered the profession as a career, but the majority were citizen soldiers of the democracy, still civilians at heart, who hoped some day, when the great aim should have been accomplished, to take up other pursuits of more vital interest to them.

But if it was obvious that the glitter of brass buttons did not dazzle the people, it was equally obvious that the army was created by a real, popular demand.

Down in Eastern Rumelia, which was under Turkish dominion up to 1884, I often spoke with the peasants about the revolution which brought them under the Bulgarian flag.

"Taxes are much higher now," they assured me, "than they were in the old Turkish days. But who cares? The money doesn't go into the pasha's harem.

We need the schools; we shall always need them. But the army—we shall only need that until our brothers down there are with us. After that we shall all have plenty."

Again and again taxation has come up as the issue in a local election and invariably the candidate standing for a high tax rate has been elected to the Sobranje, the popular assembly. Money has indeed been spent, vast sums of it on armament, but even more has gone to the nation's school system.

Meanwhile the Bulgars down in Macedonia were not waiting in idleness for their brothers in free Bulgaria to deliver them. They have never counted much on that. It was not till I crossed the frontier that I realized the full significance of the famous Macedonian Central Committee.

I had come with the picturesque idea of joining the fighting guerrilla bands, believing vaguely that there was a sort of chronic insurrection going on down there continually. I had been over the border less than a week when I realized that the Manlicher carbine in my hand was only a passport, not a destructive weapon, and that my comrades-in-arms were primarily teachers, and organizers and administrators, endeavoring to accomplish in Macedonia what free Bulgaria was accomplishing more openly.

My first experience in "brigandage" was with Luka Ivanoff, ex-officer in the Bulgarian army, in charge of the Vodena district, where the Greek forces are now struggling to penetrate Macedonia. His headquarters was in the marsh about Lake Enedjee, the site of Philip's ancient capital, so near to Mt. Olympus that you can watch the shadows playing among the crags. Incidentally I lost all respect for Turkish military efficiency when I saw the failure of the repeated attempts to oust us out of that swamp.

I had been less than a week with Luka and his escort of fifty men when we emerged from the swamp one night and entered one of the larger villages in the adjoining plain.

"We shall have some excitement tonight," said Luka. "It's the first election of delegates to the next Congress under the new constitution, which grants universal suffrage."

Coming thru the outskirts we were challenged by armed pickets, guarding us from outside surprises. We entered the village church. It was crowded with peasants; young, lithe limbed boys, older men gnarled by field labor and old grandfathers, past their days of labor, all quiet, seriously intent on the work before them, picturesque as an opera chorus in their red kalpaks and broad sashes and cowhide moccasins.

As I watched the male population file silently past a basket on the floor, depositing therein folded bits of paper, Luke told me what it all signified.

Crude and imperfect as it was in form, because of the many difficulties operating against it, there existed thruout Macedonia and Adrianople an organization that was as near a perfect democracy as may be found in more favored countries, a secret government of the people developing slowly under the rotten husks of Turkish rule. Only a people to whom democracy was an absorbing passion could have builded it under those conditions. Abuses there were in plenty from within, but they were constantly fought. So jealous were these simple peasants of the power they delegated to their elected officers that they would never give it over to any one man, but made the word "committee" so significant thruout the country that the Turks came to call them *comitlara*, the committee people.

Officially the government did permit Christian schools, but down in those districts bordering on the Greek country it found a means of evading the granting of even this privilege. The communities were purely Bulgarian, but they were handed over to the jurisdiction of the Greek Church. In the art of corrupt oppression Abdul Hamid had nothing to teach the Greek Patriarch. He taxed the Bulgars heavily for schools and gave them Greek teachers who knew no more Bulgarian than the people knew Greek. Finding no pupils the Greek schoolmaster would go away, but no other was allowed to take his place.

We had entered a large village overnight, a community of rugged mountaineers, just over Lake Castoria. Toward midday I had had my sleep and came out into the street. As I was talk-

TRUDGING TOWARD TCHATALDJA

The pathetic figure of the Turkish straggler, marching in the mud thru the desolate plain in the direction of Asia, personifies the Ottoman defeat.

ing to a member of the local committee I observed a child lying flat on a neighboring hilltop. By chance I looked in an opposite direction and saw the silhouet of another child standing beside a rock on another eminence. The peasant caught my inquiring eye.

"The school karahoul," he said. Karahoul means a picket posted to guard against the approach of patrols. But I did not know what a school karahoul was.

"Come, I'll show you," said the peasant, in answer to my inquiry. We entered the church. Inside, seated on the bare floor, was ranged a class of thirty children, watching a slim young girl explaining some diagram on a blackboard. In spite of her peasant dress she spoke the Bulgarian of Sofia University. Then I observed that a child was posted at a window in each side of the room, watching its distant mate on the hilltop.

"What do you do when the karahoul signal?" I asked the schoolmistress. She showed me a cavity in the stone wall behind an ikon.

"The books and the board go in there," she laughed. "The children take care of themselves. When the soldiers arrive I am washing clothes in the house next door."

I have dwelt only on the constructive features of the organization, but all the time the people were arming; smuggling Manlichers from Bulgaria, buying Greek Grats from illicit Turkish traders and storing ammunition in secret hiding places. That the great day would come in a blaze of violence and bloodshed no one ever seemed to doubt. And yet, when the Young Turks proclaimed their constitution, it looked for a while as if the new era had arrived in peace. Most of the district chiefs, the constabulary of the underground republic, laid down their arms and went down into Salonika. Sandansky, head in the Razlog district whose name has appeared in recent dispatches, led the column that marched into Constantinople and deposed Abdul Hamid. But Young Turkey, however sincere it may have been, could not re-

tain its hold on the masses of Islam. So the expected had to come.

"The great day has come at last," writes a friend of those days to me, then a student, now a telegraphist in Pazardjik, down in southern Bulgaria. He is a Jew, not a Bulgar. "I am working now without pay and the government rations are bad enough. Yesterday I took the oath of secrecy, so I can't tell you quite all I know. But we are going to push the red fez out of Europe at last."

Another longer letter comes to me from the Russian engineer who taught the Minister of Agriculture how to trace maps. He had been municipal engineer of Stara Zagora, the first headquarters of the general staff.

"I have given up my regular work for some time now and am devoting myself entirely to the building of barracks and the laying out of roads for the passage of the artillery. There is very little noise, but I have never in my twenty-five years here seen Bulgaria so moved. Peasants come driving sheep, pigs and cattle into camp and compete with each other in forcing them on the commissary. All the women want to be nurses and are causing no little trouble with their demands. They seem to think the wounded should be bandaged up with bed sheets and table linen. Throngs of young men; students, schoolmasters and peasants hang about the recruiting office and when they are told they cannot yet be enlisted they walk away with drooping heads and shoulders, only to return again next day. However, all their turns are coming. All feel that the nation has at last taken the final plunge, that it must be now or never. But there seems no doubt about the outcome. Even Turkish fanaticism must go down before the impact of this deep, quiet determination. We shall surely win."

NEW YORK CITY.

The Invader

BY HARRY KEMP

FROM monstrous Asia's crowded camps he comes;
He knows no truce, no armistice can stay him.
War, walking by his side, takes on the bloom
And lighted eye of youth, hell puts on white.
He knows no mercy: His not the sharp sword
And pitying bullet cleaving swift the brain—
His bony hand clutches about the throat
Of the mother and the babe upon her knee,
Of the old man, and the young man, strong and proud
In the slow agony of living death.

Oh, you who sing the bugle and the sword
Two thousand years after the Man of Peace
Perished that men might love their fellowmen—
Oh, you who never saw a battlefield
(Not even in imagination's eye),
Where slaughtered heaps lie piled up in the light
Of the pale moon—find here a braver theme
Than war and victory with her lifted wing!
Sing us the glory of the blue-lipped Plague,
Proclaim the majesty of Pestilence!

NEW YORK CITY.

Embattled Housewives

BY MARY DUDDERIDGE

WHEN butter suddenly leaped to sixty cents a pound last winter, and one hundred and sixty-five thousand housewives announced that they would eat no more until the price dropt, the general public first became aware of the existence of that remarkable and picturesque organization which has since become known thru the length and breadth of the land as the Housewives' League.

Neither the boycott nor the subsequent expansion of the League were at all premeditated. The time had come for the federation of the housewives of the country in defense, literally, of their hearths and homes, and they took the field as naturally and spontaneously as did the embattled farmers at Concord, because there seemed to be nothing else to do. They had put their faith in the Government, but the Government had failed to give them any adequate defense against an enemy more invidious and powerful than any which ever wore red coats.

A pure food law had been past in response, as Dr. Harvey W. Wiley has testified, to the demands of the women, but after six years the country was still flooded with poisonous foods, and after much wrangling a learned board had decided that benzoate of soda mixed with food was "not deleterious or poisonous" and that therefore manufacturers of canned stuffs could not be prevented from using it as a preservative. The Government had also devoted much time to the busting of trusts, but the resultant fragments had shown as great skill in boosting prices as ever the uninjured bodies had displayed. Commissions of eminent men had been appointed to inquire into the high cost of living, and some blamed the tariff and some the gold output; but no one had thought much about the housewife as a factor in the situation—except when an occasional prelate reproached her for not hunting up cheap cuts of meat and cooking them so no one would know they weren't tenderloin—until suddenly becoming conscious of the power of the dollar in her pocket, she said:

"We don't care who is to blame for the high cost of living, but if you boost the price of any commodity too far, we won't buy it. We don't care whether benzoate of soda is injurious or not; we don't want it, or any other artificial preservative, in the food we give to our children and we won't buy any food that contains such preservatives. By and by, perhaps—altho we thought we were already paying the Government to do this work for us—we may start our own laboratory and find out for ourselves just how the food we are asked to buy has been treated."

It was the butter boycott which opened the eyes of the housekeepers to their own power. In the latter part of January of the present year, butter was selling from forty-seven to sixty-two cents a pound, retail, according to locality, prices higher than had been known for twenty-eight years, and the butter interests hinted darkly that they were likely to go higher before spring. The Housewives' League had been organized a few months before. It grew out of the Household Economics Committee of the New York City Federation of Women's Clubs, and therefore was able to start with a large and effective membership. Housekeepers, of course, could not come together at such a time as this without discussing the price of butter, and when the high-water mark was reached with a sudden jump the question, "What shall we do?" was, naturally, on every lip. "Don't eat any," suggested the president, Mrs. Julian Heath. One hundred and sixty-five thousand housewives responded with enthusiasm, and an appeal to the public to join with them in boycotting butter fell on willing ears. The whole State and the whole country took up the cry, and there were boycotts everywhere. In a week the price began to fall. At the end of twenty-seven days the market at Elgin broke to thirty-two cents, and a dispatch

from there said that the slump was due to the consumers' refusal to buy. Furthermore, before the New York boycott was many days old, the District Attorney's office had started an investigation of the whole situation.

The League came out of the boycott three hundred thousand strong and the housewives of the country were up in arms. Letters, which had begun to deluge the headquarters of the League—then as now the home of the president, No. 175 West Eighty-eighth street—the day after the boycott was declared, continued to come in avalanches, and Mrs. Heath was overwhelmed with calls to organize branches. Whenever she was able to respond to these she was received with the most astonishing enthusiasm. Men and women turned out to her meetings and halls were too small to accommodate those who wanted to hear her. In many cases, organizations similar to the Housewives' League had already been formed and these soon affiliated with the New York women. The country was ripe for the movement and it needed only this impulse to crystallize and give practical direction to forces already at work. The League is now represented by branches, individual members or allied bodies in every State in the Union—even to Oklahoma, which, from its newness, might be expected to have escaped some of the evils that afflict its effete sisters. There are complete State organizations in New York, Connecticut, New Jersey, Ohio, Wisconsin, Missouri, Michigan, California, South Carolina, West Virginia and Mississippi. Amelia Barr's daughter, Mrs. Kirk Monroe, is organizing Florida and by the end of another year it is expected that every State will be fully organized. The membership, direct and affiliated, is estimated at 400,000. California alone came in with 10,000 and the promise of thousands more in the immediate future.

This is not a mere dues-paying membership, meeting once in a while to hear the reports of committees and waiting idly the rest of the time for an order from the executive to do something spectacular like the boycotting of butter—tho even if it were only that it would be a force to be reckoned with. No one is allowed to become an active member who is not an actual purchaser of household supplies. Men may join if they meet this requirement, and one man is an active member of the New York League. Other men, and women not so directly concerned, are admitted as associate members on the payment of a dollar a year, whereas the active members pay only ten cents, the dues having been fixed at this figure so that none may be excluded by inability to pay them. For the power of the League rests not upon its financial resources, but upon its nu-

merical strength. The money of the associate members is a valuable asset, but what is wanted more than money is work and this the active members do actually give. Four hundred thousand of them are continually on the job. In this, the Housewives' League is surely unique. No purely altruistic organization could attain this end. Good intentions are weak when they concern other people. The members of the Housewives' League do not lack altruistic motives, but to these are added motives which are usually—and necessarily, in the present state of society—much more powerful. In working for the League they know that they are not only working for the community but for the direct and immediate benefit of their own families.

Thus an army of inspectors has been turned loose on the industries that serve the home, and each one is backed up by a power of enforcement which official inspectors might envy. The Leaguers are pledged to report all violations of the law in groceries, meat markets, delicatessen shops, bakeries and laundries which they themselves patronize and to withhold their patronage until conditions are as they should be; even to the point of baking their own bread, if good bread cannot otherwise be obtained, and having their washing done at home. They are also pledged to read all labels on packages and canned goods and to refuse to buy any that contain artificial preservatives, regardless of whether the law has been broken or not. Thus they dispose, very simply, of the benzoate of soda question. They are pledged further to demand fair prices and by conference with each other and with their central offices which always have the latest market quotations they know exactly what a fair price is. They are pledged finally to protest against all contamination of food by dust, flies, or other means, and when the law gives them no redress—and even when it does—they can very well help themselves.

At regular intervals the housekeepers of each neighborhood meet to compare notes, and any dealer who does not come up to the standard and refuses to amend —which is but seldom—quickly loses his trade. This is direct action of a most effective kind and by its means not only are the laws enforced but many reforms are effected which the law has overlooked. There is no law, for instance, which says that the cat shall not sleep in the raisin box, or that no grocery shall be swept with the butter tub uncovered; but these practices are greatly on the decline in neighborhoods where the Housewives' League flourishes.

The grocer is more willing to listen to reason because the Leaguers have a thought for his troubles too. They don't market after six o'clock, they don't demand cheapness at the expense of quality, they don't keep delivery boys running to their houses all day to deliver things that they ought to have remembered to order in the morning and they pay their bills promptly. Other considerations apart, they realize that a weary and worried grocer is not the one who is going to keep his shop in a sanitary condition, and that the cost of delivery

is a large item in the cost of living. All these neighborhood groups are in touch with a central executive, and any information gained by one that would be useful to all is passed on. In the same way cities, towns and States keep in touch. If New York wants to know the current market prices in Milwaukee, that can be had by return mail, and if information is wanted about California fruit, the California League stands ready to supply it. Furthermore, the League is now reaching out hands to Canada—not without hope that the relation may some time have its influence on the price of meat—and European affiliations are possibilities of the near future.

A great part of the League's energies so far have been turned toward the acquisition of information; for in spite of all the investigations with which the country has rung for years past the housewives find that there is still much essential knowledge that they must get for themselves, and they have more faith, besides, in the reports of consumers than in those of official investigators. New York housewives are now filling out score cards showing the sanitary conditions—including ventilation, cleanliness of display, cleanliness of proprietor and clerks, etc.—of the shops which they patronize. All these cards will be tabulated and compared at the central office and will give more information about industries of this class in New York City than has ever been available before.

The peculiar value of Housewives' League investigations has been recognized by the Government and from thirty-two cities a report of current market prices goes every month to the special commission appointed by the Department of Commerce and Labor to investigate the cost of living. When Mrs. Heath read in the newspapers that this commission was collecting the prices of retailers and wholesalers for the purpose of comparison, she said to herself that the prices obtained by the Government investigators might not be those quoted to the housewife. A letter to the commission to this effect brought in response a request from the acting chairman, George W. Hanger, for the co-operation of the League. Mr. Hanger asked for reports from thirty-nine cities and Mrs. Heath was able to touch thirty-two.

Much information about the composition of foods is now being collected, and every housewife knows that she can rely absolutely on the advertising pages of the League Bulletin. The conditions of admission to this medium of publicity are very rigorous. One product, for instance, which is known to be above reproach, has been refused because the manufacturers decline to state what it is made of. The housewives make a great point of knowing the exact composition of foods which they buy, and that is why they feel that they must have their own laboratory as soon as their finances permit. The idea was suggested when it was found impossible to have a can of tomatoes analyzed by the Federal Government, the Department of Agriculture stating, when asked for the analysis, that it has authority to report only the presence of injurious substances in such goods.

It was the abnormally high cost of living which provided the impetus that brought the League into existence, and as soon as they were organized the Leaguers all over the country set to work to find out the cause of those high prices. Their inquiries brought to light some astonishing facts, and when the New York State Food Investigation Commission reported that from 40 to 70 cents of every dollar spent by New York City consumers went to middlemen, it did not tell the housewives much that they did not know. Already Long Island women had traced the vegetables for which they paid so dearly past their very doors to Brooklyn and back again to their respective grocers. Staten Island housekeepers had made similar discoveries, and the women of the Connecticut towns had begun to realize that, with rich farms all around them, the high prices they were obliged to pay for food could not be due to scarcity.

As a remedy for these conditions the League advocates the public retail market. Direct contact between producer and consumer is usually impracticable, but thru the public market, it is argued, the number of middlemen might be reduced to one. This view the housekeepers have imprest upon public officials with such vigor that all over the country old markets are being restored and new ones planned. After two thou-

sand housewives had visited Washington Market, New York, on Housewives' League Day, the city fathers thought it worth while to clean up the place, and they have since announced that a system of markets is being planned to cover the whole city. In New Orleans an old French market has been restored, and in Wheeling, West Virginia, the corner-stone of a new market was recently laid. In Buffalo the public market, which was so dirty and dilapidated that it was a disgrace to the city, has been cleaned up by the Housewives' League; and in Detroit the City's Federation of Women's Clubs, which lately affiliated with the League, has undertaken a similar task. In Mt. Vernon, Ohio, and other small towns the farmers have been invited to sell their produce in public squares.

At the present writing the housewives have just declared war upon the Beef Trust. After full investigation the Central Council became convinced that nothing would adequately relieve the present intolerable situation but the removal of the tariff on meat, and letters were straightway dispatched to the Republican, Democratic and Progressive candidates for the Presidency, asking them whether if elected they would exert themselves to this end. Only Governor Wilson gave a definite answer. He was in favor of the removal of the tariff on meat. Colonel Roosevelt answered the letter, but evaded the issue, and Mr. Taft maintained a discreet silence. The same question will be put to every candidate for a seat in the national Legislature until the meat of Canada, Mexico and Argentina is allowed free entry into the country, and if Governor Wilson is elected and fails to live up to his declaration of principles, at least four hundred thousand housewives—there may be millions by next March—will want to know the reason why.

"The men may yield their necks to the meat baron's joke, but the housewives most assuredly will not," says the League Bulletin belligerently.

Here is a notable list of achievements for a few short months, but a much exploited and hopeless public may be inclined to think that they don't amount to much and that any real change in present conditions is too much to be expected. Their causes lie too deep for surface treatment, and any influence strong enough to reach them would shake the foundations of society. Quite right; and that is just what the housewives propose to do. Mrs. Heath says:

"We are just at the beginning—the beginning of a social revolution. No one could doubt it who has seen the spirit of the women as I have. Of course, I know that the odds against us are tremendous, but if we only stand together, there is nothing that we cannot obtain and nothing that we cannot change. Remember these women are fighting for the safety of their homes. It is a case of the female of the species defending her young. What wonder if she proves more deadly than the male—not that we want to be deadly; we believe more in education than in boycotts. But we are ready to fight if we have to. Remember also that we wield the power of the dollar. Nine-tenths of a man's income is spent by the woman of his family among the laboring classes, and three-fourths among those of a higher social status. Women are the spenders of society and the greater part of its business depends on our purchasing power. Why haven't we the power to say that business shall be conducted in such a way as not to injure our homes? We have, and the powers against which we are contending know it. I have daily evidences of that fact; some of them so intangible that it would be impossible to convey the impression they make on me to another mind; others quite unmistakable, as when the legal representative of a big corporation comes to me and begs me to get our council to defer action in a matter threatening the business of his principals. That leaves no room for doubt as to the way the business world regards us. But there is no corporation powerful enough to get us to defer action when we are ready to act. They may buy the Government, but they can't buy us, and we are going to go on extending our field of action till we touch all the big industries."

The leader of this woman's crusade, Mrs. Julian Heath, has long been well known to the philanthropic workers of the American metropolis and is well qualified by experience for the position into which without any volition of her own she has been thrust. As head of the Jacob Riis Settlement House and later as president of the Home Economics Association, which has for years been sending teachers into the homes of the people to tell them how to make the most of their scanty resources, she gained a knowledge of the economic struggle which books could never have imparted, and in her fight for the control of conditions which affect the home she never loses sight of the hope that its outcome may be to make life easier for those on whom the burden of the cost of living presses most cruelly.

New York City.

Gerhart Hauptmann: Realist and Idealist

BY MAY LAMBERTON BECKER

THE announcement that Gerhart Hauptmann had been awarded the Nobel Prize for 1912—some $40,000—can have surprised very few people; it would have been quite settled beforehand were there not always a certain uncertainty as to the amount of latitude the Nobel Academy would allow itself in defining "literature of an idealistic tendency." Year by year the list of those obviously in line for this distinction grows smaller, for, no man winning it twice, forecast grows correspondingly easier. This time the only complicating possibility was Anatole France, and it is hard to take that idea seriously. The notion of rewarding as a crusader for the ideal a man who turns upon every human inspiration a disintegrating smile, is just the kind of sardonic joke that Anatole himself would relish, were he far enough away from the point to get a perspective. Most of us have been waiting only for Hauptmann's fiftieth birthday, with the expectation—now realized—that the highest honor in the literary world would give luster to the celebration.

GERHART HAUPTMANN
From a drawing by Ernst Pickardt

At first sight, it seems a little disquieting that a life-message so far from confident, so pathetically "human, all too human," as that of Hauptmann, should stand for the best the world can do today for the cause of idealism in literature. The hero of his first poetic publication, *Promethidenlos* (1885), begins by preaching a new social religion of compassion. Ridicule unnerves him; he retreats to enjoy the contemplation of pure beauty, but the sight of suffering, starving men destroys the loveliness of the landscape, and drives him to the Isle of Hopelessness. Thence he is summoned back to the world, to a life of effort, of disillusion, of despair, until at last all that is left of his endeavor is his lyre. The underlying idea of this immature production at once suggests that of his masterpiece, *The Sunken Bell;* all his heroes thus are impelled to and fro. Henry the bell-founder, drawn away from Magda and the moral law toward Raudentelein and free artistic creation, cannot drown with all the clamor of his forge on the summit the sound of the

sunken bell in the depths of his heart, nor when it has called him back to duty, can he re-live the old life without the dream that he has renounced. He can but creep back to the mountain hight to welcome releasing death. Frederick, the hero of his latest work, the novel *Atlantis,* declares himself the maddest progressive of his time and the maddest reactionary, "with the spirit of the American millionaire and the enthusiasm for poverty that was the glory of St. Francis of Assisi," and says that he is a genuine child of the times, for "every individual of significance is just as divided against himself as humanity on the whole." He is describing, in short—and so always is Hauptmann—what Eucken constantly describes, the oscillation between nature and intelligence, between the individual and society, between the world and man; and if it be objected of Hauptmann as so often of Eucken, that he has taken conditions of thought in Germany to stand for those of the world, it is none the less true that the conditions that German life so dramatically expresses are those with which the world at large must reckon. The new industrial Germany, often brutal and blatant, but with upward strivings all its own, has met the idealism of an old Germany whose past has carried so far into its present that the resulting struggle is perhaps more picturesque, perhaps more poignantly exprest than with us, but with us there is also the struggle of the new with the old, and never were the two less ready to compromise.

Nor does Hauptmann himself ever compromise—whether he be expressing himself in social dramas of the harshest realism, and a purport clearly ethical, or in plays of pure beauty; and if he go back and forth from one to the other, over and over, he says what he has to say with a desperate earnestness. He may contradict himself, but only as life contradicts itself, and always with the hope, however formless, of an ultimate reconciliation. His first hero fails, but the Goddess of Poetry bears his lyre to the skies; Henry the bell-founder dies, but whispering "The Sun—the Sun draws near!"

His concern is indeed with the ideal alone, and in this his title to the award is clear. He may—he often does—depict scenes of squalor and misery, but his interest in circumstances is after all only as it affects the fiber of the soul. A man may be starved or sweated, but Hauptmann will not feel that the ultimate wrong has been done him until his soul has sunk beneath the burden. As I remember the production of *The Weavers* (just before the New German Theater in 59th street came to an end) the worst moment was not in the starving scenes, but in the first act, where the gaunt workers bringing their finished webs to the sweater's office to be paid off, pass before the counter in a panorama of misery. As one of the bosses approaches a poor creature, she cringingly picks a bit of lint off his coat. Somehow the thought that she had been crushed until even the hatred had been crushed out of her, makes the ultimate shudder of the piece. He measures the weight of calamity by its effect upon the soul; not he who struggles in vain, but he who has ceased to struggle, moves his compassion. That old weaver who out of the depths of his firm religious faith refuses to leave his loom, join the strikers and resist evil with evil, falls dead at his post from a stray shot, but his death is a triumph; the shrill mother who spurns his religion as cowardice and leads the mob that her children may have bread, no doubt ends her days in prison or on the gallows, but she has risen above her lot. Poor little Hannele, beaten, abused, broken by the long cruelties of life, rises above her agony upon the wings of her dream into a realm of pure thoughts, naive images and aspirations. Her death is an apotheosis, *Hanneles Himmelfahrt.*

It is this longing for a reconciliation of the warring forces of waking life that so often drives Hauptmann to the refuge of dream. The real action of Hannele takes place within the mind of the dying child—it may as well be said at once that only the downright methods and personal sympathy of a German stock company will give on the stage anything like the marvelous effect of being in a half-waking dream that one may have from reading the play. The roughest production, so it be sympathetic, will have so filled the hearer with the conviction that

the curtain that shut out Hannele's last ecstasy fell upon something real, that when it rises again for that last swift glimpse of the doctor bending over the dead body, the mind refuses to accept the almshouse pallet, the stethoscope, as reality. It is a daring device to show that picture after the chanting angels; that it does not jar shows how thoroly the audience believes it is but a shadow. The atmosphere of *The Sunken Bell* is altogether dreamlike; the turning point of *The Fool in Christ* is a vision, and a prime importance attaches to Frederick's dream of the lost Atlantis in the latest novel. But dreams like these are never mere fantasies, never purposeless; on the contrary, they always shadow forth some vision of what are to him ultimate realities, some expression of the ideal.

It is indeed in the pursuit of the ideal that Hauptmann has made his failures, and they have been many and resplendent. Florian Geyer was perhaps the most spectacular collapse, but for some seasons past literary Germany has gathered about once in so often, so it has been said, "to see another Hauptmann play fall thru." Sometimes these plays stopped on the stage side of the footlights from the inherent impossibility of expressing in three dimensions what belongs only to the fourth, in which case the reader could and did stage it more effectively upon the scene of his own thought; but none of these plays ever failed because he was afraid to say what he felt. Sometimes it was because he was not sure what it was he had to say, as in *The Rats,* or perhaps because he had to say so much that he choked his own utterance, as in *And Pippa Dances!* But always he has the refuge of beauty, and when the life that he would improve by social dramas stifles him with its woe, he may always be expected to swing to poetic expression, sometimes in verse, sometimes in such prose as the *Greek Springtide* travel sketches.

That he should never reflect decadence or morbidity could not be expected of one who expresses the life of his time and place with such realism and feels it with such vibrating sympathy. But the reason why the reader shudders at the glimpses he gives of the morbid and perverse is because he himself shudders.

MRS. FISKE AS HANELLE IN 1904

Mrs. Fiske produced the Hauptmann play in New York, Chicago and elsewhere. It is her dream to repeat these performances this spring with the best company which she can gather round her, accompanied by a symphony orchestra of high rank, and to tour the principal cities of the country. This illustration is reproduced from a drawing by Miss Frances W. Delehanty.

He is the true knight of the ideal; if the idealism that he expresses is more wistful than confident, more cloudy than determinate, it is none the less that of the transition time for which he speaks.

HOW TO READ HAUPTMANN.

Hauptmann's philosophy of life is most coherently exprest in the play that is also his literary masterpiece, *The Sunken Bell,* a fairy drama, of which we have the admirable poetical translation of Charles Henry Meltzer (Doubleday), but his philosophy is formulated also in the fantastic play *And Pippa Dances,* available in editions by Badger and Wessels, the subject of much bewildered commentary. The dream-play *Hannele* (translated by Meltzer, by Archer, and by Bryan) is the best example of his characteristic mingling of dream and reality (Doubleday). These plays belong to his middle period; his earlier expression was in social dramas, in which the dialect and character of his native Silesia (he was born in Salzbrunn, November 15, 1862),

enter largely. The best known of these is *Die Weber* (*The Weavers*) published both in dialect and in German in 1892, a play of such sympathy and frightful power that it was long kept from stage production in countries where labor troubles were acute. This, and the other plays of this class, such as *The Fur Coat, The Red Cock,* have just been published in one volume ($1.50), by B. W. Huebsch, as the first installment of an authorized complete edition of Hauptmann's works. His family dramas, which show a strong influence of Ibsen, appear in English translation as *Lonely Lives, The Coming of Peace* (called "a family catastrophe"; Dramatic Publishing Co., Chicago), and *Before Dawn* (Badger). Of his novels the most significant is *The Fool in Christ* (*Der Narr in Christo Emmanuel Quint*), published in English by B. W. Huebsch. The germ of this novel appears as far back in his work as 1892, in a sketch called *The Apostle,* but it is one of his latest productions, his very latest being also a novel, *Atlantis,* just issued by Huebsch ($1.50).

Atlantis will appear in America in advance of its publication in book-form in Germany, which is no more than appropriate, as it deals mainly with Germans in America, and is based on Hauptmann's own visit to this country in 1894, to supervise the first English production of *Hannele.* His legendary plays include *Florian Geyer, Der Arme Heinrich, Griselda,* and *Kaiser Karl's Geisel.* One copy of his first production, *Promethidenloos,* of which not half a dozen examples survive, is at the Deutsches Haus, Columbia University, and his latest play, *Der Bogenspanner Odysseus,* has not yet left his hand, tho Berlin is looking out for it at any time. His volume of travel essays, *Greischischer Fruhling,* is hard to classify, but deliciously easy to read. His first attempts at expression were as a sculptor, but he soon withdrew from the school of art to give himself to literature, owing much to the early encouragement of his brother Carl, himself a well-known and prolific writer. Gerhart Hauptmann lives in his country place at Agnetendorf in the Riesengebirge, but spends much of his time in or near Berlin and Dresden, especially the former. He won the Grillparzer Prize in 1898, and was made an honorary doctor of laws at Oxford in 1905. Several volumes of biography and criticism of Hauptmann have appeared in German, but the nearest to an entire book about him in English is *Studies in Modern German Literature* (Ginn; $1.50), by Otto Heller, who devotes over one-third of the work to a consideration of Hauptmann's writings. See also Kuno Francke's essay in *Führmann Henschel* in *German Ideals of Today* (Houghton; $1.50), James Huneker's essay in *Iconoclasts* (Scribner; $1.50), and C. A. Krause's treatise, *Gerhart Hauptmann's Treatment of Blank Verse* (Stechert; 75 cents).

NEW YORK CITY.

The Ghost of Me

BY ANNIE CAMPBELL HUESTIS

THO I may walk in fear by night,
And dread a ghost to see,
I cannot think my friends would shrink
To see the ghost of me.

For I would surely come again
When fun and fancy came,
And watch them laugh away the hours,
And love them just the same;

If they should see me standing near,
I think that they would know
I did not grieve to see them gay,
But liked to have it so.

And if, in time of grief or pain,
Or any hour of fear,
I came to them, they would not dread
To have me waiting near,

But bring me to the friendly fire,
And make me welcome there,
And think, unchecked, their troubled thoughts,
And tell me all their care;

For they would know I only came
Across the lonely years
To feel their human weariness,
And share their human tears.

HALIFAX, N. S.

The Town Crier

A Brittany Two Days from Broadway

by

E. Alexander Powell, F.R.G.S.

The Gendarme

IF you ever feel like giving a rude jolt to the self-confidence of those supercilious young gentlemen who condescend to wait on intending travelers in the big tourist agencies, I would suggest that you drop in some day and casually ask for a ticket to St. Pierre-Miquelon. It is a perfectly safe bet that, after being kept waiting quite an unreasonable length of time, you will come away without your ticket, leaving a crestfallen and very apologetic clerk frantically rummaging thru timetables and gazetteers in a vain effort to locate a French colony which can be reached in two days from Broadway. And if, by any chance, he is able to give you a ticket, I strongly advise you to take it, for you will be getting, at very moderate cost, a sort of magic carpet which will whisk you away from the blistering pavements and the hurrying crowds and drop you, some forty-eight hours later, in a place which is so totally unlike anything else in this hemisphere that it will not need the flaunting tricolor to tell you that you are on foreign soil.

After one has been in something over six score countries, not to mention provinces and protectorates, one has to begin to use a magnifying glass on the atlas to find something new. So it came as an agreeable surprise when, scrutinizing the map one day, I discovered the microscopic archipelago of St. Pierre-Miquelon nestling under the southwestern shore of Newfoundland as a brood of chicks nestles under the mother's wing. Twenty-four hours later I was on my way. Search your guide books from title page to index and I doubt if you find so much as a mention of these nearby but unknown isles. Yet, for the tourist who is willing to put up with discomfort, they possess an interest few places in America can equal. They are the sole remnant of that great empire of New France which was won by Cartier, developed by Champlain, defended by Montcalm, and captured for England by Wolfe. In their population, their language and their customs these islands are as French as tho they were off Brittany instead of off the Banks. Red-capped, blue-bloused Breton fishermen roll along the wharves; gendarmes in gold-laced uniforms patrol their cobble-paved streets; the townsmen, sipping their absinthes at small round tables before the doors of cafes, discuss month-old news in *Le Gaulois, Le Journal* and *Le Matin;* a guillotine performs its grisly office, when occasion calls, in the Place d'Armes of St. Pierre; a governor sent out from Paris rules the tiny colony from the one-story frame "palace," over which flies the French flag.

There are three inhabited islands in the group—St. Pierre, Miquelon and Langlade—and their total area is about eighty square miles, or, as their loyal inhabitants prefer to put it, fifty thousand acres, which sounds larger. Tho these seagirt rocks show but a pin's head on the map, France clings to them for both sentimental and practical reasons. She cherishes them as the sole remaining fragment of that French dominion which once stretched without a break from the St. Lawrence to the Mississippi, and

THE HARBOR OF ST. PIERRE AND A PART OF THE CODFISH FLEET

which a French monarch unconcernedly surrendered with the remark that it was nothing "but a few arpents of snow." She keeps them also because they are the headquarters of the great French coast fishery on the Grand Banks of Newfoundland, and because that industry is virtually a naval training school for French seamen. Few places have had so troubled a history: the islands have been tossed like tennis balls from France to England and from England to France no less than eight times in the past two hundred years. They were ceded to England with Newfoundland in 1713, but on the English conquest of Canada they were assigned to France as a fishing station. They were taken by an English fleet in 1773 and restored to France five years later. In those days war really was hell, and no sooner did the islands again come into the possession of the French than they expelled every Britisher they found on them. In 1793 a British squadron again dropped anchor off St. Pierre and every French subject was deported. In 1802 they were recovered by France, but were lost again in the following year, but in 1816 passed again into the possession of France, and have remained an undisputed French possession ever since.

It is easy enough to reach these forgotten isles if you know how—but the tourist agencies don't know how. They lie eleven miles off the southern shore of Newfoundland and upward of one hundred miles from North Sydney, Cape Breton Island, with which port, during the summer months, a very small, very dirty and none too seaworthy steamer maintains a semi-weekly service. By leaving New York in the morning, you should, with good luck, reach the Nova Scotian fishing port of North Sydney the second night. The route lies thru some of the most beautiful scenery on the continent, your car window framing in rapid succession exquisite views of the Adirondacks, Lake Champlain, the Laurentian Mountains, the south bank of the St. Lawrence, the Restigouche region, the Maritime Provinces, and the Bras d'Or Lakes. From North Sydney across to St. Pierre, which is the capital of the colony and on the island of the same name, is supposed to be a voyage of twelve hours, but the slowness of the boat and the roughness of the sea generally combine to make it considerably longer. Nor do I recall ever having traveled on a vessel that possessed such a large and varied assortment of unpleasant smells.

Imagine, if you please, an Alpine vil-

WOMEN SPREAD THE COD UPON THE STONY DRYING GROUNDS

lage, with narrow, cobble-paved streets and toy houses with peaked roofs, set on a steep and stony hillside with the ocean risen to its outskirts—that is St. Pierre. It borders a small but excellent harbor, whence it retreats up the hillside, struggling more and more the higher it climbs until the houses disappear entirely before it reaches the top. The town is a study in weatherbeaten browns and driftwood grays, unrelieved by any other color, for none of the houses are painted and there are no fields, no trees, no flowers, no grass. It is about as inviting in its appearance as a prison. But one quickly forgets the dreariness of the setting in the picturesqueness of the inhabitants. None of your hybrid French-Canadians here. One hears the rapid chatter and sees the mercurial gestures of the true Frenchman. The pompous, strutting gendarmes, resplendent in uniforms of blue and silver, twirl their waxed mustaches and ogle the giggling village maidens, just as their fellows are doing in every French town from Normandy to Savoy. An ox-cart goes creaking by, the slow-stepping animals prodded on by a peasant whose red cap makes a vivid splotch of color against the dun of the houses, and whose wooden sabots clatter loudly upon the stones. Fishermen in bright jerseys and enormous sea-boots pass noisily to their work, the roll of the sea in their gait. Women with gay kerchiefs and stiff-starched, snowy headdresses, cassocked and shovel-hatted priests, seminarians in black surtouts and buckled shoes, crop-headed school children in smocks, carrying their books in goatskin knapsacks on their shoulders, the loungers in front of the cabarets, the boom of the angelus bell, the roll of the town crier's drum—all combine to make the visitor feel that he is an onlooker at a play whose scene is laid in another century and in another land, and that the curtain will go down shortly and end the illusion.

There is no hotel on the island, but the visitor can usually find accommodations at the house of Madame Coste, a matronly Bretonne whose remarkable abilities as a cook should have a wider field than is provided by St. Pierre. Her house has the smallest rooms and the largest beds I have ever seen. The latter are, in fact, precisely like those the traveler in rural Brittany finds himself condemned to sleep in—huge affairs with red canopies, and so high from the floor that they have miniature step-ladders with which to get into them. The first morning I was awakened by the long roll

of a drum beneath my window and sprang out of bed under the impression that a revolution had begun, only to find that it was the town crier, or rather drummer, announcing to the housewives of St. Pierre that a shipload of fresh vegetables had just arrived from France and were to be sold at auction on the quai. We had lobsters until we were ashamed to look one in the face, for they and Newfoundland shores, St. Pierre occupies the unique position of being a sort of wholesale distributing house for liquors and tobacco for all the adjacent regions. New England skippers make periodical visits to the islands, and when they sail away their bulkheads are filled with champagne, opium and perfumes: the captains out of Halifax and Sydney and St. John make more money in sup-

CROP-HEADED SCHOOL CHILDREN IN SMOCKS

are almost as plentiful in St. Pierre as codfish, and that is saying a good deal. Every evening after dinner Madame Coste would bring in a dish of blazing brandy and we would have *café brulé*, and along with it Havana cigars, which, never having paid a centime of duty, cost us no more than they would have in Cuba. And such wines!—champagnes and burgundies from France, ports from Portugal, madeiras and sherries from Spain—brought over in the ships that come for the cod and landed duty free. Everything considered, I never fared better in my life than I did in St. Pierre.

Next to fishing, smuggling is the chief occupation of the islanders. Owing to the low import duties, the laxness of the customs regulations, and the proximity of the colony to the American, Canadian plying confidential customers in the Maritime Provinces with gin, whisky and brandy than they do from their legitimate cargoes; while the Newfoundland Government suffers a serious diminution in its revenues as the result of the liquors and tobaccos which the fishermen smuggle across from St. Pierre. The extent of this smuggling is almost unbelievable. It is said that half the intoxicants sold in the "prohibition" State of Maine come from the French islands; whole cargoes of wines and tobacco are run up the St. Lawrence and readily and profitably disposed of in the French-Canadian villages which dot its banks; tho the inhabitants of Cape Breton pay next to nothing to the Canadian excise, they never lack for whisky. As a result, St. Pierre enjoys the distinction of having the greatest va-

riety of liquors on sale of any place in the world. Anything in the drinking line can be procured there, from the rarest vintages to the vilest concoctions that were ever poured down the throat of man.

The colony also gives a welcome and a refuge to fugitives from the law. To it as a sanctuary fly criminals from Newfoundland, from Canada, and from the United States. Tho the extradition laws are nominally in force, the authorities will rarely execute them unless they are compelled, while the islanders, who are on general principles "ag'in th' law," invariably take the side of one who is flying from justice. So menacing was the demonstration which the inhabitants made against two Canadian detectives who were sent to St. Pierre, while I was there, to get a defaulting bank official, that the commandant of the gendarmerie advised them not to land, as he feared that he would be unable to protect them. A former dentist in St. Pierre was a Vermonter who left the city where he lived quite suddenly, taking with him one friend's bankroll and another friend's wife, while the leading barber in the town is a French count and a former army officer, who left his country between two days for his country's good. Incidentally, he owns the only bathtub in St. Pierre. It costs a franc to use it. One would naturally suppose that such a monopoly, would bring him in quite a revenue, but he assured me that such was not the case. "Monsieur must remember," he explained, shrugging his shoulders, "that few Americans come here—less than thirty in a year—and as for these St. Pierrois, they do not bathe at all; they say it is easier to use perfumery."

AN OX TEAM GOES CREAKING BY

Almost every third building in the town is a café. This is because the population of the town is temporarily trebled each spring by the ten thousand fishermen who come out from France for the codfishing season, and who are noted among their fellow workers on the Banks for their unquenchable thirsts and their capacity for consuming incredible quantities of liquor. Tho your French fisherman can put an American or a Canadian under the table, he rarely topples over himself, this being largely due to his boots, which are an inch thick and three sizes too large for him and cover the legs away above the knees. I saw one red-

IN WINTER THEY WITHDRAW INTO THEIR WEATHER-BEATEN DWELLINGS

shirted Breton roll around in his boots until a kindly gendarme took pity on him and escorted him home; but he didn't fall down because the boots wouldn't let him.

Turn ten thousand fishermen loose in a town where liquor is as cheap and saloons are as plentiful as they are in St. Pierre, and it naturally follows that fights are frequent and sometimes bloody. In these quarrels the Americans, Nova Scotians and Newfoundlanders invariably combine against the French. One night a score or more of infuriated Frenchmen set upon half a dozen Anglo-Saxons, but one of the latter knocked down the chandelier with a blow of a chair and in the darkness which ensued he and his fellows slipped thru a window and escaped, leaving the Frenchmen and the gendarmes knifing each other on the floor. The oil from the broken lamps blazed up and started a conflagration, which, as a fierce wind was blowing, soon endangered the town. The villagers and fishermen attacked the flames with buckets and ladders, meanwhile sending a messenger to the parish priest begging him to pray for the wind to change. After the flames had been extinguished and the panting fire-fighters were resting from the unaccustomed labor, an antiquated hand engine rattled up, its coming heralded by the warning blasts of a bugle. "Why didn't you come sooner?" demanded the angry villagers of the foreman of the engine crew. "How could we?" indignantly retorted that puffing, but important, personage, as he paused from bellowing orders thru his speaking trumpet. "The captain of the company has gone to France, and the lieutenant is shooting quail in Miquelon, and I couldn't find my trumpet."

Shortly before I went to St Pierre a sailor had killed one of his mates in a fit of jealousy. The man was promptly captured, tried, and sentenced to death. Now the St. Pierrois are very French and still cling to the guillotine as the orthodox means of execution. And where were they to get a guillotine? There was no such thing in the colony, for there had not been a case of capital punishment there in the memory of the oldest inhabitant. Local pride forbade them sending the man to France for his execution, so the Governor of St. Pierre cabled to the Governor of the French West Indian colony of Martinique, where murders are of quite frequent occurrence, asking for the loan of that island's guillotine, just as a man would ask a neighbor for the loan of a lawnmower. The Governor of Martinique sent the instrument of

THE BEADLE STRUTS AT THE HEAD OF A RELIGIOUS PROCESSION

death up by the next steamer and it was erected in the public square. Then came the question of getting an executioner. The colony boasted no such functionary and every one who was approached on the subject promptly refused. Finally the Governor offered 500 francs to any one who would take the job, and, much to the relief of the officials, who had begun to think that the condemned would die of old age, a Basque sailor was tempted by the size of the offer and agreed to perform the unpleasant task.

"But I must have a calf," said the amateur executioner.

"*Nom de Dieu!*" exclaimed the Governor. "What for?"

"To practise on, of course," explained the sailor. "I never saw a guillotine before."

They provided him with a calf, and, in the presence of an interested audience which comprised the entire population of the island, he lashed it to the plank, touched the spring, and the falling blade decapitated it with neatness and despatch. The next day the real execution took place, but this job the sailor bungled miserably. Now here comes the typical Latin touch. He was paid his 500 francs, but the café keepers refused to sell him food or drink, he was unable to find a roof to sleep under, his comrades refused to speak to him, and he was compelled to leave the island, tho the seamen on the steamer on which he departed almost mutinied, saying that to carry him would bring them all bad luck. Yet all of these people had approved of the execution and most of them had attended it with the same pleasurable anticipations with which an American town turns out to see the circus.

At the top of the hill on which the town stands there is a little cemetery. It is not a very imposing cemetery as cemeteries go, for there are no towering shafts, no elaborately carved monuments, in fact hardly any headstones, but just plain boards or little white-painted wooden crosses inscribed with the names and the dates of birth and death of those who lie beneath. The disasters which contribute to fill the little cemetery are not as might be supposed, those which occur so frequently off the Banks, for a Frenchman has a superstitious horror of having a corpse in the boat with him. Hence, when he finds a dead body on the fishing grounds, he strips it of its boots

and clothing, if they are worth the having, and tosses it overboard again to find a resting place under those waters on which the man doubtless spent so much of his life. There is such a dearth of soil in St. Pierre that what little there is is utilized for truck gardens, the graves in the cemetery being blasted out of the solid rock. Hence the graves are prepared in summer. I asked one of the

THE VILLAGERS RIDE BEHIND STURDY NEWFOUNDLAND DOGS

men at work in the cemetery how he knew how many to prepare.

"We get to be good guessers," he answered. "There's not much change in the number of deaths, year in and year out, and we can make a pretty close guess as to how many will die before spring. Take old Bovard, for example. He's past eighty, now, and he's drinking pretty hard and the doctor tells me that there isn't much chance of his living the winter out. Then there's old Madame Masson, who lives in that cottage down at the foot of the hill. She'll be eighty-seven, come her next birthday, and I hear her rheumatism is getting worse, so it's a pretty safe guess that she'll never see another spring. Sometimes we are shy a grave or two, like the time the blacksmith blew himself up firing one of the old cannon—but a gravedigger couldn't be expected to foresee a man dying that way, now could he?"

The islanders are deeply religious, as are most seafaring folk, and on Sundays the churches are filled to the doors. That the priests are keen judges of human nature is proved by the fact that, instead of having the plate passed by gray-bearded pillars of the church, as is customary elsewhere, the collection is taken up by the two prettiest girls in the congregation, which effects the twofold object of inducing the old men to contribute more liberally and the young men to remain. Silence is maintained in the church by the village beadle, a black-bearded giant who wears a uniform and a cocked hat akin to those of a major-general and carries a great silver-headed staff of office. A frown from him will instantly silence whispering youths or giggling maidens, and when he raises his bushy eyebrows crying babies are paralyzed with fear. Not to have seen this impressive dignitary strutting thru the streets at the head of a religious procession, a marriage party or a funeral is to have missed one of the picturesque sights of St. Pierre. It is a happy and

light-hearted crowd that meets in the village square after church, and so typically Breton in its dress that one might well imagine himself in St. Malo or Dournazac. I noticed that all the women of the better class wore veils and was told that it is customary for ladies to wear veils whenever they go out of doors, tho their servants are not permitted to wear them at all.

During the summer months, while codfishing is in progress, St. Pierre is a busy, bustling town, its population swollen to three times its normal size and its trade enormously augmented by the hosts of sun-tanned *voyageurs* who come across from the coast of Brittany each season to engage in this pursuit, for every scrap of codfish served on French breakfast tables and every spoonful of codliver oil taken by French children has its origin in these remote islands.

The fishermen are taken from France to St. Pierre in steamers chartered for the purpose, a scene of indescribable activity being witnessed as they disembark with their gaudily painted sea-chests upon their shoulders, while the puffing donkey engines draw up out of the ship's hold immense quantities of fishing impedimenta and supplies. The St. Pierrois fishing fleet consists of 350 schooners, crowded by some 5,500 men, in addition to which are the hundred or more ships from St. Malo, Dieppe, Granville and Cancale, which sail across to the Banks from France direct and run into St. Pierre to land their fish or to procure bait and supplies. There are usually two dories to a schooner and each dory has a crew of two men. They row off some distance from the larger boat and anchor until they get their hooks baited, each man having fifteen hooks which he baits with hake or squid, for the cod will touch nothing else. For the convenience of the fish trade these varieties of bait fish very accommodatingly consent to make the waters of the St. Pierre-Miquelon islands their resort, and the number caught during the season is enormous. The hooks once baited, the lines are cast into the sea and fixed to buoys. The next morning the dories visit the buoys and haul up the captured cod, and, as the cod is the greediest of fish, there is usually one on every hook. When the haul is completed new bait is cast over and the dories return to the schooner, whereupon the most unpleasant part of the day's work —that of cleaning the catch—begins. With astonishing dexterity the fish are split open, all inside except the roe and the liver are thrown away, the head is chopped off, the backbone torn out, and the fish salted down in the hold. When the schooner has a full cargo it returns to St. Pierre, the fish are thrown into crates and submerged until all the salt has been soaked out of them. Then women and boys get into the crates and scrub each individual fish, after which they spread them upon the stony beaches to dry. This process has to be repeated daily for many days before the cod are properly dried. At night, or when rain or fog threatens, the fish have to be piled in circular stacks and covered with tarpaulins, for the best dried cod are as dry as a bone and as hard as leather. When it is at last sufficiently cured it is salted all over again and packed for export. There you have the life-history of the codfish from the Banks to the breakfast table.

When the autumn gales drive the fleet off the fishing grounds, the men and their catch are transferred to the waiting transports and sent back to France, while their schooners are laid up in the inner harbor of St. Pierre, bound in a solid mass of chains and tackle to resist the fury of the fierce midwinter blizzards which rage about the unprotected little archipelago. From then until the spring comes round again all communications with the little islands are cut off except by cable. The wharves are silent and deserted, many of the cafés are closed, the gendarmes exchange their uniforms of blue and silver for more serviceable garments, the wind shrieks and yowls across the Place d'Armes, the narrow streets are banked house-high with snow, and the inhabitants, like hibernating bears, withdraw into their weatherbeaten dwellings to sleep and eat the time away until the warm weather brings the island colony to life again. It is one of the strange corners of the earth, is St. Pierre-Miquelon, and, if you will take the word of one who has journeyed on all the continents and voyaged on all the seas, it is worth visiting.

Thru Almond Eyes Aslant

What a Chinese Student Thinks of Us

[We have asked a young man from China who has been in this country for several years studying at various colleges and universities of the West and East to give us a frank account of his experiences and impressions, and we publish it just as he has written it. It contains some slight deviations from English idioms, but the mistakes are much fewer than we would make if we wrote an article in Chinese. As a "human document" it is of great value, for it enables Americans to see themselves as they are seen. There are about five hundred Chinese students now in the United States, and it is important to know just what they think of us, collectively and individually, for these young men are to be the dominant factor of the New China in determining its relation to our country.—EDITOR.]

NO foreigner can come to the United States, where one finds undertakers in the church, no candles sold in the drug store and everybody in a hurry, without making many blunders, in which respect I am not excepted. When I first landed in San Francisco, it was Saturday evening, and my hair was intolerably long. I said to myself, "This is the civilized land where every one should have his hair decently cut." A moment later, I was wandering on the streets to find a barber shop. Fortunately, after walking three or four blocks, I saw thru the window a barber cutting the hair of an old man. In the parlor there were a number of nice chairs and tables, on which were placed books, newspapers and letters. All those gave me a very favorable impression. That ordinary barber has such library, and certainly an American professor should have half a dozen. I entered the house and sat down. Waiting about half an hour, I found that the barber had packed up his tools and gone away and that the old man entered his inner chamber. I was left alone in the room. Waiting for fully twenty minutes, the clear shaven gentleman came out again and looked squarely in my face and said, "Well, what do you want here? Can I do anything for you?" Nothing; but I want to have my hair cut," I answered. "What," he said with surprise, "you wanted your hair cut here? Man, this is not a barber shop, but it is my residence. I left the house greatly embarrassed, after being told that the barber was private and I had come to his home on Sunday.

Before I sailed for America, I pictured to myself in a half dreaming way: First of all, America is a land of white men. The cosmopolitan spirit is prevalent there. There are no starving people, and every one I am going to meet is a Christian; in religion, sincerity and unselfishness are predominant; in politics there is no graft; in society every one is equal, and in the whole country there is contentment and peace. After being here for four years, I become convinced that such a place as I pictured to myself cannot be found in this world.

On my arrival, during the change of cars at a certain point, I entered a car without noticing that it was a smoker; not until after an old man with black beard and dirty clothes asked me for matches. He thus advised me when he found I did not smoke, "If you don't smoke there is no business for you here. This is a smoking car." I encountered a lot of unpleasant experiences one after another. In China one house can be easily distinguished from the other, but it is not so in this country. When I first arrived at the city, I stayed on a certain street where all the houses looked alike. If one does not know the number of his house, he is likely to get into a wrong one. After returning from a walk at night, I went to my room on the first floor, sitting down and opening up the drawer to get my nightgown. Finding that the drawer was empty, I became alarmed. My alarm brought the landlady to the scene. She saw me and accused me of theft and robbery, and attempted to have me arrested. In broken English I explained to her that I got into a wrong house, and she refused to listen to my excuse until my landlady was notified and came to identify me. The whole matter seemed that the landlady treated me rather too harshly. I was scared as she shook her fists in front of my face.

I went to a Western self-supporting co-educational college, where I saw more plainly than ever before the characteristics of American girls in school. On my arrival, I went to see an old man with a haughty bearing—I was told that he was the president. That the president of a Christian college should assume dignity did not impress me favorably. He did not say very much to me either. If my memory is correct, his words were: "Fill out the blank"; "That is all"; "You may take him to the dormitory." Before I came to this country, I thought to myself that a Christian college president is always humble and polite.

In my three years' stay in that institution, my knowledge of American girls is increased. I seem to like these golden haired, beaming faced, mild eyed, goddesslike creatures. I have a high esteem for those who are helpful, courtesying and kind, as I have utter contempt for many others who are peevish, unladylike and fussing all the time. So far as their fair complexion is concerned, both classes impress me deeply. Their tender eyes, neither black nor blue nor white, and rather all those shaded together, give me a predilection for their association. Their plump necks, shoulders and arms look as beautiful as some wonderful creation. Their chat, their laughter, their good-natured innuendoes, their flashes and their soft voice charm me.

Like many others, I prefer telling something about the bad treatment I received from peevish girls, rather than the kindness given me by ladies. When I first went to the college dining room, the girls, who were sitting up like a row of avenging ghosts, looked at me as if I were a wild beast. After my three years' stay at the college, I discovered that most of their hearts are not bigger than hazel nuts. They always replied to my remarks in monosyllables. I seldom talked with them in whose eye there was not a spark of invitation. I do not know even now why they everlastingly flung bitterness in my face. However, I declare they are fine looking girls. Perhaps God so created them that their hearts are not indexed in the honest freshness and earnestness of their facial expressions.

During the first few days of my life in the college, I always lifted my hat to every girl passing by me, but a few of them would not respond to my courtesy. Thinking that they did not see me while tipping my hat,—for I am a short man,—I stepped in front of one and tipped my hat before the royal lady. She again paid no attention. I thought to myself that the case was incurable. Finally I adopted the American style; that is to pass by them without looking backward. The president of the institution one day called a meeting, in which he complained of our discourtesy to the ladies. Having been there but a short time, I had no courage to stand up and to speak my grievance against some of the fair sex, but I said to myself with a grin, "That president must be a blind man, and if not, why does he not open his eyes to find out the peevishness of girl students?" The discourtesy I described above will certainly discourage anybody who is polite to the extreme and has a little horse sense, in which I am not lacking.

American girls seem changeable. They have mercurial temperament. Of course, there are some exceptions. I have seen many boys and girls become good friends, and after a week's association they disliked each other. The girl has found another boy whom she liked better. After a while she still gets another, and so on, without ceasing. Here in the school I seem to discover the reasons why there are so many divorces in America. Those girls who are mothers of the future get their training to despise sacred relations in their early school days at the expense of their poor, broken-hearted classmates. They make love to boys and leave them when they tire of them. To be sure, boys are not perfect, and are responsible for the mercurial temperament of girls. The girls thru their charming personality can afford to do that kind of trick without getting into serious trouble. If any girl in China so behaves, she would be looked down upon. When I discovered this code of schoolgirls' morality I was greatly terrified. In spite of their changeable characteristic, I seem to like them—like them for their beauty, their smile and their musical voice. A Japanese scholar once remarked, "I would make an English woman my wife, a French woman my sweetheart, a German woman my servant and an American woman my

friend." On that point I quite agree with him.

To me, not caring for philosophical studies of the character of any people, everything is bad or good according to its appearance under a certain circumstance. I do not possess analytical talent to see things as they are. What I am going to say may be wrong or may be right. Inconsistency, conventionality and capacity for bluff impress me as the national characteristics of Americans.

Probably most men of high positions are inconsistent in their dealings with people. One of the American presidents, for instance, is said to have sold Korea to Japan in his effort to end the Russo-Japanese war. America proclaims to be a friend of China; her Executive refuses to recognize the Chinese republican government after having been firmly established. At the signing of the Korean treaty, America promised to offer her good offices whenever Korea got into trouble with any nation; but when the time came, and the latter needed her help, America kept quiet. But all those inconsistencies do not concern me at all, and I speak of them while losing the train of my thought. The inconsistency I will speak of is individual and perhaps not national. I have found this character is deeply rooted in two persons, a college president and a professor, with whom I have been in contact for three long years. They did not pay a whit of attention to me, but I studied them like some strange creatures which I had never before seen in my life.

That gray haired college president is a man, vigorous, tyrannical, peevish, professing to know everything and trying to do anything, from his executive work to the loading of a wagon. In the institution his rule is supreme. A professor told me that if any teacher in the faculty meeting tries to antagonize him, he is liable to be discharged. One day the president issued a request that all the teachers in the college should frankly express their opinion in regard to his administration. One college teacher, who is an honest man, gave his opinion in writing, in which he criticised a number of rules and pointed out the bad part of his administration. He was called before the high executive and received the president's reproach for his unreserved opinion. I will call that college president King Lamb for convenience's sake. In the church, King Lamb is very religious. He frequently read the fourteenth chapter of the Romans with his students. I followed him as he read, "Why dost thou judge thy brother? or why dost thou set at nought thy brother? for we shall all stand before the judgment seat of Christ. For it is written, As I live, saith the Lord, every knee shall bow to me, and every tongue shall confess to God. So then every one of us shall give account of himself to God. Let us not, therefore, judge one another any more; but judge this rather, that no man put a stumbling-block or an occasion to fall in his brother's way." But when I wanted to leave his college one year before my graduation on account of the poor English department, King Lamb manifested his inconsistency more than ever before. I told him I wanted to go to a college where I would learn practical English, for which I came to this country. I went to his office and said good-bye to him, after telling of my plan to leave. He got angry and said, "You—you use our college as a stepping-stone. When you first came here, we admitted you to the school. You have no conscience. You are an Indian, a heathen, a savage. No; you are worse than Indians. Don't come back to our campus again. There is no place for you here." After leaving his office, I murmured, "Is it possible that the man with whom I just this morning repeated the fourteenth chapter of the Romans in the church can call me such ugly names? Then I don't know the Lord yet." From that moment on I have been puzzled as to whether King Lamb has been influenced by paganism, Paulinism, fanaticism, animalism or a mixture of them all. But I am sure he has little of Christianity. Other than those faults, he is a splendid, gentle, bald headed college president. But I would mention one fault of his. He likes to employ too many graduates of his college as teachers, who as a rule always obey his supreme command in his little kingdom, and obey it even if they do not like it. It seems to me a bad idea to employ graduates to teach in the institution in which they got their education, for they do not have a wide range of knowledge; they do not know any better method of

teaching employed in other schools; they give to students what their former professors in the college had given to them. If the English department is weak, it will remain weak, and also has a tendency to be weaker. When they teach, they do not put out an amount of energy and industry as they would in a new school where their popularity and success depend upon their ability and diligence.

The trouble with the English department of that institution lies in the employment of her graduates as teachers. There are two English instructors, both of whom were graduated from the institution. One professor I have particularly in mind, against whom I have much to say—certainly unpleasant—is a middle-aged man. No doubt, he is well versed in the language, either theoretical or practical. But to be frank, he is lazy to the core. He seldom looks over students' examination papers, which usually go to feed his waste-paper box. I took several courses under him, and I shall mention one study which caused me a lot of trouble because of his laziness. It was a writing course. I wrote essays as carefully as I could, and handed in my papers as promptly as it was possible. He never looked over my essays. This was the trick he played upon me. He said he would return me my papers tomorrow afternoon. When I went to his home at the appointed time, he told me to go back again next Monday, for he had not got my papers corrected. But that next Monday never came. Alas! my teacher had thrown my elaborate essays, written under pressure, into his old waste-paper box. He had no time to correct them, because he had to cook food for his wife and preach in a country church. That professor got used to the college "atmosphere," and became lazy beyond amendment. He will never think of trying to do his best. I am sorry I have to leave him at the end of this paragraph.

Before I came to this country, many missionaries in China told me that I would find everything democratic and cosmopolitan in that Christian college; but my three years' stay proved the contrary. I was excluded from all the literary societies and denied all advantages which American students enjoy. Thanks to the Heaven when one of the literary societies took me into its circles out of their sympathy for me, a poor outcast. The girl students frequently ran away from me, or they changed their pleasing faces into grim ones when they saw me. All the males students played politics. There is no cosmopolitan spirit, no democracy; but old conservative ideas and the Indian caste system prevail in the college. There is little of Christianity; but the students worship God day and night.

I received more conventionalities in that institution than anywhere else in my life. One incident is still lingering in my memory. The head matron one day invited me to her table out of her kindness for foreigners. She is a lady of about thirty years of age. I was told the other day that she is going to be married. She honored me by sitting at one end of the table by my side. This embarrassed me. Embarrassment grew into excitement. Excitement automatically caused my hands to be on the table, playing with the napkin and the ring. She stared at me, and unconscious I kept on playing. At last her patience was exhausted, and she turned her head aside, twisted her body and said, "You better put down your hands. It is not decent." Immediately I obeyed the order; but a moment later, while talking with me about her interesting visit to Paris and about European courtesies, she forgetfully put upon the table her own hands, and her fingers were soon engaged in turning around the napkin ring. Another conventionality of hers mixed with inconsistence was the rule she gave in her book of etiquet. She stated, "No young lady can shake hands with a young man for five seconds." But another day I observed she held the hands of one of the superintendents for over ten minutes. I doubt very much whether her conventionalities, that president's religion and the spirit of that institution will help me in the development of my character.

As to the American capacity for bluff, I am glad to say that it has saved me many times from embarrassment and the loss of positions. I have been cultivating that character for the last four years, and I appreciate it highly. Three years ago, I went out to work for a farmer in Missouri, who asked me whether I knew anything about plowing. Of course, I

answered him I knew how to handle a plow, for I used to plow rice fields for my father in China. But he did not inquire into the nature of my previous work. In China we use cows and oxen to plow fields, but in America horses and uncontrollable mules are employed. Some of my American friends tell me that theirs is the advantageous way, but I do not think so, after having worked with two Western mules for three hours.

The farmer for whom I worked asked me to jump on the back of a big mule, the sight of which scared me. I rode out to the corn field at a distance of two miles with another mule by my side. During the trip I enjoyed keenly the riding, but some hard things were going to happen. Knowing nothing of harnessing the mules, I told the farmer, "I know the Chinese way of harnessing, but not yours." It was merely a simple bluff. However, he helped me to finish my first job.

I did remarkably well at the beginning; but after plowing for two hours I began to get tired and at the same time the mules got hungry. They ate grass and little corn stalks as they were treading on. Angry with them for their stopping, I cut each of them with the whip. Before I tried to give them a second cut, they turned round, stared at me, waved their ears and shook their heads. They jumped up and turned the plow upside down as I was thinking about the mysterious language the mules spoke to me. I said to them, "Ho, ho," the Chinese way of saying stop to animals. Misinterpreting the meaning of my "ho, ho," they thought I wanted them to walk faster, and so they began to run, and plowed down hundreds of little corn stalks. I liked the work, but I did not like the mules and their treatment. I told the farmer I wanted to quit. He said, "All right. Here is one dollar for your morning service." I refused to accept the money, thinking about the little corn stalks I plowed down with the incomprehensible American mules. But if he offered the dollar to me now I would act in a different way, and would accept it with grace. I have seen from time to time many Americans doing the same thing, and are paid for it. Why should I make an exception to their example? I have learned their bluffing character, and surely I should learn their way of making money.

After my failure in attempting to earn two dollars a day on the farm, I started back for my college town with a heavy suitcase, which contained five suits of underwears and other articles besides. You see, I was then an amateur farm hand, unlike the professional farm helper, who carries nothing, but wears a shirt and a pair of "pants," and if by accident he happens to get wet, he has to go to bed until they are dry. Fifteen miles away from the college town I met an old farmer, who advised me to take a short cut across a large patch of corn fields in order to save three miles' walk. After getting into the corn fields I could not get out. I walked for five hours, and could not find a way out still. It rained. My suitcase, which was already heavy, became heavier as it soaked in with water. I was so exhausted that I had to sit down under a big tree. Hungry, I found a cow a little way from me, and milked her for a cupful. I had a big meal in the American wildness to which I had been betrayed by that merciless farmer. Finally, I was led out of the corn fields by a kind young farmer who happened to pass the place. Since that time I have always been wondering whether that betrayer was an American or a Yankee. In the name of good sense, I cannot forgive him in this life or in the life to come. The above incident illustrates the usefulness of bluff, thru which I found my work with that farmer.

As time goes by my capacity for bluff is improving. I am more successful in New York than anywhere else in practising my bread and butter craft. One day in New York I went to see a bachelor who wanted to seek advice of an Oriental student working his way thru school. He is good natured, dignified, sympathetic and thoughtful. He asked me whether I knew anything about cooking. As a matter of fact, I never cooked a single meal either for myself or for anybody else. Endeavoring to get the job, I used the bluff taught by Americans, and said, "Why, sir, surely I know how to cook. The cooking of rice is my speciality." "Well, what kind of food can you cook besides the rice? Can you cook steak?" Why, surely." "Can you roast the pork?" "Why, surely." "Then

you know everything about cooking?" I answered, "Why, certainly." I had a week to prepare myself. First of all, I must learn how to cook the rice. Finally, I mastered the art of rice cooking. On the first day he asked me to broil a big steak. Here came into my mind the word bluff. "Well," I said, "I know how to cook it in the Oriental way, but not in yours." Then he showed me how to cook, and I learned it. The bluff always serves me well and successfully. O, Bluff, if I were a poet, I would write a few lines to praise your merits.

Notwithstanding that the old farmer tricked me and caused me to walk fifteen miles extra amidst the corn field, I like American farmers and their life. They are reared in the lonely country corners and live among flowers, trees, nightingales, thrushes and other beautiful birds. Their household is the happiest in the world—happiest of all positions in social scales. They are bathed in the fresh air and work hard in the twilight of morning. While city women are asleep at midsummer dawns, country girls are up working, with gentle roosting birds above their heads on the trees in their nap and with rabbits and hares running around in the forest. They are representatives of typical womanhood. They enjoy nature. They see faint summer fogs spreading about the meadows in the early morning. They see that sun rays open the buds of flowers, stretch them into long stalks and bring forth scents from their petals. The fresh looking, rosy cheeked, bright eyed farmers' daughters are so charming—more charming than the human language can describe—in their summer pinkish or white attires. You will find in them real vitality, real incarnation and real purity, which are nourished by mysterious nature. I believe the farmer appreciates moral ideals, high thinking and plain living as much as men of any other profession. There is nothing of fragility among them. I believe not a single city girl will be able to milk cows, churn butter, make cheese, set hens and rear chickens, which the farmer's daughter does every day.

Perhaps some city girls may get angry with me for not saying anything pleasant about them. To be fair, I would say they have their superiority. They walk more graceful than any country girl; they dress more fashionable; they are more cultured; they possess skills for handwork. They receive visitors with elegance, while country girls are badly frightened in any social doing. They know how to travel from one end of the city to the other, while country girls once get into the middle of a small town and cannot get out without the help of her friends.

So far as my part is concerned, I like America's country life, for I love to hear the rush of streams, the fizzing of milking, the absolute stillness of night and the hissing of serpents. I love to see country girls, honest hearted, receptive, chaste, even tho not accomplished. I like to watch them working in the field and at home. I like to ride with them over rough country roads. I love their gospel of simplicity. I love to stay in their airy house. I love everything belonging to the farmers, after spending four months with them. I prefer sermons in manual labor to sermons in churches, which I have learned since I came to this country.

My impression and experience in the United States, my adopted home, as a whole are pleasant. Americans are helpful and cheerful in spite of their bluffing. They are unreserved and open minded. They are sympathetic with foreigners, and always excuse their blunders. American women, beautiful of eyes and charming of faces, are smiling more often than Oriental women—including my sisters and my sweetheart—I can find in China. American teachers are the most pleasant men in the world, ready to talk with me on anything, but not on my grade and my standing in the class. The American manner of living, tho expensive, gladdens one's heart. But in some cases American society is hopelessly snobbish. The American church is a very comfortable place in which to hear eloquent sermons, but one preacher maddened and terrified me when he said, "Those who have not been baptized will be consigned to the nethermost corner of hell." American schools where either the poor or the rich can get education give me an idea of the American standard of civilization. Except capitalism and politics, I like everything American; but best of all I like her farming life, simple, honest, happy and divine.

Literature

The Three Brontës

After more than half a century since the death of the author of "Jane Eyre," interest in the Brontës continues unabated. Collectively, these sisters, of whom Miss Sinclair writes in *The Three Brontës*,* together with their father and brother and their extraordinary family life, constitute one of the most fascinating, because baffling, problems for those who base their mode of literary criticism upon biographical detail and attempt to derive all artistic expression directly from personal experience. Their imaginative range was so great, their contact with life was so limited. How to explain this discrepancy between art and life, how to make the few poor incidents and events serve as clues for the work of interpretation—this is the problem.

As a matter of fact, the "Brontë problem" has for all practical purposes been that of Charlotte alone. Annie had too little genius to invite much individual notice. Emily had so much that her case has been felt to be nearly hopeless from the start. Critics, aghast at the gulf between such a novel as "Wuthering Heights" and any knowledge of the world that could possibly be acquired by an isolated country girl like Emily Brontë, have been obliged to accept her just as she stands without explanations—to regard her as a strange exception, a paradox of genius—or to find grounds on which to base a denial of her authorship. If it be held that experience is absolutely essential to genius—and that this is the common view seems the only possible deduction to be made from the fabric which has been erected upon the facts of Charlotte's life—the latter is the sole logical and consistent course to pursue. Consistency, however, is the only virtue of such theories as that which used to make Bramwell Brontë the real author of "Wuthering Heights," and as that which Mr. Malham-Dembleby has recently advanced in an elaborate "Key to the Brontë Works," where he assigns the novel to Charlotte. For the rest, these theories wholly disregard strong internal literary evidence and all the probabilieies of the case. Nothing is more reasonably certain than that Emily Brontë wrote the book which is commonly ascribed to her, while nothing, on the contrary, is less likely than that the theme of passion which Charlotte spiritualized, and which thus past into modern English fiction thru "Jane Eyre," was the result of her own passionate experiences and reveries. (Miss Sinclair pretty well disposes of the view advanced by Mrs. Oliphant and others of Charlotte Brontë's almost abnormal preoccupation with the other sex by an appeal to the very evidence on which such a view is supposed to rest.) On the whole, therefore, it would seem safer to argue from Emily to Charlotte in order to demonstrate the futility of attaching any special significance to the events of the latter's life in their effect upon her art, than to argue from Charlotte to Emily with the result of making the author of "Wuthering Heights" a kind of monster, or else eliminating her entirely.

As a matter of fact, Charlotte's experience, whatever it was, and however vital to herself it may have been, is no more adequate to explain anything she ever wrote than is Emily's *lack* of experience to prove that she did not write "Wuthering Heights." The truth is that genius in the last analysis has absolutely no necessary relation to experience; tho, as in the case of Charlotte, who undeniably drew to a large extent upon the stock of her observations and memories, it can utilize it in its own way to its own ends. It is this that Miss Sinclair, who, as a novelist, may be supposed to know something of the modes of artistic creation, has seen more clearly than any other recent writer about the Brontës. And we accordingly have to thank her, in this remarkably acute and sympathetic study, not only for rescuing Charlotte from the plane of petty personal gossip that has

*The Three Brontës. *By May Sinclair.* With Illustrations. Pp. 396. Boston: Houghton Mifflin Co $3.

obscured to some extent the essential character of the artist in her, but for establishing the close spiritual kinship of the two sisters in such a way that each serves to support and explain the other. The difference between them is one of degree and intensity rather than kind, after all. Miss Sinclair even goes so far as to hazard the suggestion that "Wuthering Heights" may not have been without its influence upon the art of Charlotte. Certainly this sounds more plausible than Mr. Shorter's theory that she owed her literary ability to the academic training of M. Heger, of the Belgian *Pensionnat.* For such an influence would be but one phase of all the reciprocal influences of the home circle at Haworth, where the isolation of the common life stimulated a feverish intensity of spiritual communion. If Emily Brontë's genius "found its sources in itself," we need not go beyond her family as a whole to find the sources of Charlotte's.

Under the Old Flag

General Wilson's long experience in the service of the United States has, as he himself points out, given him "unusual opportunities for observing character and learning the inside details of what was taking place about me." He tells his story* with a soldierly frankness and he has a good eye for interesting incidents as well as a most amazing memory for conversations heard before most of us were born. He served on the staffs of Sherman, McClellan, Grant and Sheridan, and after eighteen years of civil life he re-entered the service to take part in the war with Spain, when he had control of districts in Porto Rico and Cuba. At the time of the Boxer rebellion he was second in command of the American troops that went to Peking, and we are glad to note that he opposed the blowing up of the White Pagoda, tho after he had withdrawn the American contingent this act of vandalism was carried out by the British commander, General Barrows, at the request of the British Minister, Sir Claude MacDonald. The reason given by the British Minister for the destruction of the famous Chinese temple was that it was necessary to demonstrate that the God of the Christians was more powerful than the gods of the heathen.

The reader comes across many remarkable passages in these two volumes, for example the following account of his all-night conversation with Grant just after the Civil War:

> "At eleven o'clock he [Grant] dismissed Badeau and Babcock to their rooms with the remark that he wanted to talk alone with me, and when the talk was thru would give me the spare bed in his own room. With their withdrawal we renewed the conversation and kept it going till one o'clock in the morning, during which he stated his views on other important questions of the day. He indicated for the first time his desire, now that Maximillian's Empire had come to an end, to march an army into Canada for the settlement of the Alabama claims and the expulsion of the British flag, not only from that country, but from every British colony on the continent. He declared that in carrying out such a policy we could mobilize five hundred thousand of the best infantry and artillery and fifty thousand of the best cavalry in the world, and suggested that the ex-Confederate leaders would hasten to enroll themselves under the national flag for the execution of that great purpose.
>
> "At one o'clock we went to bed, but, as can well be understood, I had by that time become thoroly aroused to the great events of the past and to the great questions of the future which he had brought forward that evening, and, instead of going to sleep, I lay pondering their solution. After perhaps thirty minutes I turned over, heaving an unconscious sigh, whereupon the General said: 'If you can't go to sleep, Wilson, let us get up and finish our conversation.' Of course, I accepted the suggestion and we at once carried it into effect, our talk continuing unbroken till we were called to breakfast at eight o'clock."

Evidently Grant was not content with having freed Mexico from the emperor thrust upon that country by Napoleon III, but wished also to "free" Canada. Some resentment against the British was natural enough then at the close of what has been often called "the third war of the United States with England," a characterization which the international tribunal on the "Alabama" claims proved to be not altogether inapplicable. But, fortunately, nothing came of this plan to take revenge upon Great Britain by the invasion of Canada. General Wilson states that President McKinley shared his hopes for an equal and honorable union of Canada and the United States, tho the expression of that aspiration

*Under the Old Flag. Recollections of Military Operations in the War for the Union, the Spanish War, the Boxer Rebellion, etc. *By James Harrison Wilson.* New York: D. Appleton & Co. 2 vols. $6.

which General Wilson had caused to be inserted into the platform of the Republican party was dropt when England, alone among the European nations, had stood by us during the Spanish War.

An English Letter-Writer

In a letter to Mason, included in this third and concluding volume of the Bohn Library edition of his correspondence,[1] Gray quotes Dean Swift as saying that one should never write to one's friends but in high health and spirits. If he were to wait for them, Gray adds, he would never write at all. Let not the reader conclude that the author of the famous "Elegy" is either a dull or a morose epistolarian. On the contrary, we find him as sprightly as ever, diverting, and of that humor that makes him one of the most pleasing figures in the literary England of the eighteenth century. Perhaps he was hardly profound—but who wants profundity in a letter-writer? And certainly he was learned enough. Let us skip his learned letters!

To read these letters at all is to be reminded that the eighteenth century is one of the most modern—in many ways more modern, indeed, than that to which it led up. Gray was greatly interested, during the period which this volume represents (1763-1771), in one Jean-Jacques Rousseau: and it is Rousseau, precisely, whose two hundredth birthday has just been celebrated with so many literary fireworks. Today we have books about the Genevan by MM. Valette and Dide;[2] Gray for his part was interested in the pamphlets and books of Rousseau himself, and in his personality, and in the impression he made in England when he came there as the guest of David Hume. Perhaps, on the whole, Gray had the better of us in this respect. Not that he loved Rousseau. He realized Rousseau's importance as the author, in "Emile," of a book that "struck out" a thousand lights, and exprest better than ever before "a thousand thoughts" on education; yet he read the "Letters from the Mountain" "heavily," and found them the dullest writing he had ever sunk to, excepting only the overrated "Social Contract." Gray was not a critic in the sense Sir Henry Wotton used when he told Bacon that critics were "like the brushers of noblemen's clothes," but he was possessed, all the same, of an uncommonly keen and discriminating vision, not only in amusing himself with Marivaux and Crébillon, *fils,* "On a Sopha," but also in realizing that from one standpoint Jean-Jacques is useless gush, however eloquent, while from another his books belong to the dynamic literature of all time. And Gray's modernity we find nowhere better exprest than in his cynical railing at what he calls "French atheism"; which he finds "a little too shocking" for even a patriotic Englishman to rejoice at. "I have long hated their authors for it," he tells Walpole; "but I pity their poor innocent persons of fashion. They were bad enough when they believed everything." This is very pretty cynicism. A new note in contemporary French drama would be struck if some playwright took it for his cue, and satirized, not belief and virtue, but unbelief and vice. In Paris, this dramatic style might even be taken for paradox, as it is when Mr. Shaw writes tracts in London.

Gray's letters are as entertaining as anything that has come out in a great while, and we recommend them to such persons as have tired of repetitious novels, and are beginning to tire even of the English memoirs cribbed from French monographs, to be sold by our best publishers at exorbitant prices. For there is scandal, tho not very much of it, here, as well as literary gossip. "The present talk," writes the poetic don, "runs on Lady Harriet Wentworth (that is her name since she married her Irish footman)." The editing of these letters is scholarly to a notable degree, and the notes longer and more numerous than in earlier editions. As Gray's letters were addrest to some of the most intelligent Englishmen of his times, and were written by one who wrote so little else that he is very properly styled a "man of letters," a genuine entertainment may be promised to whomsoever takes them up, providing, always, that his brain has not been softened by the reading of too many fiction magazines.

Her Soul and Her Body. By Louise Closser Hale. New York: Moffat, Yard & Co. $1.20.

Here is a new Boston of which literature has known nothing! The Boston where the half world impinges upon the respectable one; the cheap boarding house, with its doubtful and degraded inmates, where girl students with more ambition than money to buy instruction run the risk of contamination; "Columbus avenue, just across the bridge" from Huntington, is far from the Boston of Howells and Higginson; an unknown country of sordid actualities and tragic potentialities, when a girl in her teens tries to live on six dollars a week. Mrs. Hale has entitled her novel *Her Soul and Her Body*. Boston, in fiction at least, has been pretty much all soul or oversoul and little or negligible body. Perhaps the stage experience of the author has lent a touch of exaggeration, but the story is dramatic and neither morbid nor suggestive in its treatment of most unpleasant topics The fact that emotions and their expression are a sort of stage wardrobe, put on and off as a business, may give Mrs. Hale, who is herself an actress of ability, an unconventionality that is sometimes startling. Only an experience of stage kisses could make her regard the real ones so lightly. A girl brought up in a respectable New England home would not think them a matter of course, after so short an acquaintance with the extremely undesirable Mr. Ruyne. Some ideas of decorum are fairly beaten into a girl's mind in a modest American village, and she does not immediately change her standard even when she goes to Boston for an education. Melissa Robinson, if as "nice" a young girl as the author wishes us to believe, would at least have been instructed that it is wrong for her to go to dine with a young man alone in his rooms. On the stage it might happen to bring about a dramatic situation, but in real life it is most unlikely. However, the pitfalls are so plainly described that women who want to help young girls in their fight for goodness have a few duties pointed out to them by this plain-speaking book. They might see, for instance, that there are more decent places for girls to board at rates within their scanty means. We must, by our respect for their honorable ambitions, teach them to respect themselves "It weakens a girl's defenses when she has no opinion of herself. She must be as proud as Lucifer of her goodness if she wants to preserve it."

The Lost World. By A. Conan Doyle. New York: George H. Doran Co. $1.25.

The Lost World is a paleontological romance of South America, and, at the same time, a curious study of the scientific temper as exemplified in the person of the redoubtable Professor Challenger. The report of the meeting of the Zoological Institute Hall is delicious in its satirical presentment of the lengths to

FROM CONAN DOYLE'S "THE LOST WORLD" (DORAN)

which it is possible for science to carry a man. *The Lost World* is the Jurassic world refound,

"An area as large, perhaps, as Sussex has been lifted up *en bloc* with all its living contents, and cut off by perpendicular precipices of a hardness which defies erosion, from all the rest of the continent. What is the result? Why, the ordinary laws of Nature are suspended. Creatures survive which would ordinarily disappear. They have been artificially conserved by those strange accidental conditions."

And as the reader joins the expedition to confirm the professor's story, which had been doubted, he feels as tho he had walked into the pages of a geology with all the fearsome animals depicted therein come to life and in pursuit of him. The party of intrepid explorers have many hair-raising adventures on the plateau related in Conan Doyle's best style, and for a really thrilling story of adventure who has a better?

The Tempting of Tavernake. By E. Phillips Oppenheim. Boston: Little, Brown & Co. $1.25.

One is constantly reminded of the literary style and methods of Marion Crawford in this absorbingly interesting story. Tho several of the situations and incidents are similar to those in Oppenheim's recent book, "The Lighted Way," it is original enough to stand by itself. It is a characteristic Oppenheim story, catching the reader's curiosity and interest at once and holding them unflaggingly. The hero is a strong-jawed, young, middle-class English real estate agent, who falls in love—and for the first time in his hitherto unemotional life—with two girls at once. They are sisters, one good and sensible, the other sensuously beautiful and wicked. Under these two conflicting passions his character is beaten and welded into form, and one dramatic scene follows another in quick succession.

The Joyous Adventures of Aristide Pujol. By W. J. Locke. New York: The John Lane Company. $1.30.

A joyous book whose pages sparkle with delicate humor. It is only occasionally that one meets a book or a woman that has that elusive, indescribable quality, charm. This book has it to a marked extent. Every paragraph is a pleasure. One reads slowly in order to enjoy the reading to the full, and finishes the book with regret. Mr. Locke was never happier than in delineating the quaint, temperamental child of Southern France, Aristide Pujol, the soldier of fortune, innocent prevaricator, talented and wholly lovable hero, who drifts from one calling to another, always joyous, often bankrupt, irresponsible, fascinating. Mr. Locke, essentially British himself, portrays this essentially Latin type with rare sympathy, appreciation and humor. Each chapter is a story in itself, yet a slender thread of plot binds them together into a composite whole. It must have been a real pleasure for him to write these whimsical sketches, and it is a real pleasure to lovers of true literature to read them.

A Romance of Billy Goat Hill. By Alice Hegan Rice. New York: The Century Company. $1.25.

Were it not for the fact that Mrs. Rice had achieved fame as the author of "Mrs. Wiggs of the Cabbage Patch" of perennial popularity, this mediocre novel would hardly call for review. There are touches here and there of the homely humor and clever character delineation that sparkled thru the merry pages of Mrs. Wiggs, but the story otherwise is commonplace. A stately old Kentucky home with an unsophisticated heroine, a gay and somewhat dissipated lover who reforms, an unworldly professor whom the girl marries and who dies at a convenient time, and several humorously sketched inhabitants of the slums make up the slender tale. With these latter characters Mrs. Rice is sympathetic and effective, and if she would devote her talents to portraying the people who live among the tin-can-strewn poverty flats and abandon the attempt to interweave high life scenes, her work would be far more effective.

The Life of Michael Angelo. By Romain Rolland. New York: E. P. Dutton & Co. $2.

To most of us Michael Angelo is a great Italian sculptor. To some of us he is a painter. To a few he is a great historic character—a great and unique man of genius. To M. Romain Rolland he is manifestly a hero, even if he did not live up to M. Rolland's definition of heroism, in his preface to *The Life of Michael Angelo*. "There is," he says, "only one form of heroism in the world,

and it consists in seeing the world as it is—and in loving it." This *Life* is, in one initial respect, very worthy of its subject, since it is as artistically designed and executed as any we meet with. It tells of a great life which was always a tense struggle, always falling far below aspiration and vision, yet always rising far above contemporary conceptions. It is a piece of artistry in authorship, not surely vieing in its sphere with the genius of its great inspirer, yet claiming some of his quality of motive. It is epic in its method, French in flavor. It is not biography, nor history, yet it pictures the man as tomes of detail could not. The contents table is impressionistic: "Strength" heads the first chapter; then "Shattered strength — Despair, Love— Faith — Solitude." The end is titled, "Epilog — Death." The man and his work are treated without reference to an end, and death is made, in the book as in life, the epilog. The physical plan of the book is that adopted by dry-as-dust histories and biographies — each page loaded with references and authorities—but the text always is kept alive, vital and intensely interesting, picturing the life of the great-spirited man, who all his life performed wonderfully, but never had happiness, content, nor peace for a single hour. His was, as this author at last declares, a "life of divine sorrow." That M. Rolland has made it thus better known to us is cause for real joy. The book is packed with the best of Michael Angelo, and the best of Rolland—and that should be commendation enough.

An Introduction to Metaphysics. By Henri Bergson. Translated by T. E. Hulme. New York: G. P. Putnam's Sons.

The Introduction to a New Philosophy. By Henri Bergson. Translated by Sidney Littman. Boston: John W. Luce & Co. $1.

In the article on Bergson by Edwin E. Slosson published in THE INDEPENDENT June 8, 1911, reference was made to the article entitled, "Introduction to Metaphysics," in the *Revue de Métaphysique et de Morale,* January, 1903. Now that this missing link has been translated we have the complete Bergsonian philosophy accessible in English just at the time when Professor Bergson is coming to lecture in this country. In this essay he develops the fundamental principles of his intuitive metaphysics; for example, that duration cannot be put into static conceptions, that the whole is simpler than its parts and that our comprehension of reality is symbolic and therefore inadequate. To attempt to recreate a personality by putting together certain psychical states is, to use one of his characteristic illustrations, like giving a child a lot of letters to reconstruct the poem they composed. Tho this essay is indispensable to the student of Bergson we should hardly recommend it to the layman as an introduction to Bergson's philosophy, for, being more succinct and abstract, it is hardly so likely to interest as "Creative Evolution." Of the rival translations, that by Mr. Hulme is by far the better. It is authorized and revised by Professor Bergson and reads well, while the translation by Mr. Littman is very unreliable and in many places quite incomprehensible.

Desultory Verse. By La Touche Hancock, with an introduction by S. E. Kiser. New York: Neale Publishing Co. Pp. 129. $1.25.

La Touche Hancock is well known in the newspapers and magazines as a writer of verse and we are glad to welcome a little book of this verse reprinted from the New York *Sun* and other publications. There is a snap and a sparkle to many of these "desultory verses," of which "The Society Poet" is a fair sample:

"Take a little pathos,
Mix it with some fun,
Drop into a bathos,
Even risk a pun!
Peep into each feeling,
Sparkle like champagne,
Yet avoid revealing
Any kind of pain!
Still, if you should let a
Glimpse be seen of grief,
Sobs must only wet a
Tiny handkerchief!
Let your rimes be simple,
Yet be so unique,
That a laughing dimple
Comes in every cheek!
Blend with satire polish,
Sentiment with wit,
Merrily demolish
Every hypocrite!
If with tact you show its
Impropriety,
You will rank with poets
Of society!"

Literary Notes

....Rather tender, homely, and homelike verses, and fairly well illustrated, are the fifty or more poems in Gertrude Capen Whitney's new volume, *Roses from My Garden* (Boston: Sherman, French & Co.; $1.35).

....Mountain climbers and travelers generally will find pleasure in reading Miss L. Marion Davidson's *Gates of the Dolomites,* with a chapter on the flora by F. M. Spencer Thomson. (Illustrated, pp. xxvii, 332; Lane; $1.50.)

....The sketches of travel grouped under the somewhat misleading title of *Children at Play* (Dutton, $2), have been reprinted from *The Nineteenth Century and After.* The author, Rose M. Bradley, has "worked among the poor" in London, traveled in France, Italy and the Basque Country, and seen a number of harmless necessary things.

....Mr. Dwight L. Elmendorf's *A Camera Crusade through the Holy Land* is not to be judged as a literary production but as a cabinet of pictures taken by the author, who is known as a lecturer. There are one hundred of these full page half-tones, admirably reproduced from the photographs, and forming an attractive volume of views of Palestine. (Scribner's; $3.)

....Edward Thomas's *Lafcadio Hearn* shows no evidence of its author having read Mrs. Kennard's unwieldy but instructive volume, and there are other defects which diminish the reference value of a work too summary to have further worth, unless as a stimulus to reading a distinguished stylist and interpreter of Japan. The book is in all respects secondary (Houghton; pp. 91; 75 cents).

....In the *Romance of Nice* John Douglas Errington Loveland writes a book that without being exclusively historical or primarily topographical has many of the merits of both kinds of writing and is generously illustrated from photographs. (Stokes; pp. xiii, 347.) The traveler thru France does not always reach the Mediterranean coast or realize the antiquity and mixture of races which have enriched the Gaelic inheritance.

....Volume three of the second series of *Papers of the American Society of Church History* (Putnam), containing the reports and papers presented at the last two annual meetings, has just appeared under the editorship of Professor Rockwell. Two addresses of special value are those by Dr. Corwin on "The Ecclesiastical Condition of New York in 1700," and Professor Christie on "The Beginnings of Arminianism in New England."

....In the series *Les Villes d'Art célèbres* appears *Londres, Hampton-Court et Windsor,* by Joseph Agnard (Paris: H. Laurens; small 4°; pp. 172; 4 fr., bound 5 fr.) Fully illustrated, of ample format and generous margins, and written by a former student of Cambridge (or is it Oxford?), this volume will serve many students and sightseers of other nationalities than French as a guide to monuments and art collections.

....From E. P. Dutton & Co. we receive a fine variety of calendars and Christmas cards printed for the most part in gay colors, and altogether pleasing. The motive in some of these is religious. In more of them the association is with good cheer, and Dickens supplies many of the suggestions. From simple cards to elaborate calendars, from cherubs to English bulldogs, from thoughts by Phillips Brooks to jovial toasts—that is the range; and the prices vary from three cents to five dollars.

....Your practical bookman has come to look askance at books written to teach neophytes how to write. Yet William Dana Orcutt has made *The Writer's Desk Book* (Stokes; 60 cents) useful and of real interest. His dicta relative to punctuation and the forms of literary composition are mostly sane, and might with good conscience be adopted by writers needing such guidance; even tho the use of points and the mechanics of writing are so nearly individual perquisites. One may turn these chaste leaves (Mr. Orcutt is by vocation a bookbinder) and read the crisp rules with large approval, with substantial agreement, even if with occasional dissent, until "Examples of correct letter writing" is reached, and then judiciously wish that brief section had been omitted or made more helpful.

....Few writers on philosophical subjects have found a wider or more enthusiastic circle of readers than Prof. Josiah Royce, of Harvard University, and his mastery of the intricacies of thought and simplicity of expression fully warrant the implied tribute. In the Bross Lectures for 1911, now published, he discourses on *The Sources of Religious Insight* (Scribners; $1.25) in his most attractive and intimate style. The reader feels that he is not merely a distant auditor but rather an inquiring friend who has been taken into the confidence of a great thinker and shown the processes and methods whereby one may gain insight into religious truth and reality apart from its particular forms of manifestation. Professor Royce's chapters show clearly the three qualities which he designates as the marks of all true insight, viz., "breadth of range, coherence and unity of view, and closeness of personal touch."

....Tho the personal note is strong in William Ellery Leonard's little book (*The Vaunt of Man and Other Poems.* Huebsch; $1.25), the personality is sufficiently generalized and typical to give it a broader interest than most subjective work. The group of poems which the author calls "The Unjust" opens with the lines:

> "Let no man carve upon my monument,
> Thinking to honor what he loved in me,
> When I shall rest:—'He had no enemy.'"

Bitter as is the underlying thought in this work, it is, after all, the vengeance of the poet, who smarts, and, smarting, has it out with himself in song, and thereafter goes to dine with a good appetite. There is poetry here, with charity, nervous force, a broad outlook on human life, and a fine appreciation of intellectual interests.

....*Beauty and the Jacobin,* by Booth Tarkington. "This characteristic Tarkington tale," as the publishers label it, turns out to be a one act play. The period is that of the French Revolution, the scene a garret in Boulogne, the characters three "emigrants" on the point of flight to England, a commissioner of the committee of public safety and his henchman. The dialog is clever, at times brilliant, most of it occurring in a duel of wits between the commissioner and one of the fugitives, a beautiful selfish woman who lives for those brief moments in which she is under the limelight of publicity. It is a good little drama for the study (as the author intends), with an ingenious ending. If Mr. Tarkington thinks of staging his play he would require to use his blue pencil vigorously, for the action is hampered by too much talk (Harper; $1).

....We have in *Kings and Gods of Egypt,* by Alexandre Moret, translated from the French (Putnam; $2), not a history, nor a history of religion, but a series of independent chapters on various subjects treated in a popular way by a competent scholar. Of the eight chapters we specify these, "The Religious Revolution of Amenophis IV," "The Passion of Osiris," "The Immortality of the Soul," "Homer and Egypt," and "The Reading of Hieroglyphics." All are interesting subjects and the illustrations are sufficient. The extension of the worship of Isis and Osiris into Roman times makes them fascinating subjects of study. The second largest temple in Palmyra was dedicated to Osiris. The chapter on the Immortality of the Soul wanders far beyond Egypt. Here others than Egyptologists will suspect our learned author has gone too far, as when in discussing the balance in the Egyptian judgment of the dead he compares Rev. 6:5, the angel on a black horse holding a balance in his hands. But that has nothing to do with judgment of souls, but with famine and scarcity of food. With this admirable volume we may bracket a third edition of Newberry and Garstang's *Short History of Ancient Egypt* (Dutton; $1.25), which gives the essential facts in a hundred pages.

Pebbles

"The mere proposal to set the politician to watch the capitalist has been disturbed by the rather disconcerting discovery that they are both the same man. We are past the point where being a capitalist is the only way of becoming a politician, and we are dangerously near the point where being a politician is much the quickest way of becoming a capitalist."—*G. K. Chesterton, in December Century.*

THE TORTURIN' OF THE OYSTERS.

Dr. Wiley says that when salt is put on oysters they suffer excruciating pain.

"What makes that oyster look so sad?" the grave Head Waiter said.
"A touch o' salt, a touch o' salt," old Doctor Wiley said.
"They are torturin' the bivalves, they are saltin' of 'em down.
They are givin' 'em tabasco fit to make the divils drown,
An' they'll die in 'arf a minute in an agony profoun';
Oh, they're torturin' the oysters most alarmin'."

"I've served 'em 'ot, I've served 'em cold," the grave Head Waiter said.
"They suffer either 'ot or cold," old Doctor Wiley said.
"I've poured the cocktail sauce on 'em," the grave Head Waiter said.
"You should have been arrested then," old Doctor Wiley said.
"They are saltin' down the bivalves; you can hear the critters moan.
'Tis an agony of torture that will make an oyster groan.
I'm goin' to start a great reform if I 'ave to act alone.
Oh, they're torturin' the bivalves most alarmin'."

"What's that a-leanin' on the bar?" the grave Head Waiter said.
"It's one of them S. P. C. A.," old Doctor Wiley said.
"What's that that whimpers over 'ead?" the grave Head Waiter said.
"It's oysters' souls that's passin' now," old Doctor Wiley said;
"And they're formin' in procession; you can hear the Dead March play.
The officers are comin' an' you'd better skip away.
The coppers are in column and we'd better say good day,
Or they'll put us in the cooler for a longish sort of stay
After torturin' the oysters all the evenin'."
—*Sanborn Gove Tenney, in New York Sun.*

The Independent

Entered at New York Post Office as Second Class Matter. Owned and published by The Independent Weekly, Incorporated, at 130 Fulton Street, New York, N. Y. Hamilton Holt, President; Frederic E. Dickinson, Secretary and Treasurer.

A WEEKLY MAGAZINE FOUNDED IN 1848

One Year, $3.00 Single Copies, 10 Cents

Single copies over six months old, 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as those offered by any responsible agency.

An order for the change of an address should be received two weeks before the change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of the publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Binders holding in book form thirteen current issues will be furnished for 45 cents. If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We welcome unsolicited contributions, but writers who wish their articles returned, if not accepted, should send a stamped and addressed envelope. Even so, we cannot hold ourselves responsible for their return. Authors should preserve copies of their manuscripts.

Advertising rates will be furnished on application.

Senator Root's Solemn Appeal

OUR readers know how we stand on the subject of the remission of tolls on the Panama Canal to American shippers engaged in coastwise and not foreign trade. We not only believe that it is bad financial policy, and an indefensible subsidy to a class of our citizens who do not need it, but that it is also chargeable with perfidy, as a breach of a solemn treaty with Great Britain. We greatly regret that Congress should have enacted such exemption of tolls as against other nations and against our own shippers in foreign trade, and we equally regret that President Taft should have been persuaded to sign the bill.

Great Britain has made complaint; what shall we do about it? We ought to reconsider the question. Congress ought to do this, but we have little hope from this Congress at its winter session, nor from the next Congress at its special session, for Democratic Congressmen have more than rivaled Republicans in this false patriotism. The one visible retreat appears in a request from Great Britain that this difference between the two governments be referred to The Hague for arbitration, and our arbitration treaty with Great Britain requires us to consent.

But, say the defenders of exemption, this is not an international question. They say it is a purely national question because it has to do with traffic along our own coasts, from New Orleans thru the canal to San Francisco, or Honolulu, or Manila. The traffic may be purely along our own national possessions, but the question is an international one, whether Great Britain has under treaty a right to every exemption of toll on the canal which we give to any of our own people. She says she has; Congress says she has not. That is a question to be arbitrated according to our own arbitration treaty with her.

This is what Senator Root tells us very solemnly. We have never heard a more solemn adjuration from a more weighty voice. Listen to him, and say if you would have our nation stand before the world thus proved false:

"We have a treaty with Great Britain under which we have agreed that all questions arising upon the interpretation of treaties shall be submitted to arbitration, and it seems hardly conceivable, yet there are men who say that we will never arbitrate the question of the construction of that treaty. And I say to you that if we refuse to arbitrate it we shall be in the position of the merchant who is known to all the world to be false to his promises.

"With our nearly $4,000,000,000 of foreign trade we shall stand in the world of commerce as a merchant false to his word. Among all the people on this earth who hope for better days of righteousness and peace in the future we shall stand in the light of our multitude of declarations for arbitration and peace, discredited, dishonored, hypocrites, with the fair name of America blackened, with the self-respect of Americans gone, with the influence of America for advance along the pathway of progress and civilization annulled, dishonored, and disgraced."

Honor is worth more than money. Our good name cannot be stolen from us, but it can be thrown away for trash. Our people are not at all settled that there should be any subsidy or rebate given by way of special privilege to any class of traffic on the canal. The people have not discussed it or considered it. When they consider it we believe they will decide it aright. If we choose profitable favoritism to honor, then we are not fit for self-government. At Great Britain's demand this international question must be arbitrated.

Thanksgiving

We have lost the art of Thanksgiving. If it had not been invented by a simpler sort of folk it would never have come about at all. There really was nothing intended by it at first, only what the word implies, that is, giving of thanks; and that told the big story that a right sort of person always may have and does have much for which to say, Thank God.

But folk in those days did not want so much; did not care for more than they could use and look at. A nice bit of land, with a wood lot, and a chance to plant an orchard, with a spring and a brook, and a wholesome bunch of children; what more could anybody want? They all expected to work, and there was nobody above work, and nobody had yet learned that work was disgraceful. There was no sharp distinction between the indoor and the outdoor work. There was not a woman in New England but could milk and toss hay, and so they all became healthy mothers. And the men could knit and churn and wash dishes; and as for the boys, there were few colleges, and there were more weeds in the garden than were needed. The creeks were full of fish and the woods were full of game. So it came about that there was enough for everybody—and some over.

Thanksgiving Day came of itself. President Washington and President Jefferson never thought it was necessary to advise the people to say Thank you, to the Good Giver. They left it to the people to be grateful as they would, and when they pleased. So it happened, if you were near the line, you might have a Thanksgiving dinner in three or four different States: a turkey with apple sauce in New York; cranberries and duck in New Jersey; plum pudding and roast pork in Connecticut; and in Massachusetts one might find oysters and plum marmalade; and there were good sermons everywhere.

But wherever one went he was sure to see real gratitude, and a display of modest prosperity. Nobody anywhere whined about high prices, and it was no problem at all. Did we not get 11 cents a dozen for eggs at the village store, and as for veal and mutton, we drest our own, and it cost us only the grass of our meadows and the labor of our hands. One might get from the soil all that he could eat except only tea and saleratus. We had not yet half of Europe to feed, nor were there a dozen big cities in every State to keep from starvation. We had never heard of a tramp, and there were only four millionaires in the whole United States.

We older people remember Thanksgiving Days when New York City had only a few hundred thousand people, and no New York Central Depot, or any other depot at all. Indeed, but those were times, and there was some rest in the world—no overhead trains, and no underground trains, and no trains on the ground. We had the world to ourselves. We knew nothing about coal, and the telegraph let us alone. Did we miss the news because it was two hours old? But it was just as good when we got it, and any one could know who was President two or three months after the election. However, the United States did not spread over the whole continent; only as far as one could easily go in ox carts.

But Thanksgiving Day! There was sweet beechwood, enough of it to heat all the big chimney ovens from Boston to Buffalo; and the little mother had thought it all over for two weeks, and the oven should be not only hot, but it should be full. Of vegetables there were to cook onions, potatoes, squash, turnip, parsnip, carrot, artichoke, not one of them should be left out, for behold the Lord gave them one as much as another and all of them in abundance. The soil was fat and new and the crops were never stinted.

The turkey in the oven (it had been there all night) was mate of a huge chicken pie. Do you know what a chicken pie is? Well, if you do, that is enough, but in these days!!!! But there was also pumpkin pie, and apple pie, and cream pie, and mince pie, and bean pie. You never heard of a bean pie! Oh, Lord, but in these days we have forgotten enough to run a good-sized world.

There must, of course, be an extra table, and the great kitchen was full of makeshifts, made for the day, and every one must be covered, not with newspapers, for there was but one paper to a

Copyright, Underwood & Underwood, N. Y.

MR. ANDREW CARNEGIE (FIFTH FROM THE LEFT) AND THE EXECUTIVES OF THE CARNEGIE INSTITUTIONS

household, and that was two feet square, and it came once a week. It did not know Wanamaker, but it did know the catechism. In those days advertising was not an art, and education was not yet a marmalade of newspapers and books.

Thanksgiving dinner was one hour later than a common dinner; that was a matter of honor, and it was painful to the limit of endurance. The odors kept getting out of doors, and every one of them was full of temptations and aggravations. All the boys and all the girls begged to aid the little mother to shorten that hour. It is not possible thru all the years to recall those delicious flavors, but in the memory they are stored away, to bear on to heaven with us. We have found nothing better in all this world than home life, and that of the old-fashioned sort. There is no more beechwood, and as for the little mother, she has gone on.

Ah, dear Lord! Let us not forget the art of giving thanks; and as for these modern treasures, if one only felt sure where they came from one might know what to do about it. It looks now very much as if the Department of Agriculture would so multiply our fruits and vegetables that there would be no room for them in all America, at least not in a ten-acre farm. Let us give thanks! Honest thanks in this year 1912.

A Hundred Millions from Mr. Carnegie

We do not suppose that Mr. Carnegie has yet assured, like Dr. Pearsons, his ambition to die poor, but the announcement, so incidentally made, that he had added ten months ago one hundred million dollars to the twenty-five millions previously given to the Carnegie Corporation of New York to perpetuate his benefactions, is a long step in that direction. The press generally has taken so much interest in the proposal to pension ex-Presidents and their widows that it has not apprehended the seriousness of this great gift. It seems to have supposed that because the gift was actually made ten months ago it must be old news, which is not the case. He wishes the gifts he has made to be continued as long as needful after his death. He wishes still other gifts made hereafter whose need he cannot anticipate, while those already made and to follow are more of a burden to carry than his years allow him to take on himself. It is a wise and noble plan that he has put into execution to establish a board of wise men, representing other boards organized by him, in whose judgment he has confidence, who shall have the privilege, with no restriction on his part, to administer this fund of $125,000,000, perhaps to be further enlarged, and to be wholly devoted to the benefit of the people, as needs shall hereafter appear. The example thus set by Mr. Carnegie and by Mr. Rockefeller is one more and more to be followed by men of large wealth, who not only think it right that they should make return for the opportunities that society has given them, but who also find their chief satisfaction in making their wealth useful to others. To give is goodness, but it is also justice; for very fittingly does Scripture say of those who give to the poor that their righteousness endureth forever. When the time comes that the State shall so liberally provide that no personal gifts are required the lapse of the practice of beneficence will be a great loss.

If the press generally has failed to observe this incidental announcement of a hundred million dollars, it has seized with avidity on the offer from this Carnegie Corporation of a pension of $25,000 to all future retiring Presidents and their widows, so long as the Government shall make no provision for them. This seems to us in itself a worthy grant, and quite worthy to be accepted. But some men loudly object to it. Mayor Gaynor and a multitude of others approve, but Senator Gore calls it a poor joke, and Senator Hoke Smith, who is talked of for a Cabinet position under President Wilson, says it is impudent, and Hannis Taylor calls it an insult. If an insult, it is an insult to the nation which does not provide for its ex-Presidents, and the nation can stand it. It can hardly be an insult to the retiring Presidents to receive a pension from a corporation that has no favors to ask. At the same time we do not know why Presidents should receive pen-

sions for four years or eight of service, while poor Government clerks, equally in executive service, are given none after retiring for old age. The chief parallel is with the pensions given to soldiers of from three months to three years in the Civil War, who were not incapacitated by wounds or sickness from earning a living. It is proper that the ex-President, who has been commander of the army, should receive his adequate pension from the Government, and we trust this will be done, so that the Carnegie Corporation of New York will have nothing to do with it.

Mr. Wilson and Mr. Bryan

THERE should be nothing unexpected or surprising in the report that Mr. Wilson will offer the first seat in his Cabinet to William J. Bryan. It is true that there was a time when the President-elect did not regard Mr. Bryan as a desirable associate or a commendable figure in American politics. Five years ago he said: "Would that we could do something at once dignified and effective to knock Bryan once for all into a cocked hat." But in five years there is time for many changes. Mr. Bryan and Mr. Wilson are now on very friendly terms. The effect of Mr. Bryan's influence and labors in the Baltimore convention was a decided promotion of the nomination of Mr. Wilson, altho there are some who think that Mr. Bryan had another possible candidate in mind. In that convention he was a commanding figure. He virtually wrote the platform that was adopted, and his work there opened the way for the nomination of New Jersey's Governor, even if it did not cause that nomination. And at three national elections he has been the candidate of Mr. Wilson's party for President. Three times he has been defeated, it is true, but at no one of those elections was the Republican party cut in two by Theodore Roosevelt. Mr. Wilson's popular vote, according to the latest estimate, did not exceed that of Mr. Bryan in 1908.

If Mr. Wilson should not invite Mr. Bryan to become the head of his Cabinet, that indeed would be surprising. Such offers are sometimes made to unsuccessful competitors. But Mr. Clark prefers to be Speaker and has said that he would not accept a Cabinet place. Mr. Underwood is needed in the House, where he will continue to be chairman of the Ways and Means Committee and leader on the floor. And Governor Harmon does not appear to be regarded as eligible. The logic of the situation gives to Mr. Bryan, thrice the Presidential candidate of the party, and now active in its councils, a pre-eminence that the President-elect cannot ignore. But we are not convinced that the interests of Mr. Wilson's Administration or of the party would be served if Mr. Bryan should be made Secretary of State.

If the President-elect should not offer to Mr. Bryan a Cabinet place, he would be subjected to much criticism and would offend a considerable part of the Democratic party's rank and file. It would be said that he was guilty of ingratitude and that he had failed to show due respect for him who had been the party's leader in three campaigns. On the other hand, as Mr. Wilson well knows, the choice of Mr. Bryan would offend the conservative element of the party. And so the President-elect is between two fires. He desires to do what should be done in politics by a gentleman. He would like, of course, to retain the confidence of Cleveland Democrats. He is unwilling to imperil the success of his Administration by taking into his official family one whose presence there, in the opinion of many who by no means overlook Mr. Bryan's good qualities, might cause dissension and failure. It is a difficult problem.

There are some who think it could best be solved by Mr. Bryan himself. A press correspondent says: "Mr. Bryan told some of his friends in Washington that he would do everything in his power and make any reasonable sacrifice to make President Wilson's administration a success and to continue the Democratic party in power." It is difficult to see how Mr. Wilson can avoid the offer of a Cabinet seat, but it is not necessary that Mr. Bryan should accept. Declination may be the sacrifice, reasonable or unreasonable, which the interests of the Administration and the party require him to make.

The Pensioning of Wage Earners

The plan of the Bell Telephone Company to pension its employees and the employees of the Western Union Telegraph Company has the characteristic merits and the characteristic shortcomings of similar schemes already in operation in various industries. These merits and shortcomings have from time to time been carefully analyzed and set forth in our columns by Mr. Louis D. Brandeis and other writers. The principles and policies involved are, however, of such social importance that they must be reiterated as often as occasion offers.

It is desirable that employees should feel that their future is provided for. It is desirable that during their working years they should enjoy security of tenure. It is desirable that such relations of good will should exist between the employer and the employed that the working force of a mill, a factory or a railroad should be entirely permanent.

But, also, it is desirable that every wage earner in the civilized world should feel the responsibility resting upon himself to provide for his family and for himself in old age. It is desirable that he should be free to improve his economic condition by every legitimate means, including the freedom to give up a job and take another, and to continue with fellow wage earners in organized effort. Nothing has so greatly benefited the wage earner of Europe and America since the days of serfdom as the breaking down of restrictions upon freedom of action. As Francis A. Walker demonstrated in his "Wages Question," the "mobility" of labor is, next to health, strength and technical ability, labor's greatest asset.

Therefore any pension plan has serious shortcomings if it restricts the mobility or the perfect freedom of action of employees; if it in the least diminishes their alertness to get the best wages the market offers, or if it offers a provision for old age less adequate than wage earners could make for themselves by getting the best wages the market offers, and accumulating saving in savings banks or taking out insurance in standard companies.

Thruout nearly its entire history THE INDEPENDENT has vigorously contended against all insurance schemes that practically make the insured take his own risk of living to a certain specified age. It is therefore impossible for us to regard favorably any plan by which old age benefits are contingent upon survival and continued performance of tasks until a given age limit is reached. Every plan should make provision for a "paid up" or "paid for" benefit, proportionate to the time during which payment of premiums or performance of tasks has continued. On this basis the arrangement should be subject to termination without prejudice at any time.

In another particular also the corporation pension schemes thus far proposed are inadequate. They make no provision for great classes of wage earners whose need is greatest and who are most certain to come to want in old age. The great body of relatively unskilled labor which, under the present ordering of industry, must inevitably go from one employment and one employer to another, is never included in these corporate pension schemes. The beneficiaries of these schemes are the relatively skilled and well paid elements of the total labor force of the community.

For these reasons, among others, there appears to be no way to provide for the future of wage earners in general, and to organize the provision so that mobility and freedom to seek the best market shall not be curtailed, except thru governmental action. The state is the only agent that can do the thing on an adequate scale and in quite the right way. The responsibility to prevent pauperism and its attendant misery is a collective responsibility, resting on the whole body politic.

While, therefore, we must rejoice in every philanthropic effort that springs from the generosity of men who have prospered in business and is reinforced by the legitimate desire to create cordial working relations between employers and employed, we should deprecate any relaxation on this account of efforts to bring about an assumption by the state of what we believe to be a clear and imperative duty. Above all, we should deplore any attempt to prevent the agitation of this question by the wage earning classes themselves. It is their privilege

and their duty to get for themselves and their families any economic benefit that this industry can legitimately command. They have the same right to use their ballots to this end that capitalists have to use their ballots to get and safeguard opportunities for investment and enterprise. The true ground upon which to urge and defend any extension of governmental activity is the common good, and the day has gone by when it could be maintained that a community is in a sound and normal state of well being, if its industrial classes do not get beyond that economic danger line which is marked by want when illness and accident occur, and by dependence in old age. America must fall in line with the rest of the civilized world in using every agency, including the power of the state, to insure this measure of general well being and social health.

Divorce in England

THE divorce question is precisely the same in England that it is in the United States; in both countries the general sentiment is the same, but the laws do not wholly harmonize with it. With us the laws of the States differ, those of South Carolina and New York being very strict and those of other States more liberal, but the effort for uniform legislation makes progress. There is similar difference in Great Britain; in England divorce can be granted only for adultery, while this is not the case in Scotland.

There is at present in England no little discussion over the reports of the commission on divorce. It has taken much testimony and its unanimity in favoring equal legislation for men and women, and equal treatment before the courts for rich and poor, is of note. Hitherto a man could get a divorce for adultery of the wife, but the woman could not get divorce unless cruelty were also proved; also the cost of divorce made divorce possible only for the rich. These inequalities all agree should be removed.

It is of further note that of the thirteen commissioners ten recommend that five new grounds of divorce be allowed; and these ten include the two women members, Lady Frances Balfour and Mrs. H. J. Tennant, whose names suggest that they represent both political parties. This seems to be a social and not a party question. It may also be thought of as a religious question, for the three who oppose any extension of the conditions for divorce are led by the Archbishop of Canterbury.

The five additional grounds for divorce recommended by the majority and likely to be accepted by Parliament are desertion for three years and upward; cruelty; incurable insanity after five years' confinement; habitual drunkenness found incurable after three years from first order of separation; and imprisonment for life after commuted death sentence. The minority agree with the majority that a marriage shall be declared null if the physical condition of one party shall be found in certain respects on marriage to have been unknown to the other party. Such cases are unsound mind, epilepsy and recurrent insanity, and venereal disease. The latter is also classed as cruelty. Annulment comes very near being divorce.

The chief objections made against the majority report are either religious or that the five causes allowed tend to make collusive divorce easy. The latter evil is certainly a danger, but it is for the courts to judge in each case, while it is for the legislatures to decide whether, in case of long separation, it is for public morality that the parties should not be allowed to remarry.

At the bottom of the whole question of divorce lies the basal question whether marriage is a religious or a civil contract. In a sense all contracts are religious, because they involve moral relations and duties. Morality is the better part of religion. Marriage is usually solemnized and sanctified by a religious ceremony, but that is done by the minister or priest acting under law in a civil capacity. We hold that the Church is not the authority to fix laws of marriage. Marriage came under the Mosaic civil law, which had relation only to penalties for breaches of its duties, and to marriageable parties. No priest performed the service, which was done by the parents, and no sacrifice was attached to it. Equally the New Testament allows it to remain a civil contract. Our Lord treats it no differently from the way he treats murder or theft. He deals with duties in

marriage, and declares that it ought to be permanent, not easily dissolved. He mentions only one cause for divorce, to which Paul adds wilful separation.

The true principle which should underlie divorce is the welfare of the parties and their children, and the welfare of the state. On these matters the state only can judge. And the principle on which it must judge is the same as that for the Sabbath, that marriage was made for man, not man for marriage. This is sufficiently strict and sufficiently liberal. What is best for man and woman the state must finally judge; and after it has judged each person must decide for himself whether its decision is a right one; for the right of private judgment can never be lost, but must be exercised at one's risk. At any rate, no priest of the Church of England should be required to solemnize a marriage which he believes to be adulterous. But it would not be adulterous if the law decides it to be legitimate.

One other point needs more consideration than it has ever received. If marriage is a civil contract breaches of that contract deserve punishment. If a man leaves his wife without cause, or if he is guilty of habitual drunkenness or other physical wrong, he ought not to be let free, and the punishment need not wait for divorce. If the law were perfected in these respects divorces, and particularly collusive divorces, would be rarer.

A Promising International Movement

The American-Scandinavian Foundation with headquarters in New York is one of the more recent of the international organizations which in our day are fostering a more intimate understanding between the various nations of the earth. It is particularly fortunate in that it works for a closer affiliation between races already united in their traditions, their intellectual life and their ideas of personal liberty. It is a well-known fact that the Scandinavian immigrants to this country are among those that become Americanized most readily. At the same time their numerous churches, schools and colleges, established often at a great sacrifice, bear witness to the loyalty with which they cling to the language and culture of their home countries. They are anxious to weave into the variegated web of American life the strands of Northern thought.

This is one of the missions of the American-Scandinavian Foundation, established by the "Danish Ironmaster," the late Niels Poulson, president of the Hecla Iron Works in Brooklyn, and endowed by him with half a million dollars. It has therefore given a grant of $5,000 to the Exhibition of Scandinavian Art brought to this country by the American-Scandinavian Society and arranged by the Society's president, Mr. John A. Gade of New York. The Exhibition is under the patronage of King Gustaf of Sweden, King Christian of Denmark, and King Haakon of Norway and will be formally opened in New York December 9 by the ministers of the three countries in the names of their sovereigns. It will go afterward to four other American cities: Buffalo, Toledo, Chicago and Boston. It includes one hundred and fifty of the best paintings of the three countries and is the first collection of Northern art that has ever come to the United States.

In pursuance of its object of making Scandinavian culture known to Americans the Foundation at its last meeting voted to publish a bi-monthly magazine to be called the *American-Scandinavian Review*. It will be edited by the secretary of the Foundation, Dr. Henry Goddard Leach, with a board of associate editors, of which Mr. Hamilton Holt is the chairman. At the same meeting the Foundation granted scholarships to two young Americans of Scandinavian extraction who are studying in their home country and preparing themselves to teach Scandinavian languages and literature in American universities.

The second great purpose of the American-Scandinavian Foundation is to bring American thought to Scandinavia. This will be done mainly by giving fellowships to advanced Scandinavian students desiring to study in the United States. Begining with the next academic year six such fellowships will be given to students selected with the cooperation of the three Scandinavian governments. It is probable that a large

proportion of these will be technical students. The Norwegians, Danes and Swedes greatly admire American energy, efficiency and business methods in all fields of endeavor. Three young civil engineers, one from each country, who studied here under the auspices of the American-Scandinavian Society, were especially impressed with the American system of "shop management," a science practically unknown in their own countries. They realized its possibilities for usefulness in Scandinavia, where a rapid industrial development is taking place. Three students are now in this country with scholarships from the American-Scandinavian Foundation. They are studying, one practical hydromechanics, one American library methods, one the teaching of domestic science in the public schools.

These efforts of the American-Scandinavian Foundation are so practical and at the same time so ideal that they may well be emulated by organizations and individuals having at heart the closer relations between the United States and other nations.

Railway Ownership

In the United States there is not one single railroad owned by the public; every mile is owned and run by a company. Yet we should not therefore imagine that this is an ideal way; for it may be that in this, as in some other things, our country is slow. In Europe there are, according to statistics given by the intelligence department of the Prussian State Railways, 107,663 miles of state-owned railways and 99,632 miles owned by companies. Those in Great Britain, 23,387, are all privately owned, as are 25,159 in France, against 5,509 owned by the French Government; but within fifty years the great railways in France will all belong to the state as the concessions expire. Nearly all the railways in Germany, Austria, Russia, Italy, Denmark and Norway are public property. Equally in Japan and British India the Government owns most of the railways, as is the case in nearly all Africa, in New Zealand and Australia. Only in the continents of North and South America, with their enormous mileage, does company ownership prevail, to the amount of 314,693 miles, as against only 12,190 miles, mostly in Brazil and Argentina. The total state-owned mileage for the world is 186,068, against 453,553 miles owned by companies. These figures may give serious thought, for the world's tendency is to put these monopolies into the full possession and control of the state. It will be recalled that when Mr. Bryan returned from his trip around the world he urged that the ownership of our railroads should be transferred to the several States, a proposition that received no favor, for interstate traffic must belong to the national Government if any change is to be made, with further centralization of power in Washington.

To Stem the Tide

The New York anti-suffragists have held a meeting and have decided that the case is critical, that there is serious danger that the suffrage will be imposed on women in this great Empire State, and that then their blessed exemption from the duty of voting will be lost. They are right; the day of fate approaches. What can they do? Argument has failed. When they say that women have not time to go to the polls, the hardest working women reply that they can find time as well as the men. When they say that their domestic duties prevent, they are told that the world could spare some of their social frivolities. If they say that they have no time to read politics, they hear the reply that newspapers are as valuable reading as novels. Argument failing, they propose now to assail every man they meet, the butcher, the baker, the candlestick maker, and the ubiquitous plumber, and tell him they don't want to vote, they don't want to. The saloonkeeper they will not need to meet—he is on their side already. It is the last resort—we do not mean the saloon, but the last ditch, this plan of boring the men at every opportunity and saying to them, "We do not want the vote; the reason why we cannot tell, but this at least we know full well, we do not want the vote." But that plan will fail; suffrage is coming. It has come in ten States and the rest will follow. The women's clubs will be too much for the society bridge parties, for

all the opposition of the dear old conservative matrons and the flippant undesiring undesirables.

A Perpetuated Printer's Error

THE INDEPENDENT published, March 3d, 1887, Robert Louis Stevenson's poem, "Our Lady of the Snows," sent by its author from Skerryvore, Bournemouth. Unfortunately one printer's error escaped the eye of our proofreader. Stevenson wrote:

"Out of the sun, out of the blast,
Out of the world, alone I past
Across the moor, and thru the wood,
To where the monastery stood.
There neither lute nor breathing fife,
Nor rumor of the world of life,
Nor confidences low and dear,
Shall strike the meditative ear,
Aloof, unhelpful, and unkind,
The prisoners of the iron mind,
Where nothing speaks except the bell,
The unfraternal brothers dwell."

The printer substituted an *h* for a *b* in the word *bell,* and made arrant nonsense of the line. When Stevenson gave over to Charles Scribner's Sons the poems included in his "Underwoods," published by them that same year, he must have sent this poem as cut from the pages of THE INDEPENDENT, and tho one would suppose no intelligent person could read the line without instantly correcting it mentally, the typographical error remained unchanged in that edition of "Underwoods." Since that time Crowell & Co. in 1900, and Chas. Scribner's Sons in 1896, have repeated the error in their editions of Stevenson's poems, even the *edition de luxe,* edited by Charles Curtis Bigelow and Temple Scott, in its eighth volume. "Poems, Ballads and Plays" gives it:

"Where nothing speaks except the hell."

In 1898 THE INDEPENDENT called attention to this blunder, hoping that it might be corrected in future editions of "Underwoods," but since all editors seem to have overlooked this obvious mistake, it remains for readers to correct their individual copies.

The Balkan Schism

There are two amazing things in this Balkan war: one is the celerity with which the allies have driven the Turkish army out of Europe, and the other is the fact that the four nations could unite at all. Up to the last known conditions before the beginning of the war Greeks and Bulgarians have hated each other worse than they hated the Turks, and all in the name of religion. When Bulgaria became free from Turkey it wanted a Church of its own, separate from the orthodox Greek Church, ruled by a Patriarch at Constantinople, in which the services should be in the national Bulgarian Slav language, and it broke off. That was schism. Then there were Greeks in Macedonia and Bulgarians also, and the quarrel was fierce and bloody between them. But now all the branches of the Orthodox Church have lifted the same cross to fight the crescent, and it may be that the old schism will be healed. It would be a great sight if they could all meet in the old church, now the mosque of Saint Sophia, and renew ecclesiastical relations. There will be little reason to keep up the quarrel when Macedonia is divided between them, and we shall see an enlarged Bulgarian Church, Servian Church and Greek Church coterminous with their boundaries and recognizing each other as sister Churches. And is it beyond hope that the Roman Church and the Greek Church shall end their feud and schism in mutual Christian recognition? There is more hope for that than for the end of schism between Roman Catholics and Protestants, but that is not past praying for.

Kirk and Kilisse

How much interesting and curious information we are getting nowadays about Turkey. For example, the Ottoman expert of the New York *Times* states that Kirk-Kilisse means "Forty Churches," and then displays his erudition further by explaining the reason for it. "Kirk," he says, means "church" in Turkish, and "is of course, also Middle English, and was possibly left behind in the Holy Land by one of the early Crusades." This is certainly an ingenious and plausible hypothesis. We may overlook the fact that Kirk-Kilisse is far from the Holy Land and was a Christian city, much given, it appears, to church going, some centuries before any "one of the early Crusades." But what does impair

our confidence in this brilliant explanation is the fact that the inventor unluckily hit upon the wrong word to explain. "Kirk" does not mean "church" at all, but "Forty"; and it is the second half of the name, "Kilisse," which stands for "Churches," being a corruption of the Greek Ekklesiai. But it does not matter what the name has been. The Bulgarians now hold the place and mean to hold on to it, in which case it is likely to be known by its Bulgarian name, "Lozengrad," or the "City of Vineyards."

The sad death by suicide of President George A. Gates, D. D., of Fisk University, as the result of insanity following a nervous breakdown caused by a severe railroad accident, is a serious loss to American education. His first college task was as president of Grinnell College, Iowa, which he developed in an extraordinary degree, particularly on the scholarly side, making it for the Central States the headquarters in astronomy. Later he did the same service for Pomona College, Cal., and still later undertook his most difficult task for Fisk University in Nashville, Tenn. His accident was a misfortune for the effort which he had undertaken to secure an endowment for Fisk University, but its success is, we trust, only delayed. The loss of his rare initiative and executive force is a severe one.

The demand of 30,000 railway engineers for increased wages has been settled by the arbitration to which the companies and the engineers agreed. Only a minimum wage was agreed on, and that will hold only for six months, when the dispute may be renewed. The arbitrators felt so strongly the evil that would follow a general strike, and which might starve out our cities, that they advise national and State commissions that can enforce arbitration. That the companies can be enforced is easy to see, but not how the men can be prevented from striking. The final remedy is by State ownership, the State fixing wages for its soldiers of industry as for its soldiers of war.

It is grateful news that the American Girls' College in Constantinople has been removed to the new site on the European side and not far from Robert College, and that both institutions are protected, it would seem, against any danger of riot that might occur. The teachers and students are very busy giving aid to both the Red Cross and the Red Crescent societies for the relief of the wounded. Recitations are going on regularly, altho a number of Bulgarian students have been sent away.

The Charlotte (N. C.) *Observer* knows us, and we are glad of it. It says:

> "We don't hope that THE INDEPENDENT of New York will be any the less a fool about the negro question under its partly changed management. It is altogether too set in its ways."

There is foolishness that is wiser than all the wisdom of conceited race and color; such foolishness as delivered North Carolina from the institution which the *Observer* seems still to hanker after.

When before two thousand hearers in this city the other night William J. Burns, the famous detective, was asked whether it was necessary to have disorderly houses in a great city, he gave the snapping reply that it is not necessary in any city on the face of the earth. Which suggests what kind of a Police Commissioner would Burns make?

The condition of the Turkish army because of the cholera reminds one of the effect of a similar scourge as related in the Bible, when, in the siege of Jerusalem by Sennacherib, an angel of the Lord smote in the besieging camp "a hundred and fourscore and five thousand."

It is to be hoped that the use of American dictionaries in England will have some effect in arresting the depravation of pronunciation. A writer in the London *Times* tells us that it is a cockneyism to pronounce the *h* in *humor* and *hotel*.

We imagine that the Metropolitan Museum is not going to fail to find room for $50,000,000 worth of Mr. Morgan's treasures shipped from Europe, and allow them to find their home in Hartford.

The horrible disclosures made at the trial at Indianapolis of the officials of the Ironworkers' Association pass all belief or imagination, and tell a story of crime unparalleled in industrial history.

Insurance

A Mischievous State Law

In South Carolina recently the Mutual Life Insurance Company encountered the legal ogre which roams at will in each of our States, appearing at the opportune moment in the path of foreign corporate suitors to bar the way to Federal tribunals. In common with most of the States, South Carolina has a law prohibiting the removal of suits from its State courts to the United States courts. Long ago the United States Supreme Court pronounced against the validity of that statute holding in effect that a litigant could not thus be deprived of his constitutional rights, nor could the Federal courts be ousted of their jurisdiction.

But the remedy is ineffective. The States in which such laws exist—and some of them have enacted the law since the decision alluded to was rendered—virtually set the Federal Constitution at defiance by resorting to an arbitrary exercise of their police powers. They force nonresident corporations desiring to transact business within their borders to the choice of complying with the illegal and subversive statute, or of retiring from the State. To that extent they are nullifiers of the fundamental law of the land—a law that all their inhabitants are sworn to uphold and defend.

Not long since the Mutual Life Insurance Company became the defendant in a suit brought before one of the South Carolina courts. For reasons satisfactory to the company's counsel, the defendant, relying on its constitutional guarantees, had the case removed to a Federal court. Immediately the company was cited by the Insurance Commissioner of South Carolina to show why its license to transact business in that State should not be revoked. Answering the summons, the company represented that the law prohibiting removal from a State to a Federal court was invalid; that the Supreme Court of the United States had affirmed the right of a suitor to take that action; that the company had no intention or desire to disregard a valid law of the State; but it was willing to have the jurisdiction of the State court over the litigation restored. The controversy with the Insurance Commissioner was thus disposed of, and the company, upon adjuring the rights guaranteed it under the Constitution of the United States, was permitted to continue business there.

A legal writer, discussing this particular case recently, raises a nice point, referring to the attitude of the Insurance Commissioner. He said:

"Under the precedent established in the Continental vs. Doyle case, Mr. McMaster [Insurance Commissioner of South Carolina] was right. But we wonder has he ever taken an oath to support the Constitution of the United States? If he has, how does he reconcile enforcing a clearly unconstitutional law with the due observance of that oath? There is the law. It is not for an insurance commissioner to say that it is void as a regulation for the admission of companies when the Supreme Court has held it valid for that purpose, yet he cannot enforce it as such regulation without a denial of a sound and proper constitutional guarantee. He is foresworn if he fails to enforce the law, and foresworn if he enforces it, because he is sworn to support the Constitution as well as to enforce the laws. He is between the devil and the deep, deep sea, and the only proper and discreet thing to do is to bring all his might and main to bear in an effort to have the infamous law repealed."

Admittedly, it is an embarrassing situation in which conscientious and patriotic commissioners find themselves. Is it unfair to ask if they consider their oaths to support the Constitution paramount? If the effect of a State law is such as to be an aggression on the provisions of that document, is an officer bound to attempt the enforcement of it? Perhaps it may seem to be a small matter, but there are men who, forced to faced such a situation, would resign. Such an alternative should not be possible. All laws which in even slight measure impair the guarantees contained in the Federal Constitution should be wiped off the statute books of every State.

You had better take out that accident policy you have been hesitating about.

Financial

Protection for Investors

ONE of the objects of the new Investment Bankers' Association, whose first annual convention was held in New York last week, is to defend the investing public against those who sell worthless or unsound securities:

"(1.) Careful attention to the ethics of bond trading by our members.

"(2.) Careful attention to proposed legislation, lending aid to the passage of various measures that will standardize the issuance of municipal bonds and the work of public utility commissions.

"(3.) Make our association a working association, and not purely a fraternal organization.

"(4.) Furnish the secretary's office with such information as recent court decisions and those of the Interstate Commerce and Public Service Commissions; also, information regarding defaulted issues and those in which money has been lost and the houses that put them out and deal in them.

"(5.) Cooperate with the public press and State and Federal officers for the elimination of all unreliable promotions by irresponsible promoters."

Among the subjects discussed was the so called Blue Sky law of Kansas, which seeks to protect the public by penalizing the sale in that State of securities which have not been approved by the Bank Commissioner and are not accompanied by his certification to the effect that the issuing company is solvent, that its methods are just, and that the securities promise a fair return. It is expected that similar laws will be enacted in other States. Objection to the Kansas law was raised in the convention, mainly on the ground that it is too paternalistic, and that it unwarrantably interferes with or obstructs the business of those who deal honestly with investors. The association, however, was clearly in sympathy with the aim of the statute. One of its committees will prepare a bill, designed to accomplish the same purpose, but by methods more satisfactory to the members.

One of those who spoke about the Kansas law said: "This is the sort of thing to spread from State to State." Why does it spread? An answer to this question may be found in the official statement of the Post Office Department that the American people were robbed last year of $120,000,000 by so called bankers or brokers who promoted the sale of worthless bonds and stocks by using the mails. Those who have been cheated in this way naturally turn for protection to the State officers whom they elect. The result is the enactment of such statutes as the Kansas law.

To avoid legislation which they regard as paternalistic or unduly restrictive, honest bankers and sellers of sound securities must co-operate in a continuous attack upon the dishonest. We notice that President Caldwell recommended the employment of a detective agency. That is a good recommendation. If the American Bankers' Association, or the banking institutions of New York, had begun some years ago to pursue rascally promoters by means of competent detectives, to expose them and to procure the prosecution of them, the sum stolen from the people last year by scoundrels who use the mails would have been very much less than $120,000,000, and rural opinion as to the morality and honesty of city bankers would be more favorable than it is at present.

. . . . .The well-known firm of J. G. White & Co., Inc., of this city, has reorganized. The engineering and managing departments will form two new corporations, to be known as the J. G. White Engineering Corporation and the J. G. White Management Corporation. This will leave the original corporation free to take up financing propositions in the public utility field.

. . .The committee on the reorganization of the United States Motor Company announces that over 90 per cent. of the indebtedness of the companies grouped under this title has been deposited subject to the plan of reorganization of last October. No deposits of debentures, notes, claims or shares of stock will be accepted after December 9, 1912, unless in exceptional circumstances. The chairman of the reorganization committee is George W. Davison.

The Independent

VOL. LXXIII NEW YORK, THURSDAY, DECEMBER 5, 1912 No. 3340

Survey of the World

Political Topics

Mr. Taft has quietly said to his friends that, while he intends to do all he can to strengthen the Republican party, he must not be regarded, or referred to publicly, as a possible candidate for the Presidency in 1916. It is thought that he may become the leader of a movement for restoring the party's strength, but not as one seeking the nomination. After retiring from office he will return to Cincinnati and practice law there.——He has removed from office, for "pernicious political activity," Mrs. Helen D. Longstreet (widow of the well-known Confederate general), who has been postmaster at Gainesville, Ga.; United States Marshal Nolte and United States Marshal D. B. Lyon, both of Texas, and political supporters of Col. Cecil Lyon. Mrs. Longstreet was an accredited delegate to the Roosevelt convention in Chicago. The two marshals were active workers for Mr. Roosevelt. The two men appointed to succeed them were delegates to the Republican convention. These removals serve to assist a movement among Democrats in Congress to procure, if possible, a suspension of Mr. Taft's executive order, issued in October, placing 36,000 fourth-class postmasters under the civil service rules. It is held that this order can be revoked by President Wilson. Representative Hull, of Tennessee, who is leading the movement, asserts that the order was a political one. It places, he says, "a horde of Republicans permanently in office, without examination or other tests as to merit or efficiency, and excludes Democrats."——Mr. Wilson has asked Mr. Bryan to meet him for a conference after his return from Bermuda. There are Democrats in Washington who expect that this conference will be followed by an announcement that Mr. Bryan has been invited to become Secretary of State. Mr. Wilson will take the oath of office on March 4, but he desires a postponement of the public inauguration ceremonies until April 24, because the weather on March 4 has usually been inclement.——It is reported that several persons prominent in Mr. Roosevelt's party would like to eliminate George W. Perkins. Mr. Roosevelt and Mr. Perkins will attend the party conference at Chicago on the 10th, when steps for a thoro organization of the party will be taken.——Mr. Taft will soon appoint, it is said, the nine members of the Industrial Commission. He will not seek any temporary agreement, or *modus vivendi*, with Russia, to take the place of the treaty soon to expire. This question will go over to the new Administration.——Senator Rayner, of Maryland, died on the 25th ult., and the Governor appointed in his place William P. Jackson, a Republican, who will serve for at least one year. The Democrats will still have a majority in the Senate.——Reports filed at Albany show that the Progressive party's committee received $668,860, the Republican State Committee $329,911, and the Democratic State committee $213,837. The largest Republican contribution was $20,000 from Oliver H. Payne. Among those who gave $10,000 were Mrs. Harriman, H. M. Flagler, William Rockefeller and Andrew Carnegie. The largest Democratic gift was $7,000 from W. H. Kelly. In the Progressive party's list were George W. Perkins, $130,000; F. A. Munsey, $101,250; W. E. Roosevelt, $50,000, and Douglas Robinson, $51,250.

Mr. Perkins's entire contribution to the Roosevelt movement appears to have been $262,500, while Mr. Munsey's was $229,250.

Congress It is not expected that the work of Congress at the present session will go far beyond the passage of the annual appropriation bills. On the 2d inst. the session was opened, but the Senate immediately adjourned, out of respect to the memory of the late Vice-President and Senators Heyburn (Idaho) and Rayner (Maryland). There will be an attempt to amend the Sherman Anti-Trust law and to impose additional restrictions with respect to campaign contributions, in accord with the recommendations of the committee which has been taking testimony concerning campaign funds. Mr. Burleson, of Texas, has prepared a bill providing that ex-Presidents shall be entitled for life to the privileges of the floor in the House, with all the rights of members except the right to vote, and shall receive an annual salary of $17,500. Tariff and currency legislation will go over to the next Congress. Mr. Underwood, who will be re-elected chairman of the Ways and Means Committee at the coming special session, is confident that Speaker Clark will be re-elected. He thinks the tariff can be revised by July 1. It is not yet known whether the special session's work will be confined to tariff revision. Mr. Wilson has recently said that there is pressing need of currency reform. It was reported a few days ago that Mr. Bryan's views about currency legislation might be accepted, but later reports were to the effect that a more conservative course would be taken, and that the banking committee would seek Mr. Wilson's advice. Mr. James, Representative from Kentucky, and now Senator-elect, says that currency legislation may well be deferred until the regular session. He adds that Mr. Bryan ought to be invited to enter the Cabinet, and that Representative Burleson and Josephus Daniels also should be Cabinet officers. An income tax bill that would yield $100,000,000 of revenue has been prepared by a group of Democratic Congressmen.

Labor Questions It is now estimated that the recent award of the arbitration board in the wage controversy between fifty-two Eastern railroad companies and their locomotive engineers will not increase the companies' payments by more than two or possibly three million dollars per annum. On some of the trunk lines the wages already paid exceeded the arbitrators' minimum. The firemen and trainmen of the same companies, who asked some time ago for increases amounting to more than $15,000,000 a year, will now press their claims. ——In Lawrence, Mass., on the 26th ult., Joseph J. Ettor, member of the executive committee of the Industrial Workers of the World; Arturo Giovanitti, a Socialist writer, and Joseph Caruso, a mill worker, who had been on trial, as accessories before the fact, for the killing of Anna Lopizzo, who was shot during a strike riot in Lawrence on January 29, were acquitted. Ettor had made a remarkable speech to the jury in defense of himself. The three men were received with affectionate enthusiasm by the mill hands of Lawrence. Ettor was warmly greeted in New York, where he was borne on the shoulders of men at the head of a procession in Fifth avenue. William D. Haywood, encouraged by the acquittal, gave notice that there would be strikes in several cities, and surely in the Pittsburgh steel district.——The Homestead, Braddock and Duquesne plants of the Steel Corporation have been made idle by the strike of 1,000 men for higher wages. Their withdrawal deprived 11,000 of work. Strike-breakers have been employed.——At the trial in Indianapolis, Ortie McManigal has continued his narrative, which accords with his confession, published last year. The McNamaras, he says, planned to blow up the Panama Canal locks, the Frick Building in Pittsburgh, the Los Angeles aqueduct, and also a sleeping car, because in the latter was a young woman, a stenographer, who "knew too much" about their dynamite plots.—— The testimony of Miss Chamberlain, a recent graduate of Vassar College, who visited canneries in Northern New York as a detective, will be used by the Fac-

tory Investigating Commission as a warrant for legislation. She found children four, five and six years old working in the canneries sixteen hours a day. Sometimes they were on duty from 4 a. m. until midnight.

Trust and Railroad Cases Washington dispatches repeat the assertion that the Government will soon sue the United Fruit Company for violation of the Sherman act.——In the suit for the dissolution of the International Harvester Company, at Chicago, last week, testimony was given tending to prove that the company had largely reduced prices for a time to overcome rival companies, who later went into bankruptcy.——Hearings in the suit for a dissolution of the American Sugar Refining Company (Sugar Trust) were continued last week in Philadelphia, where witnesses testified as to an agreement of the Trust with other refiners for a restriction of output.——Representative Martin, of Colorado, will ask for an investigation of the American Smelting and Refining Company by Congress.—— It is asserted in Washington that the Government of Brazil has sought to ascertain, thru our Ambassador at Rio de Janeiro, upon what terms the Department of Justice will settle the pending suit against the Coffee Trust. This suit affects Brazil's project for maintaining the price of coffee.——The O'Gara Coal Company, the Lake Shore line and two other subsidiaries of the New York Central Railroad Company, have been indicted for rebating. Indictments of officers, it is said, will follow.——In Colorado the Denver & Rio Grande Railroad Company, the Colorado Southern, the Colorado Fuel and Iron Company, two cement companies and a sugar company, have been indicted for violating the Federal law because rate concessions were made by giving free passenger transportation in consideration of freight shipments.

Panama The Panama National Assembly will probably disapprove and seek to annul the grants of land freely made by the Government of President Arosemena. The area of them exceeds that of the Canal Zone.—— Members of Congress returning to Washington, last week, from Panama, said it had been decided that the first passage of a ship thru the canal would take place on September 25, 1913, the 400th anniversary of the discovery of the Pacific by Balboa.——It is announced that Senator Cummins will introduce at Washington a bill providing for a procession of at least forty battleships thru the canal at the formal opening of it. He would have foreign governments invited to send ships for this procession, and will ask for an appropriation to pay the expenses of a celebration in the Zone. He would also have the ships go up the west coast to San Francisco and pass in review there before the exposition grounds. ——In a lecture on the Panama Canal, at Washington, last week, Rear-Admiral Colby M. Chester (retired), of the navy, said:

"For my part, I should like to see the Monroe Doctrine policy of the United States abolished, not by giving up its basic principles, but by amending its form into a treaty with the republics of South America so that they should have not only an interest in its execution, but a responsibility as well. The original document enunciated by President Monroe regarding our foreign relations is as obsolete today as was the Clayton-Bulwer treaty at the time it was amended and no more fits the present condition than that does. As far as the basic principle of the Monroe Doctrine is concerned, the right of self-defense, it is axiomatic and it is no more necessary to continue to pay the enormous price that we have done in order to maintain our rights in this respect than there is to buy the privileges of erecting fortifications on the Isthmus."

Philippine and Other Islands A typhoon of great violence swept over several of the Philippine Islands on the 28th ult., causing much loss of life and property in Samar, Leyte and Panay. About 400 persons were killed. Tacloban, the capital of Leyte, a town of 14,000 people, was partly destroyed, two steamships were wrecked in the harbor there, and there were heavy losses in Capiz, which has 20,000 inhabitants and is the terminal of a railroad crossing the island from Iloilo.——The Manila Railroad Company, a British corporation, has suffered loss by reason of extensive frauds. The guilty persons are officers engaged in procuring right of way for extensions. Interest on $30,000,000 of

the company's bonds is guaranteed by the Government, which, it is said, will lose nothing.——It is reported that a Japanese steamship company is getting options on shore front land at Honolulu, intending to establish a large coaling station.——In Santo Domingo, on the 28th ult., President Victoria's resignation was sent to Congress and accepted. There was a unanimous vote for Archbishop Nouel, to be Provisional President. The commissioners sent from Washington report in favor of a plan that will bind the new Government to respect the fiscal agreement concerning the payment of the republic's debt. It is proposed that no Government that does not respect this agreement shall be recognized at Washington. Hostilities have been suspended, and many political prisoners have been released.——At the convention of the Cuban Liberals, to consider the question of accepting the results of the recent election, there were many fiery speeches. President Gomez and General Monteagudo (commander of the army) were denounced as traitors. They had plotted, it was said, to prevent the election of Zayas. Speaker Ferrara opposed a revolution, saying that the United States would intervene to support General Menocal. Señor Hernandez, a defeated candidate, thought revolution would not cause intervention, because Cuba's treasury was empty and unattractive. The convention adopted resolutions providing for attempts, within the law, to annul the election of Menocal. A committee will ask President Gomez to dismiss General Monteagudo for using the army to intimidate voters. Liberals in Congress will move for his dismissal.

Mexico It was reported on the 26th ult. that there were signs of pacification in the north, where, in Chihuahua and Coahuila, the Government was preparing to distribute 2,000,000 acres of land among small farmers. But General Salazar was menacing Casas Grandes, and there was a battle at Guzman, where the rebels were defeated, with a loss of twenty-five killed. Salazar promised to attack Juarez. There it was discovered that rebels, coming from El Paso, had joined the Federal garrison and were plotting to assist Salazar. Several of them were placed in jail. A band of rebels crossed the boundary of New Mexico, and ranchmen on the American side asked for protection. General Orozco was said to be near Los Angeles, disabled by rheumatism. In the south the situation was not improved. The Federal commanders put to death many captured rebels, under the law permitting such action. In Oaxaca they destroyed more than twenty villages. Zapata retaliated by killing an envoy sent to negotiate peace. He had promised to kill all peace envoys who should come to him. The rebels looted many ranches, among these one owned by Americans, near Tampico. In Puebla they burned $2,000,000 worth of cane and sugar. In a battle at Chalco, thirty miles from the capital, one Federal regiment fought against another, in the dark, and ten soldiers were killed before the shooting could be stopped. Fifty Federal soldiers went over to the rebels, having first killed their commanding officers. There is great suffering where the recent earthquake destroyed several towns. At Acambay, where 1,000 persons were killed (300 of them in a church, while attending early mass), the bodies of the dead are unburied. Typhoid fever and smallpox have attacked the survivors. The earthquake dried up all the wells, springs and small streams. Many of the survivors are starving. Madero will not consent to the appointment of a joint commission to inquire as to the losses of Americans during his revolution. The claims of these Americans, he says, are before a Mexican commission which will report in April.

South America There is a movement in the Brazilian Congress for the reclamation of lands on the frontier conceded to foreign corporations. It is proposed that no more land shall be conceded or sold to foreign buyers except by special act of Congress.——Remarks made in a public address at Berlin by Dr. Da Cunha, the Brazilian Minister to Germany, have excited some comment. He said:

"By accepting the principles of international law generally recognized by European nations, Brazil and her neighbors hope, above all things, to obtain security against the en-

BOMBARDING SKUTARI.

Montenegrin gunners load with shrapnel to be dropt into the besieged city. Skutari was the first Turkish stronghold attacked in the present war and has been under fire for more than a month.

encroachments of the United States of North America."

German capitalists are interested in Brazil's coffee valorization project, which is involved in the United States Government's suit, at New York, against what is called the Coffee Trust. Negotiations with our Government for a settlement of this controversy out of court are said to be in progress.——Argentina has rejected the conditions of payment proposed by the Farquhar syndicate for the purchase of the State railways.——Testifying last week in London before a Parliamentary committee concerning the Putumayo atrocities in Peru, E. H. Barnes, who went to Peru in behalf of the Amazon company, said a majority of the local managers in the rubber district were murderers, bandits and pirates. The London directors were less guilty, but ought to have known what the local managers were doing.

Preparing an Armistice

A protocol for an armistice to give time for peace negotiations was ready to be signed on Sunday, but was held up because the Greek delegate wished to communicate with his Government before conceding some of its provisions. The conferences are being held every day on the Turkish side of the Karasu River, between Tchataldja and Hademkeui. Turkey is represented by Nazim Pasha, Minister of War and commander-in-chief, Rechad Pasha and Riza Pasha. The Bulgarian delegates are General Savoff, commander-in-chief; Dr. Daneff, president of the Bulgarian Chamber of Deputies, and General Fitcheff, Bulgarian chief of staff. It is said that the terms of the armistice provide for a truce thruout the Ottoman Empire for a week or two; both sides to hold their present positions without entrenching or bringing up reinforcements.

and the beleaguered garrisons of Adrianople and Skutari to be allowed to receive daily rations from outside during the armistice. In case of a failure of the peace negotiations, a warning of forty-eight hours is to be given before the resumption of hostilities. It is rumored that Bulgaria demands an indemnity of $250,000,000 in case Turkey is allowed to retain Adrianople. Altho alarmist rumors have predominated during the week, possibly on account of stock exchange maneuvers, it is now generally believed that the danger of a general European war is averted. The chief point in dispute is whether Servia shall acquire Durazzo, as she desires, or whether she will merely be granted access to that port for commercial purposes, and this difference is not important enough to be made the ground of a European war. The German Imperial Chancellor, Dr. von Bethmann-Hollweg, uttered on December 2 a plain warning to Russia that if hostilities arose out of the Austro-Servian difficulties, Germany would assist her allies. This declaration was made in the course of a speech in the Reichstag, and was a repetition of the statement made when the seizure of Bosnia and Herzegovina agitated European capitals. —— Consul Prochaska, whose reported murder at Prisrend by the Serbs seemed for a time likely to be made by Austria an occasion for war, has been brought to Uskub, safe and sound, and the charge against Servia shrinks to accusations of invading the consulate at Prisrend, insulting the Austrian flag and interfering with his telegrams to his Government.——One of the strongest forces for peace is the Socialist party, which, meeting in international congress at Basel, has issued a manifesto drawn up by Jean Jaures, the leader of the French Socialists, declaring that a European war over such a disproportionate cause as the Balkan question would be a disgrace to civilization, and calling upon Socialists all over the world to prevent it. The manifesto says:

"The time has past when the working classes of the world should shoot down one another for the profit of capitalists, the pride of dynasties or the exigencies of secret treaties. If the Governments suppress the possibility of evolution and force the proletariat to desperate measures the responsibility for what happens will rest upon the shoulders of the Governments."

The Balkan War

After the investment of Adrianople and the victory of Kirk-Kilisse the Bulgarian army pushed southward, cutting in two the Turkish forces. We have been told how the eastern part were defeated at Lule Burgas and driven back to the shelter of the Tchataldja lines only 25 miles from Constantinople, but nothing whatever was said about the western part of the Turkish force until it was announced that it had surrendered to the Bulgars on November 28. It consisted of two divisions under Taver Pasha, numbering 8,879 men and 252 officers. Besides these persons the Bulgars captured eight mountain guns, two machine guns, 2,000 horses and large quantities of munitions. It appears that the Turks were attacked from both the north and the south and driven back to the Maritza River, where, after a hard fight, they surrendered. The Greek fleet conveyed a Bulgarian force of two regiments of infantry, a squadron of cavalry and batteries of machine guns from Salonika to Dedeagatch on the Ægean Sea, near the mouth of the Maritza River, joining the 25,000 Bulgarian troops already at Dedeagatch. While this force marched northward up the Maritza another force marched southward down the Maritza from Demotika, and between the two the Turks were cornered. At Adrianople the Bulgars have brought their trenches within 1,000 yards of the city, and the bombardment is increasing in severity as the big guns have been placed in position to command the city proper. The garrison is said to have been reduced to half its strength, nevertheless it still holds out and it is rumored that in the final settlement Turkey will not be required to alienate Adrianople. The Maritza River is high and the lowlands about Adrianople are flooded, but the Bulgars are encamped on the hills in dugouts, thatched shelters and tents.——The Bulgars, anticipating peace, have not renewed their attack upon the Tchataldja lines, and the Turks are reported to have greatly strengthened their fortifications by earthworks and barbed wire entanglements. ——Practically the whole Montenegrin army of 36,000 has now been collected

Copyright, International News Service, N. Y.

THE RETREAT

Turkish soldiers defeated by the Bulgars in the battle of Lule Burgas marching back toward Constantinople.

about Skutari, and King Nicholas has moved his headquarters to Bruda, near by, so he can direct in person the siege of the city.——The Servian troops have continued their victorious march thru Albania to the Adriatic. Dibra was the last town to offer any resistance. Here the remnant of the Turkish troops, beaten at Uskub and Monastir, had rallied and been reinforced by Albanian tribesmen, but were overcome by the Serbs on November 29. The garrison at Durazzo offered no resistance when the Servian army reached that port and the Servian general telegraphed to Belgrade: "We have now occupied Durazzo in perpetuity." This, however, Austria refuses to allow, insisting that Albania shall become an autonomous state and that Servia confine to the Ægean her aspirations for an outlet to the sea.——At Valona, Albania, a provisional government has been set up under the presidency of Ismail Kamel Bey, and an assembly, claiming to represent all parts of the country without distinction of religion, proclaimed the independence of Albania on November 29. Messages have been sent to the European rulers asking for independence. But it does not seem probable that Albania, even if freed from Turkish control, can become by its own exertions a prosperous and unified nation like Servia or Bulgaria. It is the most uncivilized part of Europe, and the tribes are frequently at war with each other or with the Turks. Most of the Albanians are Mohammedans and the Christians are divided between the Greek and Roman Churches. There is practically no literature and even the question of what alphabet shall be used is still unsettled. Roman, Greek and Arabic letters are competitors for the honor of putting the language on paper. Albania, if made an autonomous province, would probably include about a million population.

English Affairs

It has become evident that the efforts of the Liberal Government will be next directed toward breaking up

the large estates, which, being lightly taxed and often entailed, tend to monopolize the land and drive the rural population into the cities or abroad. The Chancellor of the Exchequer, David Lloyd-George, in a speech at Aberdeen denounced "the present iniquitous land laws" in vigorous terms, declaring that in the Highlands thousands of acres, which could be used to support families, had been transformed into preserves for deer and grouse. The land famine, he said, devastated the country like a pestilence, and every year thousands of robust young men are leaving their homes and fleeing across the seas as tho Great Britain were plague-stricken.——An inquiry was recently started by the Government to ascertain the causes of rural depression and to discover the evils of landlordism, but some of the confidential circulars, containing lists of questions to be asked by the Government agents, fell into the hands of the Opposition and were published with protests against such an underhanded and one-sided method of getting evidence on which to base legislative action. The Government defended its methods by saying that it would be impossible to get tenants to make any complaints publicly because the landlords would make them suffer for it. In the British dominions of Australia and New Zealand the governments are promoting rural settlement by buying up large estates and selling them to actual settlers in small holdings.—— Since the withdrawal of the moderate wing of the suffragets under Mr. Pethick Lawrence the militant wing has become more violent than ever. The attempt to break up the Lloyd-George meeting at Aberdeen by firecrackers was futile, and the three women who tried it were arrested. One of them when brought before a magistrate took off her shoes and threw one at the head of the magistrate and the other at the clerk of the court. The latest outrage is the destruction of mail in the post boxes by the use of acid, kerosene, ink and paint. This was begun by a concerted plan on the 28th all over London and in other cities, and repeated on the following days in spite of extra vigilance by the police. About 1,500 letters and packages were damaged in London in the first attack, many of them containing money, checks, certificates or other valuable documents, which will be irretrievably lost. The city about the stock exchange and General Post Office suffered most, for here millions of dollars are placed in the boxes every day. Nothing the suffragets have done before has aroused so much resentment as this, which is less an attack upon the Government than upon the whole community.

Foreign Notes

A new *Kulturkampf* seems imminent in Germany. The Bundesrat, or Federal Council, has declared illegal the action of the Bavarian Government in ameliorating the laws against the Jesuits. Notwithstanding the prohibition against the society the new Bavarian Premier issued an order last spring permitting the holding of conferences in the churches at which sacrament might be administered. The Bundesrat rules that the Jesuits may be permitted to hold family masses in homes, administer extreme unction, and deliver scientific addresses, which, however, must not touch on religion; but no further activities are to be allowed them. The Imperial Chancellor is reported to have said to a Centrist member of the Reichstag that German patience with the dictatorial practices of the Vatican was approaching the point of exhaustion.——The 106 Koreans who were convicted September 28 of conspiring to assassinate Count Terauchi, the Japanese Governor-General of Korea, are being tried again before Judge Suzuki, the Chief Justice of the Court of Appeals. All the accused on being called to the witness stand testified to the use of torture and threats of assault by the police. Prominent Japanese lawyers have undertaken the defense.—— Lieutenant-General Uyehera, Minister of War in the Japanese Cabinet, has resigned because Premier Saionji and his colleagues refused to approve of his scheme for increasing the military forces in Korea.——Notwithstanding the reports from Russia that all Mongolia is in revolt and anxious to throw off the Chinese yoke, it appears that the people of Kobdo welcomed the Chinese troops on their approach and offered no resistance to their occupation of the city.——The French army is be-

ing weakened in two ways: first, by the fall in the birth rate, which has reduced the number of recruits from 280,000 in 1906 to 215,000 in 1911, and, second, the antimilitarist propaganda which has raised the number of desertions to 80,000. The Teachers' Union has been cooperating with the Syndicalists in supporting the organization known as the *Sou du Soldat* (The Soldier's Cent), the purpose of which is to spread antipatriotic sentiment among the troops, so that in case of a declaration of war, mobilization would be impossible.

An Amendment by the Supreme Court*

BY JESSE F. ORTON, A.M., LL.B.

WE hang men, we electrocute men, we send men to prison for life or for limited terms; we do this in the several States of the Union without let or hindrance from the Federal Constitution, except that we must give the accused his "day in court," a chance to make a defense. The Federal courts find nothing in the Constitution which enables them to inquire into the guilt or innocence of a person who complains of his treatment at the hands of a State. This is the way *life* and *liberty* are protected!

What about *property?* We must pause to distinguish between *ordinary* property —plain John Smith's farm or factory— and the property of a privileged corporation, such as a railroad, telegraph, gas or electric light company. The same Constitution which is unable to protect the life or liberty of innocent persons, is quick and powerful to guard the property of public service corporations. Were the Constitution and its amendments written this way? Or has some one inserted a "joker" clause which favors privilege?

1. *The Constitution as it was made.* The fifth amendment, like the nine others adopted almost as a part of the original Constitution, restricted the Federal Government only, not the States. It provided:

> "No person shall be held to answer for a capital or otherwise infamous crime, unless on a presentment or indictment of a grand jury, except . . . ; nor shall any person . . . . be compelled, in any criminal case, to be a witness against himself, nor be deprived of life, liberty or property, without due process of law; nor shall private property be taken for public use without just compensation."

The framers of the fourteenth amendment, adopted after the Civil War to restrict the States only, borrowed one of these provisions from the fifth amendment, but rejected the other three. It contained this:

> "Nor shall any State deprive any person of life, liberty, or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws." (The courts hold that "person" includes "corporation.")

It is not surprising that the people left the States free in regard to the three important matters thus omitted from the fourteenth amendment, the use of a grand jury in criminal prosecutions, the protection of accused persons from compulsory self-incrimination, and the giving of compensation for property taken for public use. Our system is founded on the idea that the Federal Government should have charge, not of all matters of great importance, but only of those which affect the people in their life *as a nation.* All else is left to the States.

2. *Privilege needs an amendment.* In the early seventies certain States began to reduce railroad rates by legislative act. From that time to the present, regulation of the rates and service of public utility corporations has grown until now it is of overwhelming importance. Unless these utilities are to be owned and operated by the government, strong and effective regulation is the only means of protecting the people of States and municipalities against monopolies controlling transportation, light, telephones and many other necessities of human existence.

The corporations affected by State regulation have fought strenuously, first to prevent such regulation and then to confine it within as narrow bounds as possible. They appealed to the Federal courts to apply the restrictions in the Federal Constitution; but these were found insufficient for their purpose, and the earlier State laws were upheld. (The "Granger" cases, 94 U. S. 113-187.) Something had to be done. The omitted provision, that private property should not be taken for public use without just compensation, challenged their attention. Would the Federal courts hold that regulation of rates or service is a *taking* of property for public use? The corporations guessed that they would and guessed rightly. This omitted restriction, while it would not *prevent* State regula-

*Copyright, 1912, by Jesse F. Orton.

tion, would give the Federal courts jurisdiction to pass on the reasonableness or justice of all such regulation. But how should this new sentence be gotten into the fourteenth amendment, where it would bind the States? The constitutional method, action by Congress and three-fourths of the States, seems not to have been considered. The corporations decided to secure the needed amendment of the Federal Constitution from the Supreme Court of the United States.

3. *The amendment made by the court.* Altho for some years the Supreme Court hesitated, the judicial amendment may be said to have become complete in the decision of the Nebraska rate cases in 1898 (Smyth *vs.* Ames, 169 U. S. 466). The method by which this "just compensation" provision was slipped into the fourteenth amendment has never been *explained* by the court; but at times it has been *assumed* that the requirement of "just compensation" is included in the requirement of "due process of law," which actually appears in that amendment. The crucial question, therefore, is: *Does the provision that no State shall deprive any person of property without due process of law include the provision that no State shall take property for public use without just compensation?** If the answer is *No,* it will be clear that the court has made an amendment.

As Daniel Webster said, in arguing the Dartmouth College case, due process of law, or its equivalent, "the law of the land," is "a law which hears before it condemns, which proceeds upon inquiry and renders judgment only after trial." "Process" means procedure, form or method; but "just compensation" means a correct conclusion, a righteous judgment. Due process of law in the taking of property for public use cannot insure just compensation unless due process will insure a just conclusion in every case, when life or liberty is at stake or when property is taken for a use not public. To hold generally that due process includes the doing of justice at the end of the trial would do violence to the English language and would be contrary to the decisions of every court in the country. It would require the Federal courts to review, on the merits of the case, nearly every judgment rendered by a State court.

That the "due process" clause of the fourteenth amendment does not include the "just compensation" clause of the fifth amendment, is shown by the decisions of the Supreme Court with reference to two other provisions contained in the fifth amendment but omitted from the fourteenth, namely, those guaranteeing the grand jury system and the right not to incriminate one's self. Both of these provisions related to *process,* or procedure; and it might plausibly be argued that they were necessary to *due* process. But just compensation, the reaching of a right judgment, never was a part of *process* at all. Yet the Supreme Court held in 1884 that the grand jury system was not included in the requirement of due process of law. Why? The court said:

> "We are forbidden to assume, without clear reason to the contrary, that any part of this most important amendment (the fifth) is superfluous. The natural and obvious inference is, that in the sense of the Constitution, 'due process of law' was not meant or intended to include, *ex vi termini,* the institution and procedure of a grand jury in any case.
>
> "The conclusion is equally irresistible, that when the same phrase was employed in the fourteenth amendment to restrain the action of the States, it was used in the same sense and with no greater extent; and that if in the adoption of that amendment it had been part of its purpose to perpetuate the institution of the grand jury in all the States, it would have embodied, as did the fifth amendment, express declarations to that effect." (Hurtado *vs.* California, 110 U. S., 516, 354-5.)

In like manner, are we not "forbidden to assume" that the provision concerning just compensation was "superfluous" in the fifth amendment, or that it was intended to be included in the provision for due process of law inserted in the same amendment? Is not the conclusion "equally irresistible," that if in the adoption of the fourteenth amendment it had been "part of its purpose" to enforce the rule of just compensation upon the States, it would have contained "express declarations to that effect"?

In 1908 precisely the same argument

*There has been little attempt to connect the "just compensation" rule with the prohibition against denying to any person "the equal protection of the laws." The Supreme Court's decisions, as well as the obvious meaning of the two provisions, foreclose such an attempt. See, for example, Insurance Company vs. Hale, 219 U. S., 307, 319.

was used to show that the rule against compulsory self-incrimination was not included in due process of law (Twining *vs.* New Jersey, 211 U. S. 78, 109-10.)

These decisions must embarrass the court not a little when it claims that "just compensation" is included in "due process of law." That the claim is a mere afterthought, induced by the insistence of counsel for privileged corporations, is shown by a decision of the Supreme Court made in 1877 in the case of a mere owner of *ordinary* property. The court said:

"If private property be taken for public uses without just compensation, it must be remembered that, when the fourteenth amendment was adopted, the provision on that subject, in immediate juxtaposition in the fifth amendment with the one we are construing (on due process of law), was left out, and this was taken." (Davidson *vs.* New Orleans, 96 U. S., 97, 105.)

If the Supreme Court had expected to be called upon to *find* this provision in the fourteenth amendment, it would hardly have called particular attention to the fact that it had been *left out.* In 1890, when the court was getting ready to read this provision into the fourteenth amendment, three dissenting members, Justices Bradley, Gray and Lamar, protested that it was not there. They said the court was proceeding "as if the constitutional provision was, that no State shall take private property for public use without just compensation." They added: "There is no such clause in the Constitution of the United States." (Railway Company *vs.* Minnesota, 134 U. S. 418, 465.) The three justices were right in 1890; the court was right in 1877. "Just compensation" was never in the fourteenth amendment, either as a part of "due process" or otherwise, until the court put it there by the fiat of a supreme authority.

4. *Practical results.* The decisions of the Supreme Court show plainly for whose benefit the amendment was made; they also illustrate the absurdity of holding, in any case, that the doing of justice is included in due process of law. If the court finds *just judgment* to be included in *proper procedure,* in the matter of compensation for public service corporations, why should it not reach the same conclusion when life or liberty is at stake or when *ordinary* property rights are in question? The prohibition is the same, not to deprive any person of life, liberty or property without due process of law. To a "person" who claimed that the State of Michigan had unjustly convicted and imprisoned him, thereby depriving him of liberty without due process of law, the court said:

"It is not our province to inquire whether the conclusion reached and announced by the Supreme Court (of Michigan) was or was not correct, ... The State cannot be deemed guilty of a violation of its obligations under the Constitution of the United States because of a decision, even if erroneous, of its highest court, while acting within its jurisdiction." (In re Converse, 137 U. S., 624, 631.)

A man sentenced to death under the laws of Texas complained that the State had convicted him unjustly and therefore was about to deprive him of life without due process of law. But the Supreme Court said:

"It must be regarded as settled . . . ; that law in its regular course of administration thru courts of justice is due process, and when secured by the law of the State the constitutional requirement is satisfied; . . . ." (Leeper *vs.* Texas, 139 U. S., 462, 467-8.)

The highest federal court will not inquire whether a State has unjustly sentenced a man to die, but it will inquire very carefully whether a State has unjustly sentenced a corporation to get less profit.

We have seen that a State may prosecute persons for capital crimes without an indictment by a grand jury and may compel accused persons to be witnesses against themselves, and still not violate the due process clause. Even the right of trial by jury may be taken away, in criminal as well as civil cases. (Missouri *vs.* Lewis, 101 U. S. 22, 31-2; Maxwell *vs.* Dow, 176 U. S. 581, 600, 603.) This narrow construction of "due process" was adopted against the strenuous protest of Justice Harlan, who said, in dissenting from the decision of Maxwell *vs.* Dow:

"The fourteenth amendment does not in terms refer to the taking of private property for public use, yet we have held that the requirement of 'due process of law' in that amendment forbids the taking of private property for public use without making or securing just compensation. . . .

"If then the 'due process of law' required by the fourteenth amendment does not allow a

State to take private property without just compensation, but does allow the life or liberty of the citizen to be taken in a mode that is repugnant to the settled usages and the modes of proceeding authorized at the time the Constitution was adopted and which was expressly forbidden in the national bill of rights, *it would seem that the protection of private property is of more consequence than the protection of the life and liberty of the citizen.*" (Page 614; my italics.)

Still more amazing is the court's discrimination between different classes of property. When private property is condemned, as for the making of a street or for the use of a railroad, it is a genuine and direct *taking* for public use, while the regulation of public utilities is at best only an indirect or constructive taking. Surely the arm of the federal courts will be strong and mighty, to the end that just compensation may be given to the owner whose property is condemned and taken against his will. But, alas, it was not this class of property owners that procured the constitutional amendment restricting the action of the States. In a Michigan case in which the owners complained that they were not given just compensation, the United States Supreme Court said:

"All that is essential is that in some appropriate way, before some properly constituted tribunal, inquiry shall be made as to the amount of compensation, and when this has been provided there is that due process of law which is required by the Federal Constitution." (Backus *vs.* Union Depot Company, 169 U. S., 557, 569.)

An Illinois jury gave a railroad company only one dollar as compensation when a street was opened across the company's tracks. The company went to Washington, pleading its right to just compensation, but the Supreme Court said:

"The State court having jurisdiction of the subject matter and of the parties, and being under a duty to guard and protect the constitutional right here asserted, the final judgment ought not to be held to be in violation of the due process of law enjoined by the fourteenth amendment, *unless by its rulings upon questions of law the company was prevented from obtaining substantially any compensation.*" (Railroad Company *vs.* Chicago, 166 U. S., 226, 247; my italics.)

In this case the railroad corporation, like "old dog Tray," was in bad company; it found itself, for the time being, in the class of unprivileged property owners and had to accept the justice meted out by the State.

The special assessment of real estate to pay the cost of public improvements is an unmistakable *taking* of private property for public use; and unless the special benefits received are equal to the assessment it is a taking without just compensation. The Supreme Court has adopted this view, holding that "taxation of the abutting property for any substantial excess of such expense over special benefits will, to the extent of such excess, be a taking of private property for public use without compensation." (Norwood *vs.* Baker, 172 U. S. 269, 294.)

If, then, an assessment of $400 is made against a lot when the special benefits are only $200, it is a violation of the Federal Constitution, no less than it would be if a gas rate were reduced to sixty cents when a charge of ninety cents should be allowed in order to give a fair profit. But the owner who appeals to the federal courts will find that it was not for *this class* of property that the judicial amendment was made. The State need not even give him a hearing on the question whether his property is benefited by the public improvement. The legislature may decide what parcels of property will be benefited, without notice to the owners, and make its decision final. (Williams *vs.* Eggleston, 170 U. S. 304, 311.) The benefits received by the several owners may be determined by an administrative body, such as the county board of supervisors, without any appeal. The only right which "due process of law" assures to an owner is a chance to be heard on the amount of benefits before the determination is made. (Spencer *vs.* Merchant, 125 U. S. 345, 355-6.) If the local authorities decide that the benefits received are in proportion to the values of the parcels in question, that conclusion, though erroneous, cannot be reviewed by a federal court. The Supreme Court said:

"It is one of those matters of detail . . . with which this court ought to have nothing to do. *The way of arriving at the amount may be in some instances inequitable and unequal, but that is far from rising to the level of a constitutional problem and far from a case of taking property without due process of law.*" (Irrigation District v. Bradley, 164 U. S., 112, 176-7; my italics.)

In protecting the constitutional rights of *ordinary* property, this matter, which admittedly bears on just compensation, is "one of those matters of detail" with which the court "ought to have nothing to do." But in the protection of a railroad or gas company against State regulation alleged to imperil fair profits, no detail is too small. No State court is trusted to determine the value of a rail or a car, or the cost of a ton of coal, if the company bestirs itself in time.

On the whole, one cannot discover that ordinary property fares much better at the hands of the Supreme Court than does life or liberty.

Let us look at the court's treatment of the privileged class of property. In 1907 a controversy arose in Minnesota as to the justice of certain railroad rate reductions made by the State. In the United States Circuit Court for Minnesota, the railroad companies sought to prevent the attorney general from proceeding in the State courts to enforce the rate reductions if they should be found valid. The power thus to enjoin the State's chief law officer was the final power needed by the federal courts, to oust the State courts from all effective jurisdiction over the regulation of public utilities. But the eleventh amendment stood in the way, forbidding suits against a State; for in an earlier case of like character the Supreme Court had decided that it was a suit against the State, being against the attorney general in his official capacity. (Fitts *vs.* McGhee, 172 U. S. 516.)

The federal court in Minnesota, disregarding the precedent, issued a temporary injunction against the attorney general, forbidding him to represent the State of Minnesota in her own courts, and, on his prompt disobedience of the injunction, adjudged him in contempt and sentenced him to pay a fine of one hundred dollars. On appeal to the Supreme Court, this action was affirmed, against the vigorous dissent of Justice Harlan. The precedent of Fitts *vs.* McGhee was overruled, altho there was a lame attempt to distinguish that case; and the federal courts were left in sole possession of the question whether the new rates would afford sufficient profit to the railroads. In due course a special master was appointed to take testimony and report his opinion; the special master made his report; the circuit judge confirmed the report, pronouncing unconstitutional all the rate reductions complained of by the railroads; and an appeal was taken to the Federal Supreme Court. The appeal was argued in April, 1912, about five years after the first attempt by the attorney general of Minnesota to test the law of his State in her own courts. A decision may be looked for late in 1912 or in 1913.

The interference of the federal judiciary with the regulatory machinery of a State or municipality, is like the thrusting of a man's thumb into the delicate mechanism of a watch. The delay, expense and confusion resulting from federal litigation are the favorite means for wearing out popular majorities in cities or States which begin a program of effective regulation. But the most serious cause of complaint on the part of the people is their frequent failure to get justice in the final decision. Very naturally, federal judges who violated the written Constitution so that a particular class of property owners is protected, are inclined to give more than their just dues to this same class.

In assuming jurisdiction to protect public service corporations from the effects of State regulation, the Supreme Court not only amended the Constitution, but took from the legislatures, commissions and courts of the several States powers which might better have been left in their hands. Nearly forty years ago, in the first great cases involving the power of States to regulate public utilities, the Supreme Court said:

"We know that this is a power which may be abused; but that is no argument against its existence. For protection against abuses by legislatures the people must resort to the polls, not to the courts." (The "Granger" cases, *supra.*)

In 1890, when the court was preparing to make its amendment, the three dissenting justices said:

"There must be a final tribunal for the decision of every question in the world. Injustice may take place in all tribunals. All human institutions are imperfect—courts as well as commissions and legislatures." (Railway Company v. Minnesota, *supra.*)

This early wisdom later became foolishness in the eyes of the court, except

when life, liberty or ordinary property was concerned.

Assuming that the judges who inserted the rule of "just compensation" for property as a federal restriction on the States, after Congress and the States had rejected it, were guilty of a lawless, unconstitutional act, and assuming that they applied the rule in an oppressive and discriminatory manner, what shall we say of the judges who have taken office since the rule was adopted and interpreted? Can any judge who has taken the oath to support and defend the Constitution find extenuation in these misdeeds of his predecessors or rightly regard them as precedents to bind or excuse him?

In view of the facts, why should any lawyer or student of government, or any citizen, hesitate to speak out? Professor Edward S. Corwin of Princeton University, recently said, with refreshing frankness:

> "The truth of the matter is that the modern concept of due process of law is not a legal concept at all; it comprises nothing more or less than a roving commission to judges to sink whatever legislative craft may appear to them to be, from the standpoint of vested interests, of a piratical tendency." (*American Political Science Review,* May, 1912, p. 271.)

Whether the Supreme Court of the United States has been executing "a roving commission" to fight the battles of "vested interests," in its decisions under the fourteenth amendment, the reader may judge.

ELMHURST, N. Y.

The Heart of a Girl

BY LOUISE DUNHAM GOLDSBERRY

"I WANT it wide and heavy," I told Him. "It's to last fifty years, you know; and when I'm an old, old lady I want it still to be wide and heavy, not just a shadow of a ring worn out till only its soul is left."

And He laughed. And so my wedding-ring was made to order, and not a girl in all the world had ever tried it on, and it had never lain in the jeweler's case, taking comment and being tried on fingers—just made purposely for me. And when He brought it out for me to keep I would not let him even try it on my finger; just hurried it into a dark, hid-away place—to wait.

And that beautiful hoop of gold horizon held the wide, wide world for me. And I saw the world with a rainbow about it, a glory of many colors.

Then a white day, a day made up of all the dreams and all the inviolate music of a girlhood's young years. I wakened in the night, and I knew it was mother's voice. *"My little, little girl,"* it was saying; *"my own little, little baby girl."* Not weeping, just her mother-way of putting a last dear sweetness to the good night she had kissed me. I was life-long used to that. There were just mother and I always; and she gave me all the loves of her preciousness that there were none others to share. Mother was all just mine. And she was so dear, with a lovingness and a bright, brave fronting of life that had kept me all life-long marching across the days of the years, to the soldier-sound of music. When He said—One Night—*"I love you,"* and stopt stock still in our tramp in the rain and faced about and looked me in the face, and the wind and the rain splashed and sung and the trees were making great chordy *"All together—sing!"* And then He said it again and again and it grew sweeter and dearer with each saying till it out-sung the singing of the trees and the wind and the rain and I thought the angels must come out to hear that sweep of sound—and I said, *"Tell mother!"* and we hurried home. And mother opened the door and the winds sung in and the splash of rain made iridescent musics and He just put one arm around her and kissed her and the other arm about me and kissed me and we told her. And after He had gone He came back. "I just want to look at you," He said. "Mine?" He said, *"mine?"* And I said, "Yes."

And He said, "Sweet, *do* you love me—do you *love* me?" And I said, "Yes." And He begged, "Say it." And I said, *"I—love—you,"* said it low against the coat sleeve my cheek leaned on. And then, glad and sudden bold, I leaned to his lips and said it there.

And when he had gone again, really gone, I opened the door and listened his footsteps go down the street; listened till the wind rushed across and the rain-splash hid the sound of his steps in its dark.

And the little drenched, dripping world out there in the black voids of abysmal space seemed new and girt with the very divinity of God. And I laughed up at the great wet night. *"God, God, You are so good—so good—so good,"* I said loud in my heart—*"so good—so good—so good!"*

A day of laughters and little speech, of tender speech and dips of tender silences fallen between. I saw mother with eyes that seemed to be seeing her for the first time. This lovely woman, crooning and sweet-lipped, was the same mother I had always taken for granted. It was *Mother!* But I wondered that I had never before known just how gold the brown of her wonderful hair. Just how speech-full the larkspur eyes. Just how she gave the sweetness of herself to the living of life and made it a glowing sacrament.

And I clung to her.

"Oh, mother, how sweet your eyes are."

"The better to see you," she laughed.

"Oh, mother, mother," I begged, "you don't really mind if I marry, *do* you?"

And she held me close.

"You won't treat me *any* different, *will* you?" I begged. "I *am* your little daughter, just the same?"

And she held me close and filled my clamoring heart with all the love-names she'd fed it on from its first beat.

And a new wonder grew upon me. How had she known so wonderful treasure-store of love's namings? What was it in motherhood that brim-fulled speech as a honeycomb with its honey? The very honeycomb of life was from between her lips, and I had lived in that presence as a thing of my rights all my life, and had it taken the lips of a man's love to kiss open my eyes to the beauty of *a mother's love?*

The stars were pricking the horizon. There was no one in the Pullman but us two, and the man's voice said low, as if a sacrament were in the wine of speech, the new name that had lain in a hid-away place, engraved in a ring just made purposely; and wide and heavy, to carry the long, long years in a hoop of gold.

"My wife," he said; *"my wife."* And as all the world fell away and nothing was but the stars and the rushing wheels, the wheels sang it—sang it—sang it. And across the singing and past the young face of the man I saw the face of my mother under the vines of the porch. The lamp-light behind her streaming upon her and lighting her in the dark of my eyelids till the larkspur of her eyes shone and the whiteness of her skin.

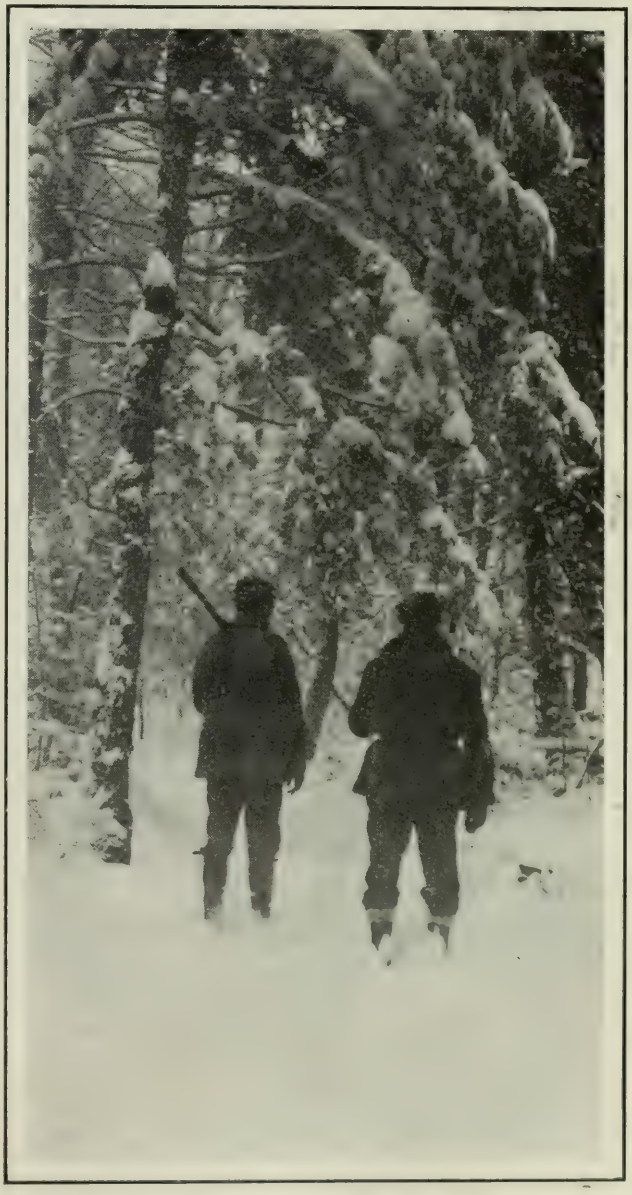
And I began to understand the litany of womanhood.

And I said to the man, "I'm going to try to be a dear wife, Man, Dear."

"It's the sweetest name in the world," he said softly.

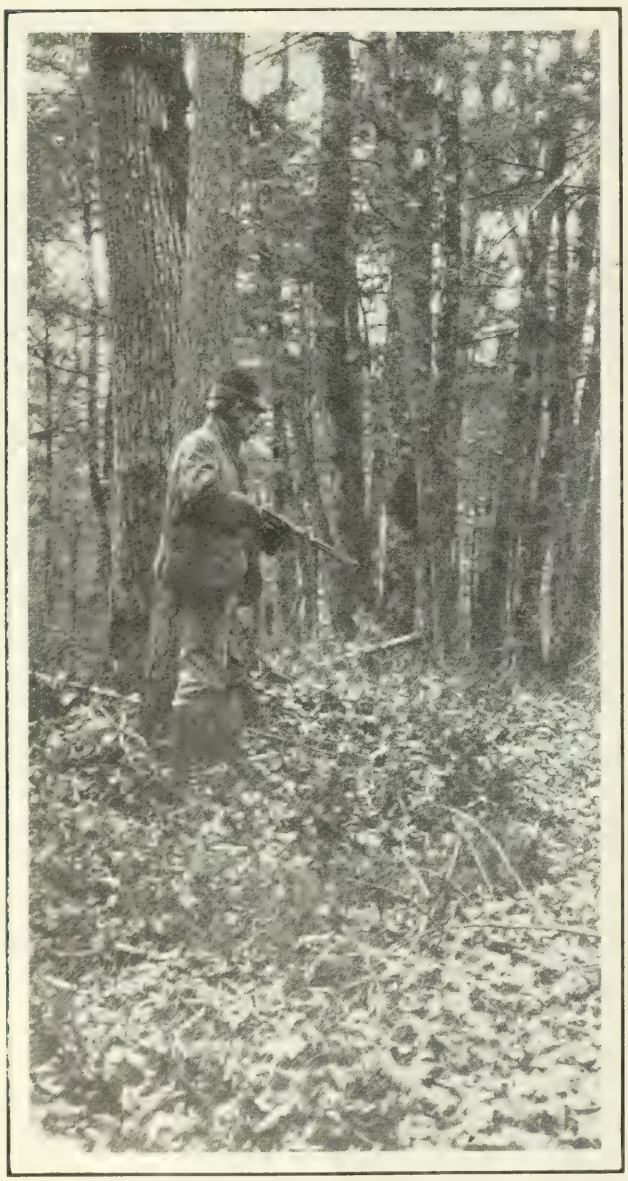
"No," I said, "no; the sweetest name in the world is Mother."

WASHINGTON, D. C.



Hunting the Deer

BY O. WARREN SMITH



PERHAPS of all forms of outdoor sports still-hunting the deer is the most fascinating. I am a fisherman, make a business of fishing, as it were, but I hunt for pleasure. I have followed the dogs over many a brown stubble and thru many a leafy thicket in quest of the various upland game birds, and I have sat on more than one duck-pass in the cold gray dawn of a November day eagerly peering out over the bobbing decoys; I have hunted rabbits in the daytime and I have followed the baying "coon dogs" lighted only by the twinkling stars until *Procyon lotor* took refuge in a tree or as sometimes happened, escaped altogether. Yes, I have tasted quite largely of sport with rod and gun, but for true, soul-satisfying recreation forever commend me to still-hunting the deer. I do not champion deer hunting simply because of the regal size of the game, and I have brought down some record heads in my time, but because of the silence of the great woods, the silence that "comes like a benediction to heal the blows of sound." The days and days that one spends on a "run-way," the only sound the tumultuous beating of our own hearts when an occasional robin redbreast scratches amid the brown leaves just out of sight, are truly recreative. I know of no sport where one becomes so *en rapport* with Nature as in deer hunting. Bless you, in the November woods I have heard music and listened to sermons, the like of which one never hears in man-made cathedrals. More than one deer has past my station because, as the guide said, I was "a-moonin'." But "moonin'" has a rightful place in deer hunting, in life, too, as for that, as has pressing the trigger. I am not "practical," blast the word! but I see things and hear things that a "practical" man never hears or sees. My most successful days have been my unsuccessful ones. Success and failure are only relative terms after all, a statement which applies to some things beside deer hunting.

I like to hunt deer by myself and in my own way, therefore as a rule I fight shy of the hunting lodges and professional guides. I like to hunt my deer, not have a bunch of pitying guides drive it on to me. Because I like to hunt alone, when that Fate which rules in the lives of hunters and fishermen as well as in the lives

"FOR SOUL-SATISFYING RECREATION: STILL-HUNTING"

of other people, decrees that I may spend a week or ten days in the north woods, I seek out some humble settler's cabin about which the tall forest trees stand on guard. There, where life is very simple, very elemental, I for a time shed the empty conventions of "good society," and, clad in stained and dirty corduroy, face life upon a common ground with my brother of the woods, he who dwells from choice upon the firing line of civilization, fights the battle every day for sustenance, which I fight now and then for pleasure. No wonder the blood of those who dwell in cities turns to water. We are too petted and pampered. It is good to get up in the morning even before the roosters begin to drowsily crow, break the ice in the wash basin beside the door, and bathe, far beyond the reach of steam pipes and hot air registers. Then the breakfast! No predigested, peptonized breakfast food, but pork and beans, rashers of bacon and good old-fashioned pancakes, all washed down with coffee guiltless of contaminating influence of electric percolator. So fortified, the hunter is ready for the adventures of the dav. Four o'clock in town marks the hour when some retire to rest (God pity them!), but to the deer hunter it is the hour of rising, the hour when the possibilities of a new day burst upon him, tho there is little hint of day in the all-encompassing darkness. To reach his chosen hunting ground before the sky begins to flirt with day is the pleasure of the still-hunter; long before the sun rises he is shivering with cold and excitement, first with excitement, then with cold.

"THE DAYS AND NIGHTS ONE SPENDS ON A RUNWAY"

While he waits for the deer, the unexpected expected, for the game seldom comes before you cease to expect it, we will talk for a moment of guns. Now, what I do not know about guns would fill volumes. If you were to ask me about fishing tackle the chances are that I could answer all your questions, but guns are an unknown quantity to me. In deer hunting I am imprest that not so much depends upon the arm as upon the man behind the gun. When we used to shoot single-shot rifles we made our single shot count, for it was our first and last chance; but today we have repeating and automatic guns, each a veritable battery, and as a consequence much good ammunition is wasted. If we do not hit with the first shot we may with the second, and we bang away. One shot just back of the forward shoulder is better than eight sent at random. I use a 30-30 Winchester carbine; it is short, light, and will shoot a whole lot straighter than I can hold it, tho I can say without a smack of conceit I am not exactly a duffer with a gun. It suits me and my needs, therefore I much doubt if I will ever swap it for a more powerful and more modern "shootin' iron." Then I carry a little axe strapped to my belt—would not think of going without it, for, should I happen to be caught out after nightfall, it and my waterproof matchbox would ensure me a comfortable night even under the most adverse circumstances. Another important article of equipment is the compass,

"ONE SHOT JUST BACK OF THE FORWARD SHOULDER IS BETTER THAN EIGHT AT RANDOM"

a tried and tested instrument. When I seek an idol worthy of worship I think it will be my little compass, for more than once, by following its unfaltering finger, have I found a warm fireside when otherwise a cheerless night would have been my portion. I also carry a small tin cup, two or three drawings of tea, and some salt done up in oiled paper. I do not expect to sleep out, but, should I be compelled to do so, my bed will not be a supperless one. One experience of the kind is enough to last me thru hunting days. Also in one of the many pockets of my hunting coat I stow away a bit of fish line, with a few hooks and artificial flies. All the articles enumerated above take but little room in my pockets, and the knowledge that I have them more than compensates for the trouble they occasion even if I never use them. Many a jolly midday meal has my simple pocket outfit supplied, for a cup of tea and a boiled grouse is not lightly to be despised by a hungry man, even tho the staff of life be lacking. A little care and forethought would obviate many a woodland tragedy. "An ounce of prevention is worth a pound of cure," you know.

We left our deer hunter standing on a runway waiting for the dawn, for the hour immediately succeeding daylight is more than apt to be the fruitful one, tho a deer may happen along any time before ten o'clock; after that hour they retire to some thick copse for a noontime nap. The wise hunter will likewise rest. Along toward evening the animals come out to feed once more, when the hunter keeps his eyes open and moves with circumspection. Perhaps there is not much sport in standing in one place for three or four hours, but I am persuaded in my own mind that if a hunter were to select a likely spot and stay there all day long he would be reasonably sure of a shot between dawn and dark, and even if he did not, many of Nature's shy children would stumble upon him. On my last hunt a whole flock of crossbills visited me one morning, lingering in my vicinity for some time, and only departing when an awkward porcupine came waddling along, his quills rattling like the armor of some ancient knight. His surprise and consternation when he discovered me was ludicrous in the extreme. Upon another occasion, while I stood with my back to a tree engrossed in the study of a flock of Canada jays, "whisky jacks" the lum-

bermen call them, woods birds always, an inquisitive doe walked up to within eight rods of me—I afterward found her tracks in the light snow—and away again without my hearing or seeing her. Think you I studied the next flock of strange birds less carefully? Not so. I count that morning one of the most successful I ever spent deer hunting, for my notebook possesses eight pages of "Notes on the Whisky Jack." It is not the tangible game one secures that is worth while, but the intangible, a law that might be applied to all life with equal felicity. Was that not what the Carpenter had in mind when he said, "Labor not for the meat that perisheth"? But if I don't look out I will be preaching and I, you know, abhor preaching.

Not always does an adventuring deer find me asleep or my wits wool-gathering. Three falls ago I spent the last ten days of November in the north woods. Nine of them I tramped forth and back, covering many a delightful mile in sunshine, snow and rain, for we had all kinds of weather, but not a shot did I get tho I saw the flash of more than one distant "flag" as the hunters name the deer's excuse for a tail. On the morning of the tenth day, my last, I was in position by a large maple tree in what appeared the most likely place. Two hours sped before my deer came, but come it did, forty rods away and a side shot. When I held the gun on the animal the forward sight seemed to cover the whole beast, but I fired and the report went shuffling out thru the snow laden trees to announce that the game was down in its tracks. Some few successes have come to me in my lifetime, such successes as men count worth while, yet somehow as I look back over the years the killing of that deer looms as large as any of them. Yes, all things come to him who waits providing he waits where it comes.

In this brief paper I have in nowise told all there is to tell about deer hunting, all that I have discovered, but I have tried to get you to see that it is not all of hunting to hunt. It is the ministry of the forest trees, the sympathy of the woodland silences, the indefinable something that we call Nature which slips into our hearts and minds, ironing out with the sadiron of her gentle blandishments the wrinkles of care and worry that makes the sport worth while. How a man can spend two weeks in the great woods without being a bigger and better man is more than I can understand. Reader, do not think that all who go deer hunting are "bums" and "sports"; some are just men and sportsmen. Not always can I go to the woods when the law says that it is legal to shoot deer, but I hope the day is far distant when open hunting will be unknown. While the big woods remain to us, while it is possible to hunt deer, let us give Nature a chance at us. Come, slam the desk shut, for the law is off, and the woods are waiting.

DURAND, WIS.

God's World

BY JAMES P. KELLEY

THE great clean sky is overhead,
The sweet green earth lies under;
Around the foulness and distress,
The souls that starve for happiness,
A fair and friendly world's outspread,
All beauty and all wonder.

Yon heaven is God's benignant face,
His arms are underneath us;
His cleansing Spirit comforteth,
His promise holds for life and death;
Our fair world is His dwelling place,
His mercies still enwreathe us.

CHICAGO, ILL.

BOOKS: AN EXTRAVAGANZA

By FRANK CRANE

HOW much better, said my friend Wardlaw, is a book than a show!

You mean you would rather read a book than go to the theater?

Yes. Tompkins dragged me out the other night. Tompkins is always making me do things I detest. He is the most medieval mind I know; he still clings to the theory that whatever is the most disagreeable is the best for one. He does not realize that we have in these times abandoned fasting and prayer and have taken to feasting and believing. I went with him to a playhouse. I was driven thru a chute with a herd of my kind, into a gaudy room full of bad air, where I sat for three hours in a cramped position. My intelligence was humiliated and my imagination insulted in a desperate effort to reach my emotions and debauch them. I could have stayed at home and read it all much more comfortably in a book.

Has the theater then no place in culture?

It has. So have alphabetical blocks. The theater is for the people who can't think or won't think. The printed drama I enjoy; when it is acted it bores me. I like to read a play with my imagination only as scene-shifter and costumer. When my mind does its own staging I assure you there is nothing cheap nor childish about the performance. I am not hampered by the exigencies of time and place. Richard rides a real horse. The forest of Arden is not painted canvas. Shylock is a real Jew and not a mimicking Englishman.

Then, carrying that sort of argument to its end, you would go nowhere?

Why go? Sit still, and the world will come to you. Why this madness to go and see great men? In the first place, you cannot. Most of them are dead. The only place you can find them is in books.

Alas! that is true.

Not alas, but thanks be! If Napoleon were alive an ordinary person like me could not come at him, at least not without a lot of nasty, reportorial obstrusiveness. And even if I should meet him the only place where such a meeting could take place under conditions at all suitable for a genuine acquaintance would be a desert island upon which we should be shipwrecked together. Calculate the mathematical probabilities of securing an hour's interview with a fellow like Bonaparte. And, in the second place, if we were brought face to face I should not see him at all; it would be at a palace or a parade, and all I should see would be a small, fattish man strutting for my amazement. It is much better to read the memoirs of this and that tattler about him. So I get really under his skin. And while I am doing it I can smoke. And when I am tired of him I can shut the book. The appalling thing about meeting an emperor anywhere else than in a book is that when he begins to bore you you cannot get away.

You would not have made pleasant company then with Lamb and Ayrton and Mrs. Reynolds and those others Hazlitt reports in his essay, "Of persons one would wish to have seen"?

I should not have chimed in with them, that's sure. Who would want to see Milton? The best of him is in his rimes, which I have, and the rest of him was doubtless the same poor stuff of personality as yours or mine. And Pope and Sir Thomas Browne, Dryden and Rich-

ardson, these are not flesh and blood; their bodies are leather-skinned, with vitals of paper and veins of printer's ink. The readers of Boswell know old Dr. Johnson better than his own mother knew him.

The real souls of men, I suppose you would say, are in their books?

Precisely. No contemporary of Jean Jacques Rousseau saw him as you can see him when you read his "Confessions" and his "Rêveries d'un Promeneur Solitaire." In the printed page the soul awakes. You are brought into the very house of life. The world, I doubt not, is closer to Shakespeare than was Anne Hathaway. I know Bernard Shaw and Chesterton far better than if I had met them.

Singular!

The truth is always singular. Only those untruths and appearances which form the small change of our ordinary "beliefs" and "opinions" are not striking. A real truth is like a hot penny. People drop it quickly. And the fact is that, bodily, we know no man, "nor woman either." The only knowable things are souls. While in the body, souls are always disguising themselves. The body itself is a disguise. The soul puts up shields, fences and masks of all sorts before it. A man is shy or gruff or pompous, silent or eloquent, merely to keep the world at arm's length. It is only when he writes that we see him. Then his soul is nude as an artist's model. In conversation there are a thousand reasons for not telling you my real opinion; when I write there is nothing but my real opinion to tell.

When I talk I address the individual. First, he may not understand me, and make mischief. Secondly, he may understand me, and make worse mischief. You cannot tell your wife just what you think every time. If you did you would be a brute. It is not hypocrisy that prevents you; it is courtesy and a decent consideration for her feelings. To utter your mind constantly before your children you would be a monster. Always in personal intercourse the character of the person you are addressing limits your free expression.

Now, in writing it is different. There you speak to the ideal reader, who is none other than yourself, made objective. You are face to face with the only man who understands. You can tell the truth, the whole truth, and more than the truth. Hence one's real self is nowhere but in one's books. The self that goes about eating and drinking is a poor prisoner of convention.

The trouble with every day living is that we are perpetually at the treadmill of doing things we do not want to do, things that do not express us, but conceal us. What have all the daily deeds of mine—acts I care nothing about, words I use merely to get some one to pass the bread, phrases coined to keep the social peace, smiles put on so that my friends will not see how badly I feel—what have these to do with me? What have my coat and breeches to do with me? I put them on to avoid trouble. And most of our conversations, salutations and chit-chat are intellectual coats and breeches. They indicate nothing except a willingness to be respectable.

Daily life is by mutual agreement reduced to formulas of self-repression. The most genteel person, "the glass of fashion and the mold of form," is the one that allows us least to suspect what is going on inside.

It is only in books that life is exprest. Then only can the mind, unclothed and unashamed as the gods upon Hymettus, walk and talk, breathe and live.

The real population of the world is not composed of its human bodies, but of its books. Men come and go; books remain. Life is merely a feeder of literature. Things, which Johnson said are the sons of heaven, pass away, while words, which he called the daughters of earth, remain. Look at that Bible; the men who believed it and the men who disbelieved it have fallen like autumn leaves, and the book itself is evergreen. Here is Dante's poem, still standing like a cathedral, while the author who built it and the thousands who have walked in it lie buried in the churchyard. Here is Shakespeare's book; the men and women in it are more alive today than were the queen who patronized and the crowd that gaped at his plays. The characters of Dickens have more reality than Dickens himself; the nobles and millionaires he looked up to are already forgotten, while

Uriah Heep and David Copperfield are intimate realities to each succeeding generation.

A book has a personality of its own, quite apart from its author, just as a child cannot be accounted for by his mother and father. A book leads its own life. It extends its mastery over men independently of their struggles against it, or it dies despite their most meticulous incubation. It wrestles not with flesh and blood but with other books. Slowly the eternal primacies of literature are formed. Its ranks and nobilities are beyond the devices of men. The realm of books is a theocracy, the only rational form of government. There is no nonsense here of democracy, there is no ridiculous makeshift of heredity; book kings are chosen of God, coming up, like Isaiah's king, from Edon, with dyed garments from Bozrah, crying: I have trodden the winepress alone, and of the people there was none with me. Who can explicate the kingship of the Iliad? When we say it was composed by Homer we are merely flattering humanity, and pretending to understand the mystery of a book by attributing it to the mystery of a man. But I doubt if there ever was a Homer. The Iliad descends to us out of the gray dawn of the world, a priest forever, after the order of Melchisedek, king of Salem, who was without father, without mother, without descent, having neither beginning of days nor end of life, but made like unto the son of God, abiding a priest forever.

I presume then, I observed, that you would say that no man lives except the author?

Well, there are degrees of life: a reed lives, and a worm, as well as a philosopher. And of all the universal tide of life it is the author who experiences its fullest expression. But it is not the man who writes the book that I have in mind so much as the book itself. I am wrapped in wonder as I gaze upon its spiritual power and persistence. Why do men build no more cathedrals? Have you read Victor Hugo's answer to that question? He shows us two men contemplating from a window the church of Notre Dame of Paris; one of them turning to the other, and pointing to an open book upon the table, exclaims: "This eats that." The book is death to the cathedral. All that energy of self-expression the former ages poured into stone and spire they now pour into books.

And are we the better for it?

Better? My friend, the age of the rights of man is nothing but the age of books. The book is the only reformer. It will not die; you cannot hang it, crucify it nor banish it. It was Luther's book, or translation, that brought on the Reformation; it was Jean Jacques' book that produced the French Revolution; it was the books of Huxley and his fellows that made way for the era of science and free inquiry; it was the books of Ruskin, Carlyle and Emerson that kept science from running away with us into materialism and brought us back to religion; it was Mrs. Stowe's book that abolished American slavery. What is a man, any man, compared to a book? In real value what has any conqueror done to influence the lives of men, compared with what books have done; what are the exploits of Timour, Alexander and Charlemagne to the results of "The Pilgrim's Progress," "Das Kapital," "Le Contrat Social" and "Progress and Poverty"?

Is a book greater than a man?

A book is a man raised to the *n*th power. It is the freed spirit of man, disembarrassed of his non-essentials. The real superman is a book.

I declare, you make me feel that a library is a very august presence.

You have said. More august than kings' councils. Enter into a library. The very air is hushed, heavy with thought. It is as if some still herald trumpeted in noiseless thunder to your soul's ear: For we look not at the things which are seen, but at the things which are not seen; for the things which are seen are temporal; but the things which are not seen are eternal! You are in the privy council of mankind. All around you are the mute rulers of the world. They do not strive nor cry, but they have their way with us. You are in the one room where dreams come true. Here, stripped of its sordidness, life rises like a pure flame, burning not with consuming fire but with creative joy. Here the sham world is cut out, with its hustling pettiness, its brute thirst and hun-

gers, its poisonous compromises, its successes and failures, both humbugs, and its lies that swarm around every pure aspiration like septic flies. Here is the house at last, as Nero said of his golden palace, fit for a human being to live in. Here is the true landscape of souls; for yonder loom the high mountain peaks of Plato's snow-tipped ideals piercing the veins of heaven, and the misty masses of Kant and Swedenborg; there lie the April fields of Chaucer, the sunny humanities of Boccaccio, the tropic fancies of "The Thousand and One Nights," the bare crags and long deep shadows of Ibsen, and the romance land of Scott, where

"The orange flower perfumes the bower,
The breeze is on the sea."

You could carry me bodily off with your eloquence, I laughed, if I did not remember that, after all, real life, you know, is——

Real? he interrupted. But what is reality? 'Tis the *pons asinorum* of metaphysicians. For my part, I say the thing is real that I feel. When I read a thing that grips me it is as real as if it had happened to me. It is pure reality unmixt with the lying increments of matter. Here are a hundred doors for the escape of the soul. Thru any one of them I step into another world. What is intoxication or religion but the attempt to flee the humdrum fraud we call actuality? And here in the library I can do better. I open the door of "Treasure Island" and sail away to summer seas. I lift the latch of "Don Juan" and go upon a pagan philandering. I step thru the door of "The Færie Queen" and am in the morning of England, and I have but to knock at the doors of Verne, Wells and Poe to explore the bottom of the sea, witness the antic of the men of Mars, or voyage to the moon. All the lust of adventure, that in time past men could only gratify at great expense and inconvenience, is now mine, while I repose upon my shoulder-blades with my feet on the table.

No, he continued, let me live and die among books. And when I die let my transmigration be next into a little worm that feeds upon an Elzevir.

That immortality which men but dream, it is books that have it. All the higher instincts of men find their reality only in books. Man has the shadow, books the substance. Do we dream of living forever? It is only books that gain this we long for. Do we want to be loved for ourselves alone? Books are; no man is. Do we dread old age? Books alone know where is the fountain of youth. Actual life is but a rough sketch. In books life is well done. Only in precious print do they "live happily ever after."

The book is the candle, and men and women are the moths that fly about it.

It is books that are the eternal personalities; human beings are the little coral insects that build them.

Our histories hitherto have described the deeds of men; future histories will describe the careers of books.

The book is the last resting place of man, the real universal cemetery. Here lie all that remains of the Cæsars and the Ptolemies. Their bones have been stolen from their proud tombs. Books have done for them what all the embalmers of Egypt and the mausoleum builders of Rome could not do.

Great captains of war, politicians, artists, money makers—it is the humble writer who judges them all, allots them to their heaven in the house of fame, damns them to oblivion, or mis-spells their names.

The wars of the past were fought with iron tubes charged with powder; the wars of the future will be fought with quill tubes charged with ink.

Do you know, he went on, after a pause, that I think the ideal marriage would be the meeting of two books. Thus would pure soul mate with pure soul. It is when souls drag bodies along into the affair that trouble is brewed.

And the children?

Out of the union of their ideas would be born the noblest of children, new books.

John, said his wife, who had all the while been sitting by, sewing, John, you are crazy.

I thank you, my dear, he said. The greatest compliment a wife can pay her husband is to admit that she does not understand him.

CHICAGO, ILL.

New England as a Switching Yard

BY EDWARD HUNGERFORD

[The railroad situation in New England, where the projected competitive extension of the Grand Trunk system has been checked by negotiations for a traffic agreement with the New Haven Company, which is practically a transportation monopoly, excites much public interest, has suggested inquiry by the Department of Justice, and will be considered by committees of Congress. Mr. Hungerford, who here explains the problem and the attempt to solve it, is the author of "The Williamsburgh Bridge" (1904), "The Modern Railroad" (1911) and numerous articles on financial and commercial topics.—EDITOR.]

THE process of transportation consolidation has been in progress in New England for almost a third of a century. Until recently the New Englanders have been content to sit quietly and to watch that progress. Perhaps it seemed to them inevitable that, first the railroads and after them, in due time, the trolley and the steamship lines, should group themselves into larger entities, for a lowering operating cost, and, the far more important thing, a bettering of service. Some of the really famous early New England railroads were pitifully small affairs when measured side by side with their brethren of the broader sections of the land. New England itself, taken aside from the State of Maine, is a tight little principality—albeit that it is today and has been for many years the richest traffic field in the world—with the possible exception of old England itself. So it came to pass almost as a mere routine of railroad development that the lines south of the famous Boston & Albany—the New York, Boston & Providence, New Haven & Hartford, the New England and the Old Colony chief among them—formed themselves into a single fairly compact railroad, bearing the title of the first of the four; while those of the north, the Boston & Maine, the Eastern Railroad, the Boston & Lowell, the Connecticut River and the Fitchburg, went to form the Boston & Maine. This was not all accomplished as easily as it is here told. Older residents of New Hampshire can still recall the bitter battles for supremacy between the Boston, Concord & Montreal and the Boston & Maine. There were other fights nearly as bitter and even more protracted, but the ultimate in railroading came to pass, the stronger swallowing up the weaker, until there was one great railroad in southern New England and another in northern New England. Between them as a dividing line rested the busy main line of the Boston & Albany, an important feeder and connection for the New York Central system. The Vanderbilts are themselves fairly adept in consolidating railroads, and they must have anticipated the final trend of consolidation in the New England transportation field, for a little more than a dozen years ago they reached out, and, by the lure of high and guaranteed rental, annexed the Boston & Albany to the New York Central. The Albany road was an expensive acquisition. Rated once as one of the best equipped railroads in the land, it had been allowed to deteriorate sadly. And yet it has been worth to the New York Central every cent it cost, not alone in traffic but in preserving its gateway to one of the most important traffic cities in the land.

For it was evident that the process of consolidation had not halted, for more than a moment, at least. It seemed inevitable that either the New Haven would swallow the Boston & Maine or the Boston & Maine would swallow the New Haven. As to which would be the swallower and which the swallowed—here was a point for the survival of the fittest indeed. The New Haven was fittest, for it had an executive—Mr. Charles S. Mellen—who was seemingly well prepared for that huge task.

Consider now for an instant the dominating personality of Charles S. Mellen. Born in New England, schooled alike in her traditions and her railroads, he had taken a post-graduate course under that master pedagog of transportation, James J. Hill, as head of the Northern Pacific. He was well fitted to assume the presidency of the New Haven, when J. Pier-

pont Morgan, his commander, called him to that mighty task. Mellen found the New Haven in far worse condition than ever the Boston & Albany had been allowed to reach. Its equipment was inadequate and even worse—why, in that very year of 1902, when he took the helm of the big Connecticut system, he found dozens of wooden bridges, even iron bridges, absurdly light, as well as rolling stock that should have been sent to the scrap heap long before. The regimes of two "lawyer presidents" had permitted the road to deteriorate sadly, altho Mr. Mellen's immediate predecessor had made some stout efforts to improve the property.

Mellen did more. In a physical sense he caused its reincarnation. He spent the New Haven's money generously and with good effect. He purchased new engines by the hundreds and cars by the thousands. He cut relief lines for the bottle-necks at New Haven and at Providence, he developed his coal gateway by the way of the Poughkeepsie bridge, transformed neglected lines thru Waterbury, New Britain, Middletown and Willimantic into main traffic routes from New York to Boston—he made serious and successful efforts for the use of electricity as a motive power while other railroad men still laughed at it. For all these things he earned praise—and it has been accorded him.

Mellen did still more. He decided that the electric trolley roads and the coastwise steamship lines of southern New England should be a part of the New Haven Railroad and he set out to secure

them—with absolute success after a due course of time. For some of these lines he paid high prices. It could not be fairly said that Mr. Mellen ever haggled long over the prices. Better a fat price, he must have argued, than a truant wandering about your front parlor. Any one truant might be the source of untold trouble at a later time—as we shall see in the case of the Central Vermont in a moment—and they were better out of the way.

After Mellen had gathered up about all of the trolley and steamship lines in Connecticut and Rhode Island, he started north. There were trolley lines in Massachusetts—also the Boston & Maine. By this time there was no mistaking the purpose of the president of the New Haven Railroad. It was his desire to make a single system out of all the transportation lines of New England south of Maine. There was no secret about the matter. He himself has spoken with characteristic frankness of it:

"The location and conformation of New England," he has said, in effect, "makes it advisable that its railroad service should be handled as a great switching yard—its serviceable railroad an exaggerated terminal, if you please. Such a road, eliminating costly competition, would accommodate equally the three great transcontinental trunk lines of Canada, the busy trail of the New York Central, and the great trunk routes that terminate in and about the city of New York. It would perform a maximum of service for the shipper and the passenger."

There is much sense in such a platform. The railroad situation of America has already come to the point where the only competition that remains is in the seeking for traffic. Railroads—east of the Rocky Mountains, at least—no longer seek to invade one another's territory. And even when they battle briskly for business they stand by certain rules of the game as to rates, minimum schedules and the like. All these things allowed, the fighting that is still permitted between the larger roads is costly, wickedly wasteful. If the service between sharply competitive points is good because of fighting for traffic it often is accomplished at the cost of the service to non-competitive points, and so, in the long run, the general public is no gainer.

Slowly, and by hard lessons, the general public has come to learn this, to appreciate generously the position that Mr. Mellen takes in his view of the New England situation. But, even if it is disposed to admit that a railroad monopoly can be made more efficient than even a service under restrained competition, it is not yet ready to admit that all of our railroads are yet capable of becoming such monopolies.

So it was with New England, when Mr. Mellen proposed to make his unified railroad a single terminal service for all of its industrial might. It has not been willing to entrust him with so important a public service. Massachusetts, with a reputation for three centuries of fair play behind her, could not give approval to the methods of the New Haven in absorbing the trolley or the steamship lines of Connecticut and of Rhode Island. She first refused to permit Mr. Mellen to acquire the trolley lines within her own territorial limits and then she forbade the marriage of the New Haven and the Boston & Maine. It made no difference that the Connecticut road had acquired a control of the stock of the northern system; it could not complete the merging of the two properties without legislative sanction and that legislative sanction Massachusetts withheld—while her leading citizens showed no little agitation about the situation.

And while the public mind of the Bay State was thoroly aroused over the proposed union of the New Haven and the Boston & Maine—immensely strengthened by a close traffic alliance with the Boston & Albany branch of the New York Central—a new factor appeared in the New England traffic field, in the form of the earliest of the powerful Canadian railroads. For a good many years the Grand Trunk has owned the control of the Central Vermont, a road running north and south thru New England, a bit wobbly to be sure, but still a powerful factor in keeping down thru freight rates by means of the "differentials" which it forced its more powerful competitors to grant to it. If you have followed railroad strategy at all within the past half dozen years you must have

noticed the splendid struggle of the Grand Trunk to make itself a real transcontinental line, instead of merely a feeder to a group of Western roads at Chicago. Under the tireless energy and the careful and capable planning of Charles M. Hays this vast task of building a modern low-grade railroad thru the forests of Canada and over the summits of the Canadian Rockies proceeded unhaltingly. The man that planned this tremendous work sank with the "Titanic" last April, but the work he planned has gone steadily forward. Another two years and it will be possible to take a Grand Trunk train at Portland or at Montreal that will bring one to the Pacific coast—without even one change of cars.

Hays had in his far-seeing mind a better eastern terminal for his great new railroad than even Montreal or Portland. Boston, with her superb harbor facilities, her outer fringe of great manufacturing communities; Providence, a second Boston and on only a slightly smaller scale—here were terminal cities and traffic hubs worth the might of a transcontinental railroad. In his Central Vermont he possessed a potential of future use in reaching each of them. True it was, the rails of the Central Vermont did not reach either of them, but neither was more than a hundred miles away from them, and a hundred miles is as nothing to a man who can build three thousand miles of main line railroad thru a Canadian wilderness.

So the master of the Grand Trunk made overtures to the two chief cities of New England, and they, in turn, began to welcome him with arms open. They helped him plan and begin building the Southern New England, the compact new railroad that was to connect both Boston and Providence with the rails of the Central Vermont. Enthusiasm ran high thru New England at the prospect of a real competing railroad treading its industrial towns once again—and even after Hays had met his tragic fate, his successor, E. J. Chamberlain, began grading the line of the Southern New England from Palmer, Mass., on the Central Vermont, straight south and east to Providence. Then—within the month—came the disillusionment, the dramatic crisis in her critical transportation situation that has set New England's nerves on edge.

On a November Saturday the workmen on the new Providence line of the Southern New England were dismissed—for an indefinite period. The head offices of the Grand Trunk murmured something about money being tight, there was the Balkan war to be brought into the reckoning; the excuses were numerous. Gradually the truth came out. There would be no need of the Grand Trunk building another mile of new track. The oldest trick in railroad strategy had been played again and had won. The New Haven had come to its knees and was willing to make the Grand Trunk almost any decent traffic arrangement for the use of its rails, as well as those of its allied properties, the Boston & Maine and the Maine Central. And on its own part it had stifled the last competitor in its territory, made its plan for a complete terminal of New England reasonably certain.

When this last crisis of the New England transportation situation shall have taken its true perspective it will be seen that it was but a phase of the entire working toward an ultimate end—the consolidation of at least the steam railroad facilities of that tight little traffic territory. Such consolidation must be the economic ultimate. It is an inevitable. Mr. Mellen's theory is right. It may not be pleasant in many of its details—few consolidations ever are—but it is an economic necessity for New England. Any transportation expert who has made a careful study of the situation will tell you that.

But, granting that a single railroad system thruout five of the New England States is both a necessity and an ultimate, it does not follow of necessity that either Mr. Mellen or any of his associates in the management of the New Haven are equipped to conduct so important an arm to the very life of that great community. Massachusetts, or just now Providence, does not seem to feel that they are competent. Mr. Mellen and his associates have been judged by these communities not by their promises, which were generous, but by their performances, which, for one reason or another,

have been something less—and the New England thumbs have been bent downward. It is a difficult task at the best to administer as important an economic function as transportation for any large community and that alone may make another ultimate come with consolidation—ownership and operation by the State.

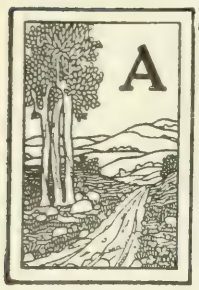
Sizable monopolies have been already privately operated to the public benefit, as, for instance, the rapid transit tunnels under the Hudson River at New York, the gas supply of Boston, the national system of the telephone. But for the Hudson tubes came a McAdoo, for Boston gas a Richards, for the tremendous development of the monopolistic telephone a Theodore N. Vail—three unusual men of a type that won public trust and following from the outset. If the New England railroads cannot produce a McAdoo or a Richards or a Vail, they are not to be permitted to establish their proving school in transportation monopoly—an experiment for the benefit of the entire country—and the present irritating and senseless deadlock, rendered more supine than ever by the Grand Trunk fiasco, will continue indefinitely. Failure by the railroad world of America to raise such an executive from its ranks, a man capable of making promises to New Englanders and keeping them to the letter, a man who can meet the most difficult situation in the history of railroading and meet it broadly, is bound to make that whispered thing—State control—the second ultimate.

Already they are more than whispering that thing in Boston—wondering why the State of Massachusetts cannot purchase the Boston & Maine and operate it in its own interest—and almost precisely upon the broad terminal plan that Mr Mellen has held this long while. It has its complications; for one thing the limits even of the early railroads rarely were coincident with State boundaries, and for another thing—it is not the purpose of this paper to take up the arguments for or against government railroads. It is merely to say in this last paragraph that the New England deadlock cannot long continue and once again that both from the point of view of the railroad investor as well as that of the general public, the situation demands a man of unusual facilities and breadth to meet it. Mr. Mellen's training has been extensive. It may be suggested that perhaps the real opportunity has not yet passed thru the fingers of his two capable hands.

New York City.

Resipiscence

BY MARGARET ROOT GARVIN



I look on these who in her youth were young,
The living yet among,
And cry—"Oh, why could she not also be
Alive, and left to me!"
Then, coming near, I see upon each face
Things piteous to trace:
I see the paths of pain upon each brow,
(Hers so unfurrowed now!)
I see them walking with age-fettered feet,
(Hers ever were so fleet!)
Eyes dim to joy, and lips no sweets beguile,
(While hers forever smile!)
And seeing these whom Life hath left behind,
Know Death to her was kind!

Whitesboro, N. Y.

The Educational Value of Coeducation

BY RICHARD RICE, JR.

[The author of this article was prejudiced against coeducation by his early training, but his experience for three years as a teacher in Indiana University has caused him to change his views and he here calls attention to some important points that the Easterner usually neglects in thinking of the question.—EDITOR.]

AN Easterner's impressions of coeducation as a problem are apt to be gained in some such fashion as my own; but I record mine here to begin with solely that it may be appreciated how far it is possible to change one's point of view in regard to this very important matter. My first glimpse of coeducation as a problem was at a track meet between my boarding school in New Jersey and the boys of a neighboring coeducational academy. Their "co-eds" had been driven over in every sort of vehicle from a barge to a buggy, and were formed on our athletic field in a mixt bevy close to the finishing line of the races. It was a mixt bevy because each girl was attended by a youth with a parasol, and because on the grass at their feet runners and jumpers, not engaged for an immediate event, lolled about and drew inspiration from their encouraging eyes.

For reasons now somewhat vague to me, we first formers thought all this an extremely wishy-washy performance and wondered how a real athlete could possibly do any sprinting with so much distracting beauty at the very tape. We had a notion, I believe, that it was not quite enough like Rowena and Ivanhoe, or like Helen looking down from the Scæan gate, to be truly invigorating. The outcome seemed to justify our opinion. The coeducational academy lost badly. One of their runners in the half-mile race even went so far as to lie down on the track a few yards from the finish, pretending to faint, at which a girl jumped up and cried out: "Oh, do you think he is dead?" And a little fellow at my side murmured in disgust: "Gee! She's his sister all right! Girls are an awful nuisance!"

It was our idea in those days that at school you didn't want girls fooling round—a very good idea, too; and that particular academy, let me say, is no longer coeducational. Of course, girls were all very well in vacations and a summer romance was practically a rule of life; but coeducation would have made it simply banal.

Now, you who went from school to Princeton or Yale—and certainly if you went to Vassar—haven't you had the opinion ever since, based on some casual impression or bit of gossip, that coeducation, even at college, *especially* at college, perhaps is apt to lead to a rather vulgar and sentimental view of life? Even supposing you have past thru some Western campus while "seeing America first," did your observations seriously change that opinion? Did they not rather make you philosophize about the matter something as follows: Coeducation is apt to increase free and easy notions, vulgar manners, and a lack of chivalry. At just the age when boys and girls are sure to think too much and too unwisely about each other, coeducation encourages them to think of practically nothing else. See them trooping over the campus arm to arm, sitting in class a little closer than the seats will naturally allow, reciting from one book—their joint property—dancing twice every week and spending two or three other evenings at a sorority house in porch and parlor conversation, etc., and etc.

These thoughts have their bearing. There is much to be changed in the campus manners of the coeducational university. There is especially a baneful lack of chivalry in the gossip of the boys about the girls, which often amounts to a vice.

But have you looked at coeducation on another side, and seriously considered

what it means as a force in national life, in culture and in politics? Have you thought, for instance, what its import is in connection with equal suffrage? Let us investigate this matter fundamentally.

What is the fundamental purpose of college education anywhere? Undoubtedly, you assert, it is the training of the intellect; it is certainly not social relations or sex relations. I agree. We both agree, that is, with some of the great educators of this country. Mr. Woodrow Wilson, in an address to the Phi Beta Kappa Society at Yale, once made it very plain that the purpose of the college is intellect, and that other things—athletics, social amenities, knowledge of human nature—are *by-products;* even that character is a *by-product.* "It comes," he said, "whether you will or not, as a consequence of a life devoted to the nearest duty, and the place in which character would be cultivated, if it be a place of study, is a place where study is the object and character the result." This does not say that intellect is more important than character; it merely puts the two things in a moral relationship.

Now, intellect is the common object of both the coeducational and the non-coeducational college. But the by-product peculiar to the coeducational college is a human preparation for life's most important conditions thru a peculiarly intimate observation of human nature in the opposite sex at its most crucial period, eighteen to twenty-two. In turn, this is not saying that such observation of human nature is more important than the intellectual training to be had at a non-coeducational institution. It is saying only that at the Universities of Illinois and Indiana certain social values may be placed in a moral relation to each other and to intellect which may not be so placed at Vassar or at Yale.

Would you not go with me so far as this, namely, to grant that *a thoro coeducation of the race* is one of the ideals of civilization? By that I mean an enlightened understanding by each sex of its distinctive and mutual functions, of its proper and common ambitions, of its most helpful and effective sympathies, of its whole relationship as a sex to the human cooperative scheme, the social brotherhood. Now, has not such coeducation been left for centuries chiefly to nature, to the family, to the teaching of codes of etiquet, to the general opportunities and experiences of life? Until very recently, that is, were we not, coeducationally, self-made men and women—some of us highly educated by the school of life, and some of us left pitifully ignorant?

College coeducation, if it has any social meaning whatever, means a conscious attempt to give to men and women a more sympathetic knowledge of their particular and mutual relations to the human co-operative scheme. As a condition of that part of the preparation for life to be had at college, coeducation is a sign of the growing consciousness for social relations. It is one of the signs —shortly to be followed by others—that we shall ultimately be as unwilling to trust the progress of the race, so far as it depends on sex relations, to men and women only self-made in their knowledge of each other, as we are now unwilling to trust the progress of the race, so far as it depends on sanitary engineering, let us say, to men and women who are self-made in that field of knowledge.

But why, you ask, cannot this knowledge of sex relations be inculcated in each sex at separate institutions? That brings us definitely to the point.

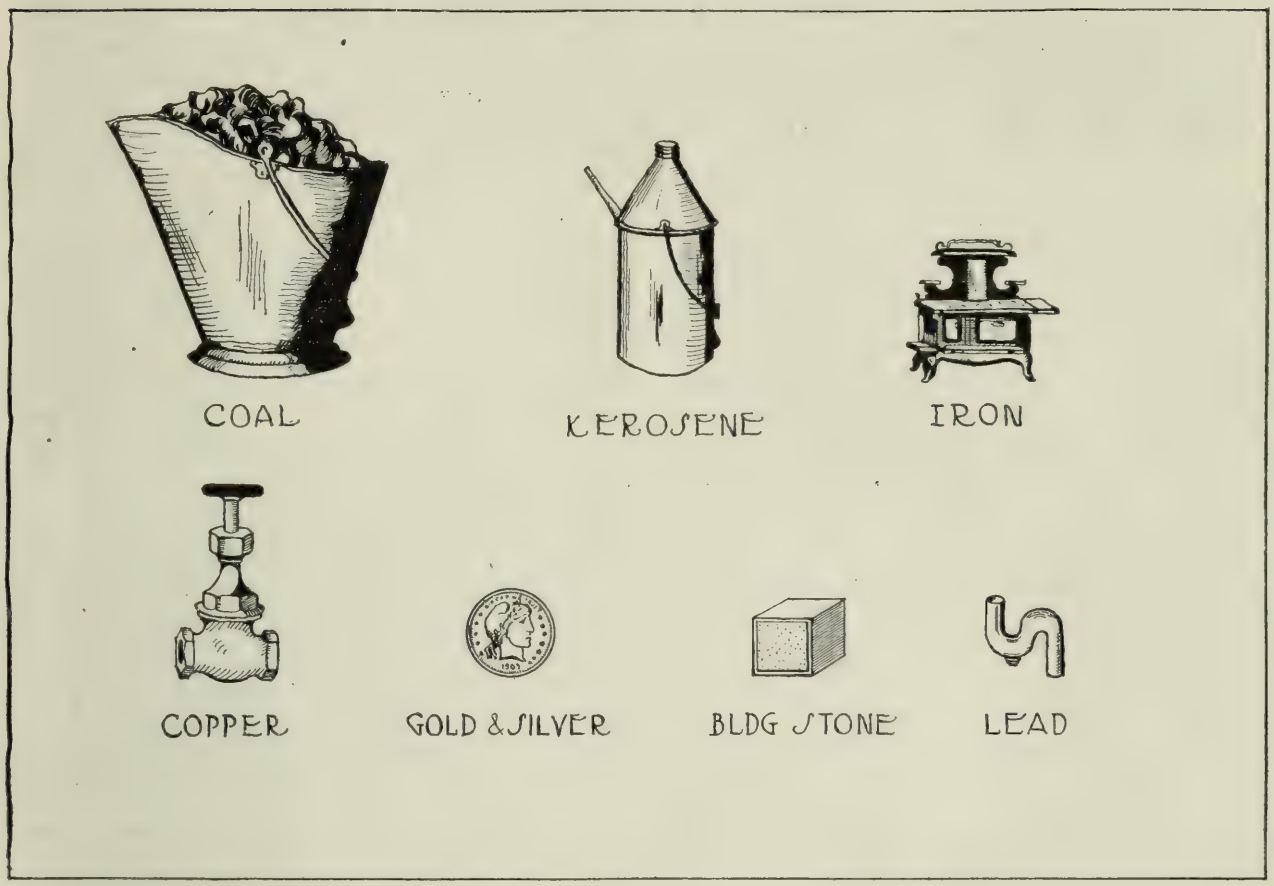
It cannot because, first, it is not primarily academic knowledge. It is not primarily training of the intellect. It is mainly a by-product—the result, not the aim, of a particular educational system. The aim of the coeducational university is, like the aim of Mr. Wilson's Eastern university, intellect. But the great specific by-product of the coeducational university is coeducation. And this is something other and socially more important, I take it, than the knowledge a particular Princeton senior may have of girls, or the experience of a Vassar freshman with men. It is all that and something more — a scientifically prepared social leaven.

Second, it is knowledge of human nature obtainable by the sexes only thru constant and close mutual observation while engaged in the same serious occupations. It is a common remark for Molly to make that she never knew Joe

till she dropt in one day at his law office and heard him transact some business; and Joe rejoins that a casual glimpse of Molly teaching her high school class gave him a new idea of her, tho they had been engaged for months. To watch a girl while she dissects a *discophorous hydrozoan* is, whether you understand the matter or not, another and a rather more illuminating experience, on the whole, than to watch her slice bread and butter for her little brothers. To discover that the romantic Charlotte can think as logically on an equation in calculus as on the personal equation you may be trying to prove to her is a discovery which, if generally taken to heart by men some centuries ago, would have made the latest imprisonment of a suffraget unnecessary. You say that every schoolboy remembers well enough how bright the girls were, and that he doesn't need to go to college with them to rediscover it. But he does; for he never used to think what it meant. Coeducation at college means not only recognition of the constantly lessening disparity of the sexes; it means also an unconscious intimacy with the mental tastes, processes, capabilities, idiosyncrasies of the other sex, which in memory becomes the lasting foundation of intelligent, unsentimental sympathy. It means that at a crucial period—a phase that permits the readiest insight into character and temperament—the sexes observe in each other, unconsciously and naturally, the temper of their most serious enthusiasms and ambitions.

Third, all this knowledge is obtainable only under conditions where young women have a freedom and independence, and a social relation to young men, which individualize them and which bring out traits of character not easily observable elsewhere. For at college qualities of leadership or of irresponsibility, of honor or of insincerity, of real charm or of specious charm, are set off against each other more sharply, and with less palliation in the contrast, than at home. What girls really are like—that time-honored enigma—is not so utterly baffling while they are at college. For once in their lives they may be known; and the habit of four years has lasted many a woman thru life and worn well. After college this mere fact, this very consciousness of having been known, makes it difficult to return to a dozen questionably charming ignorances and mysteries, since it is more interesting to be known—that is, to be known to have an independent, logical, and progressive intellect.

Because of furnishing opportunities for all these kinds of knowledge, I believe that coeducation will shortly be seen to have played a vitally important role in the affairs of this country—a role which in England, for example, is conspicuously wanting. Women in England have discovered themselves, and in their desire to prove the reality of it to men they have resorted to lawless violence—a form of advertisement—which the men say proves only the speciousness of the discovery. The blame should be placed on neither sex, but rather on a hard fact which, until recently, both sexes approved of—a social condition in which there were few educational opportunities for women to discover themselves and to let the discovery be sympathetically observed. In America, coeducation has been established in time to obviate some of this difficulty, certainly in time to obviate the necessity of a painful sex war concerning the system of suffrage. For in America it is teaching men and women together to recognize the common elliptical circumference of their regions of influence. It is teaching them their political interdependence.



That sounds like an old theorem, and we have known all about it, theoretically, for centuries. To put it in practice as coeducation has required a supreme confidence in human nature — some would still say an overweening confidence. Without doubt it shall always require a stern conviction of responsibility and a keenly sympathetic watchfulness, if this great institution is to be safeguarded to our honor and service.

Bloomington, Ind.

Our Mines and Quarries

BY WILLIAM B. BAILEY

ASSISTANT PROFESSOR OF ECONOMICS IN YALE UNIVERSITY.

THERE were in the United States in 1909, 27,240 mines and quarries and 166,448 petroleum and natural gas wells. The gross value of their products was somewhat more than 1.2 billions of dollars. The value of the chief products in 1909 was as follows:

Coal	$551,000,000
Petroleum and natural gas	176,000,000
Iron	107,000,000
Copper	99,000,000
Building stone	90,000,000
Precious metals	88,000,000
Lead and zinc	28,000,000

It is interesting to note that the value of petroleum and natural gas exceeds by nearly 75 per cent. the value of the iron mined. The last previous census of these products was taken in 1902 and since that date the value of the mines and quarries of this country has increased 52.4 per cent. The greatest increases have been shown in anthracite coal, copper, lead and zinc, in each one of which the value has nearly doubled during this period. On the other hand the value of the precious metals mined in this country has increased but 6.3 per cent. during the same period.

The total number of persons engaged in these industries in 1909 was 1,139,332, of whom over 770,000 were employed in the coal mines. The prominence of Pennsylvania in this field is very decided since over 400,000 persons were engaged in these industries in this State, whereas in no other State were 100,000 employed. From the District of Columbia and Mississippi alone was no mineral product reported.

NEW HAVEN, CONN.

The Country Problem;
How Idealists Colonized a Hill Country

by E. P. PRESSEY

NEW CLAIRVAUX has been a pioneer undertaking and part of the awakening of country New England during the past ten years. New Clairvaux is a peg upon which to hang some personal and collective ideas and experiments more than a place on the map of Massachusetts. Let us assume if we can that it is in the air.

New Clairvaux is a message, a vision of rural awakening in New England, in America. The vision has had contact with the earth, however, in struggle with conditions which limit a family's getting an honest living in these States, which limit a noble development. The persons who conceived the ideas were emersed from the problems of living in the small, remote hill town, and saturated as well with its honorable traditions and well grounded hopes of a future.

A disastrous fire on the morning of June 26, 1911, destroyed all the farm buildings on the property at Montague which have been most closely connected with the New Clairvaux movement for a better country life in America. This is a good time to look backward and recall some forces that have brought about a change.

Briefly stated, New Clairvaux was the result of introducing a printing press and a set of carpenter's tools into a country minister's home; association with a group of interested boys and girls; a needle class; a garden expanded into a farm; a fresh air week expanded into a twelvemonth; a coming of a handful of idealists from the college town anxious, inspired, to enter into our labors; the thing getting into the papers; a striving to live up to their exaggerated reputation. We were not organized into a colony by malice aforethought. No settlement of any kind was even foreseen. We first had to account for ourselves to ourselves and answer the question: What were we for? Many were the preliminary guesses at an answer. But in general we took ourselves to be a sort of informal kindergarten for grown-ups gladly learning and as gladly teaching a more profitable life by contact with people and things.

For some years previous I had been pastor of a poor hill church. Two ways were open to the young pastor so situated: to hold his position lightly while pushing for the top (the wealthier parishes), or to push for the ideal, which is here or nowhere. Charles Kingsley led a wonderfully fruitful life in an obscure country parish. So has many another. There is much to commend the Carlylean method, finding "here the ideal or nowhere." The matter of revenue is likely always to be its greatest problem. The homely industries, such as raising chickens and potatoes, were an obvious step toward the ever present ideal.

But before New Clairvaux had been named, the question was asked: What does this parish, this town, lack to make life abundant for those compelled to live here? The real needs were not hard to find. And we set about to move the forces of heaven and earth to supply those needs in any way that should seem expedient and in accordance with the will of God, man co-operating. And then we called the indefinite moving human forces New Clairvaux, in memory of

some young men who stirred Europe to a new life in every department of industry, art and thought three-quarters of a millennium ago, beginning at Clairvaux, in an eastern province of France, with a boy who pruned his vineyard and walked by the brookside in a barbarous age and saw a vision of our time. The purpose of New Clairvaux was to look ahead five hundred or a thousand years, and in the light of that vision to take and possibly give new heart to the conquest of Nature and self, to increase production of garden truck and cast an influence with all those who work for breeding a better human nature, environed in a more beautiful earth.

But such a vision is too large to organize into a state. When a writer in the *New York Evening Post* described us as a colony like Brook Farm, I replied at once and showed that there was no colony, that it was the old town of Montague, and that was all. Later I replied to a New England magazine writer and showed that there had never been a colony here in any sense that term conveys; no conceit of separation from the town, altho our great fame made it easy to lose our heads and think ourselves somewhat that could go it alone.

I have consistently held that the simple, primal, natural democratic ways of getting together upon which the whole social and political constitution of the Saxon race is founded are the best: the sitting together of neighbors, the two or three together and a spirit in their midst, in other words, a "gild"; and the old New England town meeting, the gathering of the clan, the union of the "gilds." The vision of New Clairvaux when brought to earth stimulated practical association and in direct process of events gave rise to several "gilds" in Montague, among which may be mentioned the Arts and Crafts Society, and the Dyke Mill Corporation, two distinct bodies, each with its own work and ways of doing. Nothing represents the spirit of New Clairvaux better than these two independent associations, whose union is not in New Clairvaux a vision, but in town meeting as citizens of Montague.

These have all been described at other times in THE INDEPENDENT, together with the general work of New Clairvaux. The purpose here must be held to justify the methods and confirm the message of New Clairvaux.

Fourteen years ago all New England, barring manufacturing and commercial interests, seemed in deep slumber. It was often said on the floors of Congress that New England had no future. Citizens of the plains sneered at our agricultural prospects. Country New England believed even less in herself. Magazine writers alternately wept or laughed at queer social conditions obtaining. One of the first signs of a slumbering self-respect remaining was the cyclone of wrath aroused in all rural New England by two *Atlantic* articles in 1897, by Rollin Lynde Hartt, bitterly satirizing the little Massachusetts hill town of Leverett as sweet Auburn, a type of the dead New England country town.

Hartt was taken very seriously by friend and foe, by those who said it wasn't true and those who thought that conditions were getting altogether too bad and were glad of Hartt. Of course Hartt said things which would not bear analysis. And it was not his job to disclose to the world the mute inglorious greatness still latent in the New England stock. It was his to assassinate the tyrannous self-complacency of a runout aristocracy steeped in the tradition of calling itself the salt of the earth, without reference to the facts. He called attention to the important fact that *New Englanders had given up the development of rural New England.*

Right in line with this conclusion I had received in the same year a testimonial from the national head of my church that I was one of only three men in the denomination interested in the country parish. To this was added the hope that in time our interest would become catching. During the same period I appealed to my summer neighbor, Charles Dudley Warner, asking what could be done for these towns on the down grade. His reply to me has been ever since a revolutionary slogan: "We must try to make them year by year better places to live in."

But in what does this amelioration consist? A good number of farmers were making a living, a much better living than any ameliorator could get with

the same opportunities. And yet the methods of farming were obviously antiquated. The portions of soil cultivated were yielding but a fraction of the possible return for labor, and marketing was being done with great uncertainty and at almost prohibitive cost. The general appearance of two-thirds of the farms was of struggle with penury and discouragement. Business system had not been applied to distributing farm produce, and agricultural science was as unknown as the Gospel to the remotest heathen. The most hopeful farmer I ever knew in one hill town cried out: "I would give all that I own to know the chemical composition of this handful of soil; but I am too old to learn to any purpose." A sensible rural education would help a lot. We want in our schools, as a foundation for ambition, the science and literature of those who, situated like ourselves, have conquered the soil and self.

There was not only no such rural education dreamed of fourteen years ago, but New Englanders despised work as much as the founders of New England had revered it. An education that involved a philosophy of work would have been despised, and is even now generally despised. Work and microbes are classed together. Foreigners, by lacking the Yankee prejudice against personal labor, generally get ahead and run the New Englander out. We have the unfortunate superstition that we ought to live by the work of our brains even when they are weak and inefficient. This is the tragedy of rural New England.

Our self-assurance carries us into many fields of exploitation, but not into farming. There is nobody around us to be bossed. There is nothing here but work. A centrifugal force thus sifts the community at once of its ambitious youth and loyalty. Year by year the place is a worse one to live in. There are elements of success in every intelligent effort. And that is what was hoped of New Clairvaux. We hoped to learn, by trying to live in a country life, to overcome some of its difficulties and put some check upon the tragedy.

One of the gilds I put more years of work into than any other was the plantations and crafts school intended to be a farm and trade school or gild for the benefit of my own Sunday school pupils who had arrived at the problematical age. The gild was to consist of neighbors fraternally agreeing to take boys and girls into their families and teaching them the spirit of labor and the call of the earth thru beautiful crafts and the fascination of plant life and to lead up to a definite rural economics abreast of the times. It was also understood that we would assist morally and materially suitable families to establish themselves upon the soil. Much of this program was carried out for some years, but the gild's direct purpose failed on account of the prejudice surrounding us that work was only a temporary and homely means of getting a little money. But the opposition and ridicule of some of our dearest projects raised a discussion in which a portion of the community assumed ideas of work and education similar to our own.

The New England country problem, then, which New Clairvaux undertook to solve was essentially an incorrect vision. Some said it was an economic problem. It certainly was. Others thought it was social; and it was. Hartt laid stress upon physical degeneration; there is doubtless some. Still others lay every trouble to moral lapse from God and churchgoing; this thought will repay prayerful attention. But I have indicated how a debased idea of work is the root of all these evils. New Clairvaux can count among its jewels a long list of persons redeemed from contempt of work.

Another accomplishment has been lodgment of progressive ideas of the farmhouse. The backwardness of New England country life in the past sometimes astounds me. Here is a type of many farmsteads in a town. It has been inhabited by busy farmers for two hundred years. But water is supplied still in the laborious style of 1714. Plumbing is almost as nonexistent for sanitary purposes as in the days of Noah and Lot. Several fires in seventy-five years on a mile range of farms taught not a single lesson of fireproofing. The partition walls and cellars of all farm buildings are well devised paradises of innumerable rats and mice, which spoil 30 to 50 per cent. of the winter stores of grain, fruit, potatoes and other vegetables. Stables are so hopelessly primitive in idea and construction, Boston would be

without milk tomorrow if new sanitary laws were forced upon the farmers. Revolution is called for from the ground up. The old country houses are unfit to sleep in. They are killingly contrived domestic workshops, more disorganized by time and new motives which fall short of ideas. There is no air in the house in winter. The strain of unevenly heated rooms and violent grappling with the weather after imperfect exercise also are among the enemies of young life, women and old age in the country. We had thoroly reorganized the farmhouse kitchen and living room in the house now burned. Others with more means had carried into effect the reformation of the rest of the farmhouse in carrying out our aim to beautify and utilize it.

There are no wholesome amusements and little social life. Still if money were not so scarce the country people thought they could solve these and most of their problems without the aid of philosophy. But while the farmers were deciding where they would get money New Clairvaux was started to experiment in its own way. Our little conferences and "open house" have been succeeded by a higher grade of entertainments and a permanent "country life committee."

Ours was one among many parish projects begun here and there all over New England, following the decade of criticism which culminated in Hartt's *Atlantic* articles and Governor Rollins's historic Fast Day proclamation in New Hampshire. The founder of New Clairvaux saw that the critics were no fools or defamers of our beloved New England, but friends, a little more faithful than our flatterers, rendering useful diagnosis. Hutchins, the Connecticut Bible missionary, in his "awful" report of conditions in that State, seemed to some of us like a new Micah warning Judah and Benjamin.

The changes are not confined to a few localities. Ten years of agitation have brought together isolated communities and workers. When New Clairvaux began we did not know that the arts and crafts idea had been realized anywhere in this country outside of Old Deerfield. It took us five years more to discover the names of a dozen movements involving art in minor industries for country communities. But now we realize that education everywhere is feeling the pressure of impending revolution in the direction we had taken, namely, of basing every effort at human elevation upon training the hand. In our prospectus of a hill town revival we had stumbled upon the methods of "the new education." We found that the foreign Christian missions had adopted this method of changing the heathen; that the Indian and negro were finding in it their hope; that the president of Harvard College had discovered that the surest development of the brain and training of its powers could not be separated from the training of the hands thru the use of tools. This surely was good enough for the hill towns. Their redemption lies in the development of their natural labor. The New Clairvaux Plantation and Crafts School was succeeded three years ago by a joint undertaking of the town and State, the Montague Agricultural School. This has just closed, owing to some practical misunderstandings, but the method, every one feels, has come to stay. Farm life is looking up.

Among the new organizations helping create the new civic consciousness in New England, and which New Clairvaux has vitally touched, is the rural conference arranged by co-operation of the Massachusetts Civic League of Boston at one end of the State and the State Agricultural College at the other, bringing together everything in the nature of village improvement societies, crafts gilds, garden clubs, and all associations inspired by the new education. Summer courses are also arranged at Amherst for giving scientific definiteness to the cause. The country parishes of New England have also formed an association for rural uplook, of which the Rev. Joseph W. Pardee, of the little town of Bolton, in the midland county of Worcester, is the secretary, and Prof. Thomas Carver, of the economic department of Harvard University, is the chairman. Both these gentlemen were converts from the idea that the country towns need nothing. At the winter meeting of this association in Boston, 1911, the Episcopal Bishop of New Hampshire outlined as the fruit of thirty years' rural experience in that State, a country social settlement of the

local clergy and school teachers and others for mutual counsel and support in a better public service, practically duplicating the vision of New Clairvaux.

We of New Clairvaux have aimed at the spirit and truth that underlie successful co-operation, that is, a democratic idea of work, and have given great value to the small association, or gild, of persons in perfect accord and with large personal interest in any work. A better life we have maintained will come when the people are led out in their own inspirations and have taken time for more beautiful play out of the wealth of things in this moving picture of life, particularly in their own town's history.

MONTAGUE, MASS.

Six-Shooter Ethics

BY CHESTER T. CROWELL

[The writer of the following article speaks as a champion of his section of the country where, he tells us, it is considered quite justifiable to murder those who have done a personal wrong. We are sure his defense will be very unwelcome to many, we trust to most, even in Texas. But it is of value as a psychological exhibit, and as such it is considered in our editorial pages.—EDITOR.]

A FEW months ago J. Beal Sneed shot and killed Al G. Boyce, Sr., in the lobby of a hotel in Fort Worth. Boyce was about seventy years of age. Sneed is in the prime of life. A few weeks ago this same Sneed shot and killed Al G. Boyce, Jr., on a public highway in Amarillo, Texas. Sneed was disguised, and the evidence tends to show he was lying in wait for his victim. The bullets from a shotgun which did not hit Boyce spattered against the stone wall of a church.

These two killings have brought more unpleasant and damaging comment about the habits and customs of Texans than any two similar events in the last half century. From Canada to the Mason and Dixon line and from New York to Seattle the case has received comment which has undoubtedly tended to check the flow of immigration to Texas and acted as an obstacle to the investment of foreign capital in this State.

Much as Texas needs the immigration and urgent as is the need for investment on a large scale in this State, Texas "stands pat" on this point, and holds to the opinion that if it is to be a question of failing to protect the family, even with the six-shooter or the shotgun, Texans will get along without railroads and without immigrants, even tho they have to ride a bull yearling to town.

I myself am of Texas and of the South. To me its traditions are sacred, and I feel competent to set them forth for the examination of a part of this country which does not agree with the South on these matters. I have never since I was six years of age been north of Dallas, Texas, and therefore the man who doesn't think situations arise which make it his duty to shoot and to kill is as much an enigma to me as I suppose I am to him. Having read carefully all of the evidence adduced at the habeas corpus trial in Amarillo, I am prepared to say that as a juror I would acquit J. Beal Sneed without leaving the box if possible, and that if I were in some other part of the country where opinions are different I would hang the jury if I had to fight my way out of the court house thru a mob. I have read all of the testimony in the first trial of Sneed on a charge of killing the elder Boyce, and I am prepared to make the same statement as to that case even after disregarding utterly the element of self-defense introduced in the testimony.

Now, let us examine the facts leading up to these two killings. Al G. Boyce, Jr., and Mrs. J. Beal Sneed appeared to be in love with each other. The testimony developed the fact that Mrs. Sneed was so astoundingly forward in this affair that J. Beal Sneed, being unable to understand such an attitude on the part of a woman who had two children, decided to have her confined in a sanitarium where she was given the best

of care. Boyce conspired to communicate with her there, and finally she escaped the vigilance of the guards and ran away with Boyce to Canada, whence they were later turned back to the United States. Mrs. Sneed returned to Texas, and for the sake of the children Sneed forgave her and accepted her again as his wife. But while Mrs. Sneed and Al Boyce, Jr., were in Canada, it developed that the elder Boyce, who was all the while pretending to be the friend of Sneed and trying to stop the wild escapade of his son, was really a traitor in the Sneed camp and acting as spy for his son. When this fact developed conclusively, Sneed broke off friendly relations with the elder Boyce and subsequently shot him while the younger Boyce was still in Canada. Eventually the younger Boyce returned to Texas and went to the home of his mother in Amarillo. Sneed, according to the evidence adduced at the habeas corpus hearings in Amarillo, had been carefully planning for the reception of Boyce. He had retired to a farm in the country, where he had acquired a beard and a brown color. He came to town on the day of Boyce's return to Amarillo, dressed in overalls. He previously had given instructions to a friend and employe to rent a house near the Boyce home and watch for the return of Boyce. Boyce came to Amarillo and went to the home of his mother. A short time thereafter he left the home and started toward the business section. Sneed saw him from the other side of the street and opened fire without warning, advancing from the sidewalk to the middle of the car track as he shot. It should be said here that Boyce was one of the best marksmen in Texas. One detail of the testimony at the examining trial concludes the statement for the defense. After his return to Texas, Boyce, before returning to Amarillo, was again in the company of Mrs. Sneed, and letters which were introduced in evidence tend to show that she expected at one time to give birth to a child that would be his.

The attitude of Texans on this point is that the only thing for Sneed to do was to kill Boyce, and tho he did it while Boyce was in his mother's arms or stole upon him while he slept makes no difference. Boyce had forfeited every right of an honorable man and was utterly without the pale.

Texans maintain that many situations can arise which make resort to arms the only rational course, and I can set down all of those situations briefly. The most typical, however, is just such a situation as the Boyce-Sneed case presents. The second most typical is a seduction case. It is a well known fact that the woman who is the victim would rather die than go on the witness stand—that is the Southern women would—I don't know the others. And if the man were convicted he could still avoid punishment by offering to marry the woman. And a woman with the slightest semblance of pride would not marry the man then. Of course it might be said that a woman with the slightest semblance of pride wouldn't get into such trouble in the first place; but the answer to this argument is that they do everywhere and all the time. There you have a situation where a gross wrong has been committed, a woman's life ruined, and no adequate recourse at law. The view of Texas and the South is that any relative or friend of the woman has a right to kill the man who wronged her on sight and without warning.

The other situation relates to business. It is not so generally the theory now as it used to be that financial affairs warrant taking human life, but there are still quite a number of men who think so. Their view may be stated as follows: Wherever a man stakes all, or such a considerable portion of his worldly goods on the honesty or fairness of another man that bankruptcy results from treachery and there is no adequate recourse at law, the only reasonable thing to do is to kill the crook in the interest of public morals and as a warning to those feeble honest persons who wear cotton strings where their backbones ought to be.

Men who did not hesitate to use their six-shooters in the interest of honesty won Texas from barbarism, and if the spirit of our forefathers still abides with us we are going to save it from degeneracy.

In the old days when there were no fences cattle roamed at large in Texas,

and each man had his brand. When the spring round-up came along the calves were branded according to the brands of the mother cows they followed. This system was as accurate as if the calves had been able to testify as to their ownership. Now and then men went out ahead of the round-up and branded all the "mavericks" they could get hold of. These men were thieves. There was no excuse for their thievery, because poverty as we understand it hardly existed in those days. Therefore such a man was inherently bad, and it was a service to humanity to get rid of him. Those honest men with their six-shooters are heroes to me, because my people came to Texas early enough for me to see the last stragglers of the sort they were driving out.

When I was a little boy the fact that a man had killed another in a fight for honesty in our part of the State was likely to make his credit better at the bank and his social standing better in every way. It won him an inalienable right to be identified with the forces which were building up the State, and it showed that he was man enough not to permit anyone to trample upon his rights.

Reverting to the Boyce-Sneed case, I wish to submit some other views beside those typical of Texas. In the first place men and women do not have to marry. In the second place after marriage they owe their first duty as good citizens to their children, if they have any. I submit the guess that if all the men and women who are living together as man and wife in this country who do not love one another were to separate anarchy would result. I submit that there are other things in life beside the love of a husband and wife, and highest of all of these is the unselfish rearing of children. A right minded man ought not to permit himself to fall in love with another man's wife, and having done so, owes it to society not to try to break up a home. There is no better law than the unwritten law—the proof is that it doesn't have to be written. It springs spontaneously in the hearts and minds of honest, honorable men.

The habit of carrying guns is not prevalent in Texas, common report to the contrary notwithstanding. But men usually know where to get one if it is needed. No man need fear an unprovoked quarrel in Texas. The result of all this shooting—and I believe Texas has more of it than any other State in the Union—is to minimize the rotten plots of indecent or money-minded citizens. I believe there is greater security and respect for the home here and less need to get seventeen lawyers to examine a contract between honest men than anywhere else under the sun.

Texans cannot help feeling that if you object to our shooting under those conditions you must be one of the sort we'd "get."

AUSTIN, TEXAS.

An Autograph with a Sentiment

BY WILLIAM LLOYD GARRISON

[The following lines, so apt today, are preserved in one of the glass cases in the Grand Army of the Republic Hall, Public Library Building, Chicago, and as far as known have never been printed.—EDITOR.]

THOUGH woman never can be man,
By change of sex, and a' that,
To social rights, 'gainst class and clan,
Her claim is just, for a' that.
For a' that, and a' that,
Her Eden slip, and a' that,
In all that makes a living soul
She matches man, for a' that.

BOSTON, January 3, 1875.

Literature

The Depths of the Ocean

SINCE the great book by Wyville Thomson, which described the general results of the "Challenger" expedition, forty years ago, there has been no comprehensive work, such as the present volume,* on the characteristics and life of the ocean. During the interval scientific and cable-laying surveys have been numerous; apparatus for exploration of both the bottom and the surface of the sea was perfected, and the study of its chemistry and biology have been decidedly advanced. This activity has produced a great number of special papers, but few of them have reached or would interest the general public. Hence the present authoritative résumé will be very welcome to students of oceanography and to navigators.

Its occasion is to report upon an expedition by a company of Norwegian and English men of science who spent some months in 1910 on the "Michael Sars," a surveying steamer of the Norwegian Government, in studying the North Atlantic. Practically, however, the book has been extended to cover our whole present knowledge of the sea and all that in it is. The authors are Sir John Murray, of the "Challenger" staff, and Dr. Johan Hjort, the latter Director of Norwegian Fisheries; and special chapters are contributed by Professors A. Appellof and H. H. Gran, and by Dr. Helland-Hansen, the former treating of oceanic life, and the last named of the physical properties. The whole is illustrated by several colored plates and charts besides no less than 575 exquisitely drawn figures in the text, which is handsomely printed.

Considering this elaboration and the eminence of the specialists whose original work it presents and discusses, one is justified in a high estimate of the importance of the work; and it is still further gratifying to find it in large part interesting reading. Technical details are thrown as much as possible into the background, and general conclusions are advanced in plain language, enlivened by pleasant incidents of places and people seen or methods of investigation.

The first section describes modern machinery for deep-sea sounding; for obtaining samples of water and registries of its density, temperature, and so forth, at various depths; for collecting animals and plants from the abysses or from the surface—a matter of great moment in relation to food fisheries; and for investigating currents, tides, etc. Next, Murray discourses extensively upon the depths and deposits of the ocean, telling us some rather startling things, as that there may be a difference of level of several hundred feet between different points on the sea surface, and that seven accurate soundings have been taken in "deeps" exceeding 5,000 fathoms, the deepest being near Guam—5,269 fathoms. This is equal to 31,614 feet, or almost six miles, exceeding the hight of Mt. Everest by 2,612 feet. Between the two is a range of 11½ miles; but this range is very small when we remember that the diameter of the earth is nearly 8,000 miles; in fact, on a six-foot globe a mere scratch one-tenth of an inch deep would represent the extreme variation in the irregularities of the earth's surface. These profound soundings indicate limited hollows in the bottom, but four-fifths of the entire ocean floor is buried under water exceeding 1,000 fathoms, and most of that lies beneath 2,000 fathoms. Sink all the land to a uniform plane and the globe would be clothed in a "film" of water perhaps two miles thick.

The oceanic floors, however, are very irregular, elevations, valleys and broad plains alternating as on the face of the continents. For example, a broad ridge reaches from Iceland right down the middle of the Atlantic to Antarctica, with deep areas on each side of it, from which rise the Azores, St. Helena and other southern islands; and there are

*THE DEPTHS OF THE OCEAN. *By Sir John Murray and Dr. Johan Hjort.* New York: The Macmillan Company. Cloth, 8vo, 852 pages, illustrated. $7.50.

peaks upon it which a very trifling geological uplift would erect into island mountains. Very interesting is the account of the clays and oozes which cover the sea floor and the chemical changes to which river sediment, volcanic dust, the hard parts of animals and other lost things are subjected as they sink slowly into the black depths. Some substances, as limy shells, never get below a certain stratum, but disappear altogether. On the other hand, in some places, the dredge brings up boulders still bearing ice scratches given them in the glacial age; and these serve as time indexes to a certain degree, indicating how fast, or, rather, how slowly, the ooze accumulates.

One might cull many another suggestive and entertaining fact from the richly illustrated chapters on the biology of what has been so often miscalled a "waste of waters"; but the indication of this wealth of interest for the marine biologist must suffice. Detailed indexes, it should be noted, make reference to any part of the contents very easy.

In Old-Time Pennsylvania

"Let no one see this but your family," writes Margaret Dwight at the close of her *Journal* of a journey from Connecticut to "New Connecticut" in 1810.[1] She was sending the *Journal* to her cousin, Elizabeth Woolsey, and it has, ever since, been a family or a college treasure, for its author was a niece of President Timothy Dwight, a descendant of Jonathan Edwards, and a New England bluestocking generally. Miss Dwight was twenty years old when she made the long journey from New Haven to Warren, Ohio, traveling with a certain Deacon Wolcott (a well-meaning but exasperatingly economical person), his wife, son, and daughter. Other travelers, in adding themselves to the little party from time to time, subject themselves to the severe slating of the young woman, who added a page or two to her diary every evening. It was an exceedingly sharp-tongued young woman, to be sure; and her provinciality expresses itself in a natural but exaggerated regard for "old Connecticut," and scorn of any departure from Yankee ways. Differences in accent, dress, etc., seem to this young traveler not diverting phenomena, but abuses to be complained of. She is as critical of the country she travels—New Jersey, Pennsylvania—as any captious Englishman of her period writing of any American State. Probably she corrected some of her faults as time went on, and by the time she had married a Mr. Bell in Ohio, and had borne him thirteen children, she had got bravely over her intolerance and snobbishness. In spite of the faults of this young woman, we sympathize with her in reading these pages. There were some few hardships connected with the driving trip of six hundred miles; the inns at which stops were made lacked comfort, and sometimes afforded neither privacy nor decent protection against the rude advances of Pennsylvania wagoners, by day and by night. Yet the inns of Pennsylvania cannot all have been so bad as she would have us believe, for Dr. Schoepf's "Travels in the Confederation, 1783-1784," tells of a tavern at Bethlehem "seldom without guests" that was good enough to delight General Phillipps, who went out of his way forty miles to make a second visit. True, at the inn in Bladensburg there were negroes and negresses in such deshabille as to horrify "our European ladies" and throw them into the *vapeurs* because of "the disagreeable atmosphere"—and it all depends upon the point of view, when all is said. Schoepf remarks that the German taverns in Pennsylvania were "pretty generally allowed" to be the best; but the "good beer, and at this season wurst, hog meat and sauer-kraut" that he praises were probably not to Miss Dwight's liking. She is at least a pungent writer:

"The whole world nor anything in it, would tempt me to stay in this State three months—I dislike everything belonging to it."

"Prophanity is the characteristic of a Pennsylvanian."

"When I am with such people, my proud spirit rises and I feel superior to them all—I believe no regard to the Sabbath is paid anywhere in this State."

"Nothing vexes me more than to see them

New Haven: Yale University Press. $1.

sit and look at us and talk in dutch [*i. e.*, Pennsylvania German] and laugh."

Her *Journal* is an interesting document, especially in its pictures of the inns of the period and their ruder patrons, but we fail to see any point to the editor's description of it as "a perfect gem," or to his allusions to "its perfect beauty." The editor's school-girl patter has an odd sound, emanating from a great University. Of course it is easy to pardon the young traveler for the sweeping charges she makes against all inhabitants of Pennsylvania, for she saw little that was agreeable and was too inexperienced to realize that she missed discovering the charm of life in a State which offered many social, moral, and intellectual attractions to those who did not hurry out into its wild west. She knows no more of Philadelphia, for example, than did the Chevalier de Beaujoir, who, in his "Aperçu des Etats-Unis" (1814), wrote:

"Philadelphia is not, as has been said, the most beautiful city in the world; all the streets and all the houses resemble one another, and nothing is sadder than this uniformity, unless it be the sadness of the inhabitants, of whom the greater part are members of the sect of Quakers, or of that of the Puritans."

What that charm was in earlier times is suggested in the handsome volume which a Philadelphia publisher issues: *The Colonial Homes of Philadelphia*.[2] The illustrations will please anyone interested in Colonial architecture; the bookmaking is praiseworthy; the text is readable from cover to cover. Here social and family history is presented to the world with generous sympathy, not to say outright reverence. Homely details of the life of the eighteenth century are abundant, and the surviving "Colonial homes" are humanized most delightfully, till we feel that we really know their old-time masters, the heroes and heroines of Dr. Mitchell's novels of old Philadelphia. If any one is of Beaujour's opinion that the Quaker City has always been an abode of dulness, here is an opportunity presented for him to disabuse himself of a misconception. Not only were the old Philadelphians good trenchermen, and fond of their Madeira; they had their wits, their worldly-wise and hospitable Bishops, their charming hostesses. "The Episcopalians showed most grandeur of dress and costume; next the Presbyterians, the gentlemen of whom freely indulged in powdered and frizzled hair." Nowhere in the colonies (unless perhaps at Charleston, where there seems to have been more dissipation than at Philadelphia) were the comforts of life more fully enjoyed. Here is a characteristic entry from a Friend's diary:

"This morning most of the family were busy preparing for a great dinner, two green turtles having been sent to Johnny ———. We concluded to dress them both together here and invited the whole family in. We had three tureens of soup, the two shells baked, besides several dishes of stew, with boned turkey, roast ducks, veal and beef. After these were removed the table was filled with two kinds of jellies and various kinds of pudding, pies, and preserves; and then almonds, raisins, nuts, apples, and oranges. Twenty-four sat down at table."

Small wonder that the next entry states: "My husband past a restless night with gout."

But the life of the Philadelphia of long ago was not exclusively gastronomic in its pleasures, or Miss Dwight's observations would carry more weight. Dr. Haniston, in his account of the proceedings of the Governour's Club, which met at a tavern, tells us that the conversation on one of the evenings he attended (it was in 1744) ran upon Cervantes and the English poets. As for the belles of Philadelphia, they need no praise from us, for Colonial history is full of them, and they have furnished forth more than one romancer. One of them, albeit a "standpatter" (which meant, in those days, loyalist), manifested more than a little of the modern suffraget spirit; a second, as a girl of twelve, went to the British camp and demanded of Lord Cornwallis the return of her commandeered pet cow. Besides these heroines, Rebecca Franks and Ann Rudolph of Darby, there is Peggy Chew, whose triumphs illuminate the pages of Edith Tunis Sale's *Old Time Belles and Cavaliers*[3]—a book of more than local interest, richly illustrated.

Pessimistic Plays*

It is a risky business, this "looking at life thru the medium of literature." The unblushing optimist holds up to nature a mirror frankly concave, the pessimist pulls down the lines of the face of life with a surface manifestly convex, but when an unclassified realist announces that he will show us life as it really is, then is the time to watch out.

There is, it may be assumed, no married male citizen who has not felt for at least one mad morning that his wife does not appreciate him. But if he be a business man, he remains more or less inarticulate. His frame of mind is more apt to be the result of an argument than the start of one. He takes his feelings to the office, where they indirectly affect only the staff, who will discount what he says and do according as they are also male and married. But let the same event take place in the home of a man who is writing a book. The novelist takes his feelings not to an unsympathetic group of fellow-men, but into his study, where he finds solitude, a new chapter and a light-running fountain pen. He has an unusual chance to immortalize his grouch.

Until a short time ago the drama has been almost free from this sort of influence, or at least there was a limited area in which it could work. Sometimes the dramatist could slip on to the stage, like Count Trast in "Die Ehre," who is so clearly speaking for Sudermann himself that established stage tradition has him make up like Sudermann, whiskers and all, but in general the maker of plays has been kept from sunning his grievances before American footlights by the simple fact that the American buyer of theater tickets, having troubles of his own, will not pay money to listen to another man's. And in America we have not often published plays. But now we do, and what is more to the present purpose, we import them and read them ever increasingly. Some publishers have said that it is this year only necessary to print a book in play form to sell it. And so it comes about that, the natural barriers of stage presentation being down, we may learn from the published plays of August Strindberg, not that he had persecution mania, delusions of grandeur and three unhappy wives, but that life is vile and women vicious; so we may gather from the plays of Anton Tchekoff, not that he lived in the gray years after Russia's revolutionary seventies and died lingeringly of tuberculosis, but that effort is

futile and life not worth making it. Some one spanks Strindberg at an early age on an unfounded suspicion of stealing plums—and gives him a lifelong theme of unjust punishments; he evolves a philosophy that life goes round and round in a circle chasing the tail of its own woe.

At the Strindberg Exposition—which a chuckling Fate caused to be held while a woman's suffrage convention was going on in Stockholm—there was a series of his portraits that shows, to the student of such matters, his progressive mental trouble. At thirteen, too tender; in middle life, stormy and silent; as an old man, ravaged, disordered, a tormented look, at once aggressive and fearful—but always the same eyes, glassy and suspicious, looking out at woman—indeed, at the world—as if saying his own words: "We hate each other because we love each other; we hate because we are tied to each other; we hate the tie; we hate love."

It is not enough to say that as his people are usually crazy they are thereby irresponsible, and nobody need pay any attention to anything they say. People are paying attention to them, and their craziness is not always indubitable. There is, for example, a question whether the human fiend around which the "Dance of Death" revolves was so crazy that it made him vile or so vile that it drove him crazy; and there is even a possibility that he is not meant to be either, but in some wild way a sweet but distorted soul. The last sentences sound like that. "Miss Julia" makes every man with a mother or daughter revolt against using so much of the truth to tell so vast a lie. In general, one may write a history of the higher thought of Sweden during the lifetime of Strindberg by making a record of the things he opposed, but to his dearest disgust, woman, he remained ever true.

Here is another message, uttered by Ivanoff, in Tchekoff's play:

"Wherever I go, whether hunting or visiting, it makes no difference, I carry depression, dulness and discontent along with me. . . . I have never lied, and I never used to find fault with my lot, but since I have begun to complain of everything, I find fault with it involuntarily, and against my will. When I murmur at my fate every one who hears me is seized with the same disgust of life and begins to grumble too. . . . If an intelligent, educated and healthy man begins to complain of his lot and go down-hill, there is nothing for him to do but to go on down until he reaches the bottom—there is no hope for him."

Whereupon he shoots himself, unfortunately on the very last word of four acts full of words. Astroff in "Uncle Vanya," in the same volume, is talking conservation, has hopes, beliefs—until a single glance, half a smile, crumples him up:

"The woods of Russia are trembling under the blows of the axe. Millions of trees have perished. The homes of the wild animals and birds have been desolated; the rivers are shrinking, and many beautiful landscapes are gone forever. And why? Because men are too lazy and stupid to stoop down and pick up their fuel from the ground. Am I not right, madam? Who but a stupid barbarian could burn so much beauty in his stove and destroy that which he cannot make? Man is endowed with reason and the power to create, so that he may increase that which has been given him, but until now he has not created, but demolished. . . . (To Voitski) I read irony in your eye; you do not take what I am saying seriously, and—and—after all, it may very well be nonsense. But when I pass peasant-forests that I have preserved from the axe, or hear the rustling of the young plantations set out with my own hands, I feel as if I had had some small share in improving the climate, and that if mankind is happy a thousand years from now I will have been a little bit responsible for their happiness. When I plant a little birch tree and then see it budding into young green and swaying in the wind, my heart swells with pride and I—(Sees Workman, who is bringing him a glass of vodka on a tray) however—(He drinks) I must be off. Probably it is all nonsense, anyway."

The Russian, however, unlike the Swede, has not lost his faith in women; it is one of them who says, in the same scene:

"See how you thoughtlessly destroy the forests, so that there will soon be none left. So you also destroy mankind, and soon fidelity and purity and self-sacrifice will have vanished with the woods. . . . . You are all possessed with a devil of destruction; you have no mercy on the woods or the birds or on women or on one another."

Along they go, not even merrily, on the road to nothing; in the case of the Russian, with a sad, soft beauty; in the case of the Swede, with neither beauty nor grandeur, and as they go, they attract to themselves along the road a new cult—the cult of the ignoble.

Cæsar Borgia. A Study in the Renaissance. By John Leslie Garner. New York: McBride, Nast & Co. $3.25.

This essay tells the tale of the most famous son of that Rodrigo Borgia who afterward became Pope Alexander VI. The author's story runs on smoothly and is of interest. Cæsar, backed by all the spiritual and temporal power of the Roman Church, both of which had to be reckoned with in those days, passed from an ecclesiastical career in the College of Cardinals to a secular career, in which he overran and conquered most of the towns and fortresses which had cast off their allegiance to their sovereign, the Pope. He introduced good government where bad had prevailed. In accomplishing these results he did not scruple at anything that would lead him to his end. He played the game of the Italian potentate of his day so well that Machiavelli made him the hero of his "Prince." The author acquits Cæsar of instigating the murder of his brother Giovanni Borgia, but inclines to convict him of bringing about the slaying of his brother-in-law, Alfonso of Naples. A modern jury would probably acquit on the evidence adduced. It is somewhat hard to conceive how Lucretia Borgia was, as stated on page 192, "A colorless, characterless personality, wholly lacking in will," and yet "an excellent wife and mother," and that, too, as stated on page 312, of five children. Alexander VI, instead of being the "monster" that he is called on page 235, was rather a most human and doting father, who sacrificed everything to his affection for his children and their mother, Vanossa de Catanei, who lived to be seventy-seven years old and spent her declining years in works of charity. The usual ending of ecclesiastical oaths, *Sic me Deus adjuvet et hæc sancta evangelia,* "So help me God and His Holy Gospels," becomes, on page 153, "So help me God and his Holy Angels." The ever recurring conclusion of Church prayers, *In secula seculorum, Amen,* "forever and ever, Amen," is rendered on page 554, "in the centuries of centuries," while the motto engraved on Valentino's sword, *Aut Cæsar aut nullus,* is given on page 309 as *Aut Cæsar aut nihil.* The publishers have made the book mechanically all that can be desired, and the illustrations add interest to the work. Much the same ground has been covered by William Waldorf Astor's novel, "Valentino."

The Story of Santiago de Compostela. By C. Gasquoine Hartley (Mrs. Walter M. Gallichan). Illustrated by Frank H. Mason, R. B. A. Pp. 332. New York: E. P. Dutton & Co. $1.75.

This is not a sparkling work, nor is the serial of which it constitutes a volume a sparkling series; but the series is workmanlike and this volume is a good example of its style. The writer knows Spain from the Pyrenees to Gibraltar (as she has proved in earlier books), and she has much more to tell us of Santiago

A STREET IN COMPOSTELA
From a drawing by Frank H. Mason illustrating "The Story of Santiago" (Dutton)

than most of us who have traveled there ever supposed there was to set down. Spanish history means Moorish history, and Moorish history means romance. It also means architecture—and architecture connotes sculpture. There are also some hints for him who plans to visit Galicia for the first time. A monograph of solidity and worth.

In Old South Hadley. By Sophie E. Eastman. Springfield, Mass.: H. R. Huntting Co. $2.50.

The hundreds of distinguished guests and alumnæ who gathered to honor Mt. Holyoke College early in October, on the occasion of her seventy-fifth anniversary, enjoyed the ample comfort of modern buildings and delighted in the sheltering canopy of golden branches that bent over glowing pageant and dignified academic procession. Yet they were reminded in countless ways of the grim early times when the college was founded and the great sacrifices were made. Miss Eastman's *In Old South Hadley,* rich in valuable historical material and delightful in anecdotage, describes not only the birth of Mt. Holyoke Seminary and its development during the first years, but tells the story of the founding of the little town of South Hadley, in which the college is situated. In 1720 a group of six young men went out, with their families, from Old Hadley, which had been settled between fifty and sixty years earlier, and, urged on by wanderlust, decided to settle the country south of Mt. Holyoke. They carried with them a fine spirit of co-operation and a sturdy courage against the dangers of the wilderness and the inevitable trouble with unfriendly Indians, for whom the Connecticut River and the old trail thru "The Notch" in the mountains gave easy access to the new settlement. Many stories relating to these six men and their early associates and descendants—their friendly rivalries over the chopping of wood and the spinning of flax, their stern customs, especially on Sunday, their mutual helpfulness—make an intimate and yet a typical contribution to our knowledge of the daily life of a New England town in the early days. The story is carried thru Revolutionary and Civil War times down to the present. The evolution of many a mechanical contrivance is followed, as, for instance, that of the old oaken bucket into the town pump, the first example of which was exhibited in so dramatic a fashion as to suggest witchcraft; there is a description of the early dame school; and some of the most interesting pages tell of the experiences of the ministers of the town and of the early churches, which passed thru the time of the Half-way Covenant into the Great Awakening, and, in 1843, thru the extravagancies of the Millerite excitement. The author of this record is one of the oldest inhabitants of South Hadley and has been a student of local history for many years. She has always been closely identified with the interests of the town, among them the free library, of which she was the first projector, and where she was librarian for many years. She has long been known as a charming story teller. Perhaps that is one reason why she has written a book so delightful for reading aloud.

Literary Notes

....For Christmas, Edward A. Bryant's *Yule-Tide Cheer* is an alluring title and an alluring book; richly stored with almost 200 poems appropriate to the holiday, from the earliest to the latest. (Crowell; $1.)

....Paul Elder & Co.'s *Impressions Calendar* has the subtitle, *A Book Lover's Year for 1913.* There is a quotation and a picture for every week, and the range of authors is wide. The calendar will prove in many ways a pleasing and not expensive Christmas gift.

....The *Just-So Stories* make their appearance in handsome garb conferred upon them by Joseph N. Gleeson, illustrator, and Doubleday, Page & Co. ($2.50). We shall give soon our readers an opportunity to judge the color plates for themselves, as a page insert in our Holiday Book Number will consist of one of the page illustrations. More children than ever will now sit at the feet of Kipling.

....A novel, notable for its wealth of vivid historical detail, through which runs the passionate romance of the uncrowned queen of Saguntum, is V. Blasco Ibanez's *Sonnica.* The central figure is a courtesan, who with her Athenian lover perishes in the unsuccessful defense of the African city against Hannibal. It invites comparison with "Salammbô," and does not suffer thereby, tho we note an occasional awkwardness in the translation of Miss Frances Douglas from the Spanish. (Duffield; $1.25.)

....*Bad Spells,* a dialog between an Old Fashioned Conservative and a Simplified Speller, is sent free by the publisher, J. N. Hallock, 90 Bible House, New York City

....*Along Spain's Rivers of Romance* is more than a conventional travel book. The English author, Paul Gwynne, indulges in digressions ethnic, social and scientific. There are illustrations—many of them in color. The book bears the imprint of a new house—McBride, Nast & Co., New York. (Pp. xiv, 356; $3.)

....In this issue of THE INDEPENDENT appears a review of "Pessimistic Plays." Readers of that review, who would like to learn more of the paradoxical August Strindberg, are counseled to secure a copy of the *English Review* for November, for that issue of the youngest and most alive of all English reviews contains the best account of the Swedish author which has yet appeared in our language—an article contributed by the editor, Mr. Austin Harrison.

....A novel of much quiet charm by a writer whose name is new to us is Ruth Underwood's *A Living Legacy.* Taking an old theme, that of the love of a sober-sided man for his ward, the daughter of a dear friend, she has written a love story full of tender sentiment, yet without sentimentality, and touched with a sweet religious spirit which never descends to goody-goody preaching. In its clean, healthy presentment of life lies the appeal. (Philadelphia: John C. Winston Company; $1.35.)

....*Miss Billy's Decision* (L. C. Page, $1.25) is a romance in which the course of true love, tho diverted by misunderstandings, does not cause the reader a moment's apprehension; a romance slightly humorous, devoid of sensation or unconventionality, and bound to please the adolescent or mildly amuse the elder. It contains several well drawn characters, notably Miss Billy, a former creation of the author (Miss Eleanor H. Porter), and is enveloped in the musical, artistic and pride of old family atmosphere of Boston.

....Flora Annie Steel has chosen India as her particular province in fiction. In *King-Errant* (F. A. Stokes Co.; $1.30) she has gone to history for her hero, Babar, a small tributary king who in the sixteenth century set himself up as ruler of the great Mogul Empire at Delhi. Tracing his career from a boy king at twelve, she makes him live for us, with his varied fortunes, his formation of character, his love of affairs and his poetic art. It is necessarily a book rather of episodes than of plot, and as a novel is of slight worth. As a picture of stirring times of intrigue and savage warfare, and of Indian character and manners it is vivid and interesting. The author's drawings are almost equal to the average book illustration.

....In his autobiographical *The Man Who Bucked Up,* Arthur Howard has written a book essentially American in character. In no other country in the world could a fool of Fortune so remake himself. A bankrupt at thirty-eight, after a career of dissipation, within eighteen months he had established a newspaper in and become mayor of Salem. A story of convincing frankness, sparing neither himself nor his political opponents, in which good and bad are set down side by side, it contains a moral which should not pass unnoticed. (Doubleday, Page & Co.; $1.)

Pebbles

SOMETHING TO REMEMBER.

When you read about the trouble in the mine and in the mill,
When you read about the lockout and the strike;
When dishonor and dishonesty your morning papers fill
In a way no decent citizen can like;
Then there comes a strong temptation to have doubts about the nation,
And to fear some dark disaster in the fogs;
But take heart, my honest fellow, don't you show a streak of yellow,
For this country is not going to the dogs!

When you read of rotten politics in city and in State,
When you read of juggling justice on the bench;
When the price of food makes leaner every day the poor man's plate,
When the social muck is making quite a stench;
Then a man may fairly wonder if there hasn't, crime or blunder,
Been a monkey-wrench dropped in among the cogs;
But a state of abject terror is a most colossal error,
For this country is not going to the dogs!

For this good old ship, America, has weathered many a gale,
She has sailed thru many a thicker fog before,
And her crew have learned the habit of not knowing how to fail,
Howsoe'er the stormy seas around may roar;
She is staunch and stout and roomy, and tho seas and skies be gloomy,
Let us leave all coward croaking to the frogs,
Let us face in manly fashion all the panic and the passion,
For this country is not going to the dogs!

—*By Dennis A. McCarthy, in the Journal of Education.*

The Independent

Entered at New York Post Office as Second Class Matter. Owned and published by The Independent Weekly, Incorporated, at 130 Fulton Street, New York, N. Y. Hamilton Holt, President; Frederic E. Dickinson, Secretary and Treasurer.

A WEEKLY MAGAZINE FOUNDED IN 1848

One Year, $3.00 Single Copies, 10 Cents

Single copies over six months old, 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as those offered by any responsible agency.

An order for the change of an address should be received two weeks before the change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of the publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Binders holding in book form thirteen current issues will be furnished for 45 cents. If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We welcome unsolicited contributions, but writers who wish their articles returned, if not accepted, should send a stamped and addressed envelope. Even so, we cannot hold ourselves responsible for their return. Authors should preserve copies of their manuscripts.

Advertising rates will be furnished on application.

Railroads and the Public

THE proposition seriously put forward in Massachusetts to meet intolerable conditions created by a great railroad monopoly by having the State take over railroad properties and operate them as a public enterprise, suggests interesting reflections and recalls some instructive history.

Massachusetts has been the pioneer commonwealth in developing the functions of government for the general good. That State was the first to create a Bureau of Statistics of Labor; the first to establish a State Board of Conciliation and Arbitration; the first to prohibit the payment of wages in "truck" thru swindling company stores; the first to compel corporations to pay wages weekly. It put thru the Hoosac Tunnel as a State enterprise and owned a stretch of railroad, a part of the present Fitchburg system; it was the first to undertake to regulate and control railroad service thru a State commission, and it was the first commonwealth to adopt the Australian ballot. It would be in the natural order of things, therefore, if Massachusetts should be the first American State to catch up with European civilization in the matter of railroad ownership. If she takes the contemplated step, other States, as a matter of course, will follow her example in this experiment, as they have followed it in the others named.

On all accounts it is to be desired that the experiment be tried with determination and energy. We agree with Mr. Brandeis, than whom no man is more competent to have an opinion, that as conditions stand in the railroad world today, it is the only thing to do.

Private enterprise has built our railroads, it is said, and is the only competent agency to run them. These statements, as all railroad men know, and as anybody else who is not intellectually and morally lazy can easily find out, are a mixture of truth, lies and nonsense. Private enterprise has built railroads, how? With its own capital in part; in part with untold millions of public aid from the nation, from States, from counties, townships and towns, thousands of which have never recovered and many of which never will recover from their folly in loading themselves with bonded indebtedness for the benefit of a corporation that has snapped its fingers at them and robbed them. Private enterprise has built railroads how and where? Sometimes where they should have been built and about as often where they should not have been; sometimes with regard to economy and financial common sense, as often with wanton wastefulness, graft, bribery and every known kind of crookedness. And private enterprise has run American railroads how? With discriminations that have created trusts and magnates while impoverishing entire classes and sections of the population; with a slaughter of employees that has exceeded the casualties of war, with massacres and holocausts of passengers appalling and disgraceful. If the account were balanced how much would the American public owe to private railroad enterprise?

Led by Massachusetts the American States and nation have attempted to subject a too riotous private enterprise to public discipline for the public good. The arm of the law has in a measure checked discrimination. It has diminished the slaughter of brakemen by link and pin couplings. It has abolished the car stove. But it has not curbed extortion.

It has not made railroad travel safe or comfortable, and the railroads, with characteristic shortsightedness and folly, are saying that they cannot afford to improve their properties and make travel safe, because the public cripples them thru rate and wage regulation. To this defense there is just one answer. Massachusetts gives us hope that the public is prepared to make it.

Texan Ethics

We print this week an unusual article by a Texan, Chester T. Crowell, which is a plea for murdering one's enemies. He does not say for murdering all one's enemies, but those whom one hates enough for good cause, one who has betrayed a woman of his family, or who has brought on him financial ruin. Such a miscreant, he says, does not deserve to live, and it is the right and duty of any one who suffers by the wrong to execute vengeance and rid the world of him without waiting for the tedious formalities of the law. Under the law he might escape, but under the higher law of private vengeance he cannot escape the death due him; for the avenger can properly make death sure by disguising himself so as not to be known, and then shooting him in the back from an ambush. Such is Texan ethics.

We have not the patience nor the need to argue against this school of ethics, for it is the ethics of private vengeance against law, of anarchy against civilization. Civilization depends on the reign of law and the suppression of private vengeance. There was a time when Texas was uncivilized—it is none too civilized now—none of our States are. It was the absence of law, the general prevalence of private vengeance, that led to the remark—was it not by the distinguished soldier who said that "War is hell"? that if he were given hell and Texas he would sell out Texas and go and live in the other place.

This is not Texan ethics alone. It has its disciples all over the country. Our Texan friend mentions two classes of miscreants whom if they had done him wrong he would kill. We do not know how many others that do him or his friends an injury he would dispose of. If it is a duty to kill, so as to avenge a wrong to a family reduced to shame or penury, much more is it held to be right to murder those who have wronged or impoverished a whole class of people, or have betrayed the State or nation. So men of the ethics of our Texan friend have killed. Presidents of the United States, and Booth gloried in the retribution he had accomplished. Thus he shot his unsuspecting victim. There is a trial going on just now in Indianapolis of men who are not Texans, but who believed in Texan justice, and who killed people who had done wrong, they believed, to the class they were bound to protect. In this city five men have just been sentenced to death who had merely killed a man because they believed he was saying things greatly to the injury of one of them. If we have in this country more murders, more lynchings, than in any other land that calls itself civilized it is because of the prevalence of the Texan school of ethics.

Far be it from us to deny that the sort of men whom our Texan friend would murder are unfit to live. To defend law is not to defend miscreants. To condemn private vengeance is not to condone seduction or robbery. It is simply an assertion of a preference for civilization. It is not safe to trust to this uncertain private vengeance. Sometimes it hits right, and sometimes it hits amiss; but the avenger never has a question. It killed an editor in Columbia, S. C., for words printed in his paper. It burnt the right man, perhaps, in Coatesville, and the wrong man, probably, elsewhere. Society thinks it safer that the law of barbarism should go, and that society should take the responsibility for vengeance and punishment. It is hard sometimes to yield this duty to the public, and now and then an injured victim may in the heat of passion take the law into his own hands, and in special cases society does not grieve much if it is not done in cold blood; but we know it is better, on the whole, that we relieve ourselves of the right of vengeance and trust to cooler judgment under law. Barbarism has the supreme arrogance to prefer individual judgment and action to that of the people at large, and barbarism does not care for the result. Our Texan friend, who boasts himself a murderer

in posse, tells us he does not care if the cherished Texan ethics is condemned in colder climates where blood courses more frigid brains, nor does he care if timid money shrinks from Texan investments, for the high spirit of quick vengeance is dearer than pelf. So be it, but our cool judgment is that his is a losing cause; and, like the projector of a border town, who gave it a church and then fled further west when it became too decent for him to live in, our ethical barbarian is likely to need before long to flee over the line to Mexico or Honduras for congenial company.

The Popular Vote

A STATEMENT setting forth the popular vote at the recent national election has been compiled and published by the Associated Press. It is nearly complete. All of the early estimates, it now appears, were excessive, altho the relation of one candidate's vote to that of any other, or to the total, has not been changed in the corrected figures. This statement shows:

That Mr. Wilson's vote (6,156,748) was less by 250,000 than Mr. Bryan's (6,409,106) in 1908. It was also less than Mr. Bryan's in 1896 or 1900.

That in thirty States, whose electoral votes go to Mr. Wilson, the sum of Mr. Taft's vote and Mr. Roosevelt's vote exceeds the Wilson vote. These States have 336 votes in the electoral college, or seventy more than a majority.

That the combined Taft and Roosevelt vote falls below the Taft vote in 1908 by more than 300,000, altho it exceeds the Wilson vote by about 1,150,000.

That the total (14,306,000, with omissions which will add about 250,000) is unexpectedly low, being less than the total in 1908 by at least 300,000, despite an increase of population and the possible addition of the votes of several hundred thousand women since that year. The Census Bureau had pointed to an increase of more than 1,500,000 males of voting age in the four years, and had even estimated the possible vote this year at more than 16,000,000.

That the Socialist vote has risen from 420,000 to about 830,000. In the statement, 684,432 Socialist votes are counted, but seven States are missing, and for these about 150,000 more will be added.

We are not saying that Mr. Taft would have been elected if the Republican party had not been cut in two. Still, the figures indicate that if the party had been united in the support of some other candidate, Mr. Wilson would have been defeated.

At the preliminary State election in Vermont, the Roosevelt ticket drew 37 per cent. of the Republican vote, with very few, if any, Democrats, for the Democrats gained 4,000. The distribution of the vote in some other States cannot be measured by what took place in Vermont, it is true, but there were not many Democrats voting for Roosevelt. Their places were more than filled by Taft Republicans who voted for Wilson.

It is difficult to account for the decline of the total. There were disgusted Republicans who did not go to the polls, and confident Democrats who believed that their votes were not needed because the opposing party was divided. Campaign funds were small when compared with those of past years. There was little or no money to be used in paying the travel expenses of voters far from home, or in compensating voters for their time or in employing men on election day for work in the vicinity of the polls or, generally, in "getting out the vote." All this may partly explain the shortage. In addition, the popular vote of the South, where the State result is never in doubt, continues to fall away. Surely, the campaign was not a dull one. The people were interested. For this reason it was not expected that the total would be less than that of four years ago.

Bermuda

Two days southeast of New York City, across the warm yellow Gulf Stream, lie Bermuda's coral isles. No happier or lovelier elysium exists in all the two Americas. Where else are the skies and waves bluer, the verdure greener, the oleanders pinker and the limestone roads and cottages whiter? Even the birds of the air, the giant frogs of the land and the myriad fishes of the sea glory in chromatic hue.

The sun dazzles between the frequent showers. Constant ocean breezes sweep the hills. In every nook and cranny the

flowers bloom. Bermuda is a garden of color.

The people are happy, hospitable, provident and prosperous. They are more British than the English. Even the negroes drop their *h*'s. Every one is "in trade." The islands are not large enough to support a business aristocracy. There are no millionaires or paupers.

A red-coated regiment from the Old Country garrisons the outpost. The young officers keep things lively. So do the Tommy Atkinses. Bright-eyed American girls are sure to find plenty of partners in fun. Tennis and cricket, archery and hockey, golf and horseback riding, picnics and excursions, comprise the round of life for the young people. The roads are ideal for driving or bicycling. No automobiles honk by. There are no automobiles to honk. But donkeys are just as good. Tom Moore once lived in Bermuda and wrote poetry. A pilgrimage to his home, with its palms and palmettos, is a matter of course. Other adventures include a sail on Grassy Bay, a voyage to the marine gardens and the stalactite caves, an inspection of the naval drydock on Ireland Island, and a swim on the South Shore, where the water is as translucent as the sky and the sand as powdery as flour.

On Saturday nights the great hotels—and there are none better in the United States—open their ballrooms, where the army and navy officers, in full dress uniform, lend their brilliancy to the scene. On Sundays there are services in the numerous little parish churches. At the garrison a brass quartet from the military band plays hymns. If there is a storm on the ocean the choir at the cathedral will lead the congregation in singing "For Those in Peril on the Sea."

By far the most important human beings in Bermuda are the Governor-General, the Admiral of the Fleet, and the Bishop of Newfoundland and Bermuda—Newfoundland in summer and Bermuda in winter, a most delightful division. The band plays "God Save the King" whenever His Excellency the Governor-General arrives; the Admiral, comfortably ensconced in his palatial "Admiralty," commands his fleet in the harbor from signals on a mast erected on the roof; and his Lordship the Bishop does not hesitate to wear knee breeches and black silk stockings as he perambulates among the people. To achieve sure success, a social function must procure all three of these dignitaries as its "patrons." They are accustomed to patronize even "The Darby," where open betting on the races is permitted. In short, Bermuda has all the fuss and feathers of a diminutive kingdom, yet it is as bright and tight a little island as Old England itself.

But alas! the voyage to and fro is apt to be very rough. When the waves roll thirty feet high and the odors from the cargo of onions and Easter lilies commingle with the fragrance of the ship's galley, it takes a pretty self-reliant stomach to keep a well-bred equilibrium. But the end justifies the means. Bermuda is worth the voyage, and our President-elect is a good Presbyterian. May he have a happy vacation in these blessed isles and a safe return refreshed and prepared for the great responsibilities before him.

A Model City Charter

THE proposed new charter for Los Angeles which is to be voted upon in December represents an important and advanced contribution to charter making. First and foremost it is based on the idea that only fundamental principles shall be set forth in the charter, leaving the details to be embodied in an administrative code of initiative ordinances, described by the expression, "by ordinance adopted by a vote of the people."

The governing body of the city is to be a commission of seven members, elected by the people of the city, voting at large; one of the commissioners to be elected as mayor, and to be *ex-officio* the commissioner of public safety, controlling and operating the police and fire departments and the city clerk's office; the six others to be elected simply as commissioners and to be assigned by the mayor after their election, as heads, respectively, of the departments of public utilities, finance, public works, harbors and transportation, public welfare and libraries and parks. This is a new idea suggested by the National Municipal League and giving to the mayor a position and responsibility which the mayors

of most commission-governed cities do not have—a position and influence of power and importance. The duties of these commissioners are to be prescribed in an elastic manner in the administrative code; but each department is to be subject to the supervisory control of the commission in session. The salaries of the mayor, city attorney, controller and commissioners are to be $6,000 each.

The only other elective officials (save the city controller) are the members of the board of education, seven in number, to serve without compensation. They are to be elected at large and at the same time and the same number at each time as the commissioners, that is, four school directors when the mayor and three commissioners are chosen, and three when the controller and three commissioners are chosen.

The controller, elected by the people, is to exercise the duties of city auditor and other important functions, and to be *ex officio* a member of the bureau of efficiency, which shall consist of the controller and the civil service board.

The civil service board of five members is to be appointed by the mayor and confirmed by the commission, for overlapping terms of six years, and removable only by recall or by unanimous vote of the commissioners, after a hearing upon written charges, but without a formal trial; the members of the board to serve without compensation. The commission is required by the charter to levy an annual tax of one cent on the hundred dollars to support the civil service board, the efficiency bureau and a free employment bureau under it.

All officials, both elective and appointive, are made subject to the recall. On the other hand all appointments except those of police judges, city attorney, city prosecutor and public defender must be made from the eligible civil service lists. It was strongly urged by some of the charter makers that *all* appointive offices should be filled from the civil service eligible lists. As it is, Los Angeles has gone further than any other American city

Of course, there are provisions in the charter for the initiative, referendum and recall; nominations by petition, nonpartisan elections, and the election of all elective officials by the city at large; and thoro publicity of all municipal affairs.

In recall elections the question as to the recall of an official shall be specifically stated, and a "yes" and "no" vote taken, such vote to be decisive, and the name of the incumbent of office is not to go on the ballot among the candidates for the office, nor is the vote for a successor to become operative unless the proposition for recall is carried. The percentage for recall petitions for *appointive* officers is fixt at 15 per cent. of the total vote for mayor at the last preceding election.

Other interesting provisions provide that the mayor shall not have the veto power; that the commissioners and the controller shall give their whole time to the city; that the compensation of employees on the classified civil service lists shall be at least equal to the prevailing rate in private employments, when such average rate can be ascertained; that the department of libraries and parks shall control the public libraries, parks, city playgrounds and the functions of the present music commission; that the municipal newspaper retain its present independent status, under a commission of three, appointed by the mayor, confirmed by the commission, the initiative ordinance under which the paper was started being continued in force; that the engineers in the service of the several departments shall be co-ordinated as a board of advisory engineers; that the enumeration of the powers of the city be so broadened as to include practically every industry that any person, firm or corporation may lawfully engage in, specific additions being public forums, stadiums, theaters, banks, savings depositories, loan agencies, bureaus of funeral supplies, bakeries, dairies, butter and cheese factories, milk plants, milk products, distributing stations and many other lines of business; that no act shall be vitiated or ineffective because performed by a commissioner other than the one by whom it should have been performed under the allotment of functions; that, if found legally practicable, the offices of assessor and collector of taxes be consolidated for city and county; that an adequate pension system be provided; that worn-out horses and

mules which have been in the service of the city be cared for by the city; that so far as possible all elections be held in school buildings, parks and other public and semi-public places; that a slip be mailed with a sample ballot to each voter, giving the voting place for his or her precinct; that in planning schoolhouses the school board shall make provision for the use of parts of such buildings as civic and neighborhood centers for the use of citizens during such time as the buildings are not in use for school purposes; that the election laws, except as to the initiative, referendum and recall, shall be placed in the administrative code.

From this outline it will be seen that a friendly attitude toward all the new ideas in municipal government is maintained. In its general outline the new charter conforms to the suggestions made by the National Municipal League at its annual meeting held in Los Angeles last July and represents a truly up-to-date application of sound principles of modern city commission government.

A Cry for a Mæcenas

THE following unusual letter has come to us from a young man who is quite conscious of the real ability which he possesses and who perhaps overestimates it; which, again, is better than to live a mute, inglorious Milton, whose sober wishes have never learned to stray beyond the cool, sequestered vale of contented mediocrity. His identity we withhold, and his appeal we give for the suggestions it involves. Thus he writes:

I am impelled to write a few words about myself. Here I am, full of a great conception for a Peace-Play, and all I ask is just enough to keep me going while I write it. For I want time to write and read and study, time to brood over my subject uninterruptedly. You will see by my ——— [a dramatic poem just issued], which I leave with you, that I have ability to write plays. I have written many poems which have been printed in magazines. I shall bring out another book, of poems, in the spring. All this shows that I have ability, that I am asking for backing for what is almost a certainty. Your editor says that if he were a young man he would hesitate to ask such a thing. I do not hesitate. I think that the production of a great play would justify my getting help. Also I fail to see the point of the question of honor involved. Do not young scientific men get backing for investigations of theirs? You say they are backed by accredited institutions. But who backs the institutions? And where can I find an institution which will help out the young literary artist of proven ability? I can find no such chance in the colleges. If I knew all the etymological lore of the Chaucerian poems, or could tell how many times Gower's *"Confessio Amantis"* used the adjective *green* I would be in line for a scholarship which would enable me to continue my work. What kind of an age is it, when a pedant is given every opportunity to write commentaries on old writers, while the modern writer is bidden go write his poetry any way he can? Why cannot the creative genius be given opportunity and leisure for study along his particular line of work? Why should he be compelled to give the fag-ends of his day to his creations?

Can't I get a sort of scholarship from some one? I am not asking for anything more than a mere grub-stake so that I can live while I study and write. I ask a year's time for the production of a great play.

If you get the man to back me I will produce the play. I will produce a great one too. For I know what is in me. Judge this last statement by the light of what I have done. It is true, I can go to work at many kinds of labor. But that is not the point. I want *all* my time for the next year for writing my play.

Assuredly the one who backs me up will never regret it. You, too, will rejoice when you see the great play I produce. If this is egotism then I am an egotist. But I am glad that I have a big opinion of my own ability. I have made good so far. I want to produce real literature or nothing. That I am not alone in my good opinion of myself is proven by the fact that your own magazine, THE INDEPENDENT, *The American, The Century, The Smart Set, Munsey's,* and *The Twentieth Century,* all have at one time or other, printed poems of mine.

So for the sake of art get me this one chance!

We do not say that our correspondent and contributor will make good, nor do we say he will not. It is in his favor that he has ability and determination and unbounded self-confidence and ambition. Some have succeeded; more have failed; we hope the best.

He presents one serious, yet hardly ominous, condition in our provisions for literary productiveness. We have scholarships for those who are making or have made their Ph. D., and dozens of young men and some older ones are supported by the Carnegie Institution while pursuing investigations, but these are nearly all in the line of science, while in the universities the doctorates and the prizes for literature go to grammar and philology and criticism that are not lit-

erature at all. Few are the professorships that go to the young Longfellows and Lowells, but most to the grinders fine and yet finer of old grist. Why should not a teacher be chosen who has made literature, real literature, rather than one who is an enumerator of locutions?

The age of Mæcenases is past, and good riddance to them, for they had become an offense. Thomas Gray pronounced their epitaph when he wrote his own in the lines:

"Too honest to steal, and too proud to importune,
He had not the gift of making a fortune;
Could love and could hate, so was thought rather odd;
No very great wit, he believed in a God."

It was a sore point with the bard of Stoke Pogis, whose self-respect forbade him

"The struggling pangs of conscious truth to hide,
To quench the blushes of ingenuous shame,
And heap the shrine of luxury and pride
With incense kindled at the muses' flame."

In his day the patron who supported a poet as kings supported a fool was passing away. Its specter only lingers now in the title of Poet Laureate. It was in full favor a century or more earlier when Spenser penned the burning lines:

"Full little knowest thou that hast not tride,
What hell it is in suing long to bide;
To loose good dayes that might be better spent;
To wast long nights in pensive discontent;
To speed today, to be put back tomorrow;
To feed on hope, to pine with feare and sorrow; . . .
To fret thy soule with crosses and with cares;
To eate thy heart through comfortless dispaires;
To fawne, to crowche, to waite, to ride, to ronne,
To spend, to give, to want, to be undonne.
Unhappie wight, borne to desastrous end,
That doth his life in so long tendance spend."

It does not seem to have been so in the days of Mæcenas and Augustus and Virgil and Horace. Mæcenases now might not expect of their Flaccus a dozen or two birthday odes and versified epistles in their honor, and the Augustus of today would be rarely fortunate who could find a Virgil to immortalize him in an epic like the Æneid. Our millionaires are not gambling in such wares; marble walls and their names fixt in eternal fame on university charters are surer. We bid our expectant correspondent pester the magazines with the verses his vagrant muse can supply, while giving the best of his wits to his great task; and meanwhile let him feed great thoughts on spare garret fare, as greater men have done before him, till fame drops golden apples in his lap. Yet, if his Mæcenas can find him we shall congratulate both. Thus did Virgil introduce the more bashful Horace to his own patron:

"No chance it was that brought me first to you.
'Twas dearest Virgil, later Varius,
Who told you what I was. I scarce could speak
Few halting words; for youthful modesty
Forbad me to say more. What I could say
I said; you answered as your manner is
But briefly. So I went away. Nine months
After, you called me back and bade me count
Myself among the number of your friends."

That was the golden age of both literature and patronage, with "golden days fruitful of golden deeds." Yet our way of independence and opportunity and struggle is better.

The Korean Conspiracy Case

THE appeal of the Koreans at Seoul who are being tried for conspiracy to assassinate the Japanese Governor-General is exciting so much interest that reports are sent daily all over the world.

It was not easy to follow, thru the Japanese papers, the trial of the prisoners charged with conspiracy to murder Governor Terauchi. It will be remembered that his predecessor, Prince Ito, was assassinated by conspirators who imagined themselves patriots in killing the representative of Japanese rule. It is not strange that care should be taken to protect Count Terauchi, and that the report of a conspiracy should receive credence.

What gave interest with us in far-off America to this trial is the fact that the 123 men charged with conspiracy were nearly all Christians, pastors and leading members of churches, connected with the American Presbyterian and Methodist missions in Korea, or students or teachers in the schools. The Christian missions had made phenomenal growth, having 300,000 adherents, and there had been an attempt, just as Japan took full

possession, to bring in a million converts in a year. This was not at all achieved, perhaps owing to the political change. We do not doubt that politics was mixt up with the growth of the Church. Koreans flocked into the churches in hopes that they would be an influence to maintain the independence from Japan. The missionaries were very careful, with the exception of one man who had to leave the country, to take no part in this unrest, beyond advising peaceable submission to the powers that be. There is no question that Japanese rule will be a great blessing to the country.

From the fact that the men accused of conspiracy were nearly all Christians, and the further fact that they were most of them of high character, who would not be likely to engage in conspiracy, and that the missionaries did not believe them guilty, there arose an apprehension that the Government was hostile to Christianity and was trying to suppress it. We cannot believe this true of the authorities in Japan; but Korea is under a military and not a civil government, and even the courts are under its appointment and control. A very general suspicion, if not conviction, has arisen that the Korean court which has convicted these men, giving them sentences of from three to ten years' imprisonment, has done a serious injustice. An appeal has been made to a higher court in Japan, where it may be that the decision will be reversed.

It has been very difficult to get the facts from the Japanese papers, as the reports were much too imperfect, and apparently glossed over the facts. But now we find a clearer statement in *The Japan Chronicle,* tho it must be confest that the *Chronicle* has the reputation of being more of a critic than a friend of Japan. It tells us that it is the general view that, judging from the demeanor of the court, the fate of the prisoners was settled from the first.

Remember that the trial is not conducted on our method. When brought before the court the men had been for some months in prison, examined by the police, and afterward by a preliminary court. That court made up a *dossier* of results elicited, and this was presented to the regular court, which took as facts what was there given and heard only the prisoners or their lawyers, and then gave judgment. The sole evidence given was the confessions of the prisoners themselves, who stoutly declared that those confessions were false and had been wrung from them by torture. An answer given to that in Japanese papers has been that torture is not allowed under Japanese law; but in reply it is asserted that there yet was torture, and that the police investigation and the preliminary trial were not under Japanese law, but colonial rule. When it was attempted to show that torture had been applied the court refused to accept evidence or even to allow the prisoners to show the marks of it on their bodies. As corroborative proof of guilt it appears that a revolver was found in one prisoner's house, a pistol in another's, and in another's two empty boxes from a mission school marked as having contained canned goods, but which the police believed to have contained revolvers.

Of those who confest one stuck to it, but the presiding judge regarded him as crazy. He said he had at one time intended to kill the President of The Hague Tribunal. The prisoners declared that to escape intense pain they had signed their names to any questions the police had asked them. These answers involved missionaries as partisans in the conspiracy. When in the final trial the missionaries asked to be called as witnesses this was denied, altho if they had been guilty they ought to have been put on trial and punished. Two of the original prisoners made just the same confessions as did all the rest, entered into the same details, similarly stated how they had followed Count Terauchi about in the hope of a chance to kill him, giving the times when they had approached him. But it appeared in the preliminary trial that all that time they had been in prison on another charge, and they were released. Seventy applications were made by prisoners to be allowed to prove alibis, but permission was refused. Only one witness was allowed to be called. He was a railway official, who produced a record of the number of passengers on a train between two stations at the time when a large number of conspirators were said to have taken the train, but the record showed there were but five or six passengers between those stations.

Such facts as these, says the Japanese

journal, allow no gainsaying. They are apart from the inherent improbability that so many of these men should have taken any part in such a conspiracy. It is a case of more importance for the reputation of Japan before the world than the Japanese press generally imagines, for it has been treated almost with indifference. We are glad that the appeal has gone to a higher court, and we have faith to believe that if any injustice has been done in Korea it will be righted in Japan.

Dr. Parkhurst and Mayor Gaynor

Dr. Parkhurst's letter to Mayor Gaynor will be printed all over the country. It has justification. Mayor Gaynor had charged him in a public speech in his campaign against the corrupt police twenty years ago, with having "induced the public authorities to drive them [the girls] and spread them and club them all over the city." He had done no such thing, but when the police did this and said it was at Dr. Parkhurst's instigation, girls came to his house, were fed and comforted and they went away friends of Dr. and Mrs. Parkhurst, and have remained friends for years. Now Dr. Parkhurst asks the Mayor:

> "Did you do anything of the kind in that white and negro resort maintained in one of your houses in Brooklyn, reported to me by three different detectives, and which I visited myself with a detective of my own, and caused that secret notification might be conveyed to you in order that you might be saved from the contempt of your constituency?
>
> "Perhaps you did not know what was going on there; but the public would not have excused you. And I, a heartless clergyman that causes poor girls to be clubbed all over the city, sheltered you. I am sorry for you, your Honor, and I am awfully sorry for the city. The Lord wept over Jerusalem."

Mayor Gaynor is unfortunate in having stirred up so stern a critic and accuser, particularly just at the time when his law partner, whom he made city chamberlain on taking office, has been convicted of robbing the city.

Better than Athletics

With Thanksgiving the last of the annual college athletic contests are ended, and of all the brunt of them there will be no memory or remnant a hundred years hence; but the world will still ring with the deeds of college men who have left football behind them and have done big work for country and the world. As an example of such importance a thousand-fold greater than what fills the dailies we note what in six years a band of Yale men have done in China. They started a Yale school and hospital in the city of Chang-sha. They have a 20-acre campus and buildings to accommodate ninety students, and they treat over 10,000 patients a year, and the officials of the Province of Hunan, so long hostile to foreigners and with a population of twenty-two millions, have practically committed the supervision of the health conditions to these Yale men, and now, following Yale's example, Oxford and Cambridge universities in England, and in this country Harvard, Princeton, Pennsylvania, Michigan, Oberlin, etc., have been stimulated to send similar bands to China, while some hundreds of other college men are in this and other ways doing enthusiastic work for the reconstruction of China.

Mr. Bryan's Future

The Constitution of the United States does not forbid the re-election of a President, no matter how many times. The limitation to two terms has been a matter of common consent. Accordingly, we suppose it is within the right of Congress to declare a President ineligible for a second term. The Constitution gives conditions as to age and nativity, and that is all; it does not say, tho it might be implied, that any one of proper age and nativity may be a candidate. Because the Democratic platform, prepared by Colonel Bryan, not only opposes a second term, but pledges its candidate to it, we suppose that the next Congress will pass such a law, which will shut out President Wilson from re-election; altho we may presume from the fact that he has carefully avoided the subject in his speeches, that he would not object to being re-elected. But if Wilson is thus shut out Mr. Bryan will once more loom up as candidate, and why he should not be candidate it is not easy to say, for he is the most prominent and influential and commanding man in his party. This is what

makes peculiarly interesting the question whether he will be in President Wilson's Cabinet. Mr. Wilson can hardly help offering to him any seat he will take, but whether he will accept it or not will depend on whether he thinks it will help his chances four years hence. If Wilson's term should be successful and prosperous, it would be of an advantage to have been in the Cabinet, as it was to Mr. Taft to have been in Roosevelt's Cabinet; but a failure of Congress to meet the pledges of the party, or a period of commercial depression, would ruin the chances of any member of the Cabinet for the succession. So we wait to learn whether Mr. Bryan will choose to enter the Cabinet, or would prefer to be an adviser or critic outside of it.

Student Expenses

Missouri University, with several others, is experimenting along the line of student expenses. The University Dining Club thinks that it has solved the problem, at least so far as the cost of living is concerned. It furnishes excellent board for its members at a cost of about $2.40 a week. This for forty weeks will be less than $100. It is estimated that a student can have a first-class room, buy his books and all other supplies, be liberal with the athletic games and subscribe for the college papers; employ a good laundry, spending anywhere between $300 and $400; altho a good many students go thru on $250. The dining club serves 638 students, and is run by a student manager, whose salary is paid out of the common fund. Food is bought by the carload, and always at wholesale prices, while a cold storage room receives the purchases and keeps them in a wholesome condition. Armour sells the club its meat, and canned goods are bought when prices are at a low ebb. The waiters are the students themselves, these being given their board free for three hours of work each day, in setting the tables and clearing away. The whole affair is managed by a matron and a manager, with five cooks assisted by four men. There is a reading room connected with the club, and supplied with 25 standard periodicals. No one is allowed to run a board bill over three weeks; and the net loss on all bills for the last year was only $25. The menus are varied and nourishing, altho they place other foods somewhat ahead of meat, which is served but once a day. Here is a problem for our smaller colleges as well as the universities. There is no reason known why there should be a separate boarding hall for each Greek letter society. They might easily unite in the common hall, retaining separate tables if they prefer. The whole subject is full of interest, for if anywhere the cost of living should be reduced it should be in our colleges.

Save the Leaves

Every pound of autumn leaves is worth saving as a fertilizer; and when we consider the millions and hundreds of millions of pounds provided by Nature every year, and spread over the land, we can only be amazed at the generosity of the gift. It seems to be exactly what the whole year is undertaking to do, to provide stuff enough to make our fields fat, and give us our annual crop without producing sterility. Elements held in the air and unavailable for the farmer while they are there are woven on the looms that ply all day and all summer, with art to serve us while they are still leaves, but when thrown down will be integrated with our gardens and orchards, as humus, and ultimately as soil. To burn this magnificent gift is abominable. It can hardly be conceived as possible except on the part of a very ignorant person or very reckless. We are glad to see that many of our rural towns are passing ordinances covering the case. They will not allow little bonfires of autumn leaves to be kindled inside the corporation. One of them says thank God for what you get without paying for it and make good use of his kindness. The autumn leaf is a small thing, but in the bulk it is a great gift. There is no end to the usefulness of these heaps that drift into our fence corners. They make splendid stable bedding for horses and cows; banked about our country houses they save tons of coal; they may even be spread, when dry, over barn floors, to prevent the passage of frost into the cellars below, and in the spring all these collected and put into compost piles give the material for fattening the soil or keeping up its fertility. You sim-

ply cannot wear out a farm if you will take Nature's suggestion and save, not waste, weeds and autumn leaves and ashes and stubble, and whatever else comes your way to be composted.

Meredith

S. M. Ellis concludes a paper on "George Meredith's Childhood," in a British review, by saying of the novelist that "in his later years he never spoke of his origin and relatives and the old days in Portsmouth —inscrutably he put those 'days and dreams out of mind.' He need not have done so, for no shame or discredit can rightly attach to the facts of George Meredith's childhood," even if his father and grandfather *were* tailors and naval outfitters. As a small boy the author of "Richard Feverel" was more or less spoiled, but we can't help wishing that he had never said of his father, "He was a muddler and a fool." The boys in High street called the future novelist "Gentleman Georgy," because he seldom joined in their games, and wore better clothes than the rest of them. His manners imprest one of his neighbors of like age as "superior," and the neighbor has lived to be old enough to communicate the fact to Mr. Ellis and the *Fortnightly*. All these matters interest the faithful Meredithian, but what difference do they make? Mr. Ellis throws no light on the reasons for George Meredith having gone to Germany for his education; but what difference does *that* make—since he went? We are grateful for the obscurity that still envelops the early years of Harry Richmond's and Clara Middleton's creator. It throws the emphasis upon his solid work as a writer instead of upon his accidental circumstances as a man of the world.

$

The dollar mark $ is popularly supposed to have originated in the monogram of U S superimposed, tho half a dozen other explanations have been advanced, mostly without any other support than plausibility, which in matters historical is an unsafe foundation, for in reality things do not usually happen in the most probable ways. Professor Cajori, of Colorado College, following the hard path of investigation instead of the easy road of speculation, has reached a very different conclusion. In the December number of *Popular Science Monthly* he adduces a long chain of examples from eighteenth century manuscripts to prove that the $ is the lineal descendant of the Spanish "pesos," which were then the current coin in America. The abbreviation of this was p^s, the p made by downward and upward strokes of the pen and the ^{s} written above or later over it. The change from the florescent p^s to $ was made about 1775 by English-Americans who came into business relations with Spanish-Americans, and he gives one document showing both forms, a letter written in 1778 by Oliver Pollock, then commercial agent of the United States at New Orleans. The $ sign first appeared in print in Chauncey Lee's "American Accomptant," published in 1797 at Lansingburgh.

A Forgotten Button

The Turkish commandant at Salonika thought he was safe. The Greek army was advancing from Veria, but there was one more river for them to cross before they could attack the city. When the correspondent of the London *Times* suggested that the Greeks might cross the bridge the commandant laughed: "Look," he said, "the bridge is already mined with dynamite. I have but to press a button and the whole structure will be blown to atoms. How, then, can the enemy pass?" But when the Greek shells began to fall thick on the Salonika side of the river, the Turkish troops fled panic stricken, with them the commandant, and he was in such a hurry that he forgot to press the button! That afternoon the Greeks crossed the river and now the flag of the cross has replaced the flag of the crescent over the mosque of Salonika.

President Taft sends in this week a message urging control of the national expenditures by the creation of a general budget, and it is known Governor Wilson has written and spoken in favor of it. But Congressmen hesitate, as it may limit their favorite appropriations. If it must come, and we presume it will, they want it drawn up by the House and not by the Executive, for the power of the Executive must be limited rather than

enlarged. We cannot see it so. Congress does not expend the money; it only appropriates it. It is the executive department that expends the money and knows how much is needed and how much is wasted. It should draw up a budget, and then let Congress approve or disapprove.

We are sorry that the removal of General Longstreet's widow from the post office which has given her a support, on the ground of undue political activity, should serve to accentuate the Democratic attack on President Taft's order putting fourth class postmasters under the civil service. Her removal because of her support of Colonel Roosevelt looks petty, even if justified under the rules. We may believe that in making the new order it was remembered that it would save a multitude of Republican office-holders from being replaced by Democrats. But it is a good order in itself, and whenever made spoilsmen must suffer; only we wish it had been made four years earlier.

In the last election we know that college students were offered twenty dollars from a campaign fund to go home and vote, which might be twice the cost of the trip, and they accepted it and went, with no suspicion, perhaps, that they were as truly taking a bribe as do the thousands of country farmers who in some States have expected a couple of dollars to pay for the loss of a day's work. No money should be paid to voters. There are those who think that the failure at this election much to increase the vote over that of four years ago is due to the fact that less money was paid to persuade voters to come to the polls.

The Philippine Assembly elects two commissioners, or delegates, who have seats in our Congress and the right to speak on Philippine subjects, but have no vote. One of them, Manuel Queson, has started a magazine in Washington to urge immediate independence for the islands. He represents the radical element and has just been re-elected. But associated with him has been chosen a second commissioner who is a conservative. It is not at all clear that the people of the Philippines really wish absolute independence, and it would be wrong to thrust it on them.

Philadelphia was the fitting place for the triumphant meeting last week of the National Woman's Suffrage Association, for there they were congratulated by Mayor Blankenburg, who told them progressive Pennsylvania was ready to adopt their cause, and his wife followed with an address inviting them to come back three years later and rejoice over the freedom they will by that time have achieved. We wish New York and Chicago had mayors who would be glad to say as much for their cities.

We had hoped that the punishments lately inflicted on the militant, syndicalist suffragets would teach them reason, but they prove past instruction. It would seem as if a mob-madness has obsessed them. Their late campaign against the letter boxes is peculiarly vicious, but that is its merit in their esteem. Mr. Lloyd-George tells them that the hatchet is not a weapon of persuasion. Nor is acid and paraffine in letter boxes. They are not popular with our suffragists, who have other and better methods.

The public is amazed at the pardon by Governor Dix of Mr. Patrick, who was convicted of murdering Mr. Rice, the Texan millionaire. What the effect will be on the will which gave twelve millions to found the Rice Institute of Arts and Sciences is not yet known. Governor Dix is right in saying that responsibility ought not to be laid on the Governor, but on a board of pardons. A Governor may be a very soft-hearted man.

That vice in cities does not need to be allowed or segregated is the belief of the Portland, Ohio, city council, which has enacted ordinances on the recommendation of a vice commission utterly suppressing the public evil by punishing all who rent rooms for such purpose. We believe that a general crusade is coming all over our country in defense of morality and safe marriage.

An example of what Mr. R. G. White named *heterophemy* was our speaking of Mr. Lodge as ex-Senator from Massachusetts when we meant Mr. Crane.

Insurance

Our New Insurance Editor

For sixty years The Independent has devoted more attention to the subject of insurance than any other journal of general circulation. We have done this in the belief that insurance is one of the best institutions ever devised for the benefit of mankind, and that the diffusion of correct knowledge as to its principles is a public service of the very first importance.

That our readers have appreciated our efforts is evident from the testimony we have for more than a generation received.

We are happy to announce, therefore, that plans are now under way to make our insurance department more valuable to our readers than ever before. The first step has been to secure the services of Mr. William E. Underwood, of this city, who will assume with our next issue the editorship of this department, under his own name.

Mr. Underwood is known far and wide as a careful student of insurance in all its various forms. For the past thirty-five years he has been in the insurance business, and is thoroly conversant with both its theory and its practice. Born in New Orleans, La., November, 1860, he received his education in the public schools, and then began his business life as an office boy in a local fire insurance agency. In 1882 he was appointed assistant manager of the Board of Underwriters of Denver, Col. After serving successively as manager of the Fire Insurance Compacts at St. Joseph, Mo., Mobile, Ala., and Joliet, Ill., he became editor of *The Insurance Vindicator* at New Orleans, where he remained from 1889 to 1891. From 1891 to 1893 he was a special representative of the Mutual Life in Louisiana and Mississippi, and Wisconsin and Michigan. In 1889 he again took charge of *The Insurance Vindicator,* but in 1902 removed to New York, and purchased *Assurance,* a monthly devoted to casualty insurance, and in 1906 *The Insurance Critic,* a monthly devoted to life and fire insurance. These two publications he still owns.

Mr. Underwood is an independent thinker, and has the reputation of possessing the full courage of his convictions. The insurance companies, of which there are now some 500 in the land, will find him a helpful friend in so far as they conduct their business in the interests of the policyholders, and a fearless critic when they do not. Happily, the vast majority of them practise sound insurance, from every standpoint.

Our readers, we hope, will feel free to call upon him for any advice or help which he can render, either thru the columns of The Independent or by personal interview or letter. There are few subjects on which people are still so perplexed as they are when making their insurance investments, and Mr. Underwood will be glad to be consulted at any time, and will give his services free.

Thru this department we hope to decrease the distance and the differences between insurers and insured. The interests of both are identical.

ROBARTS

Financial

Currency Legislation

Mr. Wilson has told members of Congress that the subject of currency reform should receive immediate attention. It is now expected that a Democratic currency bill will be taken up at the special session. The Aldrich plan, so far as it provides for a central reserve association, will not be accepted. It is distinctly opposed in the Democratic platform. Probably, however, parts of the plan suggested by Mr. Aldrich and the Monetary Commission will be approved. It was reported last week that Mr. Bryan, desiring an abolition of national bank currency and the substitution of Government notes, was diligently impressing his views upon the minds of Democratic Congressmen, and that he might exert much influence in this way. It appears now, however, that the members who are directly responsible for the treatment of this question are not subject to his control, have in mind no revolutionary currency projects, and intend to give much weight to the opinions and advice of Mr. Wilson. They understand, we presume, that Mr. Bryan's advice as to currency legislation is by no means the best that can be obtained.

Growth of International Trade

The foreign commerce of the United States in the year now closing will exceed $4,000,000,000. This total shows a remarkable increase, for the highest value of our exports and imports heretofore has been $3,626,000,000, in 1911. The three billion mark was first reached in 1906, the two billion mark in 1899. Imports have doubled since 1901, and exports have doubled since 1904. Imports not subject to tariff duty will amount this year to nearly $1,000,000,000. During the recent growth of our export trade, shipments of foodstuffs have declined (altho at the present time our abundant crops show a considerable surplus for sale abroad), and shipments of manufactures have steadily increased. The free trader will say that the large sales of manufactured goods prove that protective duties are not needed; the protectionist will assert that they are due to the protective policy. At all events, they do show that a considerable reduction of some duties can safely be made.

There has been a notable growth of international trade thruout the world in the last two decades. This year the total, as computed at Washington, will be $35,000,000,000, which exceeds by $4,000,000,000 the total in 1910. The only countries reporting decreases for 1912 are Argentina and Russia. The total has doubled since 1890, but values, not quantities, are reported, and it should be borne in mind that there has been a general rise of prices. Possibly the average was lower twenty-two years ago by 20 per cent. than it is at present.

....The index number of *Bradstreet's* for November 1 shows another advance of average prices, being 9.478 against 9.451 on October 1, and 8.892 a year ago.

....The Canadian Immigration Commissioner at Winnipeg reports that 100,000 settlers from the United States entered Western Canada between April 1 and October 1.

....The crops of wheat, corn and oats in Kansas this year are the largest ever known in the State. Their value is $170,785,666, an increase of $55,000,000 over the value in 1911.

....Robert Knight, who died in Providence last week, began work in a calico factory when he was eight years old, at 75 cents a week, and at his death was the largest individual owner of cotton mills in the world, having twenty-two factories and a fortune of $25,000,000.

....Mr. Roger W. Babson, of the "Babson Statistical Organization" of Wellesley Hills, Mass., has sailed for Europe to confer with the International Institute at Rome on the compilation of world statistics on business conditions that can be used by this and other governments for a basis of solving industrial questions.

The Independent

VOL. LXXIII NEW YORK, THURSDAY, DECEMBER 12, 1912 No. 3341

Survey of the World

The Presidential Messages

On the third, Mr. Taft sent a message to Congress discussing our foreign relations—diplomatic and commercial. He placed their development above partisanship. "With the development of our industries," he said, "the foreign commerce of the United States must rapidly become a still more essential factor in its economic welfare." Our Department of State was, at the beginning of his Administration, "an archaic and inadequate machine," but, upon his recommendation, Congress appropriated funds for its "complete reorganization" (August 5, 1909). "Divisions of Latin-American Affairs, and of Far Eastern, Near Eastern, and Western European Affairs" were created, and the work of the State Department specialized accordingly. The merit system, initiated by Mr. Cleveland, in the consular service, has now been extended to the diplomatic service, where the Administration has undertaken "to respond to modern ideas of commercial intercourse." We now stand "on the threshold of middle age as a nation." It behooves us not only to reach out for foreign commerce, but to provide more generously, in salaries and permanent residences, for our representatives abroad. "The opening of the Panama Canal will mark the opening of a new era" in our international relations. Against the Administration's failure to secure the consummation of general arbitration treaties with Great Britain and France, the President sets off the prevention or termination of "several wars" in South and Central America.——The President's general message was received by Congress on the sixth. His principal recommendations are:

The plan of currency reform outlined by the monetary commission.

Amendment of the law to lessen the penalty when corporations inadvertently disobey the corporation tax law.

Congressional approval of the plan of army reorganization prepared by the War College last spring.

The passage of the Militia Pay bill, increasing compensation to militia in the field.

Citizenship, without Statehood, for Porto Rico.

Regulation of water power grants so that navigable streams may be improved by water power companies.

Elevation of Colonel Goethals, builder of the Panama Canal, to a major generalship.

A return to the policy of two battleships a year by appropriation for three battleships this year.

Authority to the United States Supreme Court to make rules of procedure in common law cases in Federal courts to expedite and lessen the cost of litigation.

The President disapproves the Democratic project of independence, after eight years, for the Philippines. He leaves the tariff to his successor and the incoming Congress.——The annual report of Secretary Meyer urges provision for three new battleships—stating that if we continue to construct only two a year we will fall from second to fourth rank as a naval power. It says that to guard our coast and protect its commerce the United States needs a permanent navy of forty-one modern battleships and battle-cruisers. We now have thirty-three battleships, of which four will soon be retired as obsolete. Besides three dreadnaughts, the Secretary of the Navy recommends appropriations for two battle-cruisers, sixteen destroyers, six submarines, two gunboats, a fleet of auxilia-

Currency Legislation

Mr. Wilson has told members of Congress that the subject of currency reform should receive immediate attention. It is now expected that a Democratic currency bill will be taken up at the special session. The Aldrich plan, so far as it provides for a central reserve association, will not be accepted. It is distinctly opposed in the Democratic platform. Probably, however, parts of the plan suggested by Mr. Aldrich and the Monetary Commission will be approved. It was reported last week that Mr. Bryan, desiring an abolition of national bank currency and the substitution of Government notes, was diligently impressing his views upon the minds of Democratic Congressmen, and that he might exert much influence in this way. It appears now, however, that the members who are directly responsible for the treatment of this question are not subject to his control, have in mind no revolutionary currency projects, and intend to give much weight to the opinions and advice of Mr. Wilson. They understand, we presume, that Mr. Bryan's advice as to currency legislation is by no means the best that can be obtained.

Growth of International Trade

The foreign commerce of the United States in the year now closing will exceed $4,000,000,000. This total shows a remarkable increase, for the highest value of our exports and imports heretofore has been $3,626,000,000, in 1911. The three billion mark was first reached in 1906, the two billion mark in 1899. Imports have doubled since 1901, and exports have doubled since 1904. Imports not subject to tariff duty will amount this year to nearly $1,000,000,000. During the recent growth of our export trade, shipments of foodstuffs have declined (altho at the present time our abundant crops show a considerable surplus for sale abroad), and shipments of manufactures have steadily increased. The free trader will say that the large sales of manufactured goods prove that protective duties are not needed; the protectionist will assert that they are due to the protective policy. At all events, they do show that a considerable reduction of some duties can safely be made.

There has been a notable growth of international trade thruout the world in the last two decades. This year the total, as computed at Washington, will be $35,000,000,000, which exceeds by $4,000,000,000 the total in 1910. The only countries reporting decreases for 1912 are Argentina and Russia. The total has doubled since 1890, but values, not quantities, are reported, and it should be borne in mind that there has been a general rise of prices. Possibly the average was lower twenty-two years ago by 20 per cent. than it is at present.

....The index number of *Bradstreet's* for November 1 shows another advance of average prices, being 9.478 against 9.451 on October 1, and 8.892 a year ago.

....The Canadian Immigration Commissioner at Winnipeg reports that 100,000 settlers from the United States entered Western Canada between April 1 and October 1.

....The crops of wheat, corn and oats in Kansas this year are the largest ever known in the State. Their value is $170,785,666, an increase of $55,000,000 over the value in 1911.

....Robert Knight, who died in Providence last week, began work in a calico factory when he was eight years old, at 75 cents a week, and at his death was the largest individual owner of cotton mills in the world, having twenty-two factories and a fortune of $25,000,000.

....Mr. Roger W. Babson, of the "Babson Statistical Organization" of Wellesley Hills, Mass., has sailed for Europe to confer with the International Institute at Rome on the compilation of world statistics on business conditions that can be used by this and other governments for a basis of solving industrial questions.

The Independent

VOL. LXXIII NEW YORK, THURSDAY, DECEMBER 12, 1912 No. 3341

Survey of the World

The Presidential Messages

On the third, Mr. Taft sent a message to Congress discussing our foreign relations—diplomatic and commercial. He placed their development above partisanship. "With the development of our industries," he said, "the foreign commerce of the United States must rapidly become a still more essential factor in its economic welfare." Our Department of State was, at the beginning of his Administration, "an archaic and inadequate machine," but, upon his recommendation, Congress appropriated funds for its "complete reorganization" (August 5, 1909). "Divisions of Latin-American Affairs, and of Far Eastern, Near Eastern, and Western European Affairs" were created, and the work of the State Department specialized accordingly. The merit system, initiated by Mr. Cleveland, in the consular service, has now been extended to the diplomatic service, where the Administration has undertaken "to respond to modern ideas of commercial intercourse." We now stand "on the threshold of middle age as a nation." It behooves us not only to reach out for foreign commerce, but to provide more generously, in salaries and permanent residences, for our representatives abroad. "The opening of the Panama Canal will mark the opening of a new era" in our international relations. Against the Administration's failure to secure the consummation of general arbitration treaties with Great Britain and France, the President sets off the prevention or termination of "several wars" in South and Central America. —— The President's general message was received by Congress on the sixth. His principal recommendations are:

The plan of currency reform outlined by the monetary commission.

Amendment of the law to lessen the penalty when corporations inadvertently disobey the corporation tax law.

Congressional approval of the plan of army reorganization prepared by the War College last spring.

The passage of the Militia Pay bill, increasing compensation to militia in the field.

Citizenship, without Statehood, for Porto Rico.

Regulation of water power grants so that navigable streams may be improved by water power companies.

Elevation of Colonel Goethals, builder of the Panama Canal, to a major generalship.

A return to the policy of two battleships a year by appropriation for three battleships this year.

Authority to the United States Supreme Court to make rules of procedure in common law cases in Federal courts to expedite and lessen the cost of litigation.

The President disapproves the Democratic project of independence, after eight years, for the Philippines. He leaves the tariff to his successor and the incoming Congress.——The annual report of Secretary Meyer urges provision for three new battleships—stating that if we continue to construct only two a year we will fall from second to fourth rank as a naval power. It says that to guard our coast and protect its commerce the United States needs a permanent navy of forty-one modern battleships and battle-cruisers. We now have thirty-three battleships, of which four will soon be retired as obsolete. Besides three dreadnaughts, the Secretary of the Navy recommends appropriations for two battle-cruisers, sixteen destroyers, six submarines, two gunboats, a fleet of auxilia-

ries, a dry dock, and naval aviation.——The Secretary of Agriculture, in his annual report, reviews the increase in the value of American farm products during his service of sixteen years: from four billions to nine and a half.

Trust Suits The Supreme Court decided, on the 2d, that the Harriman merger of the Union Pacific and Southern Pacific railroads, brought about when the first of these companies bought 46 per cent. of the stock of the second, was unlawful, being in violation of the Sherman act. Dissolution of the combination was ordered. Separation of the companies is to be supervised by the Circuit Court in Utah, and, if it should be necessary, a receiver will be appointed. The Union Pacific is permitted to retain control of the Central Pacific, whose lines extend from Ogden to San Francisco. The decision was made by unanimous vote, except that Justice Van Devanter took no part. His opinion, at the trial in Utah, that the two companies were not competitors, and that the combination was not unlawful, was reversed and annulled. The decision was announced by Justice Day, who said: "While the law may not be able to enforce competition, it can reach combinations which make competition impracticable."——The court also upheld the constitutionality of the South Dakota law against unfair discrimination. This law forbids the sale, with intent to ruin competitors, of a commodity in one place at prices lower than those demanded in another place.——The indictments against the American Sugar Refining Company, John E. Parsons, Washington B. Thomas and others, charging conspiracy in restraint of trade on account of the closing of the Philadelphia refinery of Segal's Pennsylvania Sugar Refining Company, were dismissed last week on the Government's motion. It was explained that sufficient evidence could not be produced owing to the statute of limitations. For this reason there was a jury disagreement in March last. The dismissal of these indictments does not affect the Government's suit for a dissolution of the Trust.——Attorney-General Wickersham, in his annual report, to which reference is made in our editorial pages, recommends that existing law be so amended that the Government will be authorized to seize, in any State, goods imported and held in furtherance of the plans of a combination. This recommendation is suggested by the suit against the Coffee Trust.

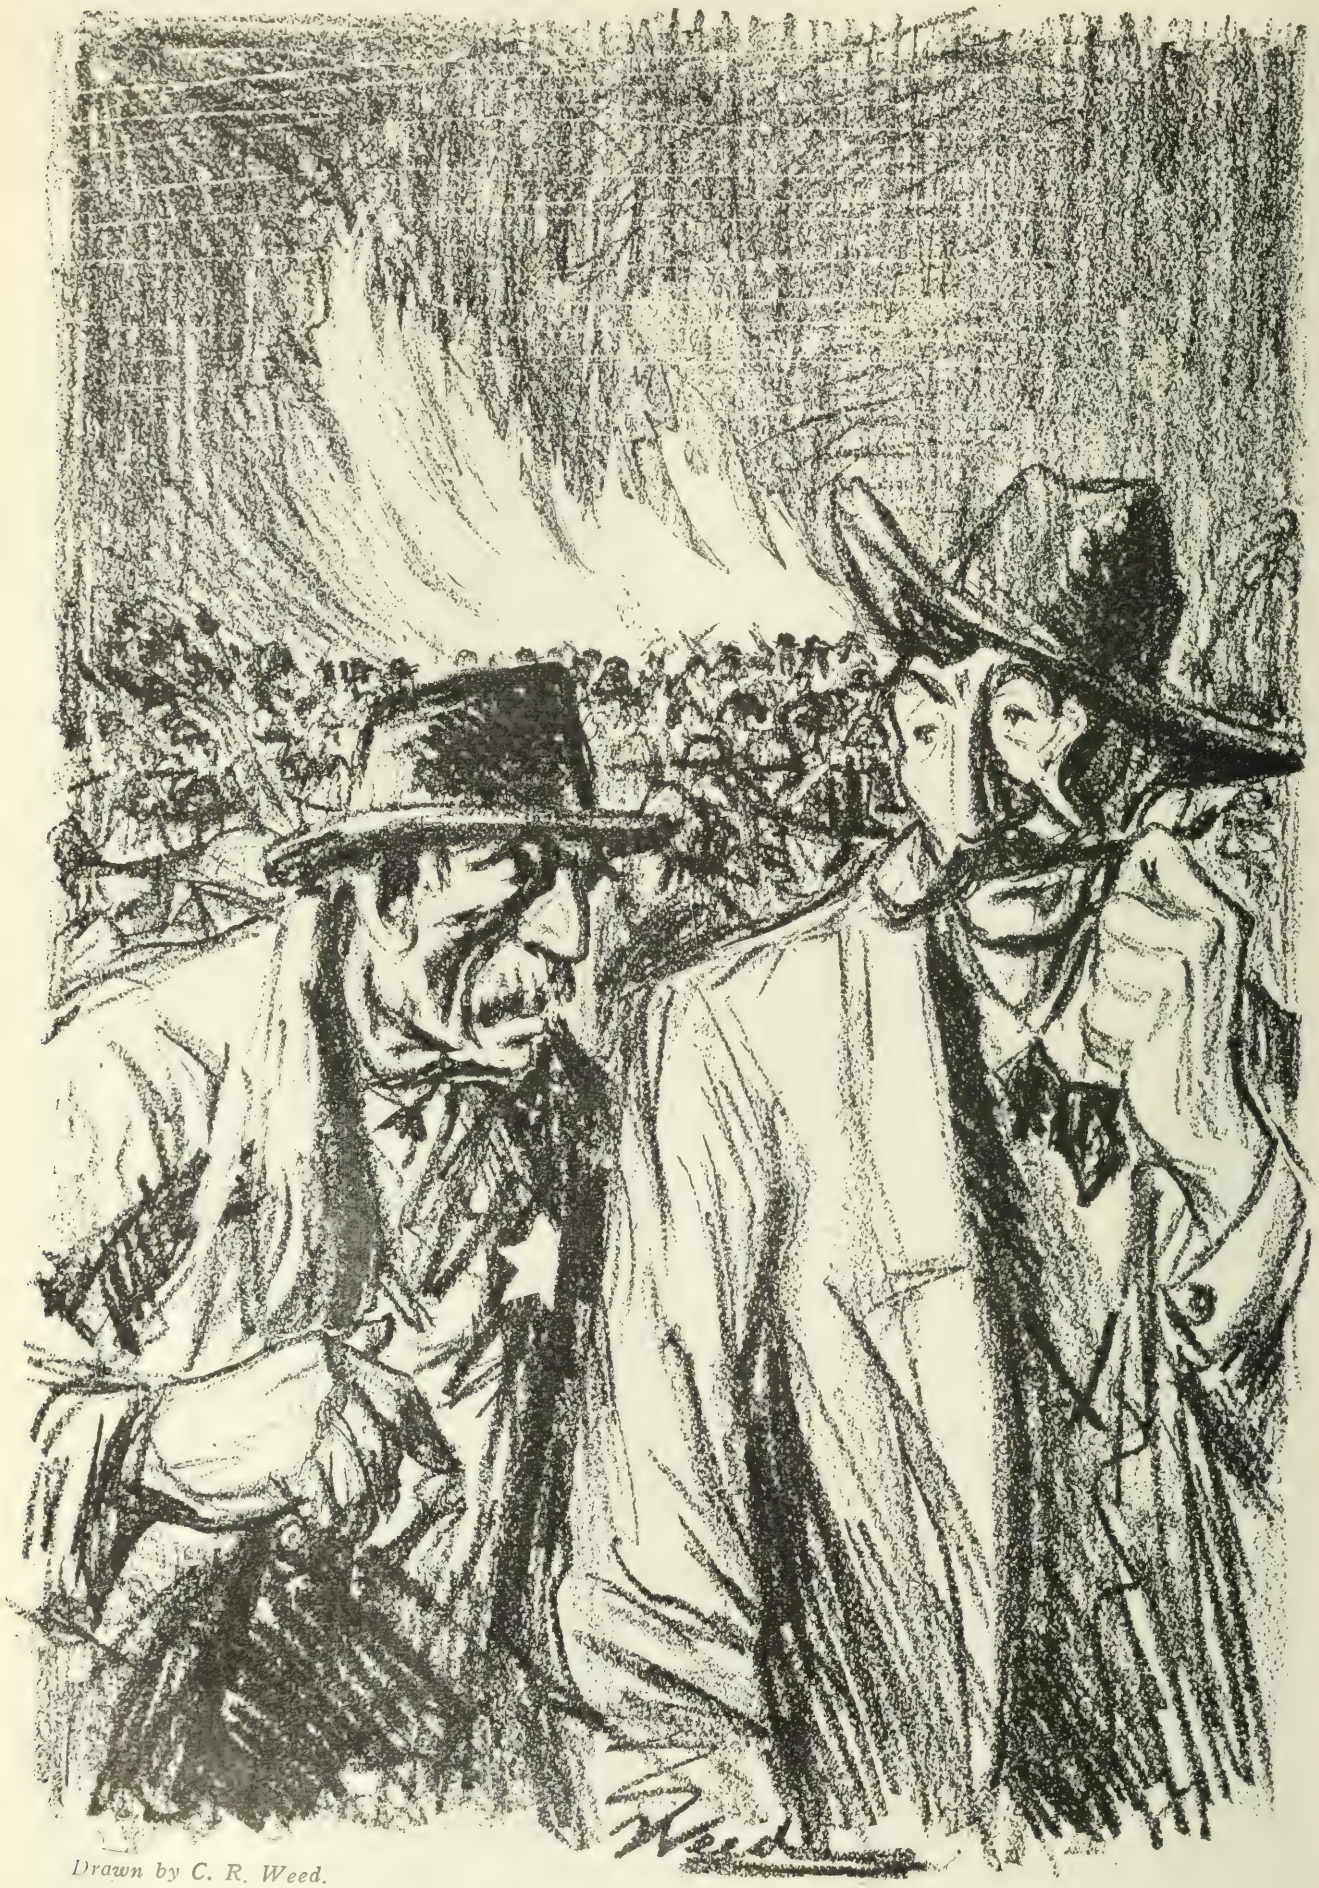
Labor Questions In the dynamite conspiracy trial at Indianapolis the indictments against four of the forty-five defendants have been dismissed, on the motion of the prosecutor, who said that the charges against these men were not sustained.——Representatives of the firemen and trainmen of fifty-two Eastern railroads, whose demand for an increase of wages followed that of the locomotive engineers, were in conference last week with representatives of the companies. Estimates of the additional payment required by their demand range from $10,000,000 to $21,000,000 per year.——A general strike in the steel mills of the Corporation, near Pittsburgh, appears to have been averted. A majority of the original strikers voted last week to return, pending the company's reconsideration of the discharge of three men. The company refused to deal with their committee. It insisted upon receiving only the applications of individual workmen and gave notice that each application would be considered by itself.

Canada's Gift of Battleships Prime Minister Borden introduced in Canada's House of Commons, on the 5th, a Government bill giving to Great Britain $35,000,000, to be expended in the construction of three battleships, "of the most modern and powerful type." These are to be used for the defense of the empire and will be built under the direction of the British Admiralty. The Premier, in the course of a long address, reviewed the condition of naval affairs thruout the world, and spoke of the burden imposed upon the mother country by reason of Germany's aggressive naval policy. He also indicated that Canada would have a voice with respect to foreign questions.

"When Great Britain," said he, "no longer assumes sole responsibility for defense on the high seas, she can no longer undertake to assume sole responsibility for the control of foreign policy."——Speaking in the Canadian Senate, on the 4th, Sir George Ross, Opposition leader, sharply criticised our legislation concerning Panama canal tolls. Canada, he said, could not submit quietly to injustice. If the British protest should have no effect, there should be an appeal to The Hague tribunal. He would be astonished if the United States should refuse to submit the question to arbitration. At the close of his speech he was warmly congratulated by the Government leader in the Senate.

The Islands

An attorney representing the Zayas interests in Cuba has attacked in the insular Supreme Court the recent election, on the ground that the electoral law, enacted during the second intervention, is unconstitutional. President Gomez intends to issue a manifesto, explaining his conduct at the time of the election and defending himself against the accusations of the Zayistas.——It is understood that the British Ambassador at Washington has addrest to our Government a protest against the concession recently granted to American capitalists for a railroad from Caibarien to Nuevitas. This protest is in the interest of the English or Canadian company, the Cuban Central, which, it is said, was about to build a road on the route in question, without a subsidy, altho the concession gives a subsidy of $6,000 per kilometer. It is alleged in Cuba that President Gomez has a personal interest in the project, because he owns or controls a branch road which will be connected with the one now projected.——General Menocal, President-elect, says he will ask for a revision of the electoral census, being convinced that it was padded and falsified. In filling subordinate offices, he says, fitness (not partisan affiliation) will be the "sole consideration."——Among the 1,500 immigrants who recently arrived in Havana from Spain are several men believed to be militant anarchists, who are under close surveillance.——General Vasquez, the revolutionists' leader in Santo Domingo, has had a friendly interview with the commander of the Government's army, and an agreement has been reached, subject to the approval of the new President, Archbishop Nouel.——Dispatches from Manila, published in the newspapers of Madrid, say that the Filipinos will declare their provisional independence on July 4, 1913.



The Panama Canal

Senator McCumber, of North Dakota, predicts that the existing treaty of arbitration with Great Britain will be allowed to expire by limitation in May next, in order that submission of the Panama tolls question to arbitration may be avoided. In his opinion, if our Government attempts to renew the treaty, the consent of the Senate will be withheld. He is a member of the Committee on Foreign Relations, and he holds that exemption of our coastwise shipping is a violation of the Hay-Pauncefote treaty.——A petition, asking our Government to seek "an honorable and amicable settlement" of the tolls controversy with Great Britain has been sent to President Taft by President Wheeler, of the University of California; President Jordan, of Stanford University; Archbishop Riordan and other prominent Californians. The issue, they say, is "whether our country is observing an international pledge," and they add:

> "It is our earnest conviction that as a people we can better suffer some limitation of our freedom of legislation and some commercial disadvantage, rather than disregard, or appear to disregard, a treaty negotiated in good faith and solemnly ratified."

The New York Chamber of Commerce, by a vote of 262 to 22, has refused to discuss the question of Panama tolls and treaty obligations, which was raised by a resolution introduced by Lewis Nixon, to the effect that the treaty had not been violated. This resolution was reported adversely by the unanimous vote of the Committee on Foreign Commerce.——Secretary Stimson returned from Panama last week. He saw the great gates of the Gatun locks, which are "like the sides of a ten-story office building," swung open for the first time. It was

"I Will Never Call Out the Militia."—*GOVERNOR BLEASE.*

THE SHERIFF: GREAT SNAKES, JIM, YOU'VE GOT THE WRONG MAN!
THE LYNCH LEADER: SHOO! HOW CARELESS OF US!

done in a little less than two minutes by machinery set in motion when Miss Helen Taft prest an electric button.

Mexico

Flores Magon, Minister of the Interior, who recently resigned because, as President Madero explained, he was not in political accord with his associates, has published an attack upon several of these. He speaks of the "unbridled radicalism" of Vice-President Suarez and alleges that both Suarez and Gustavo Madero have "made a joke of suffrage" by interference with voters. Magon's successor, Rafael Hernandez, proposes that a promise of amnesty be given to rebels in the north, who, he thinks, continue to be active only because they fear summary execution, if they should be peaceful and unable to defend themselves. In Durango many ranches were raided last week, and the Government's dynamite factory, near Torreon, was captured. On the 1st there were trains running between Juarez and Chihuahua for the first time in months. The track was kept clear by an armored car, bearing a heavy gun and followed by a car full of soldiers. On the 4th, however, the rebels captured a train on this guarded road, killed several soldiers, robbed the passengers and burned the cars. In the south, large parts of several States are controlled by rebels. On the 6th the town of Valle del Bravo, State of Mexico, was destroyed by Zapatists because the people refused to purchase safety by delivering to these rebels twenty young women. All the residents fled to the hills, and the town was sacked and burned. It is said in Washington that Senator William Alden Smith's investigating committee will report that Madero, during his revolution, was assisted by powerful interests in the United States, and that violation of the neutrality laws in his interest was permitted.

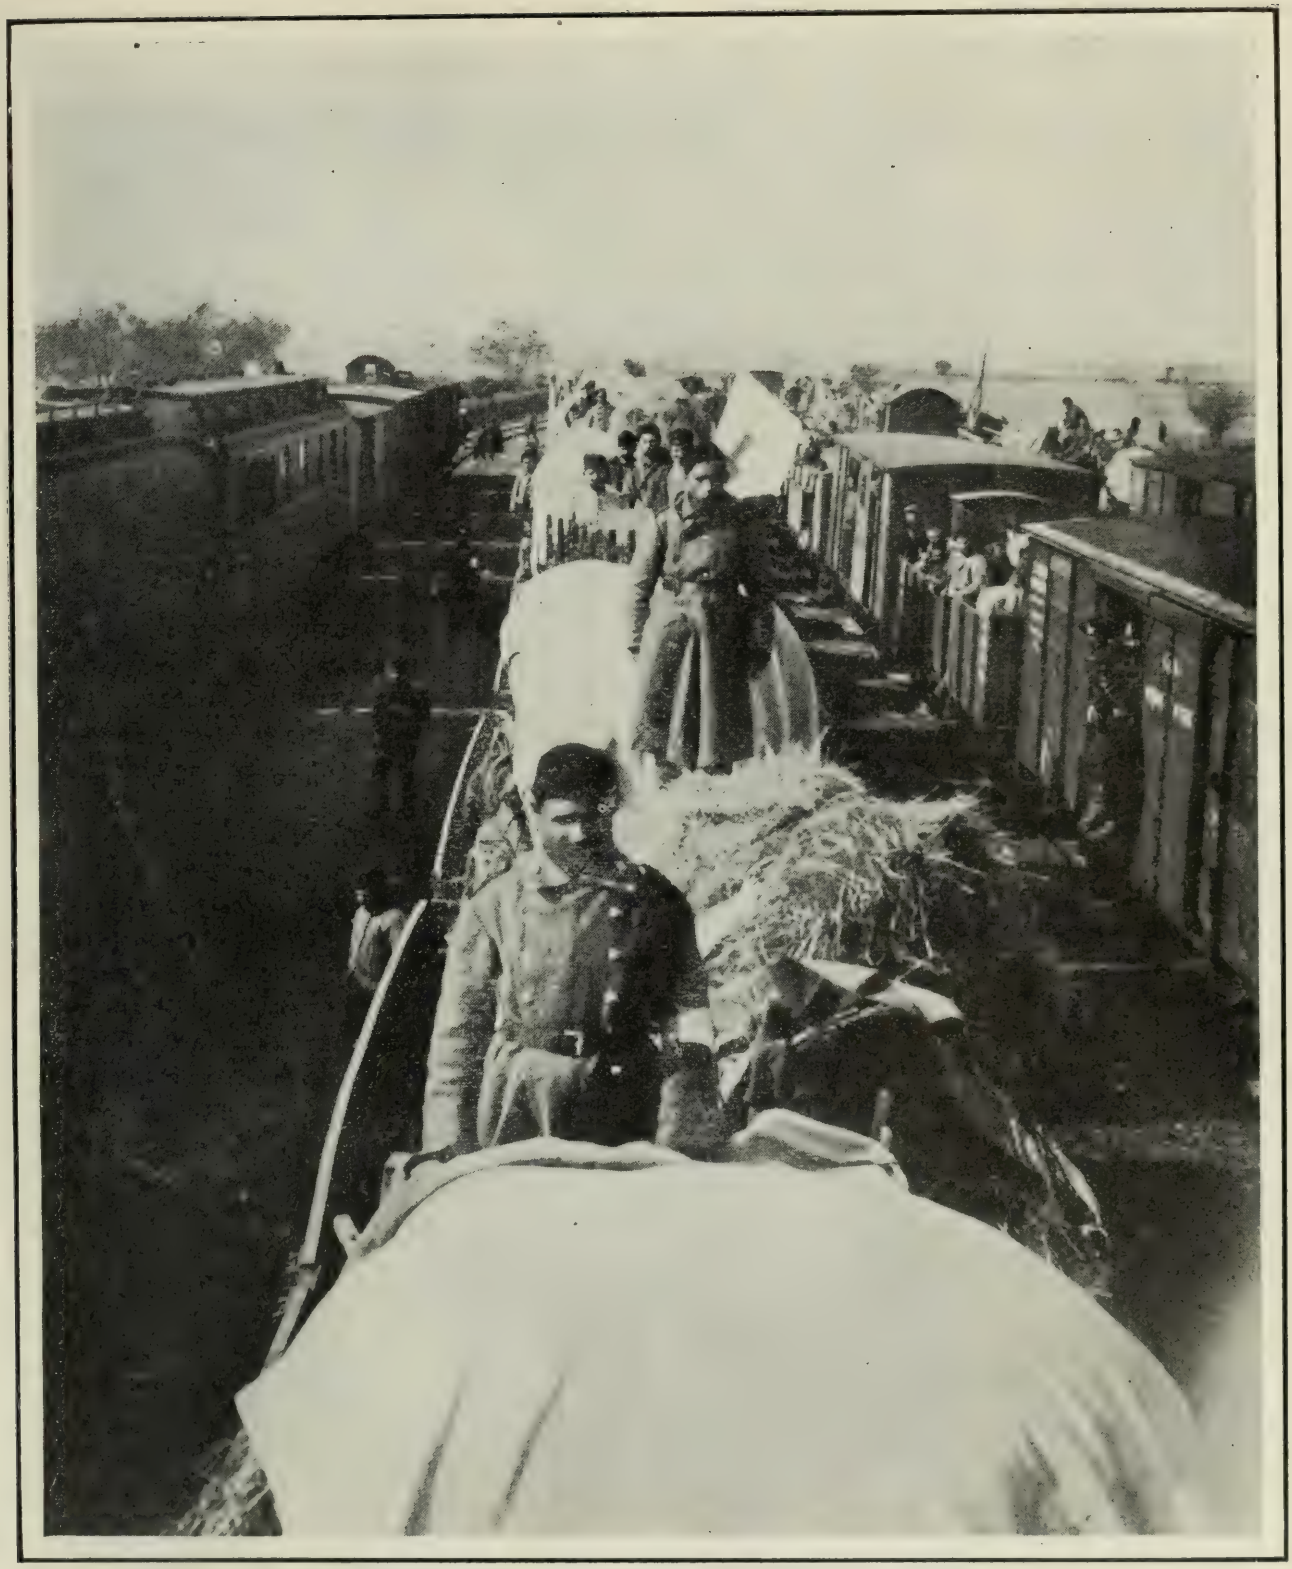
Central and South America

Altho the right of our Government to detain Gen. Luis Mena, the Nicaraguan revolutionist, in Panama has been upheld by the Zone courts, he will be released in the near future, because the present Government of Nicaragua is believed to be so firmly established that he and his associates are no longer to be feared.——In the Senate, on the 7th, Mr. Bacon, of Georgia, sharply replied to Mr. Taft's opinion, exprest in one of his recent messages, that the loss of life and property, and the sufferings of thousands of people, in Nicaragua during the recent revolution "might have been averted" if the loan convention with Nicaragua had been approved by the Senate, and if our Government had thus been permitted "to carry out its now well developed policy of encouraging the extending of financial aid to weak Central American States." Mr. Bacon criticised the landing of marines in Nicaragua. He proposes an investigation of the charge that the convention or treaty was designed to give "enormous profits to a clique of New York financiers."——Guatemala needs at least $10,000,000 to satisfy foreign creditors, and there is said to be a movement to procure the money in New York by means of such a guarantee as was proposed in the Nicaragua and Honduras conventions.——Col. William C. Gorgas, sanitary officer of the Canal Zone, sailed, with his staff, last week for Guayaquil, where, at the request of Ecuador's Government, he will plan sanitary improvements. A joint resolution, giving him leave of absence, has been introduced in Congress.——Paraguay's Congress has authorized the negotiation of a loan of $6,000,000, and the money will probably be supplied by bankers connected with the Farquhar railroad syndicate, which has interests in New York.

German Affairs

The breach between the German Government and the Catholic Center, which has hitherto been its main support in the Reichstag, seems to have become definite. Dr. Spahn, the Clerical leader, attacked the recent decision of the Federal Council in support of the anti-Jesuit laws, and said:

"Under these circumstances we cannot have that confidence in the Chancellor and the Federal Council which will insure that the requirements of Catholics in the German Empire will be justly treated at their hands and our conduct will be governed accordingly."



In reply the Chancellor defended the Federal Council and warned the Center

against making the Jesuit question the keynote of their political program, for 40,000,000 German Protestants were united in opposing the Jesuits.——Both the Center and the Socialist parties have declared their opposition to the Government bill establishing a private monopoly of petroleum under Government control, and since these two parties are the strongest in the Reichstag, commanding 213 votes out of the 397, there is little chance of the bill becoming a law. The opposition is based chiefly upon a belief that the bankers are promoting the bill to recover their losses in oil stocks and upon a doubt whether Germany can command a sufficient supply of petroleum to enable it to exclude the Standard Oil Company from Germany.——The fight against American tobacco, started by the anti-trust commission of Frankfort-on-the-Main, is to be brought into the Reichstag by an inquiry from the anti-Semite party as to what the Government proposes to do to protect German tobacco growers, manufacturers and merchants from the oppression of foreign monopolies.——The opposition of the Catholic and Lutheran Churches to cremation has hitherto prevented this method of disposing of the dead from being established in Berlin as it has in other European cities, but at last a crematory has been opened in the capital. ——The cholera in Constantinople is said to have caused the death of 17,000 persons up to November 24, but is now upon the decline.

The London Peace Conference

An armistice was concluded at Baghchetsh, near Tchataldja, on December 3, according to which the representatives of the Balkan States and Turkey were to meet at London in ten days to arrange terms of peace. Greece refused to sign the armistice, but will doubtless participate in the conference. St. James's Palace, the nominal residence of the English Court, has been selected as the place of meeting, and the rooms used will be those occupied by the Duke and Duchess of Connaught before his appointment as Governor-General of Canada. It seems likely that the "conference" may turn out to be a "congress" instead, for the ambassadors of the Great Powers at London will also consult together and the questions to be settled are more extensive than the agreement upon terms of peace, for they involve as much map making as the Congress of Berlin. The delegates named for the London conference are: Bulgaria, M. Daneff, Presiden of the Sobranja; M. Majaroff, the Bulgarian Minister at London, and General Paprikoff, formerly Minister to Russia. Servia, M. Novakovitch; M. Nikolitch; M. Vesnitch, Minister to France; General Bokevitch, Chief of Staff, the Crown Prince, and Colonel Pavlovitch, of the headquarters staff. Greece, M. Venezelos, the Prime Minister; M. Skoloudis, the Minister at London; M. Gennadin: M. Streit, the Minister at Vienna; M. Politis, professor of international law in Paris University; Colonel Danglis, Chief of Staff, and Colonel Metaxas. Montenegro, Ex-Premier Mjuskovitch; M. Popovitch, formerly Montenegrin Minister at Constantinople, and M. Voynovitch, private secretary to the King. Turkey, Tewfik Pasha, Turkish Ambassador at London; Osman Nizami Pasha, Turkish Ambassador at Berlin, and Reshid Pasha, the Minister of Mines and Forests.——The demands of Servia, according to an official statement by Premier Pashitch, include the two ports of Alessio and Durazzo, on the Adriatic, about thirty miles apart, and the territory intervening between that coast and the present boundaries of the Servian kingdom. This would include the vilayet of Kossovo and the cities of Uskub, Prisrend, Mitrovitza and Dibra. The southern boundary of the desired territory would be drawn from Durazzo to Lake Ochrida; the northern boundary, to be coterminous with Greater Montenegro, would be drawn from Alessio to Djakova. Austria, however, steadfastly refuses to allow Servia to acquire an Adriatic port, and it may be that the Serbs will have to forego this ambition.——The position of Germany was made plain by Chancellor von Bethmann-Hollweg in a vigorous speech before the Reichstag on December 2, in which he met the rumors of intervention on the part of Russia by the statement:

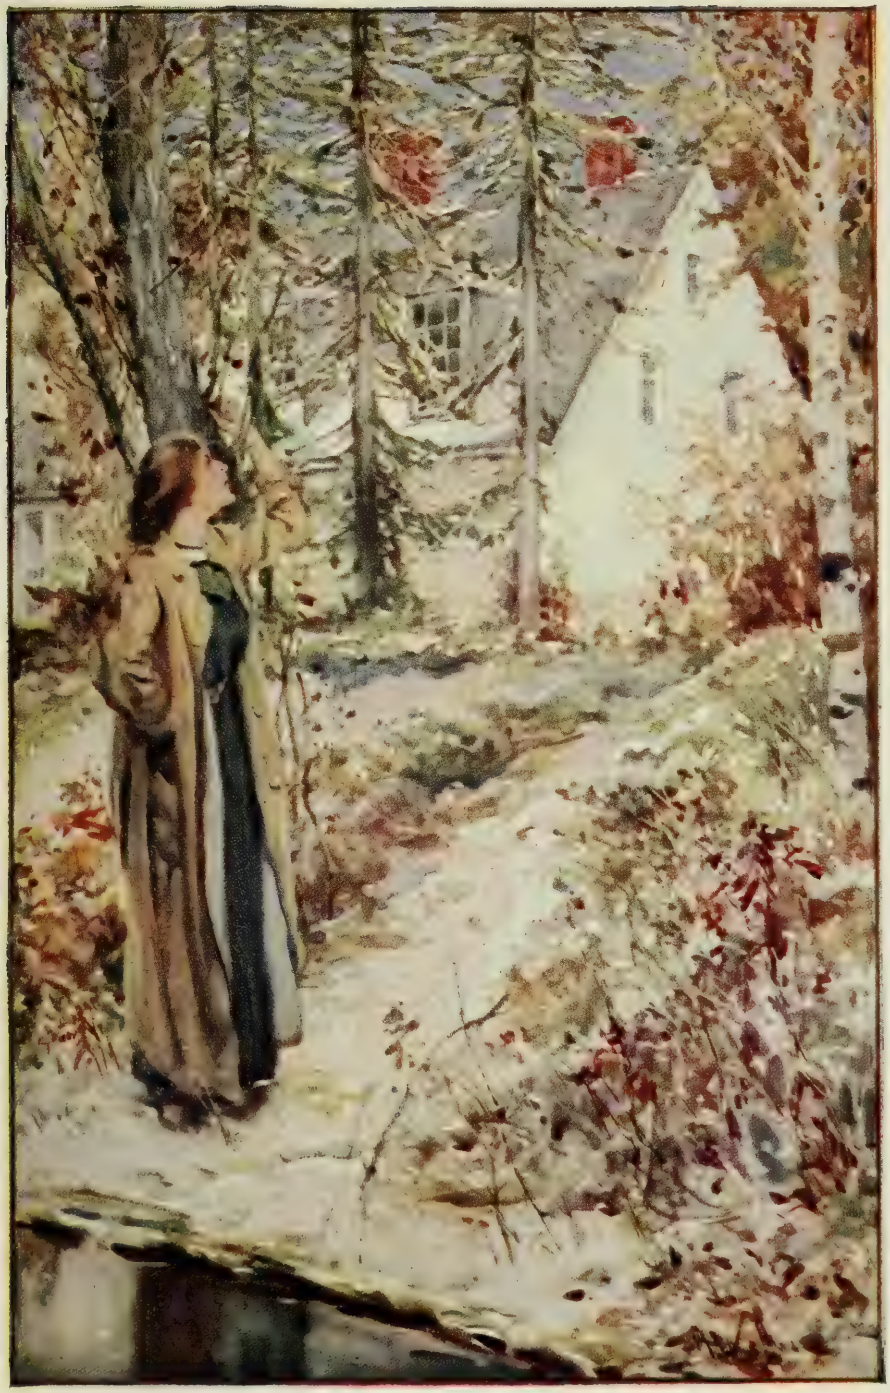
"When our allies, Austria-Hungary and Italy, in maintaining their interests are attacked—although this is not the present prospect—by a third party and thereby threatened

THE BULGARIAN COMMISSARY

Red Cross stores leaving the Bulgarian headquarters at Stara Zagora for the troops at Adrianope and Tchataldja.

in their existence, then we, faithful to our compacts, will take their part firmly and decisively."

In reply to the charge made, the Socialist leader, Herr Ledebour, that the Government was cultivating a conflict with Great Britain, the Chancellor declared that during the Balkan crisis Great Britain and Germany had worked together in the most loyal and confidential spirit.——The Triple Alliance, or *Dreibund,* of Germany, Austria-Hungary and Italy, was renewed by common consent for three years more, five months ahead of its natural expiration. The changes in the agreement desired by Germany



and Austria were not acceded to by Italy. ——M. Poincaré, the French Premier, in addressing the Committee on Foreign Affairs, exprest the determination to maintain "the alliances and friendships" of France. Every one of the Great Powers had declared that it would not seek territorial expansion. France's chief interest lay in the loans made to Turkey, and in case the Balkan States annexed part of Turkey, they would, he said, be held responsible for a share in the Ottoman national debt.

The Greeks Continue Fighting

The refusal of Greece to join with the allies in the armistice was apparently in order that she might continue her conquests and so come before the peace conference with more cards in her hand. This view is supported by the activity shown since the armistice by the Greek army and navy. A Greek squadron of six vessels appeared at the entrance to the Dardanelles on Saturday. The Greeks have not yet captured Janina and they objected strongly to the clause in the armistice allowing the besieged city to be revictualed, but they are trying to gather in as much of the rest of Albania as they can before a halt is called. Leaving Janina invested behind them, a part of the Greek forces have pushed on about 50 miles to the northwest and occupied Delvino and Argyrokastro. The frigate "Penelos," proceeding up the Albanian coast, fired a few shots at Avlona, where had been hoisted the new banner of Albania. The island of Saseno, at the mouth of Avlona Bay, has been occupied by the Greeks in spite of the protests of both Austria and Italy. ——Disgraceful conduct on the part of the Greeks in Salonika is charged by foreign correspondents. Altho most of the people welcomed the entrance of the Greek troops with enthusiasm, and even the Mohammedans seemed quite reconciled to the change of sovereignty, the Greeks behaved like conquerors instead of liberators, and looted the stores of the Jews and robbed Mohammedans on the street of their watches. In some cases the Bulgarians intervened in defense of their victims and this was one cause of the friction between the soldiers of the allied forces.

Rumania's Interests

Tho not represented directly in the peace conference at London, Rumania has manifested her intention to have her interests taken into consideration in the final settlement. The dispute between Rumania and Bulgaria dates back, like most of the difficulties now causing trouble, to the Congress of Berlin. Rumania, having fought by the side of Russia thru the hard campaign of 1878, from Plevna to Adrianople, had a natural expectation of sharing in the spoils of victory. Instead of that Rumania lost ground, for, when Russia made peace with Turkey at San Stefano, the territory of Bessarabia was taken from Rumania by Russia. An attempt was made to compensate Rumania by annexing to Rumania the Dobrudcha (Dobrudja), south of the Danube. This incensed Bulgaria without satisfying Rumania, for Bessarabia as a part of ancient Moldavia belonged properly to Rumania, as did the Dobrudcha to Bulgaria. But the Congress of Berlin, with its usual disregard for the bonds of consanguinity and religion, ignored the protest of Rumania, and in this particular confirmed the Treaty of San Stefano. Rumania, since it became independent, has been peaceful and prosperous, and Bessarabia would have been better off as part of that kingdom than it has been within the Russian Empire. It is true the Jews have been ill treated in Rumania, but there have been no massacres like that of Kishinef in Bessarabia. But since there is no chance of getting Bessarabia out of Russia's clutches, so now Rumania, as compensation for her neutrality in the present war, asks for more of the Dobrudcha, presumably a slice from Rustchuk to Varna, that is, some forty miles more of the Black Sea coast. The Rumanians, as the name implies, claim Roman descent, and their language is more Romanic than Slavic, like the Bulgarian and Servian. The literature of Rumania is chiefly known to the public thru the translations of Queen Elizabeth, who writes under the pen name of "Carmen Sylva." The Queen, who is now nearly seventy years old, has in the present crisis earnestly endeavored to keep her country from being dragged into the war.

ILLUSTRATORS AND THEIR RECENT WORK

By WILLIAM ASPENWALL BRADLEY

THE history of the illustrated book reaches about as far back as the history of the book itself. Egyptian papyri were often adorned with colored illustrations, and there are in existence specimens of this art which date from the fifteenth century B. C., such as the famous "Book of the Dead" in the British Museum. A respectable ancestry, surely, for the sumptuously illustrated holiday gift-books with which the book store counters break into bloom every year before Christmas, like tulip beds in April!

In classic times, too, there were illustrated books, or illuminated manuscripts, which amounts to the same thing. They were executed on vellum, and apparently the first reference to a *gift-book,* as such, occurs in the Roman poet Martial, who, among a series of inscriptions for gifts of various kinds gives one for a copy of Virgil, with the portrait of the poet as frontispiece. It is interesting to note that, according to Mr. J. A. Herbert, in his work on "Illuminated Manuscripts," two of the only three surviving examples of the classic illustrated book are Virgils. This might be taken as a hint by the modern publisher in search of suitable subjects for his staff of illustrators. Indeed, a pictorial edition of the "Æneid" is one of the things to which we may confidently look forward in the near future, judging by the fact that among the present season's illustrated books is a *Marcus Aurelius Antoninus,*[1] with full-page drawings in color! A delicate compliment to Mayor Gaynor, no doubt, and one which he will appreciate.

The illustrative art of the Middle Ages has come down to us in great store, and the wonderful Missals, Breviaries and Books of Hours produced by monastic craftsmen and presented to mighty princes, were the most magnificent gift-books the world has ever seen. They past, however, with the invention of printing, the physical conditions and practical limitations of which favored the development of quite another type of illustrated book. From the famous Florentine masterpiece, the "Hypnerotomachia," down to the last decades of the nineteenth century—so long, that is, as the pictures were cut or engraved on the block by hand to print with the text—illustration remained exclusively a black and white linear art; and it is only within recent years that, owing to the perfection of photo-engraving and of the color press, there has been any serious break in this tradition. Modern process work, by bringing the resources of tone and color within the range of reproductive possibilities, has greatly increased the scope of the illustrator. It has removed from him practically all restrictions, and has enabled him to become a painter rather than a graphic artist in the stricter sense. But it has, at the same time, done much to destroy the specific character of illustration, and has almost entirely destroyed the integrity of the illustrated book as a complete and coherent work of art.

In the first place, process pictures, whether in black and white or in color, must ordinarily be printed on a different kind of paper from that on which the text is printed, and must be bound in separately as inserts. (This "separatist" tendency is even intentionally emphasized and exaggerated in such a book as *The Arabian Nights,*[2] where the pictures by René Bull are "tipped" in on mounts of heavy dark-colored paper.) But a book

[1] MARCUS AURELIUS ANTONINUS: *Illustrations in color by W. Russell Flint.* New York: B. W. Dodge & Co. $3.50.

ONE OF M. DULAC'S ILLUSTRATIONS ("TO HELEN") FOR POE'S "THE BELLS AND OTHER POEMS" (DORAN)

constructed in any such way is an album rather than a book, and is not so much illustrated as it is *extra*-illustrated, in the language of the bibliophile. For the pictures here form no such integral part of the whole fabric, as they do in either the early printed book or the medieval manuscript. And, while it is idle to quarrel

with what has long since become the universal usage in modern book making—the only practical basis on which it is possible to have elaborate color illustration at all—it is just as well to recognize frankly the price we pay for such embellishments; especially as, at the present day, there is shown, in other directions, an intelligent desire to give the important illustrated book a superior unity by the more frequent use of end-papers, etc., and by entrusting the entire decorative scheme, including the cover, to a single artist. Also, there has never been a time, within the memory of the present generation, when the general standard of typographic taste was higher in books of this character, or when a greater restraint was practised in the employment of extraneous ornamentation thru the text itself.

But to return to the subject of illustration. Mr. Frank Weitenkampf, in his recent work on *American Graphic Art*,[3] remarks that "the ease of reproducing drawings in wash or oils has dimmed to sight the essential significance of line. The close relation," he says, "between the printing type and the line drawn illustration, ornament, or initial, is apt to be overlooked." This is stating the case mildly. As a matter of fact, linear draftsmanship which, because of its typographic quality, is, *par excellence*, the illustrative art of the printed book, is today almost a forgotten art. It still finds employment, it is true, as in many of the present season's illustrated books, but, for the most part, merely as an humble adjunct of glowing color pages, and it is sadly degenerate. Cultivated quite casually by painters who are no longer obliged to rely on it as virtually their only medium, and who therefore have never taken the pains thoroughly to master its technique, pen-and-ink ceases to have either real style or complete representative competence. Thus Mr. Rackham's line-work, as shown in his *Æsop's Fables*,[4] is but a facile and affected formula for telling a story and for getting certain coarse decorative "effects" of humor, sentimental prettiness and pure fancy. And while his black and white drawings do not lack that "graphic" realism and that power of poetic suggestion which completely satisfy the impressionable observer, they are too superficial to bear any very close critical inspection.

Mr. Robinson, in *The Four Gardens*,[5] as well as in a number of other books—for he is one of the season's most prolific producers—dabbles in many styles, without, however, attaining marked proficiency in any of them, and without, apparently, giving the least consideration to the typographic quality of his line, which runs heavy or light, thick or thin, at will, (I say "apparently," for it is impossible to determine how much of this variation is due to the engraver, it being another of the vicious tendencies of process work that, since reduction to any scale is now possible, the artist can no longer absolutely control the reproduction of his work, or be sure that his indications as to size will be accurately followed.) Mr. Dulac's black and white, which tends toward a more formal decorative order, shows some study of the graphic arts of design as they were practised in France in the eighteenth century, tho this year he has rather broken away from "period" style in *The Bells and Other Poems*.[6]

But it is by their work in color that all these artists will be judged, primarily, and technical questions concerning the art of the illustrator as such will be disregarded in favor of the question as to how they have availed themselves of all the polychromatic resources of the magical color press. For it is the peculiarly insidious danger of the colored illustration, as opposed to every other form of process work, that, by virtue of the direct appeal which it makes to the primitive color sense, it tends to divert attention still further from considerations of intrinsic artistic excellence and appropriateness. Here it is apt to be a matter, no longer of the disregard of sound illustrative principles merely, but of the primary principles of pictorial art itself. The demand for color tends to obscure

all other demands, and the illustrator who can neither draw nor design acceptably has only to cover his pictures with paint in order to cover himself with glory. Color, indeed, is the easiest cloak for mediocrity, and the very sumptuousness of the season's illustrated books merely serves to emphasize the ordinary character of much of the art thus magnified in importance by the manner of its presentation. Few illustrators have learned the lessons taught by that admirable artist, Boutet de Monvel, who appears again this year with a series of drawings for Maurice F. Egan's *Everybody's Saint Francis*[7]—lessons of taste and sobriety, intelligence and skill, and, above all, of the value of flat surfaces of clear color employed to strengthen and accentuate the design rather than to confuse and obscure it. Neither Mr. Rackham nor Mr. Dulac approaches him—tho, of the two, the latter comes closer and is the more interesting artist—and they are his two most popularly successful competitors at present.

Yet there is no lack of honest and even attractive work in this field, and without attempting to be exhaustive in what is intended rather as a brief *résumé* of current tendencies than a mere catalog of titles, we may undertake to signalize a few of the more satisfactory recent examples. Incidentally it may be noted that the majority of the big illustrated books are manufactured in England and show the work of English artists. This is natural, for British art has always displayed a fondness for pictures that tell a story, which is of course the very essence of all illustration. Thus a man like Hugh Thomson, who this year adds *She Stoops to Conquer*[8] to his last year's "School for Scandal," and who combines feeling for sentimental and dramatic situation with a certain decorative daintiness and attention to truth of historic detail in costume and house furnishings, comes well within the traditions exemplified by so many Royal Academicians. Belonging somewhat to the same school, tho laying rather more stress on the figures in his compositions and less on the background accessories, and employing a broader and bolder method of decorative treatment, is Mr. C. E. Brock, who contributes a series of drawings to a new holiday edition of *The Broad Highway*.[9] This is one of the few illustrated works of current fiction that call for special attention, in spite of the fact that many novels at this season make a special feature of color pictures, or at least of colored frontispieces. Mention should, however, be made of Mr. N. C. Wyeth's drawings for Mary Johnson's new novel, *Cease Firing*.[10] This American artist, represented by two other books in the season's output, a reprint of John Hay's *Pike County Ballads* and James Baldwin's *The Sampo*, bids fair, more than any other graduate of the Howard Pyle school, to take the place left vacant by the death of its master, whom, indeed, he already surpasses in certain respects, notably in his better feeling for decorative color—Pyle's color was often harsh in quality and violent in its tonal contrasts—as well as in sincerity and depth of human interest.[11]

Among the larger and more important illustrated reprints of standard English classics there must not be overlooked Shakespeare's *Romeo and Juliet*[12] done by William Hatherell, one of the best of English illustrators, who has hitherto worked mainly in black and white and who is closely identified with the literary fortunes of Thomas Hardy; and *The Pickwick Papers*, with pictures by Frank Reynolds, R. I.[13] Both these books take their places in extended sets of the authors' works which are thus being built up volume by volume. It would take a large book shelf—more than five feet surely—to hold them all. And then, too, there is still another, *The Compleat Angler*, to

[7] EVERYBODY'S SAINT FRANCIS. *By Maurice F. Egan.* Illustrated in color and in black and white half-tone by Boutet de Monvel. New York: The Century Co. $2.50.

[8] SHE STOOPS TO CONQUER. *By Oliver Goldsmith.* Illustrations in color by Hugh Thomson. New York: George H. Doran. $5.

[9] THE BROAD HIGHWAY. *By Jeffry Farnol.* Illustrations in color by C. E. Brock. Boston: Little, Brown & Co. $3.

[10] CEASE FIRING. *By Mary Johnson.* Illustrations in color by N. C. Wyeth. Boston: Houghton Mifflin Co. $1.40.

[11] THE PIKE COUNTY BALLADS. *By John Hay.* Illustrations in color and black and white by N. C. Wyeth. Boston: Houghton Mifflin Co. $1.50.

THE SAMPO. *By James Baldwin.* Illustrations in color by N. C. Wyeth. New York: Charles Scribner's Sons. $2.

[12] SHAKESPEARE'S TRAGEDY OF ROMEO AND JULIET. *Illustrations in color by William Hatherell.* New York: George H. Doran. $4.50.

[13] THE PICKWICK PAPERS. *By Charles Dickens.* Illustrations by Frank Reynolds, R. I. New York: George H. Doran. $5.

MR. PICKWICK AND MRS. BARDELL

add to the thousand or so that have gone before, this time with designs from the hand of J. H. Thorpe.[14] There are also a number of pretentious travel books, but these must all yield precedence to John La Farge's *In the South Seas*,[15] with sketches from among those which the artist so often exhibited—little jewels of

[14] THE COMPLEAT ANGLER. *By Izaak Walton.* Illustrations by J. H. Thorpe. New York: G. H. Doran.

[15] IN THE SOUTH SEAS. *By John La Farge.* Garden City, N. Y.: Doubleday, Page & Co. $7.50.

pictures, rhythmic in line and magically intense in color. But this work, like Professor Fenollosa's *Epochs of Chinese and Japanese Art*[16] and Joseph Pennell's *Pictures of the Panama Canal,*[17] really belongs in quite another category from that of the books we have been considering, and it is enough just to refer to them here in passing under the present rubric.

It is the same with the juveniles, of which there are hundreds; so we will confine ourselves to the statement that Professor Tatlock's and Mr. Percy MacKaye's *The Modern Reader's Chaucer,* tho the publisher, and the artist, Mr. Warwick Goble, have done their best to make it appear so both in pictures and in general getup, is really not a juvenile at all, but a book for adults.[18] On the other hand, if *The Book of Discovery,* with its tasteful dress, and its quaint old woodcuts, which convey many a lesson to the modern pen-and-ink artist, really does tremble on the verge of the juvenile list, so much the worse for the grown-up reader who does not discover it for his own delectation. Natural history, rather than art pure and simple, is perhaps the principal appeal both in Edward J. Detmold's illustrations for a holiday edition of Maeterlinck's *The Life of the Bee*[19] and in Joseph M. Gleeson's drawings for

ONE OF N. C. WYETH'S ILLUSTRATIONS FOR "PIKE COUNTY BALLADS" (HOUGHTON)

I ax yer parding, Mister Plinn—
Jest drap that whisky-skin!

[16] EPOCHS OF CHINESE AND JAPANESE ART. *By Ernest Fenollosa.* New York: Frederick Stokes & Co. $10.

[17] JOSEPH PENNELL'S PICTURES OF THE PANAMA CANAL. Philadelphia: J. B. Lippincott & Co. $1.

[18] THE MODERN READER'S CHAUCER. *Now first put into English by J. S. P. Tatlock and Percy MacKaye.* Illustrations in color by Warwick Goble. New York: The Macmillan Co. $5.

Kipling's *Just-So Stories.*[20] But Art, with a capital A, reasserts itself almost with a shriek in such a volume as *Ballads Weird and Wonderful,* where the black and white designs by Vernon Hill do their best to live up to this title.[21] In *The Transformation of Ling,*[22] with twelve excellent drawings, also black and white, in the Chinese style by Ilberry Lynch, the season has its one conspicuous novelty, unless we account as such a book like Burges Johnson's *Childhood,* illustrated entirely with photographs, which may very possibly be prophetic and point the way to a wholly new type of illustrated holiday book in the not distant future.[23]

For the rest, we forbear to particularize. The big books shade off into all shapes and sizes of little ones, and there is the usual riffraff of pictorial and decorative booklets, boxed or unboxed, which lead down by gradual degrees to the Christmas card. Favorite essays, poems, sermons and sentimental effusions concerning success, girls, and gardens, are thus enshrined with appropriate flowers, leaves and fanciful faces of young women and children. For we are never allowed to forget—tho frequently we would fain do so—the sempiternal pulchritude of the American maiden as she is portrayed in all her self-conscious postures and poses by the artists whose names we have long since come to associate with this style of work, each with a special type of innocent *ingenue* or hoydenish soubrette. There are Harrison Fisher Books and Christy Books, as for years past. There are *Rosebuds* by Henry Hutt and *Kitty Cobbs* by Flagg. And there are many others. Indeed, such books still remain the most characteristic products of American illustrative art as it is so prominently displayed in advance of the holiday season, while we continue to look mainly to France and to England for artists to realize the fuller pictorial possibilities of fairy tales, folklore, and the classics of English literature.

The Revolutionary of Olympus

A Ballad of Modern Greece, Rendered in the Original Meter

BY LEWIS PARKE CHAMBERLAYNE

KISSAVOS and Olympus, the two mountains, fall to chiding,
When, turning round to Kissavos, so speaks the old Olympus:
"Kissavos, strive not so with me, thou trod-by-unbelievers;
I am that old Olympus who thruout the world am famous;
Two and forty peaks are mine, and two and three-score fountains.
For every fount a rebel flag, for every bough a warrior.
Upon my very highest peak of all there sits an eagle
Holding a warrior's severed head fast gripped between his talons.
"Tell me, O head, what didst thou do, that thou art so disfigured?"
'Devour, O bird, my youthful strength, devour thou, too, my courage,
And make thy quills a cubit long, and a span long thy talons.
At Luro and Xerómero I stood in arms, a warrior,
At Khasia, on Olympus, for twelve long years a bandit;
Threescore Aghas have I slain, and laid their homes in ashes;
And whom I made to bite the dust, of Turks and of Albanians,
Are many, O thou bird, I tell thee—a host no man can number.
But at the last my turn too came to fall amid the battle."

COLUMBIA, S. C.

CONTEMPLATIVES

By JOHN MASEFIELD

WHATEVER we may believe or disbelieve, and however happy or wretched we may be, in spite of our confidence, we all have moments of revelation, according to our fitness, and moments of interpretation, according to our power. We do not get thru life without being brought to our knees from time to time by revelation of some kind. Whenever life is exalted, or torn from its usual round, or simply hit, we have a revelation of what we may call Fate, or Human Destiny, of its greatness, its complexity, its power, often, seemingly, a blindly cruel power, its difference, at the least, from our normal conception of it; and we set ourselves, more or less awed, to find a meaning in it, to interpret it, to discover some way of complying with this strange thing's needs, if it has any; of learning its mind, if, as many doubt, it has a mind; and serving it, if, as some still hold, it can be served. Some bold souls, putting their strength into their work, do none of these things, but accept it with respect. It may be that a great event in life does no more than call up something fresh and unused in the nature; it may only cause an excitement and rallying of the brain's cells, so that they exaggerate what may be simply natural, as natural as a leaf's fall in autumn, or the dropping of a brook over a cliff. Moments of mental splendor, the accidents of tragedy and the savagery of death, may, conceivably, be due to nothing more than changes in a few cells, and we ourselves may be only sports, strangely insane apes, with too high a sense of our own importance. We do not know anything; even this, unless we have faith; but if we have faith we measure life by the great event, and count as specially lived those days about the great event when we had suggestions of something bigger than ourselves, suggestions of reality, beauty and order, apprehensions of something stable, behind the flowing and ebbing of life, and apprehensions of something divine, some quality of mind or soul, outside us, more real than us, which we approach at our great times and make our own at supreme times.

The Churches in most countries have taken care to give a special significance to these great times as they occur in the process of human life. They have enlisted to help them many of the best poets, and all the best artists, all those, that is, who have exprest most vividly their faith, that outside this life there is a more real life, of which this life is only the shadow; and fortified thus, and still further by long generations of noble lives lived in the faith of that great life, they have had power to influence the minds of the many, at all the great times of life if not always.

So many noble men have strengthened the faith by showing to what hights men may march under its banner, and to what beauty of mind and power of executing hand men may attain, only by believing, that today we are made richer, at all holy moments, by a body of thought not our own, but left to us from the holy moments of others, a wealth so great and common that we never think of it, but which makes up fully half of all that we believe. We today believe, if we do believe, because others believed; and however much we may disbelieve at ordinary times, the great moment shows us pretty plainly that deep down we are in the Church of the European mind, and that

we stand or fall, as souls, by that Church's revelation. Modern life is largely external, and our great moments are soon clouded over by those multitudinous strokes from outside which cross-hatch our souls for us. Very soon, even when they come, these glimpses disappear, and then, to most people, the flowing and ebbing of life takes on its old importance as matter enough for the mind; since poetry, at its best, we say, is only make-believe, and faith a negation of reason, and art a synonym for immorality, and all these things unpractical and filled with buncombe, dreams and sick man's fancies, as those who are given to such practices hear from their relations, often enough.

Then on some special day there may come a moment, helped by some accident, or trick of health, when our inmost selves take power, knitting up all doubt into certainty, resolving the fluent into order, so that we stand apart, united within ourselves, possessing ourselves, while the pageant goes by us and the stars move over us, contributing to our knowledge and delight in life. We know, then, that we possess our own souls; and the knowledge and the delight make us long to prolong the moment, to have that possession always. Then the world comes in again, and we are caught on the wheel of the world, and carried round on the circumference, poles no longer.

We all know the words, "What shall it profit a man if he gain the whole world and lose his own soul?" Most of us have felt how difficult it is to gain possession of the soul in a modern city, where the whole world, with its fever and glitter, is offered instead; and we may have envied the dweller in some less distracted city, nearer some haunt of peace, mountains or the sea, who could look at once on tumult and on loneliness, and find his soul in the midst, and not find, as we do, so many substitutes for thought, the desire to heap up knowledge or to gain wealth, the desire to bathe in the many-colored tide of life, always flowing up and down in the market place, or the desire to destroy life, some other person's life, by arms and armies, or the desire to stifle life by varieties of pleasant ease. Such an one, we think, must have seen in clear images, burningly distinct, the truths and the order of the life beyond; he must have felt that life beyond interpenetrating this life, more often and more fully than we can feel it; and however much we praise modern civilization, with its outward order and wealth of knowledge, its power over the outsides of things, and its honest pessimism about anything else, we sometimes wonder whether that earlier, simpler mind did not live a more real life than ours, did not see, beyond the husks of things, to what is precious to the real man, and, grasping that, did not find a beauty and an illumination which we, for all our power, do not know.

We wonder thus, and then put the wonder away with the memory that earlier man had no police force and no water supply, that one could smell medieval Paris for nine miles on a cloudy southwest morning, and medieval London, I suppose, for nine and a half or even ten. Then we go on to say that monkery and all the rest of it was foolishness, and religious ecstasy, hysteria, and that if you make yourself half mad by living away from your fellows, and the other half mad by starving your brain and exciting our nerves, you do become wholly mad, and naturally see things, highly exciting things: "dreams out of the ivory gate, and visions before midnight." So we shut it all from us, denying, not the possibility, for we think most things possible, but the sanity of any one unlike ourselves.

In most countries and at most times there have been people who have taken those poetical glimpses, those flashes at the great times of life, as gleams of reality, of the real life, as gleams from a state of the soul to which the soul can permanently attain and in which she can clap her wings, free from her cage a little, in which she can attain, as it is called, union with the divine body, and live in that divinity more fully and freely than in the unillumined earthly life.

In the East today and in Europe in the Middle Ages the multitudes of such believers could not be counted. In Europe here, for many centuries, over an incredible gamut of generations, large numbers of people, very like ourselves,

past their thinking lives, not in questioning, nor in denying, but in the contemplation of a spiritual world and a spiritual nature greater than this world and greater than an earthly nature, to which, by discipline and labor, thru mercy vouchsafed, man's soul could attain. They had mapped out that spiritual world in a singularly precise way, as tho they had explored its boundaries, they had peopled it with a glorious company of souls made perfect, and they had thought out rules by which men might come to the inward vision and possession of it. Their conceptions and imaginations of this spiritual world made a magnificent imaginative inheritance, which soul after soul enjoyed, and made more splendid, century after century, till man's conception of splendor ceased to be spiritual. As far as any one thought at all, during some centuries of humanity, he or she thought of this spiritual kingdom.

Those men who thought this life a little thing, and desired to give it up so that they might seek that other life, "to be with Christ, which is far better," to become what is called religious contemplatives, could always, if they chose and could endure it, enter societies of men similarly minded.

There are and have always been two ways by which the monk can tread to perfection and come to know his higher nature; both are difficult and painful, and the religious in many cases made use of both. There is the way of the monastery with its moderately severe routine of worship, manual work, scanty food and frequent religious observance, endured by many together as directed by trained minds long in religion, and according to an order imposed by authority over (perhaps) many religious houses; and there is the way of the hermit or anchorite, who lives a life much more hard in utter solitude, in a wild place, on an island in the sea, in a forest, on the top of a stone column, or in a cave on a hill; in some place, that is, where there is nothing to come between his seeking soul and God. In the early days of the Church, the latter, the way of ascetic isolation, was the more common.

The almost immediate reward of all this beating down of self was an inward sweetness and happiness, gracious and consoling to all who felt it, a sort of earnest of spiritual treasures still to be given, a blessed faith and gladness, very beautiful, but yet dangerous, because its sweetness was apt to beget "an exceeding vain desire to speak of spiritual things . . . and even at times to teach them, rather than to learn"; and because it bore "a strong resemblance to the monk's own desires and delights." It was necessary to persevere upon the way, past this stage, and the monk found that just when he had begun to attain to some strength in God, beyond this stage, not long, that is, from his entering religion, the sweetness and gracious consoling happiness ceased; the religious seemed to be in what was called a darkness or a dryness, "the which to them," as St. John of Yepes says, "is passing strange, as everything seems topsy-turvy." This state of stypticity was an anxious and frightful state, in which the individual felt himself shut off and kept from the service of God in spite of his longing to do so. A great saint explains that this state occurs when the properties and strength of the senses are withdrawn from mind and body and transferred to the soul; and that the misery caused by it is by reason of the novelty of the change. The misery is acute and horrible, it is a feeling that God has deserted the sufferer and a dread that He has done so in wrath at some sin committed.

The next step in spiritual progress is generally vouchsafed as a gift not won by labor. It comes as a refreshment to the soul still puzzled in the darkness, and it appears as a fire of the love of God, springing up warmly and brightly in the darkness, till the soul is "so sick for very love that she pants after God, like as did David." It comes not all at once, but gradually, sometimes after many years, and leaves the soul more free upon her progress toward divine union. At this point the soul and the sensitive man have become one, since the sensitive man has acquired the spiritual longings of the soul. The united being is ready to undergo the second or greater night of purging, "which is a fierce and terrible making naked, a stripping of powers, affections and senses, leaving the mind dark, the will stranded and the memory

void," and the desires of the soul in blackest misery, because of her foulness and the excessive splendor of the divine light now poured on her. In this dark night the soul is purged of its foulness as the fire of the divine love gradually takes hold upon it and illumines it, until, to the very few perfected souls, it is granted to be made one with the divine love, when the soul enters a state of ecstasy so intense that those who have attained it speak of it as union with God and partaking of the divine nature.

It is perhaps necessary to say that the monk was not always so far removed from the world that his life was abnormal, useless, starved, remote from human experience, and feverish. Many, but not all of the great contemplatives, have lived lives of intense earthly activity, wrestling with kings and nobles, founding schools, colleges and religious houses, administering estates, ruling brotherhoods, attacking heresies, rooting out error, and in all things trying to make the outer earthly nature active for good, as active as the figure of Christ, who drove out the money changers, and washed the feet of His disciples, and gave the multitude food. They strove to make themselves vessels of Christ, exponents of the spirit of Christ, and they sought Christ's cross cheerfully, wherever it might be found most heavy, in the world, the monastery or the wilderness.

The idea that inner and outer correspond, and that an act on the earthly plane has its reflection in the spiritual kingdom, never very distant from the religious mind, inspired many minds not in religion and led to another kind of contemplative life, of which the very noble speculation, a noble madness as it is now called, became most noble at about the time when the religious houses were ceasing to attract the finer kinds of thinker. I do not know what led to this decline of the religious houses, if there was a decline, as some doubt. Perhaps the world became more attractive, as more of its wonders were revealed, or perhaps the machine of the monastery was worn out, was not big enough for the minds now pressing into the world on their march to union with the divine mind. But the Reformation came, and a sea of spiritual energy which would otherwise have past thru the religious houses, past over them; and after that had happened, and until much more had happened, the alchemist, not the monk, is perhaps the typical religious thinker.

The alchemists had very real chemical knowledge; but it is generally best to interpret their language spiritually. The names of the processes show that the alchemist, like the religious contemplative, knew all the steps of the road to the divine nature. Each process corresponds with a step known by the religious.

The processes were calcination, or purgation of the stone, or the initial steps of the religious life. Dissolution, or the Black State, the misery of the first night of the soul. Separation of the subtle and gross or the first kindlings of divine love. Conjunction or the mixing of the elements. Putrefaction, or the dying of the earthly nature. Congelation, or whiteness, the sign of success. Cibation, an excess of the Congelation and sublimation, or glittering whiteness. Fermentation, the mixing of alchemical earth and water, and Exaltation, or accomplishment.

Some think that a few of the greatest alchemists did really attain to exaltation, in their souls and experiments alike, and found the incorruptible gold and transmuted metals with it, and became themselves immortal, so that they live still somewhere. Whether it be so or not, alchemy gave a way of life to many noble men of fine intellect, and the world's mind is finer because of it; but gradually, with the growth of mind and the multiplication of experiment and modes of action, as the world and man grew larger together, three or four alchemists working independently discovered facts which made much of their belief untenable. Very unjustly, people made use of these facts to throw contempt on the whole science. The spiritual side of alchemy, which had certainly been growing dimmer as the experimental side became more interesting, was now forgotten or ignored, people began to speak of alchemists as charlatans and bunglers, who hid their ignorance under a symbolism of Green Lions, Red Dragons and Baths of Mary. The natural philosopher, who corresponded with the Royal Society, seemed, on the whole, the two being compared, a much safer, more desirable figure. The natural philoso-

pher's study had none of these symbols about it. "No lion shall be found there, nor any ravenous beast shall go up thereon," they exclaimed, quoting Isaiah, "but the redeemed shall walk there." The best alchemists were too scientific to maintain an impossible position, and modern chemistry began when they surrendered. Alchemy was put upon the shelf, as a part of the lumber of the world's brain. It has only quite recently been restudied as a spiritual way.

When alchemy came to the ground, thought ceased to be religion. Thought began to undermine religion as it had undermined alchemy; and altho much of Christianity remains, it is not now a light illuminating the multitude.

Nowadays the Universal Church is shattered and the Universal Art contemned. There is no longer any great idea common to the mind of Europe; the uncommon mind can no longer make himself intelligible to the common mind; the two kinds of mind talk different languages, and the uncommon mind, trying to express himself, must invent his own creed, consecrate his own symbols and imagine his own ritual. He cannot sit in the sun of a common faith; he strikes a light from his own box of matches, and has the pleasure sometimes of being taken for a star.

It is difficult to say who in this age can be called contemplatives, seeking union with the Divine Nature, tho all seek it somehow, according to their enlightenment. It has been urged that artists are the people most like the religious of past times; but all who set themselves to attain mental or spiritual power take the three vows of the monk, and fight the rebellion of the alchemical sulphur, and walk the dark night, often enough.

One is very doubtful of the artist's claim. Since the first chemists made an end of the last alchemists, and the first rebel brought the Church into question, artists have tried many ways to bring a way of peace to the soul of the world. We have seen them inventing feverish creeds out of the welter of their own emotionalism, and regarding their own intellects as the divine things, and taking it upon themselves to judge and to apportion praise and blame; we have seen them self-indulgent and experimental, turning from some ways and trying others, eating out their hearts, while "the Devil and their own fancy," as St. John of the Cross says, "play fantastic tricks upon their souls." All ways must be tried; a soul upon her road to the divine nature gets her strength from retrieving false steps, and art as a way of self-perfection is as difficult as any other and as manly. Perfect art is an expression of a perfect humanity, and a man wrestling with the world, so that he may come to know and to utter wisdom and beauty, has to fit himself, body and mind, to perfect his tabernacle, by hardness and light, and unceasing exercise, as a dwelling place for the vision. Whatever limits the man limits the art; the art is the man; the perfect art is the perfect man.

But looking at the art of this time, one can see very little that can be called the work of a religious contemplative, or the fruit of deeply devout feeling in a manly mind. There is a great deal of power, a good many feverish creeds and curiosities, some careful and rather dreary looking out upon the world, with an eye on its weak spots, and in the finer souls there is a noble but sad resignation, as tho all ways have been tried, and this world is all, with nothing beyond, and this world no such wonder, but a place of headache and vulgarity, of stupid and cruel doings, with the grave at the end, and widowhood and orphanage two decorations of it. There is in nearly all art of the time a want of anything that will feed the soul.

It is better to deny with brave men and to question with active men than to comply with hens and be at peace with the rabbits; but denying and questioning do not feed what is best in man, any more than a looking out upon the world, with a hard and critical eye, or with a receptive, uncritical eye. Art has failed to supply the soul of this time with necessary food. It offers nothing to the soul, nothing glorious like the food offered by the monk, or great like the food offered by the alchemist. If we could imagine a heaven made up of public libraries and post-impressionism we should probably reject it.

Since the monk, the chemist, the natural philosopher and the artist have

ceased or failed to provide a way for the multitudes desiring spiritual peace, and since, looking round society, it is difficult to see any body of men offering a new way, the question arises, what does it matter? Why should we bother about the kind of spiritual help obtainable from the ages' typical religious thinker? All this hunting for a guide, or master pilot, some one to trust in and to follow, leaves one no more certain; for the philosopher of one year is the charlatan of the next. Like the cleric in Browning's play we have all known five and thirty leaders of revolts, and one knows not how many last words of Mr. Baxter. Inner peace, tranquil happiness, the possession of the spirit and all the spiritual gifts are not to be got by reading the new book and listening to the old fossil. If we want them, they are within ourselves, here and now, near the surface or not as the case may be, waiting to glorify our work here whatever it may be; and we can get them, if we want them, as they have been got in the past, by the contemplative man. We know that the contemplative man got them, and what he did we can do. We can get them ourselves by trying for them and paying the price, and in no other way. And what is the price? The monk and the alchemist paid themselves, and got, as they declared, God, for the price paid. For the same price really paid down, without haggling, we can have the same reward. When we come to look at the price paid and to ask, "Can we pay this? Is it really worth it?" we realize more the heroism and the nobility of those old dead thinkers, who paid the price, centuries ago:

"Casting down imaginations, and every high thing that exalteth itself against the knowledge of God, and bringing into captivity every thought to the obedience of Christ."

That was the price paid, and it was paid very cheerfully by thousands of earthly men and women, who were the happier for paying it. And if we, whose lives are so much wider and finer than theirs, will pay that price, not leaving the world as they did, but making the world our monastery, and our work our laboratory, we, too, shall attain their Union and touch our fellows with Incorruptible Substance.

LONDON, ENGLAND.

Commercial Arbitration: A Hopeful Outlook

BY CHARLES L. BERNHEIMER

[Since its inception, some fifty or sixty matters of dispute brought before the Chamber of Commerce Arbitration Committee have been settled either by informal hearing as described in the following article, or thru conciliation.—EDITOR.]

WHEN the New York Chamber of Commerce turned its attention to commercial arbitration, the fundamental and controlling purpose was to find a remedy for the law's delays, which President Taft, before his inauguration and many times since, declared "Amounts in many cases to a denial of justice." In the final analyses one could hardly be charged with overstatement in saying that the law's delays are at the bottom of many of our present civic, political and economic disorders.

During the one hundred and forty years of its exisfence, the Chamber of Commerce has attempted to provide commercial arbitration in three distinct ways: The first failed because no method to enforce the award was provided; the other two because they attempted too much, for the promoters had in mind a Court of Commerce for merchants exclusively, fashioned after the Old World Handelsgerichte and Tribunaux de Commerce. Differences in laws, customs and viewpoints made such a scheme impracticable in our country.

A more modest attempt seemed in order and quite within the realm of practicability. The controlling features of

the plan now in operation under the ægis of the Chamber of Commerce, are the following:

First: Strict adherence to the provisions of the Code of Civil Procedure as found, and acceptance of their opportunities and obligations.

Second: Formal submission of the dispute, strictly in accordance with the formalities and safeguards prescribed by the existing law.

Third: Provision for a list of official arbitrators.

Fourth: Waiver of the revocation provision in the law:* we are, of course, aware that there is still some question as to whether this right to revoke can be waived, but dependence has been placed upon the honor of those submitting to a tribunal instituted by and composed of fair-minded, public-spirited fellow merchants. Nothing in our experience has yet occurred to lessen this faith.

These are some of the things the New York Chamber's system actually accomplishes:

It saves money, time and trouble to the merchant, law office and State. It supplies "technical" skill for judicial decisions because, with the large membership of the Chamber (covering practically every phase of business and commercial life) the disputants can select arbitrators specially familiar with the technical and industrial data of the specific business involved.

It affords a medium for conciliation: The antagonism present in a lawsuit is lacking. Instead there is in the attempt at arbitration itself—a recognition of and respect by each side for the other's contention. In the atmosphere of open-mindedness thus created, an amicable adjustment is frequently reached without actual arbitration.

It assures an absolutely impartial award—one that commands the respect of the disputants, the courts and the legal profession.

It establishes commercial equity: It applies the rule of reason to the actual facts, and it renders an award that is final and binding, one that *has the force and effect of a Supreme Court decision.* It admits of the disposal of a dispute within a short time, sometimes within twenty-four hours after it arises.

It offers the disputants the opportunity to select their own court, judge and jury; to designate the time of trial and hearing. They may, before the arbitrators selected by them, subpena witnesses and compel the production of books and papers as they could in a court of law.

The number of cases that can be handled simultaneously by the Chamber is limited only by the number of arbitrators on the "official list," and this may be extended to include as many as fifteen hundred names.

The procedure is exceedingly informal. Usually the parties communicate with the Chamber for information; then they are referred to the chairman of the arbitration committee and supplied with a handbook of arbitration. The chairman arranges a meeting—with both parties, where possible—and, after hearing an explanation of the matter, endeavors to bring about a settlement "out of court," if he can. In other words, he attempts by conciliation to avoid both arbitration and litigation—as would a conscientious lawyer. And in a large number of the cases considered, such informal hearings have brought a satisfactory adjustment.

If arbitration is finally determined upon, the parties decide thru which of the three methods available the arbitration is to proceed. A formal submission signed by both parties is placed before the committee on arbitration, which first judges whether or not the case is one that they can handle. The rules permit them to decline a case for any reason that appears to them good and sufficient.

The date of the hearing is set for a time that will suit all concerned—arbitrators and disputants. It takes place in one of the rooms of the Chamber of Commerce; the hearings and results are private, and are inaccessible even to the members of the Chamber except by order of the arbitration committee.

In proceeding the arbitrator is sworn in before a notary or justice of the court; the arbitrator in turn places the witnesses under oath. The arbitrator then asks either of the parties to acknowledge the genuineness of the submission and to explain the situation in his own way, just as he views it, and also to present any documentary evidence he desires, and, if he has witnesses, to produce them. After

*In substance the New York Law today permits either party to the dispute to revoke or withdraw from arbitration, by making such request in writing any time prior to the closing of the hearing. This seems unfair. It enables one of the parties to withdraw when he finds the evidence developing against him.

the witnesses have been duly sworn, their testimony is taken. The same general method is followed in hearing the opposition. An informal cross-examination, or any other form of investigation best suited, follows, of course with the assent of both parties, under the control of the arbitrator. The proceedings are taken down by a court stenographer, and the award, including disposition of the expense item, is carefully worded and forwarded to both parties. When the submission is handed in a deposit of $60 is required from each party. This serves to defray incidental expenses, such as stenographer's fees, and $10 per day—the compensation of each arbitrator. The arbitrator decides in his written award how this shall be paid and by whom. Any balance is returned to the parties.

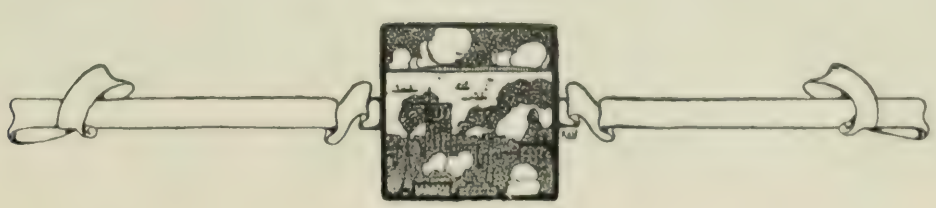
This ends the work of the Chamber.

The law provides that the prevailing party may file the award with the Supreme Court any time within a year, and obtain judgment thereon. The court must confirm the award unless it is not in accord with the submission, or was obtained by fraud or undue influence, or shows partiality; or in case adjournments were warranted and were refused. Should the award of the arbitrator contain errors that do not affect the merits of the decision upon the matters submitted, the court must modify or correct them. Ordinarily (invariably, so far in our experience) the award has been complied with without an application to the court.

Arbitration by the Chamber is not limited to its members, nor even to citizens of this country. It serves impartially every business man bringing to it his honest differences with another—whether he be a resident of this country or a foreigner.

The Committee on Arbitration has been frequently asked concerning its attitude toward the legal profession. The citing of a case submitted to the Chamber of Commerce about a month ago will answer:

> The disagreement concerned lawyer's fees a law firm could not collect from its client. Both the lawyer and the client submitted the case to the committee and were represented by attorneys who argued the case for them. It was determined in two hearings and both parties write that they cannot speak too highly of the patience, ability and fairness displayed by the arbitrators.



The National Association of Credit Men are sympathetic in this arbitration work, keenly realizing, as they do, that a business man's assets are quickly vitiated by unsettled or pending lawsuits tying up his capital.

If the national, state and municipal governments will encourage arbitration in some form similar to that instituted by the New York Chamber of Commerce, by providing for arbitration of the disputes or differences arising between it and those furnishing supplies and labor, the number of bidders will be vastly increased and the prices and terms necessarily become more favorable to the Government. From 10 to 20 per cent. can undoubtedly be saved in its operation in this manner. At present the number of bidders on contracts is reduced because the average competent merchant, thru business prudence, refuses to bid lest a dispute arise and leave him very little redress except thru a lawsuit.

International commercial arbitration on its broadest basis seems a fair possibility: a system whereby the award rendered by a Chamber of Commerce of one country will be accepted and enforced by that of any other signatory to this agreement—as court decisions in one country are respected by the courts of any other country with which it is at peace.

In its very simplicity of procedure lies a great part of the strength of our plan; for the legal technicalities that, to the layman's mind so often obscure the real issue in litigation, are entirely lacking.

NEW YORK CITY.

Books for Young People

By Montrose J. Moses

IN the limits of one article a comprehensive survey of the year's output of children's literature is impossible to give. Nor is it the object of THE INDEPENDENT to do more than to examine the field in such a concise manner that the Christmas shoppers may not enter the book stores in complete ignorance of what there is; may, at a glance down special lists, know what they can have to satisfy particular child interests and tastes. The books are much as they were last year, with the addition of the boy scout stories. The series flourish as ever, and there is a tendency on the part of publishers to list their fiction at one dollar, inasmuch as the enormous sales of the inferior 50-cent book loom threateningly. The books of most worth are marked with a star (*).

Books About Children's Books

**The Children's Reading.* Frances Jenkins Olcott. Boston: Houghton Mifflin Co. $1.25.

Story-Telling in School and Home. Emelyn N. Partridge and G. E. Partridge. New York: Sturgis & Walton Co. $1.25.

Best Stories to Tell to Children. Sarah Cone Bryant. Boston: Houghton Mifflin Co. $1.50.

The Story Teller's Bock. Alice O'Grady and Frances Throop. Chicago: Rand McNally Co. 75 cents.

**Forgotten Books of the American Nursery.* Rosalie V. Halsey. Boston: Charles E. Goodspeed & Co. $4.

The Home Kindergarten. Nora A. Smith. Boston: Houghton Mifflin Co. 75 cents.

Why purchase the latest book, when there are so many old ones, tried and true? Miss Olcott, formerly of the Pittsburgh Library, has written just the treatise all parents and teachers should have; it is a guide to the best books and the best editions, as well as a sane, lucid discussion of the different types of literature which children read. We have long needed such a helpful manual. *Story-Telling in School and Home* is purely the product of trained educators interested in the psychology of the subject; part second consists of some retold stories. The art of the raconteur has been authoritatively considered by Mrs. Borst (Bryant) in several books, while in the present one she combines many of the excellent features of her former work, giving a selection of tales whose wording has been tested in the actual story hour. More modest in format, but of the same design, is *The Story Teller's Book*, prepared by two teachers, and more nearly related, in choice of subjects, to the small child's limited observation. Its handling is sincerely done. For the reader interested in the old-fashioned story book read by our grandparents, Miss Halsey's thoro treatment of the American development of juvenile literature will be indispensable. It is a volume of great value to the student, and has been published in sumptuous style, the type being of the most agreeable face. The line cuts are quaint. The story in the kindergarten is considered by Miss Nora Smith in a practical booklet which aims to reach the isolated home.

Some Special Editions

**The Big Book of Fables.* Edited by Walter Jerrold. Illustrated by Charles Robinson. New York: H. M. Caldwell Co. $2.50.

**Old Songs and Rounds for Little Children.* Arranged by Charles M. Widor. Pictures in color by Boutet de Monvel. New York: Duffield & Co. $2.25.

Jolly Mother Goose Annual. Illustrations by Blanche F. Wright. Chicago: Rand, McNally & Co. $1.25.

**Æsop's Fables.* Illustrated in color by Arthur Rackham. New York: Doubleday, Page & Co. $1.50.

**The Beard Birds.* Adelia Belle Beard. New York: Frederick A. Stokes Co. $1.

The Seashore Book. Story and pictures by E. Boyd Smith. New York: Houghton Mifflin Co. $1.50.

**A History of France.* H. E. Marshall. Illustrated by A. C. Michael. New York: Hodder & Stoughton. $2.50.

**The Sampo.* James Baldwin. Illustrated by N. C. Wyeth. New York: Scribner. $2.

**Bold Robin Hood and His Outlaw Band.* Penned and pictured by Louis Rhead. Harper. $1.50.

We most cheerfully recommend *The Big Book of Fables*, wherein Mr. Jer-

How the First Letter Was Written

One of Joseph M. Gleeson's illustrations for the new Doubleday, Page & Company edition of Kipling's JUST SO STORIES

rold includes Æsop and La Fontaine, while Mr. Robinson illustrates the pages generously with line drawings of delightful imaginative scope. This is a veritable treasure house.

Children's songs are ever welcome in the home and school. Fortunate the youngster who is given such a charming volume as that of French folk-songs illustrated by the inimitable Boutet de Monvel in delicate color and quaint decorations! The words of the songs are in French, but they have been adequately translated. The music is simple. Another large book which from cover to cover is rich in color is *The Jolly Mother Goose Annual*, containing the time honored jingles, with pictures on every page. The artist wisely keeps her drawing free of much detail.

The Beard Birds are most clever; they are to be cut out, "each bird printed on a card the prevailing color of the bird." With water color and paste, therefore, the child is given an idea of the bird next best to seeing the live thing.. Much information is presented in the accompanying text preceding each card. Boards of Education have endorsed the method. The scope of Mr. Smith's *Seashore Book* is good, but the execution is not what it should be; the pictures are too pale and commonplace, the story too trite. Where is his humor of the "Noah's Ark" days?

Among the large books to be welcomed by the young history lover is Marshall's *France*, well printed, with wide margins and clean type. The narrative also is direct in style, while there are helpful marginal notes on every page. The color plates are adequate in conception, but poorly reproduced. For boys, James Baldwin has done some of his best retelling of legends. A delightful collection of tales from the *Kalevala* is his offering this year, and the Finnish heroes and heroines are as absorbing as those of Norway and Greece.

Another artist has likewise turned writer, for Louis Rhead's "Robin Hood," while it will never replace Howard Pyle's version, is nevertheless sure of a wide audience, for it is told with *verve* and the line drawings have the very breath of the forest.

Reprints

**The Complete Nonsense Book.* Edward Lear. New York: Duffield & Co. $2.50.

**All the Tales from Shakespeare.* Charles and Mary Lamb, and H. S. Morris. 2 vols. With plates in color. Philadelphia: J. B. Lippincott Co. $1.75 each.

Gulliver's Voyages to Lilliput and Brobdingnag. Jonathan Swift. Illustrated by P. A. Staynes. New York: Henry Holt & Co. $2.25.

Gulliver's Travels. Swift. Edited by Anna Tweed. (Golden Books for Children Series.) Illustrated by Dan S. Groesbeck. New York: Doubleday, Page & Co. $1.20

**Mrs. Leicester's School.* Charles and Mary Lamb. Illustrated by Winifred Green. New York: E. P. Dutton & Co. $1.60.

Alice's Adventures in Wonderland and *Through the Looking-Glass.* Lewis Carroll. Illustrated by Elenore P. Abbott. Philadelphia: George W. Jacobs & Co. $1.

**The King's Story Book.* Edited by Sir George Laurence Gomme. New York: Longmans, Green, & Co. $1.25.

**The Call of the Wild.* Jack London. Illustrations by Paul Bransom. New York: The Macmillan Co. $1.50.

**The Birds' Christmas Carol.* Kate Douglas Wiggin. Illustrated by Katharine R. Wireman. Boston: Houghton Mifflin Co. $1.

The Gorgon's Head. Nathaniel Hawthorne. Boston: Houghton Mifflin Co.

The Golden Touch. Nathaniel Hawthorne. Boston: Houghton Mifflin Co.

**Little Women; or, Meg, Jo, Beth and Amy.* Louisa M. Alcott. Illustrated from Photographs of Scenes in the Play. Boston: Little, Brown & Co. $1.50.

Boys of Other Countries. Bayard Taylor. Illustrated by F. S. Coburn. New York: G. P. Putnam's Sons. $2.

The Water-Babies. Charles Kingsley. Boston: Little, Brown & Co. $1.25.

How vividly we remember our small Lear Nonsense Book, but here is one beyond youthful dreams, for it is complete, which means that the editor has included new material! All the original funny pictures are included in this edition.

Every year we are given the Lambs' *Tales* in some new form, but the present two volumes would be difficult to equal. Not only are there the plays retold by Elia and his sister, but H. S. Morris has added the history dramas and others not treated by them. There are some very pleasing pictures, and the paper is of satisfactory quality for such thick books. *Gulliver's Travels* also is an annual reprint; we recommend the Holt edition in preference to its competitor, for we are sure of the text, whereas Mr. Clifton Johnson believes in editing texts by chopping here and there.

An altogether charming dress encloses the quaint story of *Mrs. Leicester's School*, which the Lambs wrote once as a "pot-boiler." In Kate Greenaway fashion, the color pages only enforce the old-fashioned quality of the story. And mention of Kate Greenaway recalls to

us that while we have not seen a copy, we have a record of the reissue of her *Birthday Book for Children* (Warne).

Alice in Wonderland is advertised as in new garb, because of the appropriate color plates by Elenor Abbott. But what the title page should have announced was that the Tenniel pictures are likewise included. Who would dispense with those for all the later drawings made by others!

A welcome reissue is *The King's Story Book,* wherein the reigns of the English monarchs are pictured by historical romances of widespread fame. Lytton has drawn the character of Harold; Scott that of Richard I; Shakespeare of Henry V, and so on through the time of William IV, treated in Charlotte Brontë's "Shirley." No young reader could do better than follow the course of reading suggested.

Reaching the modern story, we note an attractive cover to Jack London's most attractive dog narrative, *The Call of the Wild.* The pictures are in accord with the loneliness and cold of the Yukon north, while the tale itself will ever remain one of the most beautiful of animal biographies. There is but one story to equal it, and that is "Bob, Son of Battle," by Ollivant.

An anniversary edition comes to us in the shape of *The Birds' Christmas Carol.* Mrs. Wiggin writes delightfully to the book, paying tribute to its twenty-six years of existence, and, in truth, the little story deserves continued success because of its sweet, cosy spirit. The decorations are appropriate.

We are not quite in sympathy with the issue of each of Hawthorne's *Wonder Tales* in a separate slim booklet, even though the present stories are charmingly bound and clearly printed. The big book, containing the whole text, is very much better, and less expensive in the end. Duffield has published a sumptuous *Wonder Book,* illustrated by Maxfield Parrish.

Christmas would scarcely be Christmas without Miss Alcott, and the reissue of *Little Women* in one thick volume marks the launching of the story as a play. Some who see the photographs of scenes from the play may become disillusioned. We much prefer the line drawing used when we were young. Two other reprints are before us: the one, Bayard Taylor's well known *Boys of Other Countries,* which includes *The Robber Region of Southern California;* and Kingsley's *Water-Babies.*

Some Large Books

Dutton's Holiday Annual. Edited by A. C. Payne. New York: E. P. Dutton & Co. $1.25.
Caldwell's Boys' and Girls' at Home. New York: H. M. Caldwell Co. $1.75.
Chatterbox for 1912. Boston: Dana Estes & Co. $1.75.
This Year's Book for Boys. New York: Hodder & Stoughton. $1.50.
Musical Dates for Little Pates. Isabel Stevens Lathrop. New York: Duffield & Co. $1.25.
The Kewpies and Dotty Darling. Story and Pictures by Rose O'Neill. New York: George H. Doran Co.
A Christmas Party for Santa Claus. Ida M. Huntington. Chicago: Rand, McNally & Co. 75 cents.
Live Dolls in Wonderland. Josephine Scribne Gates. Indianapolis: Bobbs-Merrill Co. $1.25.
'Twas the Night before Christmas. C. C. Moore. Pictures by Jessie Willcox Smith. Boston: Houghton Mifflin Co. $1.00.

The Annual is ever a special feature in the children's realm, tho it is not representative of the best writing or of the latest technique. One of the most creditable is *Dutton's Holiday Annual*—in its 25th issue. For some years Caldwell has issued the *Boys' and Girls' at Home,* with cheerful outside covers and with varied inside content. The stories and poems are not, however, of the quality we would recommend, even tho there is an effort to cater to the playful and imaginative side of the young. As for *Chatterbox*—an ancient friend—it is a den of melodramas such as our fathers used to have and to hide. The pages are always cramped in print; the illustrations always crude and bold. But no one would give up the familiar figure of this book. Nevertheless, some of the libraries look at it suspiciously. Save it from the scalpel!

This Year's Book for Boys is just another of the kind, with an effort to be timely. None of the recognized authors of juvenile books is represented on the contents table, but the spirit of adventure seems to be taken care of in a sufficiently authoritative way. There is a great deal of the war spirit dominant, while Claude Grahame-White takes care of the aeroplane as an instrument of warfare.

Music lovers will find enjoyment in *Musical Dates for Little Pates.* The idea is a good one, and the pen sketches are comical. The biographical verses are not always clever, but each page contains a

"PRAY MORE EARNESTLY," QUOTH ROBIN
From Louis Rhead's "Robin Hood" (Harper & Bros.).

surprisingly large amount of information. The book is simply a trick, however, and we would have welcomed much more a concise, vivid story of each musician's life.

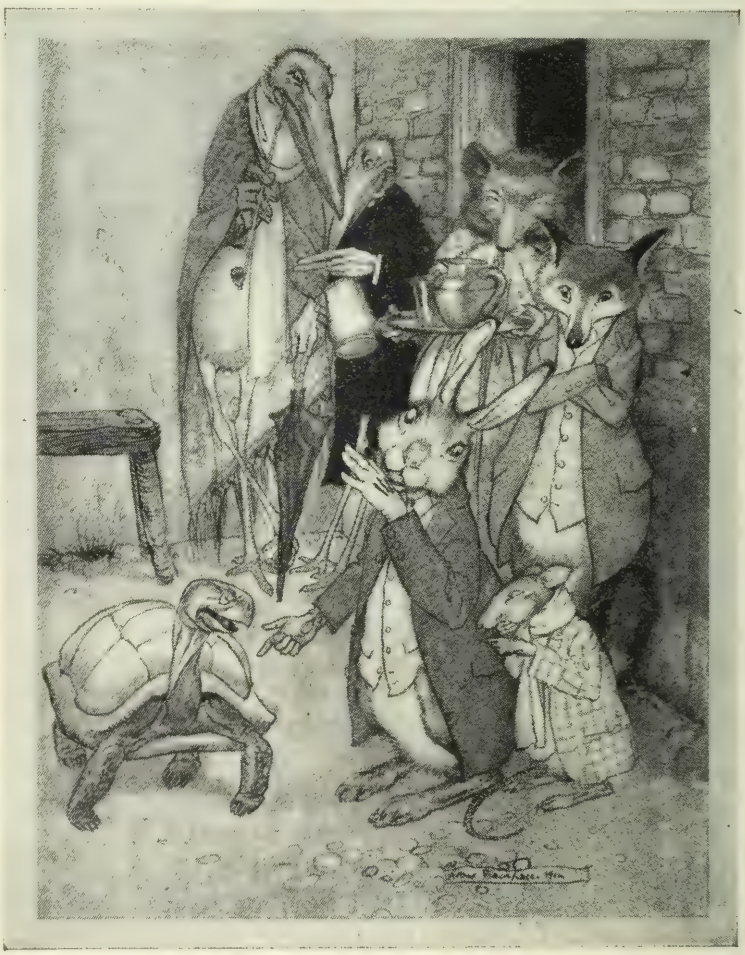
The Kewpies need little introduction; like the Brownies, they have entered every household. And like the Brownies, the verses descriptive of their antics become very monotonous after a time. The fault with the Kewpies is their naked similarity; each little Brownie, on the other hand, possesses an individuality. Any book dealing with Santa Claus meets with our approval, and *A Christmas Party for Santa Claus,* with a child's efforts to entertain Kris Kringle, is full of the wild experiences usually piled in

the pseudo-fairy tale. The book is told with no art, but with sincerity and amusing inventiveness. *The Live Dolls in Wonderland* is a story that will readily win its way in the nursery.

Dr. Moore's *'Twas the Night Before Christmas* is as classic a bit of Yuletide cheer as we can find. While we are not particularly imprest by Miss Wilcox Smith's decorations, nothing can harm, and certainly time cannot stale such jingles. The mere reading of them—and they allow of dramatic interpretation—sends expectant thrills into the youngster's being.

Books Based on Literary and Art Sources

**Shakespeare's English Kings.* Thomas Carter. New York: T. Y. Crowell Co. $1.50.
Stories of Shakespeare's English History Plays. H. A. Guerber. New York: Dodd, Mead & Co. $1.25.
**Historic Poems and Ballads.* Rupert S. Holland. Philadelphia: George W. Jacobs Co. $1.50.
The Children's Longfellow. Alice Massie. Illustrated by E. S. Farmer. New York: Hodder & Stoughton. 75 cents.
Famous Pictures of Real Boys and Girls. Lorinda M. Bryant. New York: John Lane Co. $1.25.
Stories from Old English Romance. Joyce Pollard. New York: Frederick A. Stokes Co. 75 cents.



It has always been our firm conviction that the best method of retelling Shakespeare was so to combine direct narration with chosen excerpts as to make the child at an early age familiar with the original. Such a method is that adopted by Thomas Carter in his *Shakespeare's English Kings.* The consequence is that the readers find Shakespeare himself not so difficult of understanding, after all, especially in comparison with H. A. Guerber's painstaking and uninspired analyses of the big chronicle plays.

Some of the best ballads in English have been gathered together in a most commendable anthology by Rupert S. Holland, and each one is preceded by a lucid description of the event thus poetized. Beginning with "The Destruction of Sennacherib," it goes thru Whitman's "O Captain! My Captain!" There is a wide stretch of history from "Chevy Chase" to "Marching thru Georgia" and "Dixie." Such is the scope of this book, deserving a richer cover.

So simple is Longfellow in most of his work, that it seems almost an act of impertinence to turn some of his narrative poems into prose narratives. This is what Alice Massie has done, but we are glad to see that now and again she quotes the original. There are color plates, showing some feeling, the work of E. S. Farmer.

The famous reproductions included in *Famous Pictures of Real Boys and Girls* ably abet the text in emphasizing how continually artists of every clime resort to child study. The author of this suggestive little book calls attention to the fact that in painting such portraits a partnership must have existed—of the most fascinating sort—between the wee sitter and the man before the easel. Italian, Spanish, Dutch, German and English lads and lassies peep forth from world-renowned canvases, and as for America, who can forget Whistler's "At the Piano," or Chase's "Portrait of a Girl"?

Stories from Old English Romance is

ONE OF THE RACKHAM DRAWINGS FOR THE NEW ÆSOP (DOUBLEDAY)

a slim collection of fascinating tales which have their counterpart in English literature. In every instance we are of the opinion that such a book will direct the young reader to the source where added interest and culture are to be had. The more of such collections we have, the better.

Biography and History

**Heroes and Heroines of English History.* Alice S. Hoffman. Illustrated by Gordon Browne. New York: E. P. Dutton & Co. $2.50.

The English History Story-Book. Albert F. Blaisdell and Francis K. Ball. Boston: Little, Brown & Co. 75 cents.

**Froissart's Chronicles for Young People.* M. G. Edgar. New York: T. Y. Crowell & Co. $1.50.

Sir Walter Raleigh. John Buchan. New York: Henry Holt & Co.

The Story of Nelson. Harold F. B. Wheeler. New York: Thomas Y. Crowell Co. $1.50.

Through Great Britain and Ireland with Cromwell. H. E. Marshall. New York: Frederick A. Stokes Co. 75 cents.

Through Europe and Egypt with Napoleon. H. E. Marshall. New York: Frederick A. Stokes Co. 75 cents.

**Story-Lives of Our Great Artists.* Francis Jameson Rowbotham. New York: Frederick A. Stokes Co. $1.35.

Ten Girls from History. Kate Dickinson Sweetser. New York: Duffield & Co. $2.

Brave Deeds of American Sailors. Robert B. Duncan. Philadelphia: George W. Jacobs & Co. $1.50.

True Tales of Arctic Heroism in the New World. Maj.-Gen. A. W. Greely. New York: Charles Scribner's Sons. $1.50.

Studies from Italian History. G. E. Troutbeck. New York: Frederick A. Stokes Co. $1.30.

**Little-Known Sisters of Well-Known Men.* Sarah G. Pomeroy. Boston: Dana Estes & Co. $1.25.

Life Stories for Young People. Translated from the German by George P. Upton. [Gods and Heroes; Achilles; The Argonautic Expedition and the Labors of Hercules; Ulysses of Ithaca; General "Chinese" Gordon; David Livingstone; Stanley's Journey through the Dark Continent; Emin Pasha.] Chicago: A. C. McClurg & Co. 50 cents each.

Noted Speeches of Webster, Calhoun and Clay. Lilian M. Briggs. New York: Moffat, Yard & Co. 75 cents.

The Boys' Parkman. Louise S. Hasbrouck. Boston: Little, Brown & Co. $1.

South Africa's Story. H. E. Marshall. New York: F. A. Stokes Co. 75 cents.

Australia's Story. H. E. Marshall. New York: F. A. Stokes Co. 75 cents.

India's Story. H. E. Marshall. New York: F. A. Stokes Co. 75 cents.

Canada's Story. H. E. Marshall. New York: F. A. Stokes Co. 75 cents.

John and Betty's Scotch History Visit. Margaret Williamson. Boston: Lothrop, Lee & Shepard Co. $1.25.

A royal cover invites one to look inside of *Heroes and Heroines of English History,* and there is a long list of brilliant characters written about, from Caradoc to General Gordon and Florence Nightingale. Were we writing a book of this sort, we should at the end of each section tell the young reader where to turn for further matter on the same subject. Do we ever forget our first reading of "Scottish Chiefs" or "The Last Days of Bruce"? Is there any treatment of the Maid equal to Mark Twain's "Joan of Arc"? The present volume, however, is an excellent gift for the tenth year mind, and we need to praise the pen drawings in preference to the color plates, of Gordon Browne. Of a simple and more class-room type is *The English History Story-Book,* which the authors intend as a supplementary reader for the fourth and fifth grades.

Froissart's Chronicles are prepared for young readers by M. G. Edgar, based on Lord Berner's translation. There is a satisfactory introduction, which furnishes the proper historical setting. This is a very worthy book, but in preference we would take Lanier. A peculiar treatment of biography is that in John Buchan's *Sir Walter Raleigh,* a life told in eleven stories. As the author states in his preface, "tho I have invented some of the characters, all that they tell us really happened, and most of the little incidents and speeches will be found recorded in old books." Is not this in a way a perversion of a form which should not be perverted? We are warm for the historical romance, but we are also intent on finding some worthy biographies for children. This is neither one nor the other.

The Story of Nelson, on the other hand, is a dignified treatment of a great man. In a foreword, the author places himself as a careful and thoro student of the period, and the book contains much that will interest older readers, as well as much—for instance the intercourse between Nelson and Lady Hamilton—that the young reader should not know. The book is copiously illustrated.

The two small stories of Cromwell and Napoleon are concise and inclusive. The treatment will do much to further the youthful student's interest in special periods. The books contain pictures and maps.

There is no more fascinating volume than Rowbotham's *Story Lives of Our Great Artists.* Each biography is carefully developed and presents a most graphic canvas of the social atmosphere surrounding the individual men. The section on "Sir Joshua Reynolds" is deeply entertaining, and when one has read thru Gainsborough, Romney, Morland, Turner, Constable, Landseer and Watts, one has obtained a very satisfac-

tory stretch of the history of English art. All these men were constantly in touch with the most brilliant figures of the day. Following her plan in former volumes, Kate Sweetser's *Ten Girls from History* contains striking anecdote, especially in the account of Queen Victoria. Did you ever hear of Afachique, or Eliza Lucas, or Madeleine de Verchères, or Adrienne de Lafayette? These are some of the girls she writes about, together with some more familiar.

A graphic way of illustrating the growth of the navy and of emphasizing the chief characteristics of the American attitude is to read such a survey as Duncan's *Brave Deeds of American Sailors.* For fortitude, courage and daring no better stories can be selected than those dealing with Paul Jones, Captain Lawrence, to say nothing of Hobson and Dewey.

FROM "HEROES AND HEROINES OF ENGLISH HISTORY" (DUTTON)

The hardships of Arctic exploration are breathlessly described by Maj.-Gen. A. W. Greely in his book on the subject. The author claims that these tales "are neither figments of the fancy nor embellished exaggerations of ordinary occurrences. They are exact accounts of unusual episodes of Arctic service, drawn from official relations and other accurate sources." Franklin, Kane, Sonntag, Tyson and others are the Arctic heroes; not Peary or Cook.

The author who last year described Westminster Abbey for children this year has a book of *Stories from Italian History,* and claims that it is nothing more than desultory reading on the subject, as a means of opening the doors for further reading of Italian history. The book is well illustrated. And we recommend *Little-Known Sisters of Well-Known Men* as an ideal series of biographical studies for the girl of fifteen or sixteen. Literature becomes here a *live* subject.

We can but mention the scope of the *Life Stories for Young People,* translated from the German by George P. Upton. Each year we are sent a batch of these small green books, and every year we marvel at the conciseness of their contents; there are forty-four volumes now ready—divided into four sections, American explorers, historical and biographical, musical and legendary. The eight new subjects for this season are of varied interest.

American history in literature is represented in a collection of noted speeches by Webster, Clay and Calhoun; each statesman is given a biographical sketch, and each oratorical selection is representative of a crucial period in the Union's struggle in the early days of slavery. Of course Webster's Bunker Hill Monument Address is included. Four volumes will constitute a series which the publishers have planned.

Louise Hasbrouck has very judiciously made selections from Parkman's historical works and put them in a serviceable volume for boy readers. Notes are plentiful, and the material deals with Indians, Marquette, La Salle, Montcalm, Wolfe and Frontenac.

Another series of concise histories from the pen of H. A. Marshall is that which includes the story of Canada, India, Australasia and South Africa. In each instance the treatment of the narrative is thoro, while the pictures and maps add much of value.

John and Betty's Scotch History Visit is one of those ambitious attempts to sugar-coat an historical pill, but we are of the opinion that it is much easier to study out of a real study book than to be given such a sugar-coated nothing as this.

Fairy Tales and Legends

**The Book of Saints and Heroes.* Mrs. Lang. Edited by Andrew Lang. New York: Longmans, Green & Co. $1.60.

Our Island Saints. Amy Steedman. New York: G. P. Putnam's Sons. $2.50.

Saints and Heroes. George Hodges. New York: Henry Holt & Co. $1.35.

**The English Fairy Book.* Ernest Rhys. New York: Frederick A. Stokes Co. $1.35.
Caravan Tales and Some Others. By Wilhelm Hauff. Translated by J. G. Hornstein. New York: Frederick A. Stokes Co. $1.35.
The Fir-Tree Fairy Book. Edited by Clifton Johnson. Boston: Little, Brown & Co. $1.50.
**Russian Wonder Tales.* Translated by Post Wheeler. Illustrated by Bilibin. New York: The Century Co. $2.50.
Wonder Tales of Old Japan. Alan Leslie Whitehorn Illustrated by Shozan Obata. New York: Frederick A. Stokes Co. $1.25.
Fairy Tales from Many Lands. Katharine Pyle. New York: E. P. Dutton & Co. $1.50.
Indian Fairy Tales. Lewis Allen. Boston: John W. Luce & Co. $1.
The Fairies and the Christmas Child. Lilian Gask. Illustrated by Willy Pogány. New York: T. Y. Crowell Co. $2.
Sky Island. L. Frank Baum. Chicago: Reilly & Britton Co. $1.25.
The Mermaid's Gift. Julia Brown. Illustrated by Maginel Wright Enright. Chicago: Rand, McNally & Co. $1.25.
The Wonder Bed. Gertrude Knevels. Indianapolis: Bobbs-Merrill Co. $1.
Fairy Tales a Child Can Read and Act. Lillian E. Nixon. New York: Doubleday, Page & Co. 75 cents.
**Christmas Tales and Christmas Verse.* Eugene Field. New York: Charles Scribner's Sons. $1.50.
Jolly Calle: Swedish Fairy Tales. Helena Nyblom Illustrations by Charles Folkard. New York: E. P. Dutton & Co. $2.50
Once Upon a Time Tales. Mary Stewart. Introduction by Henry Van Dyke. New York: Fleming H. Revell Co. $1.25.
**Bill the Minder.* Written and illustrated by W. Heath Robinson. New York: Henry Holt & Co. $3.50.
Billy Popgun. Milo Winter. Illustrated by the author. Boston: Houghton Mifflin Co. $2.
The Jatakas Tales of India. Retold by Ellen C. Babbitt. New York: The Century Co. $1.
Folk Tales of the East and West. John Harrington Cox. Boston: Little, Brown & Co. $1.
When Christmas Came Too Early. Mabel Fuller Blodgett. Boston: Little, Brown & Co. 75 cents.

There is always a rare offering of fairy tales and legends—the supply seems inexhaustible. We note that Mr. Lang's last editorial supervision was his wife's *Book of Saints and Heroes,* a volume full of imagination and varied national color. This season three volumes of Saints have come to our desk. Amy Steedman's book is confined to the saints of Great Britain and Ireland, who are agreeably treated with the use of much dialog, while Dean Hodges' ranges from the year 200 to the Middle Ages.

If it were not for the red lettering in *The English Fairy Book* it would be an ideal gift for the imaginative child. Those who know anything of the history of Chap-books will recognize "Tom Hickathrift" and "St. George and the Dragon," both of which were once sold for a penny apiece. With what a thrill of recognition did the reviewer come across an adequate translation from the German of Hauff's *Caravan Tales!* The colored pictures are full of Oriental spirit.

We have so often disapproved of Mr. Johnson's editorial policy of trimming stories that *The Fir-Tree Fairy Book* must not be again assailed for that fault. In other respects Mr. Johnson is generous and seems to be gracious to all countries, his style being simple and direct. Alexander Popini has illustrated the tales satisfactorily.

While secretary of the American Embassy at St. Petersburg Mr. Post Wheeler collected and translated his *Russian Wonder Tales;* for them he asked the artist, Bilibin, to do the pictures, which are certainly foreign in tone and concept. The stories themselves are to the Russian nursery what Grimm is to the German nursery.

Another national collection, illustrated by a native artist, is *Wonder Tales of Old Japan,* with Shozan Obata's pictures. Japanese students, seated with Mr. Whitehorn around the "fire box," used to tell him these stories which he later embellished at will. In his preface he calls attention to "Momotaro, or the Little Peace Child," as one of the most popular legends among the Children of the Sun. The folk element is strong in this book, and offers plentiful suggestion for the story-teller's use. Miss Pyle issues another volume of fairy lore drawn from many sources, and her own illustrations in line and color are reminiscent of her father's style. The Norse story of "Buttercup" is exciting but somewhat monotonous in the denseness of its hero, who finally proves his mettle. There is a delicacy of nature suggestion in Mr. Allen's *Indian Fairy Tales,* greater in native excellence than the style of their telling; in fact, the folklorist is constantly showing timidity, hence the story-writer is often held in abeyance. But the volume is to be recommended because of the inherent grace in such a piece as "Pond Lilies."

The Fairies and the Christmas Child is tastefully illustrated by Willy Pogány; the end papers are charming and the type used is large and clear. As for Miss Gask's story—a combination of elves and nymphs from all countries—it deals with a little boy who has special privileges because he was born on Christmas Day. The fantasy is mingled skilfully with the everyday life of Chris, who travels with his father. Mr. Baum's *Sky Island* is a continuation of last year's *Sea Fairies,*

only instead of plowing the deep his hero and crew sail thru the air. The make-up of the book is akin to its numberless predecessors in line and in color. The initial story in Julia Brown's *The Mermaid's Gift* tells of a prince who is at first prevented from marrying a princess because in her crown there is no spark from the North Star. There are six long tales in this attractively bound book, with many color plates.

In *The Wonderful Bed* three children have an exciting trip among queer characters, very much as Alice has in Wonderland. It all begins in Aunt Jane's old nursery with a canopied four-poster in it, and the style of narration is breezy and humorous. Rudolf, Peter and Ann at the close are glad to be in port again after strenuous times with geese, hares, pirates and a knight-mare. The illustrations are by Emily Hall Chamberlin.

Teachers will find *Fairy Tales a Child Can Read and Act* of service in the class-room. Such characters as Red Riding Hood, Blue Beard, Hansel and Gretel, Pinocchio and Alice are placed in simple dialogs which dramatize scenes from the stories themselves. The author claims that much may be done for the imagination and for the power of reading expressively by such a method. No more delightful compilation is published this year than Eugene Field's *Christmas Tales and Christmas Verse.* It is a most seasonable gift-book whose bold-faced type is agreeable to the eye. In the book of Swedish fairy tales, *Jolly Colle,* there is a charming moral in *The Queen's Necklace,* and the use of it is most artistically made. The book is a handsome importation, with brilliant full-page color work by Charles Folkard, full of romance and fantasy. Mary Stewart's *Once Upon a Time Tales* has an introduction by Dr. Van Dyke on the significance of the phrase, once-upon-a-time. In *Bill the Minder,* with its sumptuous cover and with its reminder that it would like to appeal to all lovers of *Peter Pan,* there is much odd disporting in brush, pen and narrative by Mr. Robinson. In outward appearance this is one of the handsome books of the season. A very foolish little story is *Billy Popgun,* flat and strained in its affected imitation of Lewis Carroll; Milo Winter utterly fails as a story-teller and succeeds as an illustrator, for the pictures are full of the color and imagination which the story lacks. *The Jataka Tales* are drawn from sources which indicate that they were known as early as the third century B.C.; they are Buddhistic in nature. The present re-telling by Ellen C. Bobbitt has been recommended by Dr. Felix Adler, and the ethical meaning of such a story as "The Sandy Road" is evident; the form is somewhat like the medieval *exemplar.* The book is filled with silhouette pictures. Last season Mr. Cox published *A Chevalier of Old France;* this year his *Folk Tales of East and West,* belonging to the same *Knighthood Series.* We find in the new volume adaptations and translations from the Swedish, early Middle English, old French and the Dutch version of "Sister Beatrice" (a doubtful story for the young); there are likewise adaptations from Chaucer, Layamon, the Apocrypha and Anglo-Saxon. We recommend this volume to those older students on the threshold of study in early English literature. *When Christmas Came Too Early* is a pseudo-fairy tale which tells how a small boy makes the Yuletide hasten by tearing off the leaves of a magic calendar.

Nature and Animal Life

The Book of the Zoo. W. S. Berridge and W. P. Westell. New York: E. P. Dutton & Co. $1.50.
The Boy Fancier: A Manual of Domestic Pets. F. T. Barton. New York: E. P. Dutton & Co. $2.
**The Spring of the Year.* Dallas Lore Sharp. Boston: Houghton Mifflin Co. 60 cents.
**Winter.* Dallas Lore Sharp. Boston: Houghton Mifflin Co. 60 cents.
More Little Beasts of Field and Wood. William E. Cram. Boston: Small, Maynard & Co. $1.20.
**The Book of Woodcraft and Indian Lore.* By Ernest Thompson Seton. Illustrated by the author. Garden City, New York: Doubleday, Page & Co. $1.75.
The Little King and the Princess True. Mary Earle Hardy. Chicago: Rand, McNally & Co. $1.25.
"Tell Me Why" Stories. C. H. Claudy. New York: McBride, Nast & Co. $1.25.
The Story of Lumber. Sara Ware Bassett. Philadelphia: Penn Publishing Co. 75 cents.
Frank and Bessie's Forester. Alice Lounsberry. New York: F. A. Stokes Co. $1.25.

A complete history of the London Zoological Society's Gardens in Regent's Park has been published for children, and the narrative is striking, for it is not technical, but takes up the various matters of the Zoo in a quite human way. Not many of us have had ambitions to handle wild animals, even tho we have dreamed of shooting them, but if *The*

Book of the Zoo is carefully read we might be able to unbox a tiger or break in a dromedary in the most approved fashion.

The Boy Fancier will do as well for grown people, since domestic pets are for the entire family. No one deserves to keep animals unless some time is spent in learning something of their needs; this manual gives one serviceable information, believing that "ephemeral love for live-stock is of no use whatsoever." The psychology of the field—of all nature, in fact — is well known to Dallas Lore Sharp. Critics have accused him of sentimentalizing to the detriment of scientific truth, but *The Spring of the Year* and *Winter* are full of the quick observation, the keen ear and the poetic expression which make him agreeable reading. Such chapters as "Things to Hear This Spring," "Is It a Life of Fear?" and "Things to See and Do This Winter" are full of these qualities. The little books will be a boon to the nature-lover.

William E. Cram's treatment of *More Little Beasts of Field and Wood* is personal, showing what he has gleaned about wild deer, woodchucks, hares, wild cats, and so on, by careful observation. But that he is something more than a keen seer may be inferred by reading the preface and introduction. In *The Book of Woodcraft* Mr. Seton develops the principles set forth in his manual, "The Birchbark Roll."

I think it is always a mistaken idea that the plain, honest facts about the earth we live in are not of interest to children unless interwoven with little fictions. It irritated me—even trying to place myself in the mental attitude of a child of eight or nine—to have to listen to so much preparatory before reaching the mysteries and riches which are suggested in Mary Hardy's *The Little King and the Princess True,* which attempts, under the guise of pseudo-fairy lore, to render an account of snow crystals, of polished pebbles, of ferns, of rock impressions, of limestone making, of rock formation, of stone growing, cave making and so on thru the romances of geology. To the story-teller, however, the plan may be suggestive; certainly the topics and the illustrations are of juvenile interest and wonder. A volume of much the same intent and purpose is C. H. Claudy's *"Tell Me Why" Stories,* wherein is narrated how old Father Gravity works and how the earth and its forces have been conquered.

Two books with indirect claim to be included in this section are Bassett's *The Story of Lumber,* and *Frank and Bessie's Forester,* by Alice Lounsberry, dealing in different ways with the same subject. The first, dedicated to Dallas Lore Sharp, tells the story of a boy sent forth with a forest outfit, so that his health might benefit and he might learn. If these books do not turn young readers into lumbermen, at least they should rouse them into active interest for the subject of forest conservation.

Inventions and the Useful Arts

The Boy's Playbook of Science. John Henry Pepper. New York: E. P. Dutton & Co. $2.50.

The Boy's Book of Modern Marvels. Charles J. L. Clarke. New York: Frederick A. Stokes Co. $1.75.

All About Ships. Lieut. Taprell Dorling. New York: Cassell & Co. $1.50.

**The Romance of Submarine Engineering.* Thomas Corbin. Philadelphia: J. B. Lippincott & Co. $1.50.

**The Curtiss Aviation Book.* Glenn H. Curtiss and Augustus Post. New York: Frederick A. Stokes Co. $1.35.

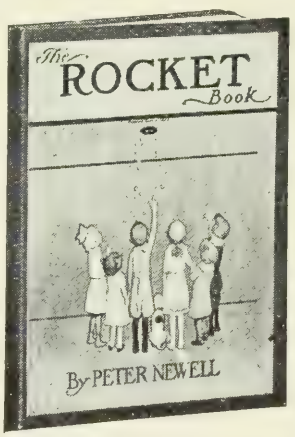
The Wireless Man: His Work and Adventures on Land and Sea. Francis A. Collins. New York: The Century Co. $1.20.

Every Boy's Book of Hobbies. Cecil H. Bullivant. New York: Dodge Publishing Co. $1.50. (A large volume suggesting workshop occupation of all kinds, and collecting of varied objects.)

Girls' Make-at-Home Things. Carolyn S. Bailey. New York: Frederick A. Stokes Co. $1.25. (This and the following volumes are full of simple suggestions in which the scissors, the jack knife, and paste constitute an important part.)

Boys' Make-at-Home Things. Carolyn S. Bailey and Marian E. Bailey. New York: Frederick A. Stokes Co. $1.25.

Harper's Boating Book for Boys. Consulting editor: Charles G. Davis. New York: Harper & Bros. $1.75. (Everything a boy should know about boats; how to build them, how to sail them, and how to form a boat club. Many boat races are described.)



The Wonder Workers. Mary H. Wade. Boston: Little, Brown & Co. $1. (The fairies of the modern world are Luther Burbank among flowers; Helen Keller with touch; William George as a settlement worker; Edison with sound; Jane Addams as a friend of the poor; Grenfell among the Labrador children; and Judge Lindsey in his juvenile court. An inspirational book, this!)

One verily has to believe that the boy is father to the man when one reaches a consideration of the scientific books prepared for the use of youth. There are juvenile experts in every field nowadays; there is no aviator who has not a million youthful eyes upon him, ready to follow his lead; there is no wireless operator who is not equaled in some things by a boy with his apparatus rigged up on some roof. So that there is always sale for

books that appeal directly to the expert knowledge and experience of scientists of fourteen or thereabouts.

Indeed, John Henry Pepper's *The Boy's Playbook of Science* is a thoro physics, together with kindred subjects, treated in simple tho professional manner. Yet he who learns what this volume fully unfolds is ready for a stiff examination in some college class. Under the guise of play, the profoundest truths may be fathomed, is the author's belief; but his approach is ever of the straight, simple, scientific kind. A rich gift for the boy.

We also recommend the design and purpose of C. J. L. Clarke's *The Boy's Book of Modern Marvels,* discussing broadly those achievements which help to make the efficiency of a city such as London. The wonders of the printing press vie with the triumphs of engineering, concrete building, bridge erecting and kindred topics; in addition to which consideration is paid to fire, water, police, hospital and sanitary systems in London. With little variations, the same considerations can be paid to all large cities in America. There are photographic illustrations.

THE COVER OF PETER NEWELL'S NEW BOOK
(Harper)

All About Ships is a fascinating book for boys nautically inclined. A real lieutenant in the Royal Navy, beginning with a survey of ancient and medieval craft, takes in turn thirty-one factors such as the modern cruiser, the modern battleship, torpedo vessels, the merchant marine, propelling machinery, ship building and equipment, docks, signals and so on, discussing point after point with minuteness and exactitude. Of equal absorption is *The Romance of Submarine Engineering,* with illustrations and diagrams. Here the subtitle sufficiently describes its contents, offering "interesting descriptions in non-technical language of the construction of submarine boats, the salving of great ships, the recovery of sunken treasure, the building of breakwaters and docks, and many other feats of engineering beneath the surface of the water." And there is no one, young or old, who will not give warm welcome to *The Curtiss Aviation Book,* wherein are also included chapters on the future of the aeroplane in the army and the navy.

An anecdotal treatment of *The Wireless Man* is given in Francis A. Collins's book; this impresses one as being just a little too colorful in its romance. Nevertheless, for so small a volume, it is full of the human and practical value of this vibratory marvel.

Books of Play, Work and Fun

Housekeeping for Little Girls. Olive Hyde Foster. New York: Duffield & Co. 75 cents.
Work and Play for Little Girls. Hedwig Levi. New York: Duffield & Co. 75 cents.
When Mother Lets Us Cut Pictures. Ida E. Boyd. New York: Moffat, Yard & Co. 75 cents.
Playtime Games for Boys and Girls. Emma C. Dowd. Philadelphia: George W. Jacobs & Co. 75 cents.
Home Entertaining: Amusements for Every One. William E. Chenery. Boston: Lothrop, Lee & Shepard Co. 75 cents.
**Floor Games.* H. G. Wells. Boston: Small, Maynard & Co. $1.
The Rocket Book. Peter Newell. New York: Harper & Bros. $1.25.
**The Mary Frances Cook Book: Adventures Among the Kitchen People.* Jane Eayre Fryer. Philadelphia: John C. Winston Co. $1.20.
**The Book of Winter Sports.* Edited by J. C. Dier. The Macmillan Co. $1.50.

A book on domestic science is somewhat difficult reading for a grown person to fathom; we wonder how many youngsters—even tho they be girls—are going to stop to read the numberless suggestions of an excellently practical nature offered by Olive Foster in *Housekeeping for Little Girls!* There is not half the fun bothering over the correct ventilation of a room—however important—that there is in making toys out of empty matchboxes, bits of string and paper. There is much suggestion of the latter nature in Hedwig Levi's *Work and Play for Little Girls.* But, after all, they are slim manuals.

Among the fascinating implements most attractive to the nursery are the scissors. Ida E. Boyd's *When Mother Lets Us Cut Pictures* will be popular on that account. But the style of the narrative and the quality of the verse are mediocre and condescendingly chatty. The idea of combining the story with the occupation is a good one; for instance, having children cut out bowls and tables while the "Three Bears" is being told. With the skill in the use of the scissors

there are offered more complicated designs. Necessarily the book is copiously illustrated with numberless models to be copied. What an excellent rainy-day book for the nursery!

Emma C. Dowd offers much fun in her *Playtime Games for Boys and Girls.* Directions are given in the form of conversation. In many cases the dialog that "pops" the question answers it in a line or two. An index makes the book of convenient reference for all sorts of sociables. A volume to go well with this is William E. Chenery's *Home Entertaining,* which will be the saving of many a party-giver who does not know what will amuse the children or grown-ups out for fun! All the world loves a trickster, and one finds himself with a certain prestige in a group when one can make a quarter mysteriously disappear up the sleeve, or when he can so cut a card as to be able to walk thru the card itself.

We relished the reading of H. G. Wells's *Floor Games*—which the publishers should have issued in smaller form so that fathers might carry it about in their pockets for ready reference. Says the author: "The jolliest indoor games for boys and girls demand a floor, and the home that has no floor upon which games may be played falls so far short of happiness." Then in naïve enjoyment of his own inventions and conceits Mr. Wells deliciously unfolds his schemes, giving suggestions to toy makers which they had better heed—or take a care!

Newell's *The Rocket Book* does not soar as high in its humor as a rocket; that is why, when the janitor's son upset a rocket in the cellar of an apartment house, shooting thru twenty-one stories and spreading havoc in its wake, we are not so thoroly amused as we once were over *The Hole Book.* Nevertheless, we are always entertained by Mr. Newell's types of person in curved spines, starey eyes with a generous amount of white about them.

A clever combination of practicality and fantasy is found in *The Mary Frances Cook Book;* the kitchen utensils aid the heroine in making all sorts of good things. When the coffee pot and saucepan grow loquacious, there is no telling what delectable dish is going to be the result. Forty recipes are included in the text. There are marginal drawings.

Religious Books

The Children's Story Bible. Edited by Holland Thompson. New York: The Grolier Society.
Stories from the Old, Old Bible. L. T. Mead. London: W. & R. Chambers.
Jonah of Gath-Hepher. Edward A. Marshall. New York: Fleming H. Revell Co. $1.
The Castle of Zion. George Hodges. Boston: Houghton Mifflin Co. $1.50.
Chats with Children of the Church. James M. Farrar. New York: Funk & Wagnalls Co. $1.20.
Eastover Parish. Margaret E. Sangster. New York: Fleming H. Revell Co. $1.
Prayers for Little Men and Women. John Martin. New York: Harper & Bros. $1.25.

The old-fashioned religious books are not so plentiful as they used to be; the cause most likely is that the reading done by the Sunday school boy or girl is not widely different from that done by the child outside; there is a tendency to encourage the reading of the Bible so edited as to remove the non-essentials which simply retard the child's clear understanding. The Grolier Society has published *The Children's Story Bible* with an equal treatment of Old and New Testaments. The volume is filled with pictures illustrating the remade text. Mrs. L. T. Mead, in her *Stories from the Old, Old Bible,* attempts to reproduce the local color suggested by each of the books in the Old Testament. We dislike the method.

The introductory remarks of Edward A. Marshall in the preface to his *Jonah of Gath-Hepher* sufficiently explains its scope, for he writes: "This volume is not intended to be an exposition of the book of Jonah. It is a story, perhaps for young people, using the life of the prophet as a basis and interweaving with it some of the customs of his time." The author shows familiarity with the life of the people of Palestine, and with this knowledge he hightens the vividness of his text. George Hodge's *The Castle of Zion* is a collection of twenty stories from the Old Testament.

In *Chats with Children of the Church* Dr. James M. Farrar gives as many sermons as there are weeks in the year, and the subjects vary according to the human and ecclesiastical variations of the time: for instance, the minister always attempts to keep his sermons in accord with the season in which he works. To some this book will be an inspiration. So too will be Margaret E. Sangster's *Eastover Parish.*

The *Prayers for Little Men and Women* are to the number of seventy-three.

but, despite the earnest effort on the part of John Martin to produce easy verse, there is an artificial introspection accredited to children which is altogether false. The book is charmingly printed, with border decorations, and full-page color plates by John Rae.

Some Special Stories

Mary Ware's Promised Land. Annie Fellowes Johnston. Boston: L. C. Page & Co. $1.50.
Their City Christmas. Abbie Farwell Brown. Boston: Houghton Mifflin Co. 75 cents.
The Hallowell Partnership. Katharine Holland Brown. New York: Charles Scribner's Sons. $1.
Sweethearts at Home. S. R. Crockett. New York: F. A. Stokes Co. $1.25.
Sue Jane. Maria T. Davies. New York: The Century Co. $1.25.
The Fortunes of Phoebe. Ellen Douglas Deland. New York: D. Appleton & Co. $1.50.
The Children in the Little Old Red House. Amanda M. Douglas. Boston: Lothrop, Lee & Shepard Co. $1.
The Poor Little Rich Girl. Eleanor Gates. New York: Duffield & Co. $1.25.
Phoebe, Ernest, and Cupid. Inez Haynes Gillmore. New York: Henry Holt & Co. $1.35.
May Iverson Tackles Life. Elizabeth Jordan. New York: Harper & Bro. $1.25.
Jim Davis. John Masefield. New York: F. A. Stokes Co. $1.25.
Helen Ormesby. Belle Moses. New York: D. Appleton & Co. $1.50.
The Japanese Twins. Lucy Fitch Perkins. Boston: Houghton Mifflin Co. $1.
Six Girls Grown Up. Marion Ames Taggart. Boston: W. A. Wilde Co. $1.50.
Nancy Porter's Opportunity. Marion Ames Taggart. Boston: L. C. Page & Co. $1.50.
Just Boy. Paul West. New York: George H. Doran Co. $1.20.
A Child's Journey with Dickens. Kate Douglas Wiggin. Boston: Houghton Mifflin Co. $1.

One approaches the field of fiction with some natural dread; there is so much of it, and it is all so much alike. It has been observed how children take to the series class as the channel of least resistance, as the channel of greater familiarity. This inclination is the chief support of endless rows of stories whose sameness we condemn less than the fact that any publisher should overwork the inventiveness of one who, in the beginning, showed marks of being an agreeable writer. A warning must be sounded against certain well-established firms, heretofore given to a conservative issue of juvenile books; they are being pushed rapidly into the wake of the Father of the Juvenile Series—whom we name not. As we have hinted, the Boy Scout movement has added many a volume to the over-abundant output. Care should be taken by such writers as Walter P. Eaton and Mrs. Thurston, that they do not simply reproduce in their stories the Official Manual for Scouts.

The list of special stories is simply an indication, not of exceptional worth so much as of distinctive character in comparison with the mass of democratic stuff. Abbie Farwell Brown has the happy faculty of catching the healthy, fresh spirit of children in all she does. *Their City Christmas* is slight, but cheerful in its contrasts. Ellen Douglas Deland is a seasoned writer whose stories are tinged with clash of will; Eleanor Gates, in *The Poor Little Rich Girl,* combines fancy with satire in her story of neglect; Belle Moses has a fresh gift of inventiveness which makes her seven girls in *Helen Ormesby* real and live and true—all with a healthy home spirit in them, rare in these days. Lucy Fitch Perkins, in such a simple story as *The Japanese Twins,* is charming both as writer and as artist; Marion Ames Taggart, in the seventh volume of a series, *Six Girls Grown Up,* exhibits no abatement of her sweetness and light, which is mixed with decided strength of character; while Mrs. Wiggin, in *A Child's Journey with Dickens,* illustrates how agreeably fictional sentiment may be mingled with autobiography.

We let the remaining book lists speak for themselves. The essential matter is this: Measure your taste; let no gift go to waste. If, by a mere glance thru a new book you are not certain of its tone, even tho it may tingle with timeliness, pass it by, and get something that has stood the test of years. I believe, with most librarians, that there is enough good matter published to keep children supplied, without having to encourage such a heedless output as we get each year. The following are a few lists for examination:

Historical Stories

The Son of Columbus. Molly Elliot Seawell. New York: Harper & Bros. $1.25. (A story of Columbus and his son, Diego.)
Stories of the Pilgrims. Margaret B. Pumphrey. Chicago: Rand, McNally & Co. $1. (A clever series of stories illustrative of Puritan life.)
Two Girls of Old New Jersey. Agnes C. Sage. New York: F. A. Stokes Co. $1.35. (The experiences of a school girl of '76.)
The Lucky Sixpence. Emilie B. Knipe and Alden A. Knipe. New York: The Century Co. $1.25. (A tale of '75, with a heroine sent to America.)
Scouting for Light Horse Harry. John Preston True. Boston: Little, Brown & Co. $1.50. (The fourth of a series.)
The Young Continentals at Monmouth. John T. McIntyre. Philadelphia: Penn Publishing Co. $1.25. (The fourth of a series.)

At the Manor. Mary B. Sleight. New York: R. F. Fenno & Co. $1.25. (A story of when the British held the Hudson.)
At Seneca Castle. William W. Canfield. New York: E. P. Dutton & Co. $1.25. (The continuation of a good story, "The White Seneca.")
Don't Give Up the Ship. Charles S. Wood. New York: The Macmillan Co. $1.25. (A story of 1812.)
The Young Minute-Man of 1812. Everett T. Tomlinson. Boston: Houghton Mifflin Co. $1.50. (A story based on fact.)
Bob Dashaway: Treasure Hunter. Cyrus Townsend Brady. New York: Dodd, Mead & Co. $1.25. (A dashing tale of 1812.)
With Carson and Frémont. Edwin L. Sabin. Philadelphia: J. B. Lippincott Co. $1.25. (Adventures east of the Rockies in 1842.)
The Pioneer Boys of the Ohio. Harrison Adams. Boston: L. C. Page & Co. $1.25. (One of a pioneer series.)
The Cave of Gold. Everett McNeil. New York: E. P. Dutton & Co. $1.50. (A California tale of '49.)
The Texan Star. Joseph A. Altsheler. New York: D. Appleton & Co. $1.50. (Describing Texas' struggle with Mexico for liberty.)
On the Trail of the Sioux. D. Lange. Boston: Lothrop, Lee & Shepard Co. $1. (Satisfies the demand for an Indian story.)
The Courier of the Ozarks. Byron A. Dunn. Chicago: A. C. McClurg & Co. $1.25. (A member of the Young Missourian Series.)
With Carrington on the Bozeman Road. Joseph M. Hanson. Chicago: A. C. McClurg & Co. $1.50. (Among the Sioux Series.)
The First Cruise Out. William O. Stoddard. New York: Duffield & Co.
The Knights of the Golden Spur. Rupert S. Holland. New York: The Century Co. $1.25.

Boys' Fiction of the Hour

Hike and the Aeroplane. Tom Graham. New York: F. A. Stokes Co. $1.
Building an Airship at Silver Fox Farm. James Otis. New York: T. Y. Crowell Co. $1.50.
The Aircraft Boys of Lakeport. Edward Stratemeyer. Boston: Lothrop, Lee & Shepard. $1.25.
Round the World in Seven Days. Herbert Strang. New York: George H. Doran Co. $1.25.
Once a Volcano. Edwin J. Houston. Philadelphia: Griffith & Rowland Press. $1.25.
The Boy with the U. S. Fisheries. Francis Rolt-Wheeler. Boston: Lothrop, Lee & Shepard Co. $1.50.
"Young Honesty"—Politician. Bruce Barker. Boston: W. A. Wilde Co. $1.
Barry Wynn. George Barton. Boston: Small, Maynard & Co. $1.20.
Young Beck. McDonnell Bodkin. Boston: Little, Brown & Co. $1.25.
The Boy Electrians as Detectives. Edwin J. Houston. Philadelphia: J. B. Lippincott Co. $1.25.
The Young Shipper of the Great Lakes. Hugh O. Weir. Boston: W. A. Wilde Co. $1.
The Story of a Ploughboy. James Bryce. New York: John Lane Co. $1.25.
Partners for Fair. Alice Calhoun Haines. New York: Henry Holt & Co. $1.25.
The Young Apprentice. Burton E. Stevenson. Boston: L. C. Page & Co. $1.50.
Donald Kirk: the Morning Record Copy-Boy. Edward M. Woolley. Boston: Little, Brown & Co. $1.20.

The Boy Scout Movement

The Young Crusaders at Washington. George P. Atwater. Boston: Little, Brown & Co. $1.50.
The Boy Scouts of Bob's Hill. Charles Pierce Burton. New York: Henry Holt & Co. $1.25.
Be Prepared: The Boy Scouts in Florida. A. W. Dimock. New York: F. A. Stokes Co. $1.
The Boy Scouts of Berkshire. Walter P. Eaton. Boston: W. A. Wilde Co. $1.
Along the Mohawk Trail. P. K. Fitzhugh. New York: T. Y. Crowell Co. $1.25.
Pluck on the Long Trail. Edwin L. Sabin. New York: T. Y. Crowell Co. $1.25.
Boy Scouts of the Air at Greenwood School. Gordon Stuart. Chicago: Reilly & Britton Co. 60 cents.
The Scout Master of Troop 5. I. T. Thurston. New York: Fleming H. Revell Co. $1.

Some Stories for Boys

Change Signals. Ralph Henry Barbour. New York: D. Appleton & Co. $1.50.
Crofton Chums. Ralph Henry Barbour. New York: The Century Co. $1.25.
The Bantam. Brewer Corcoran. New York: Harper & Bros. $1.
The Freshman. James Hopper. New York: Moffat, Yard & Co. $1.
Campus Days. Ralph D. Paine. New York: Charles Scribner's Sons. $1.50.
The Green C. J. A. Meyer. New York: Harper & Bros. $1.25.
Rifle and Caravan. James Barnes. New York: D. Appleton & Co. $1.50.
Ken Ward in the Jungle. Zane Grey. New York: Harper & Bros. $1.25.

Some Fiction for Girls

The Lady of the Lane. Frederick O. Bartlett. New York: The Century Co. $1.25.
How Phoebe Found Herself. Helen D. Brown. Boston: Houghton Mifflin Co. $1.15.
Betty-Bide-at-Home. Beulah Marie Dix. New York: Henry Holt & Co. $1.25.
When Margaret Was a Sophomore. Elizabeth H. Hunt. New York: Moffat, Yard & Co. $1.25.
Peggy Stewart. Gabrielle E. Jackson. New York: The Macmillan Co. $1.25.
Peggy Stewart at School. Gabrielle E. Jackson. New York: The Macmillan Co. $1.25.
Mary Ware's Promised Land. Annie Fellows Johnston. Boston: L. C. Page & Co. $1.50.
A Junior Co-Ed. Alice Louise Lee. Philadelphia: Penn Publishing Co. $1.20.
Every-Day Susan. Mary F. Leonard. New York: T. Y. Crowell Co. $1.50.

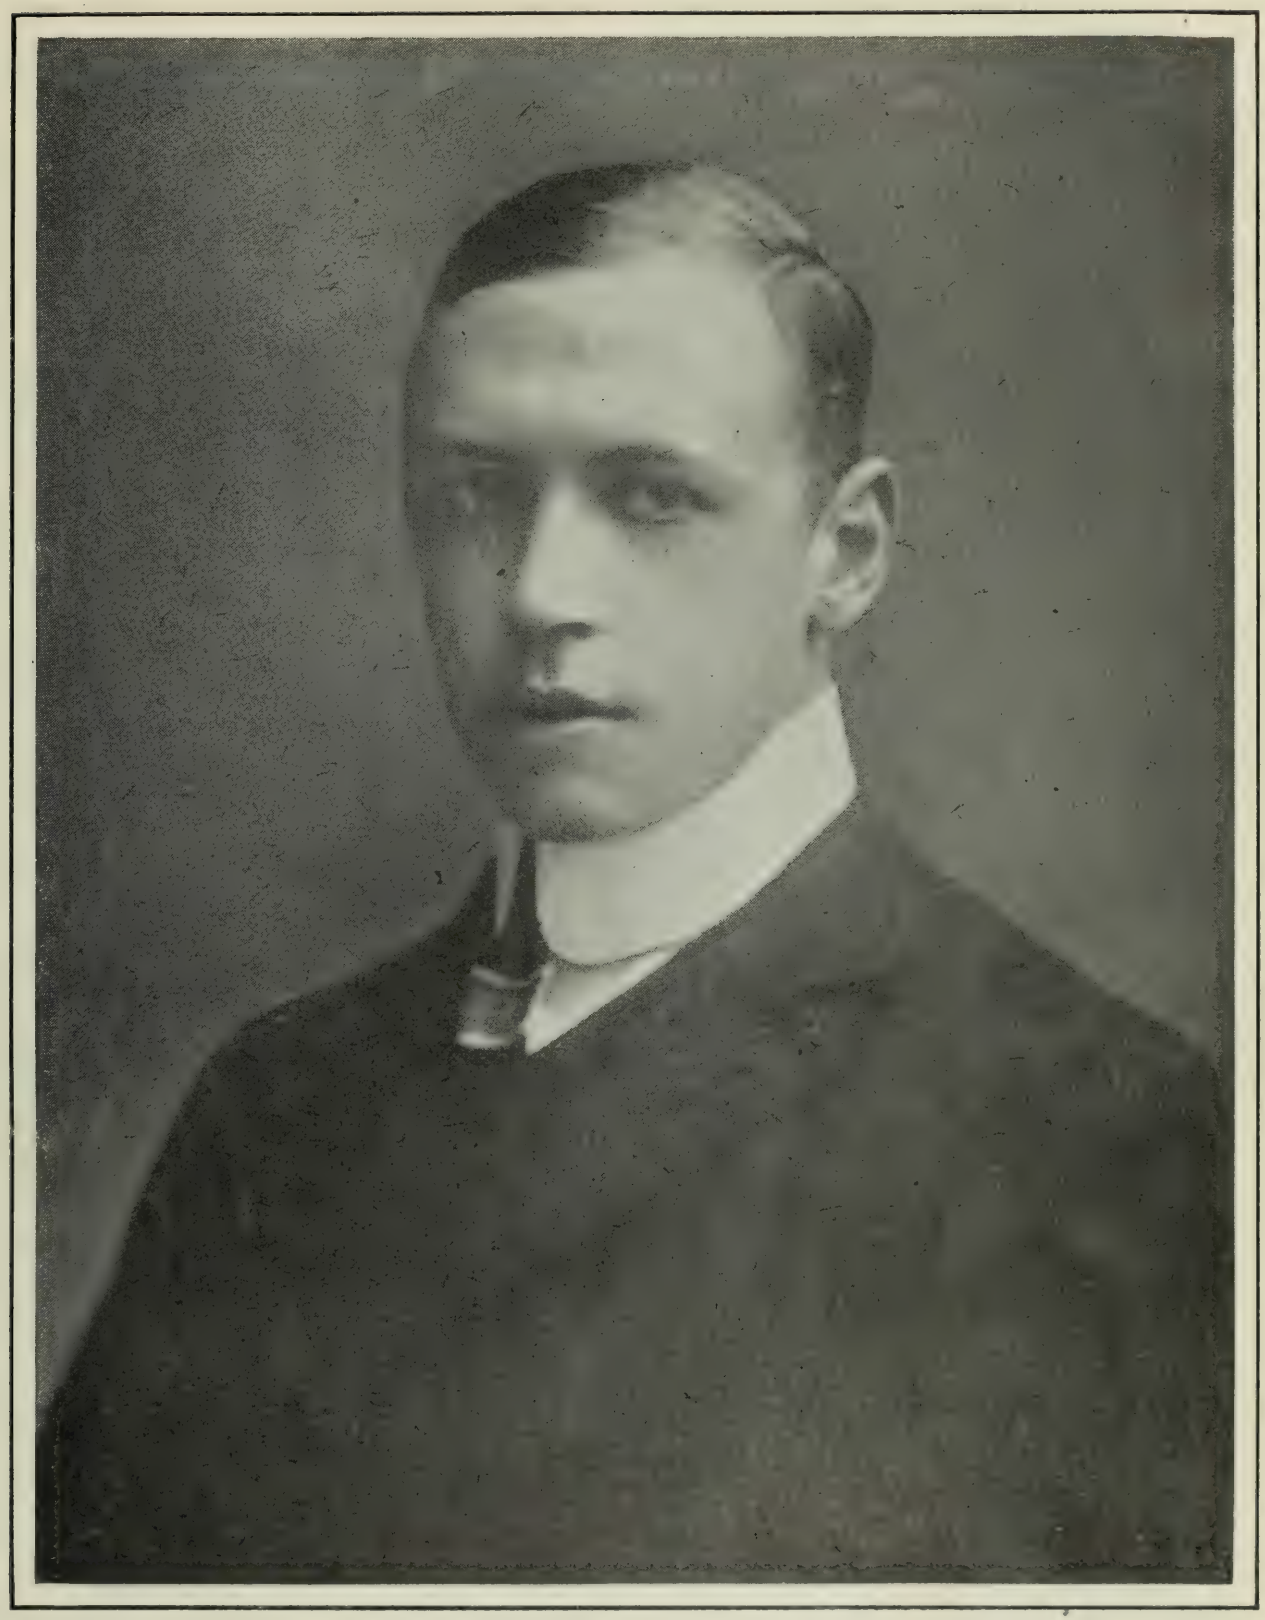
Series

The Four Corners in Japan. Amy E. Blanchard. Philadelphia: George W. Jacobs & Co. $1.50.
Billy Stands the Test. Sarah Pratt Carr. Chicago: A. C. McClurg & Co. $1.25.
Jackson and His Henley Friends. Frank E. Channon. Boston: Little, Brown & Co. $1.50. (In the same series, "Henley's American Captain.")
Dave Morrell's Battery. Hollis Godfrey. Boston: Little, Brown & Co. $1.25.
Buddie at Gray Buttes Camp. Anna Chapin Ray. Boston: Little, Brown & Co. $1.50.
Dave Porter on Cave Island. Edward Stratemeyer. Boston: Lothrop, Lee & Shepard Co. $1.25.
Four Boys on Pike's Peak. Everett T. Tomlinson. Boston: Lothrop, Lee & Shepard Co. $1.50.
Faith Palmer at the Oaks. Lazelle T. Wooley. Philadelphia: Penn Publishing Co. $1.

The Origin of Life

BY ALFRED NOYES

In the beginning?—Slowly grope we back
Along the narrowing track,
Back to the deserts of the world's pale prime,
The mire, the clay, the slime;
And then . . . what then? Surely to something less:
Back, back, to Nothingness!



You dare not halt upon that dwindling way!
There is no gulf to stay
Your footsteps to the last. Go back you must!
Far, far below the dust,
Descend, descend! Grade by dissolving grade,
We follow, unafraid!
Dissolve, dissolve this moving world of men
Into thin air—and then?

O pioneers, O warriors of the Light,
In that abysmal night,
Will you have courage, then, to rise and tell
Earth of this miracle?
Will you have courage, then, to bow the head,
And say, when all is said—
"Out of this Nothingness arose our thought!
This blank abysmal Nought
Woke, and brought forth that lighted city street,
Those towers, that armored fleet"?

When you have seen those vacant primal skies
Beyond the centuries,
Watched the pale mists across their darkness flow,
As in a lantern-show,
Weaving, by merest "chance," out of thin air,
Pageants of praise and prayer;
Watched the great hills like clouds arise and set,
And one—named Olivet;
When you have seen, as a shadow passing away,
One child clasp hands and pray;
When you have seen emerge from that dark mire
One martyr, ringed with fire;
Or, from that Nothingness, by special grace,
One woman's love-lit face,

Will you have courage, then, to front that law
(From which your sophists draw
Their only right to flout one human creed)
That nothing can proceed—
Not even thought, not even love—from less
Than its own nothingness?
The law is yours! But dare you waive your pride,
And kneel where you denied?
The law is yours! Dare you rekindle, then,
One faith for faithless men,
And say you found, on that dark road you trod,
In the beginning—God?

London, England.

Alfred Noyes

The author of "The Origin of Life" was born in Staffordshire, England, in 1880, and was educated at Exeter College, Oxford. America gave him a wife, as it gave Rudyard Kipling. This poet of patriotism is best known, perhaps, for the ringing stanzas of his "Drake: An English Epic" and "Forty Singing Seamen," but he has written also "The Flower of Old Japan" and a stirring Robin Hood play in blank verse, "Sherwood," and other books of verse: "The Loom of Years," "The Forest of Old Thyme," etc. For those who do not know this work, but would make the acquaintance of one whom Theodore Watts-Dunton names "the first of our living poets,—now that Swinburne is gone," the volume of volumes is "The Enchanted Island and Other Poems." No one need be surprised that Mr. Noyes names as his favorite recreations rowing and swimming: for he is most eloquent, as poet, in praise of the sea and "ye mariners of England."

Arnold Bennett

The United States did not get so well acquainted with Mr. Enoch Arnold Bennett during his recent visit as had been anticipated when his coming was announced. As a literary lion he was an undeniable failure. He not only refused to roar to order, but even failed to stalk forth to be gazed upon at the appointed time. Unlike many of our distinguished guests his object was rather to see than to be seen, and his latest book, "Your United States," proves that he got acquainted with us if we did not with him. A snap-shot, surely, but the snap-shot is a legitimate form of photography and often reveals more than a film fogged by over-exposure or too long development. He has a quick eye and an accurate; and we can find little fault with his picture of us. He would be able apparently to stage a story of the Five Boroughs of New York City with the same surety as in the Five Towns of England where his genius has been anchored so long.

Books Is Books

BY GEORGE FRENCH

"WHY," inquired Sophronia, "don't you read the new novel I bought?"

I rather dreaded that question, which had for two or three days been imminent in the too-candid eye of the astute lady.

It is well to explain that I usually buy the new books for the family, and the sporadic advent of this one rather marked an epoch. The sight of it emerging from the shopping bag gave me quite "a turn." At first I felt a bit piqued to recognize speedily a mild competition. I realized that I had monopolized the joy of selecting our books for so long that I had come to regard it as a prescriptive right, while the lady in question had not been privileged to select even her own birthday book!

"I haven't got ready. I've had so much to do, I got behind with my studies. Professor Um-um's big book, you know, I just have to read. I——"

She turned an eloquent, if a bit sarcastic, eye toward a row of upward of a dozen new novels which had come into the house since hers, and smiled toward me.

"Well, if you must know, I don't like the looks of that book, and I cannot bring myself to read it. Its format is bad, it is poorly printed and bound and the paper is wretched. The type and paper do not belong together, the page is too wide, the top margin is wider than the front margin, the title-page is a discordant jumble of three styles, the back cracks when the book is opened flat, the cover design is bad as art and has no relation with the motive of the book. You might have known by the publisher's imprint the book would be impossible."

I rather glared at Sophronia. I had for years refrained from imposing upon her this baleful knowledge of the book as a book because I was a bit ashamed of the prejudice it had created in me, and more than a bit jealous of the taste it had built up in me. She is an iconoclast. She once told me candidly that she had for some years known that I possessed, or was possessed with, "the artistic spirit." She put the quotation marks on the clause by her tone, and so subtly that, while they assumed 48-point size, I could not recognize their existence. Besides, I really envied her sublime disregard of those things. To her a book was a book. She never looked at a publisher's imprint and did not know, I feel sure, the difference between D. Berkeley Updyke and Elbert Hubbard as makers of books.

But the time had come to talk of many things. Sophronia dislikes the dark, physical or mental. I knew she would demand explicit explanations, and I felt the cold sweat gathering under the edge of my hair. How often, O my soul, have I labored over this ground in the vain endeavor to convince publishers, and now I must go again along the beaten path with her! If she should reject it all, too!

"Yes," she said with that gentle, soft, rising inflection. "Yes, I've heard you mention those things. Why should they prevent the reading of this book—this good story? Tell me."

"Well, my dear girl," said I, "do not you insist upon harmony in your dress? I know how particular you are to wear the right hat and hosiery with each gown, and how you grieve if you find, on our hurried way to church, that you have not the right gloves. I delight in this discriminating taste on your part. It enables me, in my somber and conventional man's garb, to feel a deep and pleasurable satisfaction in the lady who accompanies me to church. I realize that other ladies glance you up and down, assay your *tout ensemble;* and I am glad to believe that you also realize it. I note with keen satisfaction that the men also take note of you—approving note. I go into church beside you, and sit contentedly beside you thru however dull a sermon, conscious of your agreeable personality.

"Does it seem at all strange that I

enjoy the sermon better, and profit by it more, because there is beside me a dear and sweet woman who has shown that she appreciates and values her femininity to the end that it shall exert itself for the amelioration of this hard and difficult life? It is somewhat thus with a book. If it has a real message for me, it should provide as well for the reception of the message as for its deliverance. What does it profit the maker of that book that he has contrived to set my nerves a-tingle with protest, and has challenged my eyes and senses to avoid his book? An idea does not slip into one's mind if it is encased in a chestnut burr—not if one notes the burr.

"A book is like a good deed: Its quality is determined by the spirit in which it is offered. The book is the clothes of its motive. I may know full well that you are an intelligent and amiable person, whether you are gowned in becoming white serge or in the cheapest of print. But I cannot get the real flavor of you if your image that fills my eye does not reflect an agreeable image upon my brain. I am not able to begin to read a book in the right spirit if first the book physical has not sent in advance an agreeable image to my brain. The book should be made in harmony with the principles of art. Why not? Every beautiful thing that helps us to endure and enjoy life is so made—must be."

"I see—that is, I begin to see. But just how does my poor book lack?" quoth the listening lady.

"To tell you that you must know that I have really read some of the book, thinking I might perhaps let you believe I had read it all if I showed a small acquaintance with it. To specify a little, then: It is too large for its literary motive. It should have been made a 16-mo in size, set in Caslon 10-point type, printed on India tint antique paper, left untrimmed, except the top, which should have been gilded, bound in crimson cloth with side and back stamps simply lettered in leaf gold. It should have been so bound that its covers could be brought back together without a complaining crack or snap from the glued back. A book like that, well executed thruout, would have constituted a fitting roadway along which its literary motive would have joyously traveled into your welcoming mind.

"Come, confess. Would not the book have been more precious to you? Had it been thus made it would have been yours, with an inscription on the fly-leaf, long before you got it, as I knew the author's merit, had read the critics' estimates, but had also seen it in the book shops."

Sophronia smiled my way and this time without a trace of challenge or sarcasm; and the next day the book was not in the row of just-reads and just-to-be-reads. In a qualm of contrition, I bought her Dr. Van Dyke's "Unknown Quantity." She has all of his books of story, essay and *bel. let.*, and they are good books, as books, because Mr. Updike made the one at the head of the line and the publishers have followed his style as faithfully as a journeyman may follow the style of a master.

"Yet I cannot quite understand why, even if they are not as artistically made, you refrain from buying books published by certain houses, as I know you do."

Convinced against her will but unconvinced still, I was mean enough to reflect, but I said: "Despite all efforts, beauty must find expression, and hence it is beneficently ordered that a large proportion of the books I really must have are published by houses that make good books—or, at the worst, tolerable books. The Quaker uniformity of the Macmillan books always cloaks excellent typography and perfectly satisfactory presswork on good paper. The books of the famous house of Houghton are nearly always correctly designed and well made—always bound right. Scribner books are more variable, with an excellent majority. Doubleday's and Putnam's are still more variable, but with many fine retrieving examples. The quality of the books put out of most of the other houses is determined by large printing concerns, of which but few are known outside the trade. But as for me, I am Philistine enough to deny myself books that do not first satisfy my eye."

"Yes, I know—your critical eye," said Sophronia, to end the talk before it got too dull for her, with a hint of her former gentle sarcasm.

New York City.

Cross Currents in the Balkans

BY EDWIN M. BLISS, D.D.

[It is difficult for the American reader to get a clear idea of the underlying forces of the present conflict in Turkey. We hear, for example, travelers' tales of the marvelous peace and prosperity of the Servian provinces of Bosnia and Herzegovina under Austrian rule and wonder why Servia is willing to fight to the death rather than come under the sheltering wings of the double-headed eagle. But, as Dr. Bliss points out, there is reason to believe that the Serbs of the Austrian Empire are by no means so happy as they are usually represented. On questions of the Near East Dr. Bliss can speak with authority, for he was born in Erzroom, Turkey, and studied at Robert College, Constantinople, where the leaders of Young Bulgaria have been educated. He was for ten years associate editor of THE INDEPENDENT and is the author of "The Turk in Armenia, Crete and Greece," and the "Encyclopedia of Missions."—EDITOR.]

IN 1907 Noury Pasha, Secretary-General of the Imperial Ministry of Foreign Affairs at Constantinople, in reply to a question by an Englishman as to the Macedonia-Bulgar situation, said:

"We hear from time to time threats of war. But whenever we hear them we remember that we are sixteen million Turks; and when we sleep we sleep quite undisturbed by any war rumors from Sofia."

Today the Bulgarians have reached the outer defenses of Constantinople and the allies are negotiating terms of peace which two months ago would have been laughed out of court.

The full secret of this marvelous result can scarcely be stated in an article or even in a volume, for it is found in a combination of racial, national, religious, commercial and political interests and antagonisms which defy concise or clear statement.

Among these, however, two factors which have been generally overlooked call for special note: a feeling of disheartenment on the part of the Turks,

CAMPING ON THE OLD CAMP GROUND

Servian Artillery at Uskub. The greatest triumph of the Serbs is the recapture of Uskub, the ancient capital of the Servian Empire, which was overthrown by the Turks at the battle of Kossovo in 1389.

and among the allies a realization that national development, even national independence, was at stake.

The disheartenment of the Turks has been due partly to the outrageous mismanagement of the army in every department; but also to an underlying consciousness that in their contest with Europe they are fighting a losing battle. Scarcely had the signatures been appended to the Treaty of Berlin than there commenced a hegira of Ottoman Turks from Europe until comparatively few were left west of Constantinople. Even Adrianople, the old-time capital, with its famous mosque, became less and less a Turkish city. As the half-starved, poorly armed and untrained levies from Asia Minor met the vigorous onslaught of the allies, they had a feeling that it was not merely Bulgars and Serbs, but Kismet, that they were fighting, and the peace negotiations have but recognized the inevitable.

On the other hand, the allied forces were aroused by the recognition of the fact that their national life must assert itself or it would be overborne. The spur to Bulgaria, Servia and Montenegro which forced immediate action is to be found, not so much even in the conditions of their fellows in Macedonia as in the increasing danger of practical, if not actual, effacement similar to that which has befallen their former allies, Bosnia and Herzegovina, and their kinsmen of Croatia and Slavonia.

When the history of the past century in Europe is written, after the clouds have cleared away, the oppressive, crushing tyranny of Austrian rule over some of its provinces, especially the Slavic provinces, will stand out in uncomfortable comparison with that of Turkey and Russia.

This oppression has not been in the form of massacre, as in Macedonia, or of wholesale repression, as in Finland. Brigandage has been suppressed, and the farmer has been reasonably sure of what returns there might be for his labor. In the years of Austrian rule, however, there has been practically no development even in agriculture, except in certain sections, and the means of access to the country sections are still absurdly meager.

The country has been quiet, and travelers following the railway lines, and seeing what Austrian officials wanted them to see, have reported it as prosperous, just as other travelers in Siberia and Russia have announced that George Kennan's stories were the imaginings of a diseased brain. Two writers, however, a Frenchman and an Englishman,[1] have lifted the veil and disclosed a policy of terror, of espionage, of famine and of assassination. The peculiar fact is that the people who have suffered most have been the Christian Serbs. The Moslem Serbs, apart from the general misgovernment, have fared reasonably well. The Christian Serbs, however, belonging to the Greek Orthodox Church, have been subjected to the same influences as those in Croatia and the north, where the full power of the Roman Catholic hierarchy has been applied to separating them from their own Church. Theoretically, there is perfect freedom. That does not prevent the appointment by the Government of metropolitans, who make the daily life of the people a burden, till the Jesuit comes with a sympathetic offer of freedom from the more oppressive ecclesiastical demands; nor the practical suppression, for a variety of reasons, of their celebration of the festival of their patron saint.

There is also the complete subordination of the interests of the Slavic communities to those of the Germans and the Magyars, involving the entire political organization of the empire.

All this is well known in Montenegro and Servia, and equally clear is it that the same fate will befall them unless in some way the persistent policy of Austria to extend her territory thru to the Adriatic can be checked. Montenegro, hemmed in on the west, and Servia, overshadowed on the east, and with no outlet to the sea, would have absolutely no hope of development, scarcely even a chance of independence. For years the two countries have been overrun with Austrian spies, who report to Vienna everything that can offer an occasion for discrediting the Balkan governments and furnishing a plausible pretext for indirect if not direct interference. That explains, at least partly, the lack of European

THE MONTENEGRIN COMMISSARY

Every man in Montenegro carries a gun and when he is called upon to use it his wife is expected to provide him with food from home.

pressure upon Turkey for decent government in Macedonia. It is more than hinted that the incursion into Macedonia of Greek brigands from the south has been encouraged from north of the Danube as tending to emphasize the need of interference by some European power capable of exerting a firm and just rule. Firm undoubtedly, but scarcely just.

After the Young Turk party came into power, and Abdul Hamid was exiled, there came a lull, while all looked on uncertain as to the results. The last year, however, has made it evident that no hope of reform or better conditions could be expected from Turkish rule. More insistent than ever became the pressure from Vienna, more positive the assertions of her own claims and the refusal to allow Servia any outlet to the sea, until the rulers of the two countries came to realize that they must strike. Bulgaria threw in her lot with them and they have struck, and the world stands astonished at the force of the blow.

A significant feature in the movement is the attitude assumed by the Bulgarians. The Bulgar is not pure Slav, but has inherited from his Hun ancestors a certain quality of national life quite distinct from that of his neighbors of Servia, Bosnia, Croatia and Slavonia. This resulted frequently in antagonisms rather than alliances; but of late years a clearer vision has brought both into at least a formal harmony. While it is true that Austria's claims are more directly dangerous to Servia than to Bulgaria, the latter country realizes that the extension of Austrian rule and overpowering influence to her very borders would inevitably result either in her own subordination to Austria, or, more probably, in her absorption by Russia, who never could permit another European Power, and especially a Latin and Roman Catholic Power, to come within striking distance of Constantinople and the Bosporus.

To the Bulgarian this last is a result to be dreaded as much as the former. Since the Treaty of Berlin his whole policy, external and internal, has been dominated by the purpose to preserve his national life, independent of the Colossus of the North, and in this the citizen has been at one with the leader; so that it may fairly be claimed that there is no nation in Europe in which the national idea has more thoroly permeated the mass of the people, or where there is such clear understanding of national relations. It was due largely to this quality in the national life that, to the surprise of the world, Russia failed to carry out her purpose of absorbing the new principality, and in all the subsequent vicissitudes it has been evident that the European Powers had to deal with a people who could not be cajoled, frightened or deceived, but knew what they wanted and were bound to secure it.

To the question how this has been developed there are many answers. National or racial character has played its part, as have education, travel, contact with other peoples. These they have shared with Servia. But two influences have been unique: those exerted by Robert College at Constantinople, and by a weekly paper, issued first from Constantinople, later from Samakov in Bulgaria. The work of Robert College is well known. Not merely were many of the Bulgarian leaders educated there, but its influence affected the entire leadership of the nation, political as well as educational, social and moral. But leaders, to accomplish their purpose, must have men to lead. An army must have privates as well as officers; and the private, to be efficient, must be of the same essential quality as the officer. This is true in a marked degree of the Bulgarian, and it is largely due to the fact that during the strenuous years just preceding the massacres which resulted in Bulgarian independence, and following the Russo-Turkish war, a weekly paper, edited by an American missionary, was carrying into every city, town and even hamlet the fundamental principles of national life. Its editor during that period, Rev. T. L. Byington, D.D., was a man of high scholarship and varied learning, who believed thoroly in the possibilities of the race, and notwithstanding Turkish censors and Greek ecclesiastics not a copy of the *Zornitza* went out that did not exert a positive influence for Christian citizenship. Those who have known Bulgaria best have accorded to him a very large influence in developing the sturdy, intelligent independence that has baffled Russia and turned the Turkish pasha's statement into ridicule.

Another feature is the fact that for the first time Greece has associated herself with Bulgaria and Servia. In Bulgaria's time of stress Greece stood aloof, and in the Greco-Turkish war Bulgaria did the same. That the situation has changed seems due largely to the efforts of the Greek Prime Minister and to Prince Ferdinand. It is to be hoped that the alliance will continue.

As to the outcome, it is too soon to make any definite forecast. In any case, Turkish rule has vanished from Europe, tho the Sultan may continue to reside in Constantinople and may even keep Adrianople. Eventually Macedonia as a separate province will almost certainly disappear from the map, divided between Bulgaria, Servia and Greece. Albania will probably be the next bone of contention. Were there a clearly defined country called Albania, or were the Albanians themselves a united people, they might play an important part; but split up into mutually hostile tribes, belonging to three different and mutually hostile ecclesiasticisms, Roman Catholic, Greek Orthodox and Moslem, it is difficult to see how they can be even autonomous. Still the improbable has happened so often in the Levant that he would be a bold man who should prophesy what the next year or even few months will bring forth.

If Austria declares war, which at the present writing seems probable, it will be not so much to secure a port on the Adriatic or the Ægean as to crush the developing prosperity of Servia and thus destroy the possibility of a union with Servia of the Slavic communities of Southern Austria, which would be a death-blow to the Austro-Hungarian Empire, endanger German supremacy in Continental Europe, and seriously affect her influence in Western Asia.

WASHINGTON, D. C.

The Independent

Entered at New York Post Office as Second Class Matter. Owned and published by The Independent Weekly, Incorporated, at 130 Fulton Street, New York, N. Y. Hamilton Holt, President; Frederic E. Dickinson, Secretary and Treasurer.

A WEEKLY MAGAZINE FOUNDED IN 1848

One Year, $3.00 Single Copies, 10 Cents

Single copies over six months old, 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as those offered by any responsible agency.

An order for the change of an address should be received two weeks before the change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of the publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Binders holding in book form thirteen current issues will be furnished for 45 cents. If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We welcome unsolicited contributions, but writers who wish their articles returned, if not accepted, should send a stamped and addressed envelope. Even so, we cannot hold ourselves responsible for their return. Authors should preserve copies of their manuscripts.

Advertising rates will be furnished on application.

From Calhoun to Blease

It is not so very strange that the State which has of old made the rattlesnake its emblem, with the motto, "Don't tread on me"; whose most honored statesman was John C. Calhoun, expounder of nullification, as Webster was of the Constitution; the State which was the first to break away from the Union; which has since kept the man with the pitchfork in the United States Senate, should choose Blease for Governor, and then, when it had tried, tested and approved him by re-election, should choose him as Senator to take the seat once held by Calhoun. When he joins Tillman in that honorable company, no State will be able to boast equal distinction of lurid glory.

Hitherto Governor Blease's fame has been confined chiefly to his own commonwealth, where he is known and admired. There he has freely made his views known about the nullity of law, the idealization of brave murder and the waste of education, and for it all they will have him Senator; but the meeting of the Governors at Richmond has given him a wider field of display, and he has used it to the utmost. His battle-cry, "To hell with the Constitution," has resounded from the two Portlands to New Orleans and Key West, and every newspaper has given its readers his defiance of law and his approval of the lynching habit, if only the lynchers will make sure that they get the right man. There amid the Governors he stood alone, with sublime effrontery, and boasted that the people of his State supported him in his abjuration equally of the Constitution and of his oath to see that the laws are obeyed. One after another Southern Governors protested and condemned him, but he stood proudly, backed by his own citizens, and what cared he for the rebukes of others? This was his defiant answer when asked whether he had not taken an oath to uphold the laws and Constitution of his State and protect negroes as well as white men:

> "I will answer that question, and I hope the newspaper men will get it right, for in my campaign in South Carolina they found that I am a fighter—and a cold-blooded fighter. When the Constitution steps between me and the defense of the white women of my State I will resign my commission and tear it up and throw it to the breezes. I have heretofore said 'to hell with the Constitution!'"

It is a matter for great satisfaction that Governor Blease found no supporter from the South or from the North. He was repudiated by all. The Governors of Alabama and Florida presented a sharp resolution condemning him, and the Governor of Virginia another declaring for the universal reign of law and against lynching, and it was past with but four negatives, and those only because they believed that absolute freedom of expression should be allowed. No one will suspect that Governor Baldwin, of Connecticut, has any sympathy with mob law, altho we think he was too sensitive about free speech; for the resolution only indirectly rebuked the Governor of South Carolina.

But Governor Blease has won national distinction nearly equal to that of Senator Tillman. We recommend him equally as a lecturer at chautauquas and in Northern churches. It would not be strange if he should add his name to the English language. Indeed, people already begin to remark that there are "bleasers" in other States, and last week we gave record of one from Texas, who bleases as stoutly, if not as coarsely, as he of South Carolina. Coatesville, in

Pennsylvania, has a townful of bleasers, who rule the courts. But heaven save the country from the whole noisy and noisome, crazy, blowzy, bleasy, blustering rout of them.

Prosecution of Trusts

ATTORNEY GENERAL WICKERSHAM, in his annual report, asserts that the Sherman Anti-Trust law is adequate and effective as a civil statute, but remarks that the Department of Justice's experience in endeavoring to enforce its criminal provisions has not been encouraging. That is to say, orders for the dissolution of combinations have been obtained, and the dissolutions have taken place; injunctions have been procured and have been obeyed, and the effect of the proceedings and decisions has been good. As to the character of the effect, however, there is a conflict of opinion outside of the Department of Justice. Many are not convinced that the people, or the consumers of Trust products, have gained anything as a result of the successful prosecutions. In the criminal proceedings there have been several jury disagreements or acquittals. A notable example of failure was the criminal suit against officers of the Beef Trust. This failure was not due to lack of energy or ability in prosecution, and many thought the evidence was sufficient for conviction. But it has been difficult to induce juries to render verdicts which will send Trust officers to prison.

It may reasonably be expected that orders for dissolution and disintegration will be the fruit of important suits now pending. If the Steel Corporation should be dissolved, would the public interest be served by this change? There are economies associated with great combinations, and the public ought to gain by reason of them. If combinations withhold the benefit of such ecomonies from the people, it might be well to subject them to regulation and discipline by means of a Federal executive commission. Such regulation might be more beneficial than dissolution. But the merits of dissolution are to be tested. Undoubtedly there are evils associated with combinations. Sometimes these evils have been great and intolerable. The practical question is whether such evils can be suppressed or eliminated, and the advantages of combination at the same time preserved for the benefit of the public. All this cannot be done without effective Federal regulation.

A long list of important suits must go over to the incoming Administration. In this list are the Steel, Harvester, Cash Register, Sugar, Lumber, Coffee and Steamship Trust cases. Mr. Wilson should select his Attorney General with care. The new head of the Department of Justice should not, for example, be a man like Mr. Pujo, of Louisiana, the chairman of the House committee which has been inquiring about a Money Trust. Mr. Pujo, in a long interview published last week, said it had been shown beyond a doubt that the New York Stock Exchange, some produce exchanges, the New York Clearing House Association of Banks, and a majority of the clearing house associations were unlawful conspiracies in restraint of trade. For this reason, he continued, their interstate business ought to be excluded from the mails. Stock exchanges, he asserted, had become in effect gigantic Trusts and monopolies of commerce. "If they are not reorganized they will be treated exactly as the Louisiana Lottery was treated." An Attorney General holding such opinions would be out of place in Mr. Wilson's Cabinet. Stock exchanges and produce exchanges are by no means perfect, but it cannot be expected that they will be greatly improved by the labors of legislators like Mr. Pujo, who is inclined to place the New York Clearing House Association in the same class with Burr Brothers and the promoters who, the Post Office Department says, robbed the American people of $120,000,000 last year by means of the mails.

The Federal Council of Churches

As we write the Federal Council of Churches is in session in Chicago. It has already accomplished a great deal; there is a great deal more that it ought to accomplish, and which it is at the present quadrennial session planning to accomplish. That it exists is a great achievement. Our Protestant denomina-

tions were separate, divided, having no bond of union, largely rivals, occasionally hostile, at best kindly, but yet apart. Now they are officially, organically united, most of them, all that are willing to, that prefer fellowship to schism. It is a magnificent expression and bond of brotherhood. It declares that Protestantism is not discordant; it is catholic. It answers our Lord's last prayer.

The first task of the Federal Council of Churches is to make this organic fellowship of the no longer dissevered branches of Protestantism more than visible; patent, actively, obtrusively assertive. That is the task it has been engaged in during the past four years, and has fairly begun by the work of its paid officials. It has been organizing State and local federations, many of them; and then it has to some extent, and must much more, set them at work to remove rivalries and overlappings of competing local churches in communities overchurched, to the scandal of the faith. It must unite these denominations in common evangelistic work and take the lead in it. It cannot yet—perhaps it never can—thru its central organization seek to accomplish directly that larger work of reducing the number of our denominations by consolidation; but it can and must show by actual union in Christian work, and especially in evangelism, how useless, how burdensome, are the divisions of our Christendom, so that the kindred denominations will be ashamed to stand apart and will flow together of their own free necessity. To hasten this result needs statesmanship and statesmen yet to appear.

A second task, which the Federation of Churches has admirably begun to attack, is the common duty of the churches to foster social morality. In the present session that has been a prominent topic. It has recognized those social evils and wrongs which political parties also are concerned with, and it has made its admirable pronouncements on social and industrial service. It has made investigations in cases of industrial disputes, and has presented its valuable reports. In large part this work has been educational and suggestive rather than directly effective. It is a great deal to have these studies made of the good and bad conditions in various industries, and of the ways to suppress social vice in our cities, for this is a first step; but in the next quadrennium of the council something more than enlightenment will be needed. It is time to do more, to offer and even to press arbitration in labor disputes thru an impartial and sympathetic and impressive central religious body, whose advice and decision will compel attention. The president and secretaries of the Federal Council, giving all their time to its great tasks, will be the untitled patriarch and archbishops of our united Protestant Christianity, possessed of no authority but that of reason and love, which is all the authority that there is, and they will be heard.

Death in Incurable Disease

Some time ago not only New York city, but practically the whole country, was startled by a sensational announcement in the newspapers that a woman suffering from what she thought an incurable disease had petitioned the Legislature of New York, or at least suggested the sending of a petition, to ask for such a relaxation of the homicide laws of the State as would permit her physicians to put her painlessly to death, since she was suffering from an incurable disease and was in the midst of constant pain that made life miserable. She was quite willing to die and had asked her physicians to put her out of pain, but they refused because the law would not permit them and indeed because any such action deliberately done is looked upon as murder. Of course, the case was widely discussed and the whole subject of euthanasia, the deliberate, easy putting to death of human beings in order to end a life of human suffering, was once more talked over pro and con.

A short time ago a case in Paris seemed to illustrate one solution of that serious problem. A husband gave himself up to the authorities for having killed his wife, and declared that he had done so at her repeated, urgent request, because she was suffering from an incurable disease that made life miserable, as a result of which she had often asked him to put her out of torture. He was a thoroly respectable individual, the presi-

dent of an insurance company. There were witnesses who declared that they had heard his wife more than once ask him, nay, plead with him ardently, to put her out of pain, and that he had been very much affected by the request. The conditions of affection in which the married couple had lived for years seemed to make it quite clear that it was out of the most heartfelt kindness, tho only after the severest kind of struggle with himself, that the husband had finally brought himself to consent to put his wife out of her misery. Every one who heard the story wondered what could possibly be done to the husband under the circumstances. Surely no jury would convict him of crime, and yet if such actions as his were to be permitted with impunity, there would be a door open for many abuses. The Paris husband, however, appeared to many to have solved the problem of euthanasia quite apart from any development of legislation for that special purpose.

Now comes the aftermath of the story in his trial. A series of medical experts in Paris have declared that after the most careful autopsy they were unable to find anything pathological in the dead woman's tissues. She was a sufferer not from physical, but from mental disease. She was a hypochondriac, or a major neurotic, suffering great pain, yet with no physical basis for this pain. Physicians know these cases very well. They complain ever so much more than the patients who are sufferers from incurable physical disease. Indeed, it is a well-known diagnostic rule, accepted by all physicians, that the more complaint there is the less almost surely is the real physical basis for complaint. When patients are suffering physically and seriously this of itself has a quieting effect. Peripheral nerves, as in toothache or neuralgia, or the pinching of certain nerves, may produce intense, disquieting pain, but severe conditions in internal organs, while giving pain, do not as a rule give rise to loud complaints. A neurotic or hysterical woman will arouse the household and gather them all about her, and get her physician out of bed at night, tho so far as medical science goes there is nothing the matter with her. She complains of intense pain in her abdomen and there may be some little accumulation of gas present, but it is her exaggerated attention to it that gives her the sense of unbearable torture.

What is true in the abdominal region is practically true in all the organs of the body. Probably the severest pain to which human nature is subjected is the so-called breast pang or heart anguish of what is known scientifically as angina pectoris. It is due to a cramp-like action of the heart muscle because of failure of nutrition. All the great authorities on heart disease are agreed, however, that when there is very much complaint the disease is much more likely to be pseudo-angina, that is, a neurotic imitation of true angina pectoris, occurring in nervous individuals, than it is to be genuine heart cramp or breast pang. The headaches that are most complained of are those in which there is no physical basis for the condition, or so slight a basis that it is evidently the mental reaction and not the bodily condition that is responsible for the awful torture that is said to be endured.

There are many people who are quite sure that they are almost constant sufferers from an intolerable burden of pain who are really only nursing slight ills so sedulously as to exaggerate entirely their significance. Their attention becomes so concentrated on a slight disturbance of a sensory nerve that, according to Ramon y Cajal's well-known law of avalanche, the sensation is diffused over every portion of the consciousness. The message comes up over a single nerve fibre, but all the attention is directed to it and it is multiplied as it flows over into every portion of the brain and attracts all possible attention to itself. What these people have is mental anguish and not physical pain. What they need is diversion of mind and occupation of their attention with other things besides themselves and their ills, and not physical remedies. They are to be pitied, but their own pity of themselves is the worst possible element in their cases. They are to be pitied because it is a good deal worse to have nothing the matter with one and think there is something than to have something real the matter with one.

These two cases illustrate very well the much discussed subject of euthanasia, and the second is a striking com-

mentary on the first. Real sufferers, unless when they are comparatively young people, do not as a rule ask to be put out of their pain. They may be quite willing to be taken from the scene of their sufferings and may often express the wish that the Lord would take them, but that is a certain consolatory state of mind, and not at all such a persuasion as would lead them to ask for actual anticipation of their death. Even in the midst of suffering there are intervals of satisfaction with life which shows that it may be worth living on, and very often the consciousness of their example to others in the matter of suffering is of itself a supreme satisfaction. Those who clamor for euthanasia are usually patients who are impatiently exaggerating their sufferings, and often they have no real suffering, but only a state of mental anguish which they have fostered in certain morbid ways. They have lost interest in things and persons except themselves. They have become foolishly self-centered and life itself has become a suffering for them. They are supremely to be pitied, but they are the exceptional cases and must not be allowed to influence the making of the rules by which humanity in the mass shall be governed.

Recognition of the Chinese Republic

FORMAL recognition of the Chinese Republic cannot be long withheld. The new government has been definitely established for nearly a year, leaving no chance for Manchu princes to recover the scepter of the Empire. It has been our traditional policy to welcome any politically organized country into the family of states as soon as it has been able to preserve order and manage its affairs. Besides, China deserves fair treatment. She has done a praiseworthy and almost incredible thing by the overthrow of a dynasty three hundred years old without much bloodshed, establishing a republican form of government out of chaos. Our government accorded recognition to Panama, France, Brazil and other states before any other nation. We should not make an exception in this case.

In accordance with international law, China has fulfilled all requirements as an independent political organism. The republic has been established by the people. Conditions have never been more peaceful since the day of Yao and Shan, nor is the confidence of the populace in the government lacking. Trade has revived, and crops are good. All loans secured upon the customs have been partly paid, and yet there is a surplus from native customs to meet Boxer indemnity payments. According to Messrs. Noel, Murray's Price Goods Reports, the price of food has fallen thirty per cent. All the provinces have again begun a regular remittance of revenue to the government, and the people have a voice in the expenditure of taxes. The army has been disbanded to cultivate the soil. The Peking correspondent of the *Times* says that the total amount of China's financial need up to the end of November is some $30,000,000. Telegrams with uniform rates have been cheapened, and the cost of newspapers has been reduced so that the poor can afford to read dailies. Sundays are observed as days of rest and worship. City walls in some parts of the country have been removed. Foreign life and property are safe as never before. The activity of foreign shipping, excellent export figures, the higher wages, agricultural development, the organization of various plants, and the establishment of mills are proofs of the new China's stability.

In addition to her peaceful and prosperous conditions, China has incalculable natural resources and mental assets. Untold wealth is still hidden in her mines; her cultivatable land has not been properly utilized; her forests are still untouched. The patriotism of Dr. Sun Yat-sen, the statesmanship of President Yuan Shih-kai, the enthusiasm of Vice-president Li Yuan-hung, the wide experience of Dr. G. E. Morrison, political adviser to the republic, and the counsel of many other statesmen graduated from Western universities—a wonderful collection of genius and talent to lead the Republic into the haven of peace—will make China stand in the front rank along with Christian nations.

Great Britain and the United States have in fact already informally recognized the Republic. America did this on October 24, when Dr. Chin-tao Chen, the duly accredited commissioner from the Republic of China to the Panama Pacific

International Exposition, selected the site for the Chinese building at the Exposition, and the flag of the Chinese Republic, when planted on the site, received the naval salute of twenty-one guns from the United States artillery, this being the first time this flag has received a naval salute here.

Great Britain also acknowledged recognition when Sir Everard Fraser, consul-general for China, in the publication of an official notification concerning the relation of provinces and Peking in the matter of foreign loans, quoted a communication from the Board of Foreign Affairs of the Chinese government. The fact that he accepted the validity of a statement by the Peking government "as binding upon the British subjects" is a recognition. A definition from J. B. Moore's "A Digest of International Law" will elucidate this assertion:

"Recognition is not necessarily express; it may be implied, as when a State enters into negotiation with the new State, sends it diplomatic agents, receives such agents officially, gives exequaturs to its consuls, forms with it conventional relations."

Besides Great Britain and the United States, Denmark also acknowledged recognition when her Minister presented his credentials to President Yuan Shih-kai.

From an international law point of view, from a moral angle, even from an expediency point of view, China deserves diplomatic recognition, and the nations should welcome her into their family. If our country should be first to recognize China formally, our assistance will be long remembered. When four hundred million people, backed by a civilization of four thousand years, carry on economic wars against the world, we shall be glad that we did something for China when other Powers slighted her. In the name of justice, we ask our government to welcome China officially as a sister republic.

College Boy Farmers

For the first time we are getting from most of the smaller colleges a census of graduates that includes a percentage of farmers among the lawyers, ministers, doctors and editors. The larger universities have given us a very small percentage for several years past, but this drift toward agriculture is evidently on the increase. The leading horticulturists of the country are called upon to give a sort of preliminary training to young fellows who do not care to take a post graduate course in an agricultural college. This is a very good plan, but can be worked only under narrow limitations. What we really need is an agricultural university, a bringing together of the forces of our experiment stations and State colleges. The fact is that most of our agricultural colleges are now doing university work, and this must be recognized sooner or later. They are applying to production all the wisdom that is acquired in our colleges.

The great difficulty ahead of these boys is that they will have to begin what to them will seem to be education all over again. Of course, they will carry into their agricultural studies whatever mental discipline they may have secured; and whatever sciences they have studied will be capable of direct application in some branch of farm work. We imagine that drill in a chemical laboratory will have been a most positive benefit, and if by chance they have picked up a knowledge of ornithology or botany it will count. A year's practice with a well-trained horticulturist is, of course, a good idea. It is the system that might be applied quite widely, where board and lodging and teaching are made equivalents for work. We imagine, however, that in most cases college habits would have to be thoroly revolutionized.

Another difficulty ahead of these boys is that the whole drift of American education has been toward doing big things. It will not be easy for them to come down to the farming of twenty or thirty acres, but that is just about where they will land. Intensive farming has the day, and it looks now as if it were going to hold the future. The big ranches have been cut up into small farms, and there are left in the West not more than half a dozen monster establishments tilling thousands of acres. The planting of huge orchards of tens of thousands of trees has not proved permanently attractive or economical. These young fellows have got to meet the speculative spirit also which has sent capitalists all thru

the better farming sections to buy up as many farms as possible, and run them on the tenant principle. There does not seem to be any permanent settlement of tenantry on American agriculture. These capitalists have not bought on that understanding, but with the intention of selling to any one who will become a genuine farmer. Land prices, however, have been forced up in the passage.

The small farm, run intensively, means that the question of market must be secondary, and the building of a home and the creation of a complete home life must become the leading thought with the countryman. This means that the planting of the small homestead will be in the first place with the intent of growing food, and in all ways supplying home wants, while only the surplus is sold. The distinction is very complete, and the American people must learn to see it.

There is the farmer who studies only those crops that he conceives will bring a high price in market, while another farmer grows a much wider range of fruits and vegetables and cereals, not considering what they will sell for, but rather their need in his own store room or dining room. This latter farmer cuts off expenses, and aims to have a wide range of delicious table products from one end of the year to the other. If he have berries or currants or grapes beyond his household needs they are sold. His bees work for him and the honey supply is first of all for home. The man who plants for market puts all his labor on one or two crops, and has no time for those upon which home comforts depend; they must be bought, if had at all.

This principle of home building must become thoroly understood in order to put sanity into the "back to the land" movement. Not one in twenty of those who quit town life to make a home in the country is in any way adapted to meet market demands. As a consequence they put their capital and their force into crops that must be sold according to anticipated prices, or bankruptcy soon follows. We know of bankrupts in almost every branch of horticulture, from potatoes to apples and oranges; we do not know of a single failure where home building has been the central thought of the planter, provided he be industrious and healthy.

As for market, the main thing for the intensive farmer is, where he can, to secure direct relations with customers. He must dispense with middlemen, or if he cannot altogether, he must find one honest dealer and stick to him. Rid agriculture of the speculative, as it easily may be. Be satisfied with a home of comfort, and with the glorious fact that you can keep yourself almost entirely independent in matters of food and clothing. It may not be wise to carry this independence to the extent of our Connecticut forefathers, who made their own shoes, after tanning their own leather, after killing their own sheep and calves; but the country home may still have, for its one main charcteristic, independence.

The professions are overcrowded; agriculture is not overcrowded. There is less and less that can be done with brainless help, mere "hands," as they were well called, since the engine has undertaken to do so much of our mechanical work. At the same time there is an increased demand for leadership combined with industry, and efficiency in the highest sense of the word. The young fellow will not be any the worse gardener for having read Virgil's "Georgics." What is wanted is a full understanding between soul and soil. To the sincere scholar Nature is always calling, Come and read the poems that have never been translated; solve the problems that determine red-cheeked apples and one hundred bushels of corn to the acre.

Mr. Mellen Should Resign

WHILE not in themselves important, two incidents relating to the attitude of the public toward the New York, New Haven & Hartford Railroad, under its present management, are of much significance.

President Mellen had, thru advertisements in the newspapers, claimed credit for successfully handling the crowds that used his lines to get to and return from the Yale-Harvard football game, and used two favorable paragraphs from the

otherwise quite unfavorable report of the New Hampshire Public Service Commission as the text for an exculpatory advertisement.

It now appears that in order to make the football transportation record the freight traffic on the lines leading to New Haven was practically suspended, and that the traffic has since been disorganized and delayed.

If Mr. Mellen is reduced to such petty devices as these to make an appeal for restoration of favor by the public it seems evident that he considers his case desperate indeed.

The Interstate Commerce Commission comes forward to condemn the management of the New Haven for the Westport wreck, saying that "The commission is satisfied that the neglect to comply with its recommendations in its report on the Bridgeport wreck was largely a contributing cause of the Westport accident and its accompanying loss of life."

These are hard words. The public believes that they are deserved. The New Haven Railroad has one of the most productive fields in the world. Its revenues are immense. Its opportunities have been but partially utilized. If it were to fulfil properly the manifest duty of a publicly created corporation to its public all the Eastern country would profit enormously more, and the road would make a great deal more money.

It is beginning to be painfully apparent that there is but one solution—the resignation of President Mellen and the putting of the property under a management as astute and broad as is the present management of the Hudson and Manhattan tunnels in New York City.

The House of Governors

The House of Governors, if such it may be called, is to be a permanent institution. Why should not the Governors of States meet annually for mutual acquaintance and discussion as well as the presidents of colleges? The prominence of the notorious Blease must not blind us as to the more important and serious topics considered, altho it was well to have such a unanimous condemnation of his outrageous vaporings. His consignment of the Constitution of his State to the infernal regions was really no worse than his praise of the judge whom he called the ablest who ever sat on the State bench, who instantly dismissed a lot of indictments when informed that they were against "darkies," saying that if they were punished for such crimes there would be a dearth of hands to pick cotton. The advantage of the meeting of the Governors is in its aid for uniform legislation. Perhaps the most important subject was that of rural credits and agricultural banks, such as have been so successful in Germany, and which are being introduced in the Jewish farm colonies in this country. Porto Rico, when annexed, begged for them. After the meeting at Richmond the Democratic Governors met in Washington and discussed the second term pledge as applied to the next President, and they did not agree that it was binding, plain as the language of the platform was.

The New York School Inquiry

We have received a large amount of correspondence in regard to the article by Prof. E. C. Moore, of Yale, published November 14, but it will be impossible for us to devote more space to the controversy than is necessary to give Professor Moore the last word to which he is entitled. The report of his investigation of the New York public school system which the Board of Estimate refused to publish with the rest of the Hanus report will soon appear in book form with answers to the 241 questions submitted to him later by the Board of Estimate. Professor Moore's letter to THE INDEPENDENT is given below:

DEAR SIR—Mr. Allen's reply to my article of November 21 hardly conforms to the requirement that a reply must meet the issues. I find so many misstatements in it that I must point out a few of them. First, there is much more in the text of the Board of Estimate's resolution of October 26, 1910, than an expression of desire to get "sufficient and satisfactory information of requests for appropriations." The resolution calls for a committee "to conduct an inquiry into the organization, equipment and methods, both financial and educational of the Department of Education." For this purpose the committee is "authorized to associate with it such experts within and without the government of the City of New

York as may assist it in the conduct of this inquiry and in the formulation of recommendations of this board." But the Board of Education alone has the power to administer all moneys appropriated for educational purposes in the City of New York, and the Court of Appeals has said that "the city has the custody of the moneys but the board must administer and expend all school funds as the representative of the school system." . . . It is not therefore to be wondered at that the salaries of the investigators employed under the Board of Estimate's resolution were subsequently held up for some four months on the ground that there is no legal warrant for the investigation. Does the text of the resolution say the experts were employed to collect facts, by which word of many meanings Mr. Allen denotes items or incidents, or to assist in formulating recommendations? I did not say "only pseudo-questions." Three of his are answered in the report and the statement of one not made in it. It is buttressed with documentary facts. I did not say were *dictated* but "were prepared by Mr. Allen."

Sincerely yours,

E. C. MOORE.

YALE UNIVERSITY, December 4.

Battleships for Canada

It is a big price that the Conservative Government of Canada proposes to pay for its refusal to accept the reciprocity which refusal overthrew the Laurier Ministry. Again and again had Canada refused to give battleships to the British navy. She did not believe in war, did not wish to be necessarily involved in any war that Great Britain might be involved in, altho she would be ready to give help, as she did, by a regiment or two in the Boer war. Now Premier Borden offers to give Great Britain three of the finest battleships that can be built, built, of course, not in Canada, but in England or Ireland, and to cost as much as $35,000,000. How will she pay it? Of course not by present taxation, but by borrowing the money. Where will she borrow it? In England, of course, and there will be nearly $2,000,000 paid over in England yearly and indefinitely out of the people's taxes. But the worst of it is that Canada will be no longer free from attack in case of war; at any rate, she is made an essential factor in all the European embroilments. She will not only be in the navy, but will necessarily have to contribute to the army; for the payment she is to get for this contribution is that she will have one member permanently in the Imperial Defense Committee. And Great Britain will pay another very serious price for this Canadian aid, in modifying her principle of free trade and free food, and giving preferential tariff rates to Canada and the other British dominions, which are expected to follow the generous example of Canada. Now New Zealand promises to supply some smaller vessels—not battleships, and Australia and South Africa will be expected to follow, altho their interests are not those of the British Islands. Great Britain is in close treaty with Japan; and Australia fears Japan. Australia has ambitions for domination in Australasia with which Great Britain has no sympathy. Robert Borden may, however, not find it easy to persuade the Canadian Parliament to consent to his scheme. The French electors may object, and so may the growing Western Provinces. Canada did not bargain for this when, in a wave of British loyalty, she refused reciprocity and put out the Liberal Government.

Sweating Industries

A State factory investigating commission has been bringing to light in this State, and particularly in this city, conditions of what is called the sweating industry, which are nothing less than horrible. Manufacturers want work done in the cheapest way possible, and are glad to have the finest or the coarsest garments taken to the homes of working women, and of children who ought to be at school, to places where there are contagious diseases, and where dire poverty and hunger-wages set children at work for long hours putting ribbons in corsets, or licking cigarets, or picking the meat out of nuts. Inspection is almost impossible in such crowded residence quarters, and the commission believes that such piecework at home should be forbidden. Perhaps too much proportionate attention is given to the danger of disease coming to the rich patrons who wear or smoke or eat the goods prepared by these children suffering from scarlet fever or measles or tuberculosis or other diseases with which such homes are infected, for it is a housing problem; but the chief concern should be for the children and their

mothers themselves. There are evils in the factory system, but factories can be inspected and healthy conditions secured, and children kept out. The cost of goods may be imperceptibly higher, but that will be more than made up by the value of healthier human life. We need to care for people more than for money.

Agricultural Students

A very suggestive report comes from Cornell Agricultural College, pertaining to the increase of numbers. We were told, when these colleges were founded, that pupils enough could not be secured to keep them running; and then it came about that the larger part of those who were matriculated did not become farmers. They simply took advantage of the cheap courses to prepare themselves for business life. Well, that was all right, for these colleges were started as "industrial" institutions, not strictly agricultural. It seems that at Cornell in 1890 there were 53 pupils altogether, including regulars, specials and graduates. In 1901 all these combined reached the number of 210, and at that time this was considered an encouraging number. In 1912-13 Cornell has to prepare for 1,051 regulars, 138 specials, 107 graduates, 525 attendants on the winter course and 223 on the summer school. Here we have the pretty number of 2,044 pupils pressing their way into one of our industrial halls for education. It does not suggest any debate with our classical institutions. The simple fact is that our farm boys have found out that they need the very latest scientific information in order to become successful farmers; and the farmers have found that it pays to educate their boys toward the farm rather than from it. The report is very similar from other States; from Massachusetts and Wisconsin and Illinois and Oregon and Alabama and California, everywhere the industrial colleges are crowded. There are probably over 100,000 young fellows in these and in the technical schools, being trained for most efficient industrial citizenship. Farming is becoming one of our leading professions, and the art of agriculture is as accurate in its achievements as any of the finer arts. Yet the tide is rising.

Peace in the Balkans

The world hopes for peace in the Balkans. The Turkish Government, headed by Kiamil, a wise and experienced statesman, is apparently reasonable, and no longer afraid of the militant Young Turks. There was real danger for a while that the Cabinet would be overturned, with great fear of massacre in Constantinople, but that has been escaped, and Kiamil's strong hand has secured quiet and safety to the residents of the city. Also the allies have past the first flush of their hot passion, and are no longer talking of fighting their way into Constantinople. They will be reasonable and may even allow Adrianople to remain under the Turkish name. It sobers ardor to think of hundreds of thousands slain and of the years needed to recuperate population and prosperity. The pressure of the great Powers has been for peace, and their mutual abstention from robbing the victors of territory also makes for peace. It will be left to the allies to divide the spoils. Greece is the dangerous element in the problem. She has suffered least, and she makes large claims that clash with those of Bulgaria. One may rejoice in the liberation of Macedonia, and yet feel commiseration for Turkey, which was not allowed a short decade to fulfil her promises of reform. Also we may have a thought for Turkey in Asia, whose people are of the same blood as those in Europe, many of them Christians, multitudes of them Moslems whose ancestors were converted by the sword. Turkey has received a stern lesson, which she must practice in her government of Asia Minor and Mesopotamia.

In his *Commoner* Mr. Bryan goes wild over Mr. Carnegie's proposition, or that of his philanthropic corporation, to pension ex-Presidents. He says:

> "It would be a monstrous thing to permit the President of the United States to rest under the shame of anticipating a pension from a fund accumulated thru special privilege."

The "special privilege" was the tariff, nothing else. Under the tariff system established by Congress and approved by the people, all business had to be done. All manufacturing business was "special privilege"; it could not be escaped, and

they did not wish to escape it. The money earned was legally earned, even if the tariff gave too much protection. Mr. Bryan, who severely attacks the pensioning of college professors, is too squeamish; but he is right in urging that now Congress provide for the pensioning of ex-Presidents.

Many of our younger citizens have never seen any of the little brown and green fractional currency notes issued during the Civil War, which then took the place of small silver. The Government made a profit on it, for an immense amount of it was destroyed or lost, and by an act past in 1879 nearly nine millions of it was estimated as thus destroyed and taken from the statement of the public debt. Now it is practically all destroyed, barring specimens preserved by collectors. And yet the monthly statement of the public debt from Washington holds $6,855,409.90 of fractional currency added to the debt. It would be well if another act should estimate it all perished but half a million, and reduce the paper debt of the country by over six million dollars. The present interest-bearing debt is $964,631,630.

As a great concession to the Catholic workingmen in Protestant Germany the Vatican has given permission that they may become members of labor unions of which others than Catholics are members, for their industrial advantage, provided they also are members of purely Catholic unions, and provided these wider labor unions have no conditions dangerous to faith. This is the result of long discussion and investigation. Under the principle that underlies the familiar claim in Ireland that Rome can dictate as to religion, but not as to politics, one would think that she should not claim authority to say whether her members can join a labor union. The decision would apply to this country, but nobody has thought of raising the question here.

In *The Popular Science Monthly* Dr. Frederick J. Pack has been studying the statistics of smoking in college. He finds that in college examinations 70 per cent. of those who receive the highest marks are non-smokers, while of those who receive the lowest marks 70 per cent. are smokers. Taking athletes as another homogeneous class, he finds that in the football trials only half as many smokers as non-smokers are successful; and in the case of able-bodied men smoking was associated with a diminution of lung power by 10 per cent. In every case the evidence was against smoking. And yet college men meet in "smokers."

That Jews can be successful farmers as well as merchants and bankers, and can follow the old industry of Palestine, appears not only in the prosperity of the colonies there, but in a number of small settlements of Jews in this country. They have cooperative credit unions, which lend money to those who wish to buy farms, and have made 342 loans in ten months. It is greatly to be desired that Jews should not all herd in cities.

Virginia is verily the mother of Presidents. Governor Wilson is the eighth born in that State. The others are Washington, Jefferson, Madison, Monroe, Harrison, Tyler and Taylor. On Governor Wilson's birthday, December 28, Staunton, his native town, expects a visit from him, when he will be entertained in the old manse where his father, as the Presbyterian minister, was living at his birth, fifty years ago.

Once more President Taft has urged that citizenship be given to the Porto Ricans, and Congress has long refused, or, rather, neglected to do it. Of course there is dissatisfaction there. Mr. Taft says that the demand for citizenship must be dissociated from any call for Statehood. It may be, but we do not see why Statehood should not be anticipated and desired, to come later.

Because the Congregation of Oxford University has adopted statutes throwing open the degrees of bachelor and doctor of divinity to those who are not clergymen of the Anglican Church, it does not follow that the reform has been adopted. It has got to be accepted now by the Convocation, consisting of all A. M.'s of the university, before it becomes valid.

In the World of Insurance

BY W. E. UNDERWOOD

As to the Nature of Insurance

STRIPPED of the perplexing phraseology which custom and the law seem to regard as the natural dress for all written agreements between man and man, insurance is a very simple thing and one readily within the average comprehension, if those who use it would take but a little time carefully to examine it.

Fundamentally, it is a co-operative effort to secure protection, wholly or partially, against certain misfortunes incident to life. Taking the commonwealth as a whole, insurance restores nothing. The reparation it makes to the individual represents an irretrievable loss to the general stock. Fire annihilates combustible property; death destroys the productivity of a human being. The insured victim of the misfortune suffered is aided from the accumulated contributions made by himself and his fellow policyholders. Therefore, insurance is always an expense, and its disbursements represent, in lives and property, a national loss.

The machinery used and the methods pursued in achieving the objects for which insurance exists are diverse; there are proprietary companies, mutual companies, associations of fraternities, organizations practising the instalment or assessment system of premium contributions; but all come, in the final analysis, to the simplicity of co-operative defense against a common enemy. All the funds used in operating all the companies come from the persons insured, and they alone pay all the losses and expenses, and are the recipients, likewise, of all the benefits.

Sometimes the cogs in the machinery —the stockholders in proprietary companies, the officers and managers in all sorts of companies and associations—are mistaken for the machine itself, and then there is trouble in the shape of unwise legislation, sensational newspaper criticism, and the like. It is a grave error, especially in members of purely mutual companies, to regard their insurers as parties, on the one side, to a trading proposition, and themselves as parties, on the other side. It is a piece of confusion that leads to misunderstandings and increased cost of operation.

It is not contended that all insurance companies are what they should be, nor that the institution itself, taken as a whole, has reached even comparative perfection. It, in common with other social instrumentalities, is in a state of evolution, and will so continue until a final period is written against the last sentence in the record of human progress.

To tell the story of insurance—of a noble beneficence—as it develops from week to week; to represent as it is, virtues, defects and all; to commend the good work of its servants and chide their faults; and beyond all, to help protect the interests of the millions who confide in it, depend upon and support it —these are the tasks which this department sets itself.

So Alone

BECAUSE we are approaching the memorial season of Him who went about doing good, it seems fitting to set down something here, as simply as may be, of an episode which fell under the observation of the writer in a Christmas week some years ago, and which made a lasting impression on one who regards the maintenance of life insurance protection to the women and children of the land as a sacred duty. If this brief tale shall quicken some man's conscience and prompt him to substitute decisive action for faltering indecision, the reward will

be great; if it shall move many men, much will be added to the world's stock of happiness.

. . . . . .

The Man was lying desperately ill. He had fought valiantly for many dreary weeks, only to realize during every moment of the time that the remorseless enemy had captured outwork upon outwork and was now closely besieging the citadel. Its occupant, the Will, was slowly being reduced. How long it could withstand the investment was problematical.

The face of the Nurse was grave. The once capable and athletic figure on the bed was wasted by the slowly consuming fires of the fever which had so long fed upon it. The face had lost its dominant characteristics; the strength that belonged to it had vanished and, but for the eyes, deep-sunken and brilliant, and the mobile mouth, was a mask or the face of the dead.

The eyes followed the Nurse as she moved slowly and gently about the room. Perceiving the persistent attention, she approached the bed and, leaning close to his ear, inquired in a whisper if there was anything he desired.

"I must—see Her—at once."

The words were scarcely audible.

Leaving the room, she returned in a few moments, preceded by Her.

He signified by a motion that they two be permitted to remain alone together.

The face of Her was a patient, a brave face. Upon it shone all the fortitude that belongs with the love which a strong woman's soul holds for the strong man who is being slowly beaten to death before her eyes. But upon her lips sat the smile of hope—a hope she did not own, but cherished for his sake—a lie, perfect in its benign serenity, but the cover of a breaking heart.

The lips of the Man moved. His tones were audible only to Her, whose ears were close and alert for every word. Had the ear failed, her heart would have caught the message. He whispered, brokenly:

"Trust me. I will—fight it out—until —the last ounce—of strength—is spent. Were I alone—I would have—no fears, no regrets. For your sakes—I have tried—to forget You—and Them—while I fought. But I am—a coward now—in the face of—death. I have thought—I was—a good man—that my love—for You—and Them—was everything—it should be. I was—a vain boaster. I was brave—in my strength,—and it has—betrayed me—You—Them. I was —confident of—oh, so much—I could do —in a long life—and now— there is—no future—no time—in which to do other— than regret. No man can stand alone."

The woman interrupted him:

"Don't, don't reproach yourself, dear. You have neglected no duty. Your love and protecting care have been around us always. Sorrow and want have ever been far away. Verily, has our home been an altar and you its faithful high priest. Besides, beloved, God will not let you die; you will not have to call upon that last ounce of strength."

Tho her heart was heavy and the cry of impending desolation was on her lips, she would comfort and encourage him.

No man can reckon the number of his days and he is not blameworthy that death has overtaken him in the flower of manhood. This man had been a faithful guide and comforter, a generous provider, a brave protector. Wherein had he faulted? What was it now that embittered his last hour?

He was all they had.

Some acts are beyond rectification; some wrongs beyond righting. To those who die conscious, these are unpardonable sins; passing forgiveness because there is no space in which to make restitution. The element we move in is time, and time has come to an end. The penalty must fall, and it must fall upon the innocent and confiding. The contemplation of this is bitterer than death.

Beyond lie the fields of asphodel, the flowers of the immortals; here are only the withering pansies and violets.

The blinds are drawn and the air of the darkened room is heavy with the odor of lilies and roses. No one speaks. She is here—and the Children. Alone. Oh, so alone.

Financial

Currency and Banking Reform

In his annual report, the Secretary of the Treasury looks forward to a surplus of $40,200,000 at the end of the current fiscal year (June 30, next), unless Panama expenses are included. If these are taken into account, there will be a deficit of $1,800,000. Receipts in the following fiscal year will be about the same, it is expected, but expenditures will be larger, and therefore he sees at the end of that year a deficit of $22,556,000, exclusive of Panama payments, which would increase it to $52,730,000. It is possible, however, that both receipts and expenditures will be measurably affected by the Democratic party's legislation.

Secretary MacVeagh speaks earnestly and at considerable length about the need of currency and banking reform. This is what he and his predecessors have been doing for many years past, but there has been no remedial legislation except the Aldrich-Vreeland act, a temporary makeshift. He says:

"The system under which we are living not only will not prevent a panic, but after a certain point in the generation of panic conditions is reached, will make it inevitable. So that, as long as the financial system created by our Federal laws remains unchanged and unreformed, the Government will be exclusively responsible for the commercial, industrial and social disasters which flow from panics. This responsibility is a fixt one. It is unavoidable, and ought to be frankly recognized and acknowledged. The people are helpless. The character of this responsibility is better understood when it is realized that the effects of financial panics are not at all confined to the banks and the larger business world. A panic such as that of 1907, or a lesser panic, reaches directly or indirectly every town and hamlet of the country, and every family and individual. It nationalizes itself long before it has gone far; and its interruption of the business movements large and small, its fracture of the organization under which commercial and industrial life go on, and the resulting social suffering are prolonged into years. These facts intensify the significance of the delays and postponements of the Government. A panic is as unnecessary and as avoidable as an epidemic of smallpox. You can have an epidemic of smallpox if you disregard all that science has provided as a preventive. You cannot possibly have an epidemic of smallpox if you will apply the simple means that science has provided. So we will continue to have panics only so long as we refuse to apply the simple preventives which he who runs may read."

He does not propose the details of the new laws that are needed, but he suggests the following general features:

Provisions for never-failing reserves and never-failing currency; for the perfect elasticity and flexibility of both; for the permanent organization and cooperation of the banks; for a central agency, free from political or Trust control, to represent the organized banks; for independent banking units; for equality of all banks, national or State, as to standards and functions; for the utilization and fluidity of bank assets; for the scientific development of exchanges, domestic and foreign; for foreign banking, as an adjunct of our foreign commerce; and for taking the Treasury Department out of the banking business.

He recommends an extension or renewal of the Aldrich-Vreeland act, which will expire by limitation on June 30, 1914. We question the expediency of this. The law tends to prevent or defer thoro reform on the lines indicated in his report. Such effort as might be required for the extension of it might better be exerted for comprehensive remedial legislation. The subject should be taken up promptly by the new Congress. We notice that the present House Banking Committee has already provided for hearings in January and has invited prominent representatives of the American Bankers' Association, the National Citizens' League, the Credit Men's Association, the labor unions and the agricultural interests.

....No dressed beef was exported to Great Britain in September, October or November, and only 900 head of live cattle were exported in those months.

....November's pig iron output was 2,630,854 tons, or a little less than October's large total, which was 2,689,933. In the season now closing, the movement of ore from the lakes broke the record, the quantity shipped, 47,414,730 tons, exceeding last year's shipments by 15,300,000 tons, and the previous record (season of 1910) by 4.800,000.

The Independent

VOL. LXXIII NEW YORK, THURSDAY, DECEMBER 19, 1912 No. 3342

Survey of the World

National Politics

There was a national conference of the new Progressive party in Chicago, last week, attended by about 500 delegates, among whom were Mr. Roosevelt, George W. Perkins, William J. Flinn and others prominent in the recent campaign. Many speeches were made. Mr. Roosevelt urged the members of the party to press for progressive legislation in Congress and in State legislatures. He attacked both the old parties. The Progressives, he said, had overthrown the powerful and corrupt machine by which the Republican party had been betrayed and strangled. He denounced the Supreme Court of Idaho because of its decision, during the campaign, concerning Presidential electors. The party, he said, should pay the fine which the court would probably impose upon a complaining editor in Idaho, who had been summoned for contempt. In the course of the conference he advocated the creation of a trade commission, to deal with great corporations engaged in interstate business, and exprest his well-known opinions as to the right of the people to pass upon court decisions involving the constitutionality of statutes. The party could trust to events for the development of leaders in the future. He opposed fusion movements. Mr. Perkins he warmly commended, saying he was proud to have him as a fellow-worker. Mr. Perkins himself said that he was not a new convert, but had fought many years for progressive principles and for social and industrial reform. Officers of the party's committees will be subject to recall. An elaborate educational campaign plan was proposed by Miss Jane Addams. The national headquarters will be in New York, and there will also be an office in Washington. Mr. Roosevelt's friends predicted that he would be nominated again in 1916.——It is said that the Republican party has plans for an educational campaign in opposition to that of the Roosevelt Progressives. Some of the leaders are considering propositions for a reduction of the number of convention delegates from the South.——After the end of his term, Mr. Taft may take the Kent professorship of law at Yale University, formerly held by Edward J. Phelps. He also has in mind a world tour, to be made for the promotion of international peace.——Since his election Mr. Wilson has received seven letters (two in Bermuda) written in an illiterate manner by one and the same person, demanding $5,000 and threatening assassination if the money should not be paid. As the result of skilful detective work by postal inspectors, three rough mountaineers living in the highlands of New Jersey have been arrested. There is evidence that one of them wrote the letters.

Congress

The House Committee on Ways and Means has provided for hearings concerning tariff revision. They will begin on January 6, and not more than two days will be assigned to a schedule. Chairman Underwood says the special session should be opened on March 15.——By a vote of 141 to 101 the House has refused to adopt a proposed rule providing for the immediate consideration of the Senate concurrent resolution favoring the purchase, by the Government, of Monticello, the home of Thomas Jefferson. This resolution is opposed by Representative Jefferson M. Levy, of New York, who owns the property, and has been pro-

moted by the wife of Representative Martin W. Littleton, also of New York. After the vote was taken, Mrs. Littleton said she had been authorized by a prominent Virginian to offer four times the assessed value of Monticello, title to the property to be vested in the State of Virginia. Mr. Levy says he has repeatedly refused $1,500,000 for Monticello and that he cannot be induced to sell it.——The House, by a vote of 153 to 118, declared that Charles C. Bowman, Republican, of the Eleventh Pennsylvania District, was not entitled to be seated. By a vote of 181 to 88 it declined to seat his Democratic opponent, George R. McLean. Both votes were in accord with the committee's recommendation. The ground of both rejections was corrupt practices. Representative A. Mitchell Palmer, of Pennsylvania, a member of the Democratic National Committee and frequently mentioned in connection with a Cabinet office, offered a resolution to seat Mr. McLean. In the course of the debate, Representative Farr, of Pennsylvania, asserted that Mr. Palmer was the Lackawanna Railroad Company's attorney, and that the company, at his solicitation, had assisted in procuring his election. Admitting that he was the company's attorney, Mr. Palmer indignantly denied that he had solicited the aid of the company or that it had assisted him. ——In the Senate, which was sitting as a court of impeachment, the trial of Judge Archbald was continued, last week, and the prosecutors completed their case.——Senator Works, of California, who has been identified with the Progressive Republican faction in the Senate, while speaking last week in support of his resolution for a constitutional amendment providing a single six-year Presidential term, said that both Taft and Roosevelt deserved defeat. Roosevelt while in office had signally favored the Harvester Trust, the natural result being that George W. Perkins this year had been his ardent supporter and chief financial backer. The Progressive party had been managed and financed by promoters, corruptionists and Trust magnates. Taft had made a fatal mistake in going on the stump to answer Roose- self on a level with his detractor, had thus lowered his dignity and that of his office to no purpose, and had lost the respect and good will of many good people. It would have been better for the country if both had been ineligible for re-election.

Panama Canal Tolls

The expected formal protest of the British Government against the exemption of American coastwise shipping from the payment of Panama Canal tolls was received on the 9th by the State Department. In it Sir Edward Grey opposes at length Mr. Taft's argument, and holds that exemption violates the provisions of the Hay-Pauncefote treaty. He concedes the right of the United States to subsidize our coastwise shipping, but asserts that to subsidize it in this way is forbidden by the treaty. Moreover, the tolls must be "just and equitable," and he argues that if any class of shipping is exempted, there is no guarantee that other shipping does not pay more than a fair share. To determine whether the charges are "just and equitable," the whole volume of traffic must be taken into account. The British Government asks that the coastwise shipping shall pay tolls. It regards the provisions aimed at railroad-owned and Trust-owned ships as applying only to the shipping of the United States; if in fact they also apply to British shipping, it will take up this question hereafter. If the United States shall insist upon the exemption of our coastwise shipping, Great Britain is ready and perfectly willing to submit the matter to arbitration.——Secretary Knox is preparing a reply. It is understood that our Government's attitude toward the question has undergone no change. Our State Department may express a willingness to accept arbitration, but there is no indication that the Senate would consent. One prominent newspaper has made inquiry and it asserts that there is an adverse majority of nearly 3 to 1. Another finds 60 against arbitration and only 27 for it. Repeal of the exemption act, it is said, cannot be expected. Senator O'Gorman says it is inconceivable that the United States should submit to an international court a purely domestic question. Senator Bristow sees in the protest an attempt to dictate concerning

our domestic policy.——In his annual report, Mr. Stimson, Secretary of War, recommends that the exemption clause be repealed. The proposed remission of tolls, he says, "will in effect amount to a payment of national funds to a special industry which does not need such assistance." Here he disagrees with President Taft, unless the latter's opinion has been changed since August last.

A Discussion of the Canal Question

The meeting of the New York Genealogical and Biographical Society on December 14 was of especial interest because of the presence of Ambassador Bryce and the frank discussion of the Panama tolls question by our former ambassador to Great Britain, Joseph H. Choate, and Charles Francis Adams. Mr. Bryce, after referring to the length and accuracy of the Icelandic and Jewish genealogies, exprest his thanks for the service which the curiosity of the American people regarding their ancestors has rendered to England:

"It has started an active and flourishing branch of industry in England, that of finding one's ancestors and finding therewith coats of arms, adventures and heroic deeds which belong to those families from which your people descend. There are a number of people engaged in that work in England, and in that work they show considerable constructive ingenuity and what we may call rare imaginative skill at times. (Laughter.) It remains, however, to say that you have given a great spur to our curiosity about ancestors in England, and the thing has become a far more keen and interesting subject of inquiry in England, since so many have left England and come to this country, and their descendants hunt up their ancestors in Devonshire and the eastern counties of England in order to locate their progenitors.

"It is to us a great pleasure that that friendship which exists between us, that affection which exists between us and you, should rest not only every ground of sentiment and tradition but also upon the recognition of how much English blood can be shown to flow in the veins of many old families here, and how the term of cousinhood extended as it should be for many degrees, shows the connection between these of the old counties, from ancient families, down along the line to those who came over here. It was a great pleasure to present to the town of Hingham in Massachusetts, one of the oldest towns in that State, what was said to be a cornerstone of the tower erected in Hingham in Norfolk, England. And to find that the town of Hingham had preserved a record of all those who came over in the middle of the seventeenth century. Also to find how many of those families had remained in Norfolk, and now they will keep up connection with the people in your Hingham, and your men in Hingham in Massachusetts with them. There were five or six or seven families that made great names in this country, and among them was one in which there had been an ancestor of Abraham Lincoln. That was one of the interesting results which had been obtained by the genealogical studies for the past fifty or sixty years; and I venture on behalf of my friends in England, who appreciate and are interested in the work you do in that direction, to tell you that work is done for us as well as for yourselves, and to wish you a long career of usefulness in it."

Mr. Charles Francis Adams, the next speaker, exprest his opinion of the Panama question in the following language:

"Now, last evening there was a large affair at the Hotel Astor, of which Mr. Bryce was the honored recipient. Nothing pleased me more on that occasion that to see the species of skill with which the various performers went thru their antics on the subject of the Panama Canal toll question, and none of them seemed to have the courage, or to think it was quite proper, to go directly to the point. There is a reporter here, and I requested him not to put down anything I am about to say. But the others had skated all around it and avoided falling in; and I propose to plump right in. There is this agitated question right now on the subject of the Panama Canal toll; and altho Mr. Bryce is here, I propose to butt in and blurt out what I think. There is the question now agitating the Congress of the United States, particularly the Senate, as to what position this country should take, and whether we are within our rights; whether we own the canal; and what interpretation we should put upon our ownership. It then comes up that the Hay-Pauncefote Treaty is considered and then the Hague Tribunal; and around those subjects there was very skilful skating last night. I propose simply to blurt out just what I think on that subject, and now I am becoming interesting.

"I have never been able to see why the same rules of conduct which obtain with the individual should not obtain with the community. What is honest and right and pure to us in our individual capacity is, I think, right and honest and true and pure in our aggregate capacity. Now, there is not one person here, man or woman—I will venture to say there is not a single person here, man or woman, who when a question rises in which they themselves are involved, where they have made an agreement—it may have been an unwise one; it may have been ill-considered—but where they have said they would do a thing, who do not regard that they are committed by that, as a person of character, by that inscrutable thing known as character, to have their word as good as their bond. Therefore, when a question arises under that agreement which we have individually made, as to which we are possible beneficiaries, there is no person with

a claim to a vestige of character who does not say, "This is a perfectly simple matter to solve. There are just two courses, and only two courses: I must either decide this question against myself as a beneficiary, or I must submit it to a tribunal the impartiality of which is unquestioned."

"If they fail to do one or the other they can only pursue the impossible, and that is to decide that they will decide it in favor of themselves. Therefore, I hold that this question, by the rules which obtain between individuals in life, is perfectly easy of solution; and unless you are prepared to say, 'There being a disputed question, I will decide in favor of myself,' unless you are prepared to say that, there is but one alternate course to be pursued: You must say, 'I must decide it against myself, or submit it to an impartial tribunal whose impartiality cannot be questioned.'"

Mr. Choate, who followed, said that he felt exactly as Mr. Adams did about the Panama Canal and added:

"But, there is a grander, higher question than that that seems to me to be far more important than the treatment of any particular bargain or treaty; and that is the great question whether the people of the United States are willing to go back upon their whole history for one hundred years and give themselves away on a great question of good faith as between America and other countries.

"We have settled every difficulty that has arisen with the other members of the English speaking race by arbitration, or by treaty, and I think it may fairly be said that we have never failed to arbitrate a question that ought to be arbitrated, and have never broken a treaty we have made. I can not remember any, and I consulted our great adversary, Mr. Bryce; and if all Englishmen cannot remember any such default on the part of America, who can?

"Now, that having been done, and arbitration and treaty-making, and standing by treaties having been the honor and the glory and the boast of ourselves and of our ancestors since 1812, the question arises whether the people of the United States are thus to go back of their record, or to allow their servants at Washington, in whatever capacity they may appear there, to go back on the record so gloriously made by our country."

The Islands

Cuba's President has accepted a model for the proposed monument in memory of the victims of the explosion which wrecked the battleship "Maine," and has asked for an appropriation of $20,000. A figure intended to represent the new republic will rest upon the turret and guns given to Cuba by our Congress. One bronze tablet will bear the text of the Washington joint resolution concerning Cuba's independence. Other tablets will represent the arrival of the ship, the explosion, the appearance of the wreck and the final burial of it at sea.——Political followers of Zayas, the unsuccessful candidate at the recent election, who have asked the Supreme Court to say that the election law is unconstitutional, are procuring decisions of local courts to the effect that local elections, in various places, were fraudulent. They hope to annul the election of Menocal in this way. There appears to be ample proof that the registry lists were padded, and it is alleged that there was much repeating at the polls.——Following the departure of the Washington Commission from Santo Domingo, where an agreement between the revolutionists and the new Government of President Nouel had been reached, the revolutionists unexpectedly became active again. For this reason the battleship "New Hampshire" was ordered to the island from Norfolk, on the 11th, so hurriedly that several members of her crew were left on shore. The new President has reduced the size of the army.——In his annual report, the Secretary of War speaks of those who would "from misplaced sentimentality or lazy self-interest cast the Filipinos upon the world in a condition of helplessness and before they have acquired the full benefits of American civilization." He asserts that there is "no parallel to the material, mental and moral progress shown in these ten years of civil government by so many millions of people, held for centuries in ignorance and, in effect, in political and economic bondage." But he adds that our work has only just begun, as half the children born in Manila die in infancy, a million children are without schools, and the old system of peonage is still accepted by the masses, who, if not protected by Americans, would "fall ready victims to the rich and educated Philippine minority." All proposals of independence at present, he says, are pleas for national recreancy on our part and are unjust to the Filipino masses.

Mexico

In response to an appeal from Rafael Hernandez, Minister of the Interior, to the Apostolic Delegate, Mgr. Boggiani, there was a special mass in all the Catholic churches

of Mexico, beginning at midnight on the 8th, for the restoration of peace by Divine intervention. This was in obedience to a papal decree. Some of the Liberals were of the opinion that the laws separating Church and State had been disregarded. Three days later, Minister Hernandez appealed also to the Protestant clergy and the chief officers of the Masonic lodges, asking for their aid in restoring peace. The condition of the country was not improving. Large towns and many small ones were held by the Government, but thruout a wide area the rebels and bandits were not restrained. Hernandez said an army of 500,000 was needed. Many rebels have been put to death. On a road in the State of Mexico, last week, the bodies of sixty could be seen hanging from the trees. Near the town of Pedresina nine bodies were hanging from telegraph poles. In Guerrero the rebels hold a small port, south of Acapulco. There they receive ammunition, which is carried inland. In the north, Orozco's followers have been burning railroad bridges and raiding haciendas. Orozco's father has been released from prison, on a bond of $2,500, by Federal Judge Maxey, at Austin, Tex. Señor Lascurain, Minister of Foreign Affairs, is now in New York, to promote, it is said, a restoration of peace and to encourage closer commercial relations with the United States. Some say he has come to prevent intervention. It is expected that the Mexican Congress will soon authorize the negotiation of a loan of $20,000,000.

The London Peace Conference

The representatives of the Balkan States and Turkey met on Monday, December 16, in the picture gallery of St. James's Palace, an historic room hung with the portraits of English sovereigns from Henry VIII down. There is good prospects of an agreement, for it does not appear that either side can gain anything by continuing the conflict. The Serbs and the Greeks are already in possession of all the territory to which they are likely to lay claim, and more than they are likely to hold. The same may be said of the Montenegrins and Bulgars, except that the former have not yet captured Scutari nor the latter Adrianople. The question of Adrianople is probably the most difficult of the questions to be settled. The Bulgars claim, doubtless with justice, that the fall of Adrianople is only a matter of time, and they also assert, with considerable probability, that they could take the city by storm at any time if they were willing to make the necessary sacrifice. Dr. Daneff, President of the Bulgarian Parliament, and one of the delegates at the conference, in an interview published in the Paris *Temps,* states the Bulgarian position on this point as follows:

"The press has indicated Adrianople as one of the delicate problems. There can be no discussion of that point. The possession of Adrianople, so far as we are concerned, is a *sine qua non* of that treaty. We will break off the conference on this point if necessary, even if we need to renew the war. Fresh reserves have been called out and the troops in Macedonia have been concentrated. Our position from a military viewpoint is excellent; it is such that we can speak definitely. Adrianople is doomed. It must fall into our hands and we know it must. That is why we are not sending thousands of troops to be butchered needlessly in an attack that would only give us the town a few days earlier.

"It is entirely to Turkey's interest to come to an agreement. Supposing what is impossible, that Bulgaria signed peace conditions, which from her viewpoint were not wholly satisfactory, there would in a few years have to be another war. Turkey's real interest is to agree to terms that will secure a lasting peace and will give her as a neighbor a Bulgaria which has been completely reassured."

On the other hand, it is expected that Turkey will offer a stubborn resistance to the cession of Adrianople and will perhaps be supported in this attitude by some of the Great Powers. The Turkish position, as stated by Rechid Pasha at Paris, is as follows:

"We are sincere in our desire for peace, but we are firmly resolved that it shall be only peace with honor. Our military resources are increasing daily. We now have 170,000 men at Tchataldja who are abundantly provided with munitions of war. The sanitary conditions in the field are improving daily. There is no question at the moment of anything but a simple suspension of arms. Hostilities will certainly be renewed if either of the parties at the conference seeks to impose too onerous conditions.

"So far as Albania is concerned, Turkey is ready to recognize the ultimate autonomy of that country under the suzerainty of the Sultan. I can add nothing now to that, but I do not mind laying stress on the fact that we cannot negotiate with Greece until she has con-

cluded an armistice on the same conditions as the rest of the allies. The state of war we are in, so far as Greece is concerned, does not constitute a stable base for negotiation. A collision on sea or land might alter the base one day or another. We cannot be expected to treat with a State which is looking for the chance of war to improve her diplomatic position."

In apposition to this view it is urged that there is no reason why Greece should be required to sign the armistice before entering the peace conference, for terms of peace have often been negotiated while the fighting is still going on, as, for example, in the case of the war between Turkey and Italy recently concluded. The allies assert that the refusal of Greece to join in the armistice does not indicate any disagreement between them.

The Attitude of the Great Powers

Whatever the delegates at the London conference may agree upon, the final decision as to what changes shall be made in the map of Turkey will rest not with them, but with the ambassadors of the greater European Powers, who will meet perhaps at Paris at the same time to consider the same questions. Rumania has applied for admission to the ambassadorial conference in order that her interests may be taken into consideration. Germany, Italy and Austria support the claim of Rumania for admission, but France, Russia and England refuse to consent to it.——It is rumored that Bulgaria is about to join the Triple Alliance of Germany, Austria-Hungary and Italy, which has just been renewed for a period of six years.—— The strain between Austria and Servia seems to be unrelieved, altho the prevailing opinion is that the danger of war between them is averted. Still, there has been no cessation in the mobilization of Austrian troops and their concentration on the banks of the Danube opposite Belgrade, and on the other hand the Servian troops are being recalled from the front and the reserves held in readiness to resist an attack. The Belgrade paper *Pravda* expresses Servian sentiment when it says:

"If Austria desires war with Servia, let it come. It will be the most bitter fight in history. Every Servian man and woman, young or old, will take part in it, and Austria will have to exterminate the entire Servian nation before conquering it."

The Austrian Minister of War, General von Auffenberg, has resigned his position and the Under Secretary of War, General von Krobatin, has been appointed in his stead. Field Marshal Schemua, chief of the Austro-Hungarian General Staff, has been replaced by Baron von Hötzendorf, who is an advocate of war with Servia. These changes are thought to portend immediate military operations, but on the other hand an augury for peace is found in the fact that Austria and Hungary have both secured loans of $25,000,000 during the week, presumably with the assurance that they were not intended for war purposes. The Austrian issue of 4½ per cent. Treasury bonds at 97 is taken by a syndicate headed by the Austrian Postal Savings Bank and including Kuhn, Loeb & Co. and the National City Bank of New York.

English Affairs

In spite of the delay caused by the filibustering of the Opposition and the snap vote against the Government on a financial amendment, the Home Rule bill was successfully past thru the committee stage on December 11. Some time in January the bill will be past and sent up to the House of Lords. Here it will be undoubtedly rejected, but if the Government can remain in power long enough the bill may be past over the veto of the Lords, according to the new system of procedure adopted by the present Government. The Ministry is supported by the substantial majority of about 100, so the Opposition is obliged to confine itself to dilatory tactics and uproar. The Unionists attempted to score a point on the last day of debate by offering an amendment making it compulsory to fly the Union Jack over the Irish Parliament building A Nationalist member from South Down, Jeremiah MacVeagh, in opposing the amendment, used language referring to the British flag which Mr. Balfour resented, and in reply called attention to the increased respect shown to the flag in the United States, and inculcated in its schools, declaring that the Irish leaders had made the realization of the hope of a loyal and contented Ireland by the lessons of furious hatred of the flag which they and their colleagues for years had

been teaching. John Redmond, leader of the Irish party, then made a conciliatory speech of unimpeachable loyalty, and said that the Union Jack would be flown in a contented Ireland when Home Rule was past. No doubt, he added, Ireland would have its own flag, but the two would be flown side by side. ——The prospects are good for carrying thru Parliament before its adjournment, March 30, the two other important measures to which the Government is committed, the disestablishment of the Church in Wales and the abolition of plural voting. The Welsh Church bill has elicited as much discussion and criticism as the Home Rule bill during the past few weeks, altho the attendance on the sessions devoted to it has been very small. The question of the proper division of the various tithes, bequests and charitable fund between the disestablished Church and the secular organizations is a very complicated one and productive of considerable acrimony. In view of the numerous difficulties in the transition period, the Government has consented to postpone the operation of the bill for a period of six months after the royal assent has been given, or twelve months if necessary. —— The Chancellor of the Exchequer, Mr. Lloyd-George, has not yet come to an agreement with the doctors as to the proper compensation to be given them under the insurance act, but negotiations between the Government and the medical societies are still going on.——The latest outrage by the suffragets is the ringing of false fire alarms in all parts of the city, which was carried out according to a concerted plan on December 10. One of the women was caught in the act and given the maximum sentence of two months' imprisonment.

The Chinese Loan Negotiations between representatives of the six-Power group of bankers and the English financier, Birch Crisp, have resulted in an understanding that a certain number of English banks will be allowed to participate in the $300,000,000 loan to China, which has been under discussion for a long time. It is said that the public's unwillingness to relieve the underwriting firms of their liabilities in regard to the $50,000,000, which had been frustrated by the six-Power group, was responsible for Crisp's policy of joining the banking syndicate. There is, however, a strong disposition in some quarters to resent the manner in which Crisp forced his way into the sextuple group. But there is little likelihood of any Chinese loan being issued on account of the present financial conditions in Europe. If the loan question is taken up again, it is said that the banks interested will take a broad view of China's requirements, and will be more disposed than before to lend money to China in order to prevent the new republic from financial embarrassments. A Peking dispatch to the *Times* says:

"It is of extreme importance that the bankers in their conference should take a broad view of the situation, realizing on the one hand that the political and commercial development of this huge country is being suspended because of lack of money, and on the other hand that the failure of these negotiations may lead either to the bankruptcy of China or to the disappearance of that international unity which is the best guarantee of a prosperous future."

——Judging from a letter of Secretary Knox, of the State Department, to the Portland Chamber of Commerce, on December 10, the United States will formally recognize the Chinese republic after the January election in China. The letter said:

The attitude of this Government toward and its relation to the existing Chinese Government is clearly shown by the President's message on foreign relations sent to Congress on December 3, 1912, in which he said:

"The natural sympathy of the American people with the assumption of Republican principles by the Chinese people was appropriately exprest in a concurrent resolution of Congress on April 17, 1912. A constituent assembly, composed of representatives duly chosen by the people of China in the elections that are now being held, has been called to meet in January next to adopt a permanent constitution and organize the Government of the nascent republic.

"During the formative constitutional stage and pending definite action by the assembly, as expressive of the popular will, and the hoped-for establishment of a stable republican form of government, capable of fulfilling its international obligations, the United States is, according to precedent, maintaining full and friendly *de facto* relations with the provisional Government."

If Peace Prevailed

A Philosophical Traveler's View of the World as It Might Be

BY WILLIAM T. ELLIS

THIS is a traveler's tale, not a learned and symmetrical essay. The findings are those of a journalistic scout of civilization, after two journeys around the world and into many of the unfrequented corners of earth.

The old argument concerning the biological cost of war appeals with new force to one who watches the swinging Russian regiments on the march thru the streets of Vladivostok, singing as they go in the deep, strong tones that spell power. What splendid physical creatures these men are; and literally thousands of them, trainload after trainload, are past by the traveler thru Siberia. He is struck by the fertility of this imperial land, a wonder-land, a land of tomorrow, a land which the world needs, and which itself needs only men; yet Siberia is wasting its men in military service that for the most part must necessarily be fruitless. To deprive a great nation, with thousands of miles of uncultivated territory, of the labors of such splendid workers as these Russians, is nothing less than an offense to the good sense of civilization.

If one ranges far afield over this old earth's surface, the economic argument for peace becomes visualized. The appalling physical loads which Oriental peasants carry on their backs are light as compared with the burden of poverty which war taxes and military oppression impose. It chanced to be my lot to see citizens being imprest as soldiers into the Turkish army at Beirut, and far up in remote Urfa, and away down in the Hejaz. My ears will not soon lose the sound of the wailing of the women to whom these men were not soldiers of the Caliph, but husbands, sons, brothers and sweethearts. It takes the Orient to give full color and significance to this harrowing side of militarism. The wailing for soldiers is not very different from the wailing for the dead.

Turkey, because she never has been able to depend upon the loyalty of her subjects, has borne all her Asiatic conscripts to her troubled European dominions and the European soldiers to the

WHILE WAR PREVAILS

A photograph taken after the battle of Kumanovo, where the Serbs defeated the Turks on October 24.

deadly Yemen from which few return. In Ma'an, Arabia, which is as far down on the Mecca Railway as a Christian may go, my guard was a Turkish soldier from Diarbakir in Mesopotamia, where his family lived, unable to subsist on the pittance of his pay, even when he got it. To this exiled soldier on the desert the poverty-stricken but quaint old city of Diarbakir, on the headwaters of the Tigris, was paradise. His ecstatic descriptions of it had the same homesick note as the psalms of the Hebrew exiles in Babylon. Multiply this man by almost the total number of the Turkish army and something of the personal deprivation and loneliness involved in militarism is seen.

All this, however, is not what I set out to write. My thesis is the difference that would be revealed on the face of the earth if universal peace prevailed and international arbitration ruled. Such a prospect almost staggers the imagination. It runs in many directions and holds a vision of a new earth. To make the proposition concrete, let me go back to the neighborhood of the Garden of Eden.

The cradle of the race is now a desert waste. Once the center of world civilization, lower Mesopotamia is "the abomination of desolation." Aside from the luxuriant palms along the Tigris and Euphrates rivers, a few decadent cities and occasional villages on the banks, all is drear and abject desert. The fertility of ancient Mesopotamia is no new story to the educated reader. Herodotus declared that he could not tell the whole truth about the productiveness of this region lest he should not be believed.

Yet as I stood on the highest tower of the ruins of Babylon, and looked out upon the waste in every direction, except the cluster of palms near the home of the German excavators, the whimsical notion came to me that if Nebuchadnezzar were turned out to grass today he would die of starvation. This region of the Tigris-Euphrates Valley was once the granary of the known world, as well as the capital of civilization. Where cotton and wool once grew in abundance, and great cities flourished, the degenerate marsh Arabs hold sway, except that they are terrorized by the roving Bedouins. Dotting the landscape of this dreary desert are the "high towers" of the Psalmist, the defenses to which the villagers flee when the warring tribes appear.

What makes Babylonia waste? "The Turk," comes quick answer. Yes, but why, in this day of science and of the high prices of food stuffs, is it not restored to fertility? The irrigation scheme of Sir William Willcocks is perfectly feasible. When we went over his plans in Bagdad, he told me that there would be room within five years for twelve million prosperous people in the irrigated area. Upon this project Sir John Jackson is now at work. He, like Sir William, must be haunted by the twin specters of lack of safety and lack of population.

The land may be restored, but where are the essential people? Germany wants Mesopotamia, but she cannot colonize it with white people. The two obvious sources of population are overcrowded India and overcrowded Egypt, where agricultural peasants, accustomed to irrigation, may be had for the beckoning; but even these humble natives will not go from under the British flag to the sure terrors of Arabia.

It is perfectly clear, as every statesman will admit, that Germany could possess and cultivate Mesopotamia without opposition, were it not for the threat to India contained in this colonization. The ancient bugaboo of war has laid a palsying hand upon this garden spot. Remove the menace of militarism, and the Bagdad Railway would swiftly go thru to completion, with the co-operation of the world. Then the vast agricultural and mineral stores of the region would be at the service of the world. The bitumen wells, from which Noah got the pitch for his ark and Nebuchadnezzar the plaster for his palace, would be available for the highways of Berlin and London. Civilization would police Arabia in the interests of all mankind. Now the only immediate prospect is for England to take Mesopotamia, as well as the rest of Asia, by a *tour de force*. Germany's military ambition is thus seen to lie athwart her commercial advantage.

The traveler in Babylonia naturally wants to go across to the wonderful ruins of Persepolis and Susa in Persia. The consuls will not let him do so, because

of the insecurity of this whole region. So he finds himself confronting the whole problem of Persia, the ancient nation that once ruled the world. Here is an historic people whose national life has already been doomed by rival military powers. If these did not distrust each other, Persia might be given a chance to work out her own destiny on her own soil. Neither Russia nor Britain needs new territory; both have now more than they know what to do with. But militarism is the bogy on the backs of both of them, driving them forward over the dearest national sentiments of weaker people. Persia's race is run, even at the hour of an awakening national sentiment and a modern conscience.

While our mind is on this historic section of the earth, about which we learned from the Bible before we began to read history, we find ourselves reverting to that little strip of land along the Mediterranean called Palestine. Here Turkey is kept in power, and permitted to oppress and baffle, all because of the military jealousies of Europe. If international right and rule prevail, Syria would be free for cultivation and settlement by the fit. The Jews would have a chance to prove or disprove the practicability of their dreams of Zionism. The traveler and the scholar could visit and study, unhindered, these dearest scenes of human history. Syria, upper Mesopotamia and Asia Minor all wait only for established order and stable government in order to prove themselves once more a fit setting for the glories of civilization like unto that which they knew two thousand years ago. From Paul's city of Tarsus, across the Cilician plain, back thru the Cilician Gates into Anatolia, that most famous battleground of history, and the home of great cities of classic antiquity, stretches a region which the world would again find a granary, and new and modern cities would demonstrate that prosperity waits on peace.

Passing over the familiar conditions in Europe, so often and so aptly described as an armed camp, we proceed to the Far East, beginning with inaccessible Tibet. The Dalai Lama himself told me that he was eager to have his country open for travel and trade and the learning of the West. Tibet is ready for exploitation, but three military powers are contending for it, none of them with the welfare of Tibet as its objective.

Of far greater importance is the situation in Mongolia and Manchuria. There is nothing in the newspaper reports to give the average reader a conception of the vastness and fertility and promise of these great stretches of territory. They are like our American Northwest, a fat land. To the traveler every mile spells possibility. In them he reads hope, not only for the congested Chinese communities to the South, but also for the whole world's trade. China's migration into this region has begun, and if there were an international care to preserve Chinese rights, the world would have a demonstration within a generation of what the Chinese could do in a new country.

In point of fact, however, the region is overrun with the soldiers of two nations, neither of whom has any right there. Russia and Japan have made a robber's agreement for the exploitation of this great section of the globe's surface. Justice has been flouted, international agreements despised, and in the absence of a compulsory court of arbitration, a great war may at any time break out here. As these lines are written, the cables tell of the dispatch of a Chinese expedition to meet Russian aggression in Mongolia. In that simple statement we perceive the transformation of the great peace nation of earth, China, into a military people, as if China had not burdens enough to bear without this dread load of militarism.

Look whichever way we may on the world's social horizon, and we find the soldier. He is an ominous figure: he portends hurt to nearly every phase of human life: he prevents the tilling of the soil whose fruits the world needs; his sword is a barrier to the building of homes and the rearing of families. The material and social and moral progress of the human race is hindered by the soldier, set apart, at cruel cost to the poor, to execute, in antiquated fashion, the bloody will of chauvinists. The free interflow of the day's tides of neighborliness is checked by the soldier. He is an enemy of the world spirit of this twentieth century, a foe and not a brother to humanity.

SWARTHMORE, PA.

The Vote on the Ohio Constitution

BY C. B. GALBREATH

Secretary of the Convention.

THE Fourth Constitutional Convention of Ohio recessed June 7, 1912, and on August 26 reconvened and adjourned without day. In many respects it was the most remarkable constitutional convention ever held in any State. Its importance has been generally recognized.

This convention has been noted for the representative character of its membership, for the distinguished men who addrest it and for the progressive measures that it considered and submitted to the people for approval or rejection as a part of their organic law. The characteristic features of its work have already been presented in these columns, and further details would be superfluous.*

Forty-two proposals were past by this convention, many of them truly fundamental in character and dealing with matters of great importance. These were submitted as separate amendments in the order of their prospective position in the Constitution, and every elector in the State was given the opportunity to vote on each of them. It would be difficut to offer greater freedom of choice.

The work of the convention was well advertised. While it was in session the newspapers of the State gave much space to the proceedings. An "address to the people," containing the full text of each proposed amendment, with a brief explanation, and followed by a sample ballot, was published and circulated extensively from the office of the secretary and in supplement form thru the county newspapers of the State. In all, about 1,500,000 copies of this "address" were distributed thru the agency of the convention.

While there were spirited contests in the organization and debate was sometimes acrimonious, partisan politics had no part in the work of the convention. In the discussion of measures and principles, the members exhibited a freedom and independence consistent with the high character of the work they were called upon to perform. This gradually won the favor of the press and the people.

At first little organized opposition was manifest. It was charged that the "interests" were alert and that they were striving in dark and devious ways to circumvent the approval of "the people's new charter of liberty," but all on the surface was serene, until the opposition shortly before election day unmasked and unlimbered thir guns and poured forth volleys of "literature" that made the advertising by the convention look inadequate and insignificant. Tons of pamphlets, some of considerable size, some signed and many anonymous, were scattered broadcast over the State. Cards and circulars were numerously in evidence warning against the advent of socialism and industrial disaster, and sagely advising voters, "When in doubt, vote no."

The work of the convention as a whole was very acceptable to organized labor. That interest for years had been advocating principles embodied in some of the amendments. Much help was expected from the unions. The fixing of the special election immediately following Labor Day was not accidental. It afforded the opportunity that was generously utilized to make a final appeal to working men and their friends not to fail to come forth and vote in behalf of their cause on the day following.

Sunshine greeted the electors of Ohio on September 3. The weather was ideal, and "the most important election of the State in this generation" should have called forth a record vote. No one expected this, however, in spite of the efforts of the press and the general interest in the closing days of the campaign. The result is full of interest to students of the referendum. At no previous election in any State have so many measures been submitted to the people on one bal-

lot. Following is the vote on each of the amendments:

No.		Votes.
1.	Reform in Civil Jury System	Yes 345,686
		No 203,953
2.	Abolition of Capital Punishment	Yes 258,706
		No 303,246
3.	Depositions by State and Comment on Failure of Accused to Testify in Criminal Cases	Yes 291,717
		No 227,547
4.	Suits against the State	Yes 306,764
		No 216,634
5.	Damages for Wrongful Death	Yes 355,605
		No 195,216
6.	Initiative and Referendum	Yes 312,592
		No 231,312
7.	Investigations by Each House of General Assembly	Yes 348,779
		No 175,337
8.	Limiting Veto Power of Governor	Yes 282,412
		No 254,186
9.	Mechanics' and Builders' Liens	Yes 278,582
		No 242,385
10.	Welfare of Employees	Yes 353,588
		No 189,728
11.	Workmen's Compensation	Yes 321,558
		No 211,772
12.	Conservation of Natural Resources	Yes 318,192
		No 191,893
13.	Eight-Hour Day on Public Work	Yes 333,307
		No 232,898
14.	Removal of Officials	Yes 347,333
		No 185,986
15.	Regulating Expert Testimony in Criminal Trials	Yes 336,987
		No 185,458
16.	Registering and Warranting Land Titles	Yes 346,373
		No 171,807
17.	Abolishing Prison Contract Labor	Yes 333,034
		No 215,208
18.	Limiting Power of General Assembly in Extra Sessions	Yes 319,100
		No 192,130
19.	Change in Judicial System	Yes 264,922
		No 244,375
20.	Judge of Court of Common Pleas for Each County	Yes 301,891
		No 223,287
21.	Abolition of Justices of the Peace in Certain Cities	Yes 264,832
		No 252,936
22.	Contempt Proceedings and Injunctions	Yes 240,896
		No 257,302
23.	Woman's Suffrage	Yes 249,420
		No 336,875
24.	Omitting Word "White"	Yes 242,735
		No 265,693
25.	Use of Voting Machines	Yes 242,342
		No 288,652
26.	Primary Elections	Yes 349,801
		No 183,112
27.	Organization of Boards of Education	Yes 298,460
		No 213,337
28.	Creating the Office of Superintendent of Public Instruction to Replace State Commissioner of Common Schools	Yes 256,615
		No 251,946
29.	To Extend State Bond Limit to Fifty Million Dollars for Inter-County Wagon Roads	Yes 272,564
		No 274,582
30.	Regulating Insurance	Yes 321,388
		No 196,628
31.	Abolishing Board of Public Works	Yes 296,635
		No 214,829
32.	Taxation of State and Municipal Bonds, Inheritances, Incomes, Franchises and Production of Minerals	Yes 269,039
		No 249,864
33.	Regulation of Corporations and Sale of Personal Property	Yes 300,466
		No 212,704
34.	Double Liability of Stockholders and Inspection of Private Banks	Yes 377,272
		No 156,688
35.	Regulating State Printing	Yes 319,612
		No 192,378
36.	Eligibility of Women to Certain Offices	Yes 261,800
		No 284,370
37.	Civil Service	Yes 306,767
		No 204,580
38.	Out-Door Advertising	Yes 261,361
		No 262,440
39.	Methods of Submitting Amendments to the Constitution	Yes 271,827
		No 246,687
40.	Municipal Home Rule	Yes 301,861
		No 215,120
41.	Schedule of Amendments	Yes 275,062
		No 213,979
For License to Traffic in Intoxicating Liquors		Yes 273,361
Against License to Traffic in Intoxicating Liquors		No 188,825

Some recent Ohio election statistics are given here for purposes of comparison. The vote for Governor in 1908 was 1,125,054; in 1910, 932,262.

The highest vote cast on any amendment was 586,295 on woman's suffrage; the lowest, 462,186, was polled on the liquor license amendment. A vigorous campaign was waged for both of these. It will be noted, however, that the aggregate vote on the latter was much lower than that given for any other proposal. It stood alone at the head of the second column of the ballot, and many voters evidently, after following down the column to No. 41, thought they had reached the end of the list and did not notice the license proposal at the head of the next column.

Of all questions considered, the initiative and referendum was most thoroly discussed in and out of the convention. It will be noted that while the majority for this prime article of the progressive faith is large, it is exceeded by that given for each of the twenty-three other proposals.

Measures accorded a high vote in the convention were not always so popular with the electors of the State. The amendment receiving the highest majority passed the convention by only a single vote more than the lowest in the entire series, while Nos. 24 and 36, which passed the convention almost unanimously, were both defeated.

Attractive titles undoubtedly helped to increase the majorities in some instances. Amendment No. 1 is brief. Following is the full text:

"The right of trial by jury shall be inviolate, except that, in civil cases, laws may be passed to authorize the rendering of a verdict by the concurrence of not less than three-fourths of the jury."

This amendment was given the title "Reform in Civil Jury System." "Reform" in these progressive times is peculiarly attractive. It is a case in which

a rose by any other name would not smell quite so sweet. This initial word probably brought a few thousand votes to an amendment that would certainly have carried under a more appropriate title. In this class should be included No. 10, "Welfare of Employees." It provides that "laws may be passed fixing and regulating the hours of labor, establishing a minimum wage and providing for the health, comfort, safety and general welfare of employees." In this instance also the title helped a proposal that would doubtless have carried with a more explicit designation.

It will be seen that eight of the forty-two proposals failed to receive the required majority. The first of these is the "Abolition of Capital Punishment." The old doctrine of "an eye for an eye and a tooth for a tooth" was promulgated effectively in the convention and before the people. It was also urged that under existing law in Ohio the jury may recommend mercy and thus prevent electrocution. The issue was clearly defined and the result fairly represents the present sentiment of the State on this subject. There are evidences, however, that the verdict is not final and that the time is not far distant when it will be reversed.

To the surprise of the most careful observers No. 22, providing for the regulation of contempt proceedings and the prohibition of injunctions in controversies involving the employment of labor, was lost. The principle embodied in this amendment has been advocated for years by organized labor.

Woman's suffrage was defeated by a decisive majority, but not so large proportionately as that registered against the reform in Oregon in 1910, on the occasion of its third submission to the electors of that State thru initiative petition. The liquor interests were most active in opposing this amendment. Unfortunately the opposition to woman's suffrage adversely affected No. 36, which provided for the appointment of women to certain offices of the State and its political subdivisions "where the interests and care of women and children are involved." On the face of the returns the electors of Ohio have evidently resolved thoroly to eliminate women from participation in public affairs.

Perhaps the greatest surprise was the result of the vote on No. 24, "Omitting the Word 'White.'" The Constitution of 1851, which was adopted before the emancipation of the colored race, limited the elective franchise to "every white male citizen of the United States of the age of twenty-one years." The word "white" still remains in the Constitution, altho it was made of no effect by the adoption of the Fifteenth Amendment to the Constitution of the United States. The amendment simply sought to make the Constitution of Ohio harmonize in form with the National Constitution. A similar amendment, complicated, it is true, with other issues, was submitted in this State in 1867 and defeated. Race prejudice is evidently still strong in Ohio, a State that in 1861-65 poured forth her blood freely to blot out an invidious distinction that is still retained in her Constitution.

The authorization of the "Use of Voting Machines" was defeated largely thru the strenuous opposition to it in the city of Cleveland and the apprehension in rural counties that the innovation would involve needless expense. Perhaps the word "machines" had for some a sinister suggestion that increased the unfavorable vote.

Amendment No. 29, best known among its friends as the "good roads" proposal, was strongly combated in the convention and the opposition was carried to the people. The heaviest vote against it was polled by the farmers of the counties that already have good roads. Many voters in the cities and in the country were opposed to raising the bond limit of the Constitution for any purpose.

The last in the list of defeated amendments is No. 38, "Outdoor Advertising." This simply sought to give the General Assembly authority to regulate outdoor advertising, especially billboards, which often mar the beauty of cities by their unsightly displays. The billboard companies fought the amendment and thoroly circularized the State against it. They succeeded in defeating it by a very narrow margin.

The amendments that carried, without exception, received their large majorities in the large cities of the State. The country vote was light and conservative.

In a number of the rural counties every proposal was voted down.

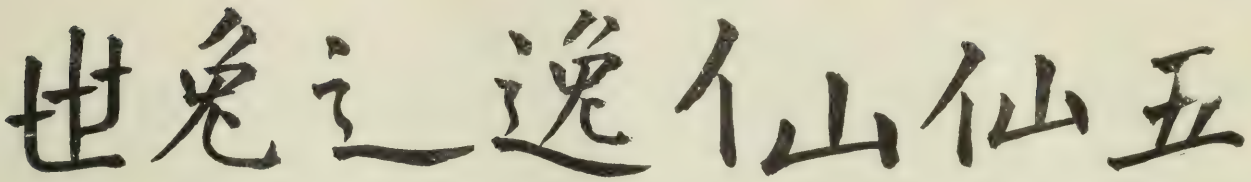
There has been complaint that sufficient time was not given the electors to familiarize themselves with the numerous amendments. After all has been said, however, it must be admitted that the work of no previous convention in the State was given the careful study and received the intelligent vote accorded the amendments submitted in 1912.

In this connection something should be said of the educational value of this recent campaign. It is only within the past nine months that the people of Ohio have commenced to take an interest in their State Constitution and to awaken to a realizing sense of their relation to it. Simply as an educational investment this constitutional convention was fully worth the money appropriated for it.

The limitations of this contribution will not permit comment on the various amendments approved by the people. Many of them simply remove old restraints and grant new powers to the lawmaking body of the State. Practically all of them will require supplemental legislation. The coming session of the General Assembly will therefore be one of the most important ever held in the State.

While the provision for the initiative and referendum goes into effect October 1, there appears to be no disposition on the part of its friends to rush precipitately to the General Assembly with initiative petitions. They are inclined rather to give the representatives of the people an opportunity to act under new conditions. Of course in time there will doubtless be occasion to use the initiative. There are needed reforms that the legislature will be slow to inaugurate. It will not be disposed, for instance, to interfere with advertising privileges of newspapers, the salaries of State and county officers and employees, and with its own perquisities which seem naturally to grow more numerous and luscious with each passing year. If the larger powers granted the legislature are used for selfish or partisan advantage, the referendum should be and doubtless will be promptly and effectually used.

The friends of good government have reason to be greatly encouraged at the triumph of the civil service amendment. It provides that laws must be passed establishing the merit system in the State and its political subdivisions. No special efforts were put forth by any organization in its behalf, and yet it carried by over 100,000 majority. This reform has not been inaugurated too soon. Ohio has long been in the iron grasp of the spoils system. The traffic in votes in Adams County is but the supplement to the traffic in office that has held sway under the dome of the State Capitol. Will the spoilsmen give up their prey? Not without a struggle. Just now there are brave promises by those who aspire to power as to what will be done. These may be kept, or at the behest of the bosses they may be made for a time a travesty and a jest. Hypocrisy may temporarily defeat the popular will, but the people are awakening, and efforts to circumvent the plain mandates of the Constitution, either by direct executive act or thru unfair and pliant agents, must, in Ohio, run the gauntlet of a popular opinion that is becoming every hour more vigilant and militant. A better day is surely dawning.



Other important amendments approved by the people are: conservation of natural resources, including legislative control of the methods of mining, weighing and measuring minerals; change in judicial system, containing effective provision for the elimination of the law's unnecessary delays; regulation of corporations, forbidding fraudulent sales of stock; primary elections for the nomination of national, State and county officers; municipal home rule, authorizing cities to choose their own form of government.

It has been charged in some quarters that Ohio's "new constitution" is "radical, dangerous and revolutionary," that it will drive business interests out of the State. In fact, the amendments are not radical, and experience will prove that they are dangerous to no legitimate interest. They invest the people and their representatives with new powers and responsibilities. They are simply a forward step in the constitutional evolution of a sane, powerful and progressive commonwealth.

COLUMBUS, OHIO.

An Easy Lesson in Chinese

BY H. P. PERKINS

1. 2. 3. 4. 5. 6. 7. 8.

WHEN President Yuan Shih Kai writes his name the marks which come off the tip of his brush look like this.

Yuan Shih Kai

The top character, Yuan, is the family name. Shih Kai is the given name, given probably in infancy. Pronounce the *i* in Shih as in *fix,* by no means omit the *h,* and speak the *ai* as in *aisle.*

The word Shih would almost certainly be the first word in the given names of Yuan Shih Kai's brothers and would show that they were probably his brothers. It means *world* or *generation.* Two thousand years ago it was written (1), *i. e.,* three tens, or one generation.

Kai means *victorious.* President before the word Yuan nicely balances the words, In - his - Generation - Victorious, which follow it.

Sun Yat Sen

The family name of Dr. Sun Yat Sen, the first President of the Chinese republic, is pronounced almost exactly like our *soon.* Had Dr. Sun been born in North China, instead of near Canton, we would be writing his given name I Hsien, and pronouncing it *ee see-en,* which shows how widely the Cantonese differs in pronunciation from the Pekinese. It likewise shows how little the written language of China has done toward unifying the spoken language of different sections, being itself exceedingly weak phonetically.

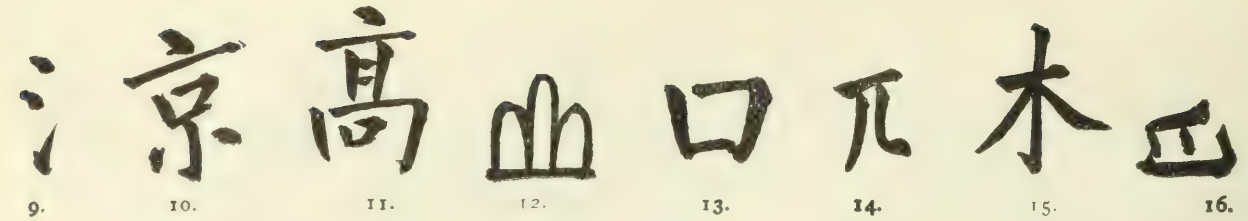
The picturesqueness of the characters is a partial compensation. Yat means the way a rabbit (2) runs, (3), and is, of course, written (4).

Sen is a man (5) who lives in the hills, (6) and therefore written (7).

Wu Ting Fang

A mountain elf is not very different from a spirit. Hence we have Sun of the Gentle Spirit; which is evidently a name given in youth or early manhood by some friend who in these two striking words has given the world the portrait of a most interesting man.

In Wu Ting Fang's name we notice the same "standing man," (5), with "five" (8), beside it; indicating, originally, a squad of five soldiers.



Ting is a *courtyard* and Fang is *a flower of sweet perfume.*

Probably the ex-ambassador does not now regret that he gave his large influence to the popular side at an early stage instead of trying to find a comfortable seat on the fence or in the corner.

Li Yuan Hung

Another name which interests us is that of Li Yuan Hung, or, if you prefer, Heng, for this is the officer to whom the revolting soldiers of Chang Piao, near Hankow, fled last October, thus almost forcing Commander Li into the military leadership of the Revolution of Central China. This Yuan means *chief,* while Hung is *great.* The famous Viceroy, Li Hung Chang, had the same char-

9. 10. 11. 12. 13. 14. 15. 16.

河南 Ho Nan

acter as a part of his name. Give the *u* the sound of *u* in *pull*. It is not, however, at all improbable that this official pronounces this character with the short sound of *u* in *up*, which is the sound intended when the word is written *heng*.

The difficulties experienced by the Chinese Romanizer are not few. When, for example, he wishes to express the sound of the English word *hung* he writes *heng*, and when he writes *hung* he is trying to give the sound *hoong*.

In Romanizing Chinese personal names, each character of which is given, as above, its own equal place, one naturally capitalizes the English equivalents. There are several reasons for writing important place names, like those of the provinces, in the same way. These are never of more than two words, and the words are usually of only one syllable.

湖南 Hu Nan

It is hardly to be expected that the newspaper name of Ho Nan will be anything else than Honan. But if our geographies and books of reference would keep the words distinct, it would be no more than we do with our own names, such as New York or West Virginia. Ho should probably be written Hê, the *e* having the sound of *e* in *her*. It means *river*, while Nan is *south*. River South is good Chinese for "The Province which lies south of the Yellow River."

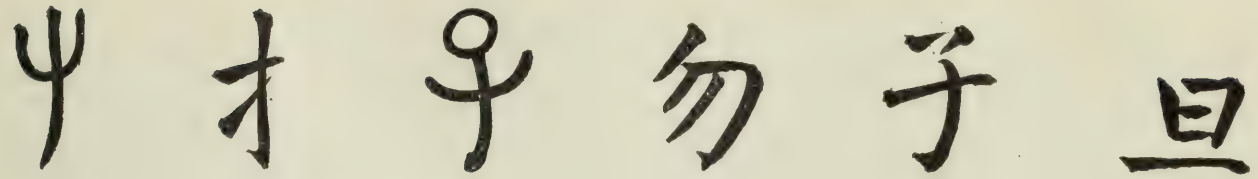
The three strokes (9) seen in the *river* character are also to be seen in all others which represent bodies of water. It is called the "water radical,"

湖北 Hu Peh

and is of course a part of the character for *lake*. Hu Nan and Hu Peh are the two provinces lying, one north of and the other south of the largest lake. In northern mandarin the Peh is pronounced *bay*. Every one in the North Capital calls his city Bay-Jing, while the inhabitants of the South Capital doubtless all say that they live in Nan King. The word for capital (Ching or King) is written by the Chinese (10), and is evidently contracted from the word (11), which probably pictured a large city gate.

上海 Shanghai

It is interesting to notice that the first occupancy of the southern capital was in the year 317 A. D. The very first Chinese capital city was in the Ho Nan province, occupied B. C. 2180. Not reckoning several of the minor dynasties, there have been, since that first, fourteen changes, and the old, central province, which had the first capital, has held it six times since.



Now the pull seems to be not toward the north, neither toward the west, but toward the east. The city in which the world and China most thoroly meet is Shanghai—"On Sea." A few years since eleven nations, besides the Chinese, were holding separate courts in the settlements of this cosmopolis. Nan King, hardly three hours up the river, would appear to be the right place for the new Government.

山西 Shan Si

Shan Si and Shan Tung are simply Hills West and Hills East, or the two provinces which lie, one east, the other west of the range of hills lying between. Si is pronounced *see*. Tung is *doong*, the *oo* being short as in *soon*. The old form of *shan* is shown below (12). Si is a nest, (13), and a bird, (14), settling down on it. "Not very much like a bird." True, but would *you* be willing to put on the feathers every time you wrote the word?

山東 Shan Tung

In *tung* we can easily see a tree, (15), and the sun, (16), just coming up behind it. If you really care for an explanation of why these parts that ought

17. 18. 19. 20. 21. 22.

to be round have corners, buy a Chinese brush and ink-stone and set about making them, when you will find the reason literally at hand.

It will hardly do to leave the province of Shan Tung without writing the name of its most famous sage, Confucius. Kung is the family name. Fu Dze is usually translated "The Master." Yet I like to remember the first definition of this word, *fu,* in Williams's dictionary, "One who can help." The man who can help me in my thinking becomes thereby my master, and so doubtless felt those young men who, over two thousand years ago, left their homes to sit at the feet of Kung the assistant.

孔夫子

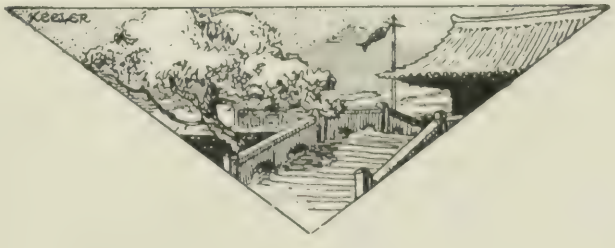
Kung Fu Dze

The two Canton provinces are divided by the two words *east* and *west* into the Broad East and Broad West provinces.

Kiang Si means Great River West. A small part of this province is west of the great Yang Dze river, altho the greater part lies distinctly south of that river.

The Yang Dze (or Tze) Kiang is the Great River Yang Dze. The meaning, "Son of the Ocean," will have to be discarded because this *yang* means not the ocean but that which is "tossed up," either from the surface of the great river or from the ocean itself.

The coast region both north and south of the mouth of the river, very long ago, bore the name of Yang Chou, and this region may have extended so far back from the coast that it may have sent considerable tributary water into the Yang Dze, which fact may have also given the name, "Son of the Yang Region." If any sinologist dislikes this theory, he has only to furnish a better one, whereupon this one will be withdrawn.



揚子江

Yang Dze Kiana

In the *yang* character we do not find any spray, but we do see the sun coming up over the horizon (17) and its rays go flying (18) all abroad. Also the hand (19) originally (20) which *tosses* the grain for winnowing. Apply this character to either the ocean or the great river and you must see the spray "tossed up" like chaff and grain from the threshing floor.

We have already had the character (21), in fact two of them, in the name of Confucius. This is the *tze* or, better, *dze* of the Yang Dze. In the good old days, when they had either more time or less writing, they wrote this "child" character (22), as any one can see who will take the trouble to go to Peking and investigate the round stones engraved some time in the reign of Hsüan Wang, B. C. 827-781.

WORCESTER, MASS.

Educational Reform

BY THE HON. CARROLL S. PAGE

[Mr. Page is United States Senator from Vermont, and a member of the Senate Committee on Agriculture and also the Committee on Education. As the result of long and earnest research he has recently presented a bill, in the Senate, providing for Federal co-operation in adding vocational education in the lower grades of public schools. The subject is receiving wide consideration.—EDITOR.]

THERE is nothing materially wrong with our educational systems, so far as they apply to those who are able to enjoy the superb advantages offered by our extensive system of colleges and universities, and it might even be added, without going far wide of the facts, that the boy who can only avail himself of the advantages of our system of high schools will be fairly equipped to enter upon the race of life successfully.

But, having made this admission as to our educational facilities, it is proper to ask two other questions, the answers to which are all-important to a correct estimate of the real value of the school systems of this country, to wit: How many of the boys and girls of our land are able to avail themselves, and do they avail themselves, of a college training? How many are able to avail themselves, and how many do avail themselves, of our high school system?

The facts developed by an attempt to answer these questions surprise us.

The guess of the average man would be that between 5 and 10 per cent. are able to avail themselves of college courses, and that between 25 and 50 per cent. take advantage of the high school courses.

Fortunately, however, it is not necessary to guess regarding this matter. We have statistics which show accurately just what proportion of our boys and girls of school age are in college, in high school, and in the elementary school.

These statistics show that only 1.71 per cent. enjoy the college course, and only 5.35 per cent. the high school course, while the great mass of the children of this land—to wit, 92.93 per cent.—never pass beyond the elementary grades. In addition to this, it is estimated, by those entitled to speak authoritatively on the subject, that only 25 to 50 per cent. of this 92.93 per cent. ever complete the eighth, or highest, grade of the elementary school.

But this is not all. The training given to those who enjoy only the elementary grades is almost exclusively on what is known as "cultural" lines, and, with very rare exceptions, it is not pretended that, even in a remote degree, the curriculum of our elementary schools equips the boy with a practical education—an education which fits him to go out into the world and earn a livelihood.

The friends of the Page Vocational Education Bill—Senate Bill No. 3—while confessing satisfaction with the curriculum, so far as those connected with the high schools and the colleges are concerned, insist that to 93 per cent.—to speak accurately, the 92.93 per cent.—who never enter the high schools or colleges we are not extending the square deal, and that it is only by affording to this 93 per cent. the opportunity to acquire an education along vocational lines that we can perform our plain duty to these children.

Passing for the moment from a statement of conditions and needs, let us see what the Page bill contemplates.

1. It proposes to appropriate $3,000,000 from the Federal treasury for the purpose of encouraging instruction in agriculture, the trades and industries, and home economics, "in clearly defined departments, or divisions, of high schools of secondary school grade." Translated into plain terms, it means an appropriation for the benefit of vocational training in schools in rural communities—towns and villages having, say, from 1,000 to 4,000 population.

2. It appropriates $3,000,000 toward the support of institutions in which only the trades and industries and home economics shall be taught. This appropriation is designed to stimulate and encourage the establishment of separate schools

in the larger cities, where will be taught those industries which the mass of boys in the larger cities must have to adequately equip them for earning a livelihood at the trade or vocation for which their peculiar talents seem best to fit them, and where girls may be taught home economics.

3. The bill appropriates $3,000,000, in round numbers, for the establishment of a system of high schools where the better educated of the farmers' boys in rural communities may receive a training which will fit them for agricultural life. It is not proposed to make this the equal of the agricultural colleges, of course; but it is to be peculiarly the college of the farmer boy, where he shall receive that instruction and encouragement which it is hoped and believed will prompt him to return to the farm and pursue agriculture as a life work rather than, as is now the case, the desertion of the farm life for the city.

4. The bill appropriates $3,000,000 for the purpose of taking the accumulated results of research at the State agricultural colleges and carrying them to the adult farmer, so that he, as well as his sons, may come to understand the better and more advanced methods which must be adopted if farm life is to be made popular and profitable.

5. The bill appropriates $1,000,000 to encourage demonstrations and experimental work, to be carried on under the supervision of the State agricultural colleges at the district agricultural schools established by the Page bill.

6. The bill appropriates, in round numbers, $1,500,000 annually for the preparation of teachers to carry on the educational work contemplated by the bill.

The appropriation of the $1,500,000 for the education of teachers is to be immediately available.

The remaining appropriations of the bill are not to take effect until the fiscal year ending June 30, 1916, because of our unpreparedness by reason of a lack of competent teachers.

It would be very interesting to state in detail the administrative features of the bill, but, of course, this is not practicable within the limits of this article. Suffice it to say that the autonomy of the States is fully protected. The Federal Government says, in substance, to the respective States, You need not accept any of the provisions of this act unless you wish to do so; but if you do (so far as the most of the appropriations are concerned, at least) you must to every dollar appropriated by the Government add two dollars to be paid by State and local taxation.

To illustrate: If a high school in any city wishes to avail itself of $1,000 of this Federal fund, either the State or the local community must add $2,000 to the Federal fund, thus giving the school $3,000. It is hoped and expected that, as a matter of fact, it will work out more nearly on this basis: The Federal Government, for example, will contribute $1,000 toward a school. The State will add another $1,000 to this $1,000, and will then say—as the States of Massachusetts and New Jersey now say substantially to their respective localities—if any city, town or village will add another $2,000 to this $2,000, it may avail itself thereof, thus giving $4,000 to that school which avails itself of the benefits of the proposed legislation.

More than this, the funds appropriated by this act must be used, and used only, for the special purposes contemplated. They cannot be diverted to general school support. The whole theory of the bill is that the Federal Government is to stimulate and encourage the States and local communities to take up this much-needed work of vocational education.

Every student of public affairs must have observed that there is no more serious problem before the American people today than that of maintaining a proper division of the population between city and country life, involving, as it does, that twin problem—the maintenance of the equilibrium between food consumption and food production.

The boys and girls in our rural communities are leaving the farms and flocking to the cities. Under conditions as they now exist, the bright, enterprising son of the farmer is not slow in observing that urban life offers better possibilities of success than the life of the country. This fact needs no verification. Its existence may be easily ascertained, and, unpalatable as it is, we are confronted with the necessity of doing something to check and regulate this constant move-

ment from country to city—the depletion of much of the best blood of our rural communities—or within ten years, perhaps within five, we shall not only cease to be a food exporting nation, but shall be actually importing no inconsiderable portion of our foodstuffs. The great question now before the country, therefore, is, Can these conditions be changed, and, if so, how?

We have been hugging the delusion that we were getting wealthy from farming, whereas, as a matter of fact, we have been taking the nitrogen, the phosphoric acid, the potash and the vegetable matter or humus, from our virgin soil, and selling them in the form of cereals and fibers; and before we can become prosperous farmers, we must learn to restore to the soil those ingredients of which we have been so prodigal.

The question of practical farming today has come to be largely a matter of the rotation of crops, of fertilization, of better seeds, and of better breeds of stock. We have no more lands to exploit unless it be land the cultivation of which will have to be made profitable by the clearing of needed forests, by irrigation, or by drainage. We must increase the productivity of the acreage we have or become a food importing nation.

We have for more than a century been deceiving ourselves. From platform and stump we have been wont to boast of our boundless natural resources; but students are now coming to see that, unless we change our present practices, these resources will be largely exhausted within a period that to the farsighted statesman is but a day.

We have been exporting millions upon millions of bushels of wheat and corn, supposedly at a profit; but those experts who have been making the question of soil fertility a study for the past decade are now able to say to us, as the result of their research, that every bushel of wheat carries with it 27 cents' worth of phosphorus, every bushel of corn 13 cents' worth; and our friends from the South now know, as they did not know 20 years ago, that every pound of cotton takes from the soil 3 cents' worth of phosphorus. When we consider the hundreds of millions of bushels of wheat and corn and the millions upon millions of pounds of cotton which we have been exporting, the extent of soil depletion is something fearful to contemplate.

As President Wallace recently exprest it, "The nineteenth century farmer was no farmer at all; he was a miner, mining the fertility of the soil and selling it for the bare cost of mining."

Two hundred and fifty-two counties in the United States—and they are mostly counties in the agricultural sections of the country—show a less population than they did thirty years ago. The picture is not pleasant to contemplate, but we may as well voluntarily face the facts now and thereby being compelled, at no distant day, to apply heroic remedies.

We have exploited all our virgin soils, and the demand still is for more corn, more wheat, more foodstuffs of all kinds with which to feed the American people.

In the process of time—and I believe that time will arrive within the next ten years—the slipshod, unscientific methods of farming which we are now practising must be superseded by more progressive and more intelligent methods, or the burden of the high cost of living will continue to grow more and more heavy until it becomes unbearable.

In my judgment, the remedy for this condition must come thru those more intelligent methods of farming which will inevitably result from the passage of this bill.

Proceeding from the question of agriculture to a consideration of that of home economics, it may be said that no greater problem confronts us today than the health of our people, and especially the health of the young. There must be a better knowledge of sanitation, hygiene, ventilation, cooking, and home-keeping generally; and it is a cause for gratification that home economics is rapidly assuming the prominent place which it deserves in all schools which girls attend, from the elementary to the collegiate. This bill, if it passes, will generally accelerate this much-needed movement toward better home-making, better wives, better mothers. Thousands of homes are wrecked and tens of thousands of lives are ruined because those who kept the homes of our country have no training in that greatest of all professions—the profession of home-making and motherhood.

All must live in some sort of a home. It is there that character is developed. No great advance, spiritual or mental, is possible which does not begin within the home. Every girl is a potential mother. Every mother should be a home-maker. Every girl should have the best of health, some knowledge of her peculiar functions, some specific preparation for playing her part in the best possible home.

The foregoing reasons are sufficient and alone justify the passage of the Page Vocational Education Bill, but after all the great problem now before the American people, as it seems to me, is, What we shall do with that vast army of boys, most of them only fourteen years of age —and many of them less—who leave their homes, unsuccessful, aimless, most of them having learned little else than the three R's, not educated in any sense, but possessed only of the rudiments whereby real education may be acquired. They have been so schooled that there is but one possible result as to the great majority of them, and that result is failure.

From one end of this country to the other we are discussing the great question of conservation—conservation of our lands, conservation of our water powers, conservation of our timber—forgetting that the most valuable of all our resources is the American boy, and that we are wasting this great asset more than any other. He is being cast onto the dump like so much waste from the mine.

Judge William McAdoo, the chief magistrate of the city of New York, in making his annual report, says:

"There is growing up in this city a menacing army of boys and young men who are the most troublesome element the authorities have to deal with. From the ranks of these lawless, reckless rowdies, who are organized in bands, or bound up with chums or pals, come most of the crop of burglars, truck-thieves, hold-up men, and other criminals of dangerous character."

What Judge McAdoo says of New York is applicable to every large town and city in this country; and the deplorable thing about the whole matter is that it is largely unnecessary; for if we will give to these boys an education which they can see will fit them to become better men, better artisans, and better enable them to earn a livelihood, we could direct their minds into different channels, and the larger part of them could be saved and made useful men.

We should not wait until the boy has become a criminal before we take cognizance of his temptations. He should be safeguarded during the earlier period of his adolescence; and in this connection I believe that the time will come when we shall clearly differentiate the method to be pursued in correcting a first offender, who, up to the time of getting into trouble, has been a self-respecting man and a good citizen, from the course to be taken in punishing the man who has become a hardened criminal.

In my opinion, it is within the power of this country to so legislate that all our people, or practically all, may have an honest occupation—a vocation—which means an opportunity to earn a livelihood; an opportunity to obtain, thru pleasurable labor, the wherewithal to supply the legitimate, reasonable demands and desires of mind and body.

Indeed, the time has come—and we are already beginning to see it—when vocational education, under school conditions, is a widespread demand and is rooted in the social and economic conditions of this age.

Every observing man knows that there is something wrong in our educational system, and we must not shut our eyes to that wrong, because it is pregnant with an importance second to no other problem now before this nation.

The curriculum of the elementary, or graded, schools, as they are today conducted, is largely impracticable and does not fit for the great struggles of life that are before the 93 per cent. of our boys and girls who never pass beyond the eighth grade. To continue conditions longer as they are is to criminally neglect the largest asset of this country—the American youth.

I believe that when the child reaches the seventh grade we should begin to take an account of stock of what that child is. He should be studied physically, mentally and psychologically. The natural bent of his mind should in some way or other be brought out, and when we have discovered what that bent is, we should continue his education along prac-

tical lines and in the direction of his natural abilities for as many years as his condition and needs warrant, that we may make of him an efficient worker in some useful line.

Educators are practically unanimous in the belief that every proper incentive should be used to continue the school life of the boy, by a year or two, at least, after he reaches the eighth grade. Three to five years would be better still. But this we can never do under our present system of education.

Men like to do that which they can do well. Place a boy in a position where he must work in the lowest grades of the establishment with which he is connected, and work to him is drudgery. Give him such an advanced and responsible position as a year or two of education along vocational lines would have equipped him to fill, and all is changed. He sees not only a higher wage, but he sees promotion, preferment and honors. The boy who has been drifting downward from the fourteenth to the seventeenth year soon comes to know that he has not had a square deal in the race of life, and he joins the order of malcontents and anarchists.

Industrial education, more than any other agency, will augment and intensify the desire for more knowledge, both general and vocational; it will unquestionably arouse into action thousands of boys possessing latent ability and talent; and, with their desires whetted for still greater knowledge, every institution of learning now in existence will become the direct beneficiary of the joint action of the nation and the State in providing, as is proposed in the Page Vocational Education Bill, a stable foundation upon which can be builded a broader education.

It is not easy to overestimate the advantages which will come into our country life by the passage of this bill. Teachers of agriculture and home-making will be prepared in large numbers by the agricultural colleges and the State normal and other training schools. The secondary school department will furnish in the local schools the beginnings of vocational education. The district agricultural schools will send back to the farm hundreds of thousands of boys to join with the father, who meanwhile has been educated thru the farm or college extension work provided for by this bill; and together they would join in vitalizing, stimulating, and energizing that more intelligent and more profitable farm management of which our country today stands in such great need.

The extension work will furnish instruction and inspiration to millions of our mature farmers. The present splendid movement for the betterment of country life will be impelled forward at a faster rate. The aspirations of our best people to live on the land will be aroused. We shall see the genetically best of our great white race again seeking the land instead of deserting the country for the city.

We shall see a better digestion and assimilation of that great quantity of foreign material which is coming into our country, an influx which will unquestionably give us trouble if we do not assimilate it into our political system by a process of practical education.

Give the children of these immigrants an education along vocational lines, so that they may see that their condition is bettered because of their change of residence to the United States, and they will revere our institutions, love our country, respect our flag. Deprive them of such an education as will make them efficient and permit them to earn a respectable livelihood, and we may well fear that the red flag of anarchy will take the place of the Stars and Stripes. Educate these foreign boys and they are a blessing. Omit to do it and they become a menace. Which shall we do?

We must not do injustice to the laboring man. Out of the abundance of our great wealth and our great prosperity we must at least see that his children have the opportunity to receive an education, and that kind of an education, too, which shall fit and equip him to be self-respecting and self-supporting, to the end that he may take his place alongside of his more favored brother.

We must so combine the advantages of a city and the country that more of our best people will live on the farms; and, with larger and stronger families, they can help our race to gain that world leadership which can only be attained by a combination of large numbers with a high average of industrial efficiency.

The occupied man is a good citizen. It is easy for the agitator to call the idle man to deeds of violence and anarchy, but the agitator is not able to lead the honest arm from the anvil and the plow into deeds of destruction. Wise statesmanship lies in so administering our affairs as to give the greatest measure of universal contentment. National defense is just as effectually provided for in promoting good citizenship as in building battleships. An illiterate, uneducated citizen, disloyal and anarchistic, as he oftentimes is, is a greater menace to our national safety than the combined battleships of Great Britain, France and Germany.

WASHINGTON, D. C.

Crazy-Quilt Art

BY WARREN BARTON BLAKE

"WE went back to childishness as a swimmer goes to the bottom that he may rise again; Gauguin copied at first not the Parthenon horses, but the Noah's Ark kind." So runs the confession of a twentieth century Frenchman, M. Maurice Denis, in his "Théories." Perhaps Gauguin and Denis have read Browning's "Prince Hohenstiel-Schwangau," with its line,

"Genius has somewhat of the infantine."

Browning was fortunate, however, in escaping art futurism by dying before any one was stupid enough to invent it. In the circumstances, we find a better cicerone in Mr. Huneker, author of "Iconoclasts" and "The Promenades." Now, James Huneker is a critic entitled to credit as interpreter of mysteries. Never was he afraid to recognize the beauty or force of a writer or painter who ventured to depart from the beaten track in the search of new formulæ, new effects. Indeed, he has piqued himself on the exposition of what the vulgar mind could neither fathom nor admire. Therefore I regard as significant this "progressive's" account of the tendency in painting, as exprest in the last decade by the younger and more revolutionary painters, the world over: that is, the cult of crudity and ugliness for ugliness's sake. It is this cult that has led a municipal councillor of Paris to protest against the Government's "indecency" in lending a public building for an exhibition of this morbific art.

After attending the second annual show of the Post-Impressionists in London, and the tenth Autumn Salon in Paris, Mr. Huneker sends back to New York an article that, while making an effort to attain fairness in presentation, is an unmistakable attack upon the freaks—charlatans and misguided zealots alike. Many critics have begged the question, in writing of art in its newer manifestations. Like Professor Michel, who denounces the "delirious dyers" who have covered their defenseless canvasses with "color puddles," they have often taken no pleasure in the work shown, and, to judge by their writings, have generally failed to understand what the worker was driving at, and yet, mindful that Manet was sneered at in his day (like Maeterlinck in letters), they have written Delphically, with an eye to that future (against which they have prayed), in which the men they are tempted to sneer at today might loom potent, awesome. But there is no anchor to leeward in Mr. Huneker's latest criticism. He is not misled by Signor Marinetti's high sounding slogan, "Imagination without chains and words at liberty." He joins in the laugh of the layman at the painting of "The Dead Mole,"—and who would not lament the effort of the younger generation to paint potatoes with souls and turnips with emotions? Post-impressionism has become a domestic issue in Europe, for today there are post-impressionist wall-papers on the market, and happy homes are broken up by battles over the deplorable geometry of its patterns.

"Picasso's 'Nature Morte' is dead, not still life," Mr. Huneker writes. This is imprest on us when we study the number of *Camera Work* (dated August,

1912), which is devoted to the work of this "master" and Matisse. But Picasso's deadliness in still-life is nothing compared with his deadliness in treating the human face and form (formerly) divine. The logical extreme of an effort to create, not an illusion, as older painters have done, not a "pale reflex," but "a new and definite reality" —an effort, not to imitate nature, but to create a new nature—"would unquestionably be an attempt to give up all resemblance to natural form and to create a purely abstract language of form —a visual music." This sentence reminds me of the remark of a fluent young "Futurist" of New York, in showing a canvas utterly meaningless to the uninitiated. When I confest its failure to convey anything to my intelligence, "It is the same with me," he said, dreamily, "when I look at a sheet of music. Yet one who knows can draw out of those dots on the printed page exquisite harmonies." Is it necessary to point out the fallacy involved in this metaphor? For written music is shorthand; the public, even the music-loving public, makes no pretense to enjoy it. A middleman is essential—pianist, violinist, singer—to translate its beauty for us in rendering it on his instrument. But in the case of painting and sculpture it has never, in the past, been needful to introduce an interpreter—a third person. Painter has spoken directly to picture-lover. The intimacy, the ever-presence of the painting's charm, have constituted a large part of its traditional interest.

One of the apologists of the crazy-quilt art which is our present day affliction complains that its critics approach it "with a manifest prejudice." For that matter, is there any art (about which we know something) that we can approach *without* prejudice? It is for the art to overcome those prejudices, as it has, theoretically, mastered the difficulties of its medium. "Unadulterated cubism," says the apologist quoted—Mr. Raymond Drey—"consists in leaving out the third dimension." Good Abbé Dimnet finds more concrete words for summing it up: "It is nothing else than the pretension we had, you and I, when we were three years old, to draw a face that should be at the same time full-face and profile."

THE PHILISTINE AT A FUTUR IST EXHIBITION: "PERHAPS IT'S THE BALKAN STATES!"

We reproduce this drawing by Abel Faivre, in the Paris *Figaro*, not as a caricature, but as representative, in the canvas and statuary shown, of what Futurists and Post-Impressionists (to condense: Post-Futurists) are doing—and the figures in the foreground are infinitely more human than anything done by Pablo Picasso. "Morose and maniac geometers," one critic dares to describe these ultra-modernists; and "demented Bouvard and Péchucet." One daub at the Autumn Salon is fitly dedicated "to mariners, travelers, and mountebanks."

Chardin, greatest of the Little Masters, told an inquirer that he mixt his paints with sentiment. Is it too much to ask twentieth century painters to mix their paints, not with sentiment (that, of course, is hopelessly out of date!), not with metaphysics, but with a little sanity?

NEW YORK CITY.

The Remains of Private War

BY H. V. O'BRIEN

WHEN I landed in Heidelberg I had a strong desire to witness a student duel. My conception of these battles was of the swords-at-fifty-paces variety. After securing lodgings I sallied forth and addrest my first inquiries to a gold-laced and buttoned representative of law and order, who was squinting at the sun.

"The duels?" . . . he looked as startled as if I had told him I was a Socialist or cracked a joke on the Kaiser. . . . . "The duels? There are no duels. It is against the law!"

From what I knew of the Fatherland that sounded like a good deal of a clincher, but just then my glance fell upon three exponents of the higher education who chanced to be passing. Their faces looked like a plate-glass front after a collision with a cobblestone, so I asked the officer if these facial etchings were the result of climatic conditions or *l'art nouveau* in shaving. But he merely shrugged his shoulders with that exquisite contempt displayed by officialdom the world over, and sauntered off on his beat. Still, I had a notion that New York enjoyed no monopoly on police graft—and I set out in search of the man "higher up."

On my next attempt I went to headquarters. That is, I tackled one of the carved-up wearers of colored caps and bulldogs themselves. But with no better luck. He, too, was afflicted with the shrugging habit, and I came to the conclusion that either I was in a blind alley or I looked like a Government spy. Neither hypothesis appearing tenable, I did the only thing left—which was also the only manifestly sensible thing I could have done—and went to my hotelkeeper. Nobody had "fixt" him, so after a half hour's conversation, attended with considerable circumlocution, I acquired sufficient information to enable me to set out for the Middle Ages with a fair chance of arriving.

A long climb on the far bank of the Neckar brought me, at the end of a narrow lane, to a tavern of obvious antiquity and apparent innocence. Still, innocence of appearance did not dismay me greatly, for I had once spent a summer in prohibition Maine. So I knocked roundly—with the peculiar inflection learned from a drummer who had been in Kansas—the door presently swung open, and I entered.

The landlord scarcely erred on the side of over-cordiality, and I made every effort to make my tourist character stand out—which was anything but difficult! My manipulation of German rapidly dispelled any suspicion he might have entertained as to my coming from Berlin, and when I invested in a bottle of his best wine without questioning the price, he began to thaw a trifle. Finally I applied that grand old principle that *l'argent parlera dans une langue ou une autre*—with the desired result that I presently found myself upstairs in the armory.

I took the armory first, on the same theory that a man steps into a hot bath gradually. My nature was a trifle too sensitive to go at it without preliminaries. The few tables and chairs in the bare old chamber were strewn with equipment and *materia belli* that sent annoying little thrills up and down my spine every time I carelessly touched them. Once my hand strayed over a sort of jerkin, heavily quilted, and came in contact with something damp and sticky. I jumped about a yard, and mine host shook with glee at this evidence of my squeamishness. As I surveyed his

fat placidity I wondered if he had ever known what it was to be squeamish.

Over near the window a grizzled old Vulcan was hard at work sharpening swords on an oil-stone. That made me curious, and with the banality of a Cook's tourist I inquired if they were sharp. His look exprest unutterable disdain for my simplicity, and his reply was more eloquent than words. Plucking a hair from his head he held it out between thumb and forefinger. "Swish" went the blade—and only a stump of hair remained. . . . . I tried to say something, but my jaw hung limp!

Vulcan was very old, and a perfect storehouse of information on everything connected with the royal and ancient sport of face-slitting. Every article he touched proved fruitful stimulus for a story. That much battered weapon on the chair was the one with which Bismarck's son brought pride to the Iron Chancellor's stern old heart. This one, which he fingers with such loving attention, wielded by a brawny youth from Texas, for two years held the dueling supremacy of all Germany. That ponderous sabre over there, in the hands of a hot-headed young Austrian, had quite suddenly cut off his chum from the pursuit of life and liberty—a particularly harrowing case—so the old man said—of *cherchez la femme;* for, be it said, all the blood-lettings of these fellows are not performed out of pure love of sport by any means! There are duels of "honor" in which one of the contestants is apt to finish up like the Austrian's chum. Over there, hanging from the wall, was a long, evil-looking blade that had gone through a battle of forty minutes' duration, and ceased its surgical operations then only because its owner had fainted from loss of blood. And so the stories ran—until my head swam with the naïve savagery of it all.

I was suddenly recalled to modernity by the sound of happy voices, the cracking of whips, the barking of dogs, snatches of song, and gusts of boisterous laughter, which were beginning to make themselves heard from the courtyard below. Presently the peremptory shouts for mine host became too insistent to be longer ignored, so the good man, after placing me at a little window overlooking the scene of the approaching entertainment, and consigning me to the care of the old armorer, departed to attend to the "fellows." When he left me I felt like a waif on a cannibal island, and almost wished myself back on Broadway.

The field of sport was a long, well lighted, two-storied chamber, quite devoid of furniture, save for a few rough tables and chairs at one end. At the other end a space some twelve feet square had been liberally sprinkled with sawdust—a ghastly convenience whose function did not at once become apparent.

Students—save the mark!—in little groups of twos and threes now began to filter in. They were jesting and singing, apparently quite free from any suspense or anxiety, and I could not avoid a mental analogy to the devil-may-care insouciance with which condemned malefactors sometimes see fit to grace their last hours "up the river." All of the lads wore their distinctive corps caps and bands, all carried canes, and not a few were accompanied by the inevitable bulldogs.

Old Vulcan, in his role of cicerone, waxed garrulous as things progressed (due in part to my tact, but in much greater part to my financial backing of the same)—and made clear many interesting points that would otherwise have escaped me. One of the most illuminating and significant of these was his explanation of the colored ribbon worn diagonally across the chest. He told me that these were awarded for three successful duels. (I examined the crowd carefully and could not find half a dozen that were without this badge of distinction!) There was much food for reflection in the fact that every duel is not successful—that is, *somebody* has to lose—and I began to understand why dueling bouts were held two and three times a week. I wondered, even at that, how they managed to accommodate all who were desirous of improving on the natural arrangement of their physiognomies.

The room filled rapidly with the members of the two *corps* or societies who were to meet in combat—the Saxons and the Westphalians. The one, in their blue caps and ribbons, the other in green, con-

gregated at opposite sides of the hall. The noise in all its cheerfulness was unabated, and the alcohol flowed with unremitting vigor, for no German considers any function of this life, be it bright or sorrowful, complete without beer.

Perhaps the most unforgettable sight in all that unique assemblage was that of several older men—graybeards, some of them—wearing the corps ribbon and accompanied by their young sons, lads of from twelve to sixteen years old. What narratives of genteel butchery were being recounted to these young hopefuls, what promises held forth before their eager minds, of future indulgence in the same delightful sport, I could imagine only too well. It was the most thoroly significant sight of the afternoon, and having seen it, I no longer dared to call dueling merely the folly of thoughtless *young* men. It was vastly more. It was the folly of German aristocracy—the best blood of the country, from royalty down, stood sponsor to the institution. I began to see a glimmer of light in the ignorant stolidity of my policeman friend. "Dueling? There *is* no dueling!" I was getting a line on those "higher up!"

Suddenly, as I ruminated thus the tumult was hushed, as a tall young man appeared in the middle of the room, and in a high monotone delivered a short address, the meaning of which I was unable to catch. But I rather guessed that it was on a line with the "*morituri salutamus*" of the Roman gladiators. Almost immediately, from the entrance below me, the duelists were led in, and placed in position on opposite sides of the sawdust.

They were garbed in long, heavily quilted jerkins, with high leather collars. The sword arm was similarly quilted, and the hand was protected by a steel gauntlet. On their heads the only safeguard was a pair of projecting iron goggles, fastened by a narrow strap around the ears—which strap served the additional purpose of holding those desirable members *partially* in place.

Each duelist was attended by a second, similarly attired, but with a vizored mask in place of goggles, and armed only with a dull sword. Besides the principals there were two witnesses and the referee—and finally, most horrible of all—a couple of surgeons, swathed in white, precisely as for a clinic.

For the convenience and instruction of those who have never been edified by my experience, I may as well insert a word or two regarding the weapon employed. It is known as a *schläger,* and is about four feet long, with a large, gaily colored basket hilt. It is very light at the point, most of the weight being concentrated at the hilt. This is an ingenious method of preventing any over-zealous player from cutting his opponent in two and thereby putting an untimely end to the game. As before intimated, the sword is sharpened to a razor edge for about eight or ten inches up the blade, and has no point—being further features designed as safeguards.

After several more bows, there was a general scurry for ringside locations, and the referee barked out some more announcements. The seconds then lifted the duelists' caps, in quaint observance of formality, and because they could not do it themselves, and the two fighters were finally placed a sword's length apart. The seconds, safely armored, crouched at the right, their eyes glued on the uplifted blades. The surgeons then stepped up and gravely wiped the swords with antiseptics. (That seemed like putting ether on a bullet before you shoot a man!) There was a pause, dead silence—save for the gurgle of a few belated beers scurrying homeward, and a slight rustle as the onlookers crowded to points of vantage—then . . . *"Lös"*—the referee's voice snapped sharply—and the first round was on!

I could see only the glint of the weapons and hear their constant clash. It really looked like a stage duel. I was startled, therefore, when a moment later the staccato *"Halt!"* resounded above the din, and the men lowered their swords—one with a great crimson gash from his temple to his jaw!

I thought, of course, that something had gone wrong, and that I was witnessing a terrible accident; and the doctors hurrying up with their cotton and their instruments convinced me. But I was wrong. Within a second, it seemed, the harsh rattle of steel upon steel filled my ears again. Then, once more, the—*"Halt!"* Again the same delightful spec-

tacle. Again the cotton—the blood—the instruments — the ludicrously careful cleasing of the blades. And once more they were hard at the process of mutual dissection.

The bout lasted for ten minutes—the regulation period—and at its conclusion the two were led off, mutilated beyond even the descriptive powers of a yellow reporter, to be patched up in the other room.

"Rather tame, that!" grumbled the armorer. "And this next will be worse. Von Klotzen has no science."

I thought he was attempting a rather ghastly joke, but there wasn't the vestige of a smile on his face.

The next martyr to appear was the unhappy Von Klotzen. Scarcely more than a boy, as he was, my heart uttered a call for help, but my voice wisely kept silent. The poor lad was a freshman, I was told, and he was about to strive for the honor of his corps in the first of the three duels that are necessary for full membership. There was not a mark on his face—possibly that is why he looked so downcast and generally ashamed of himself—and I shuddered at the thought of what his handsome, rosy countenance was soon to be.

I had been told that stepping back or dodging was strictly forbidden by the rigorous code that governs the sport, and I wondered why men did not offend involuntarily. But my old cicerone gravely pointed out that the projecting goggles allowed one to see only his opponent's face, and all view of his sword was quite prevented. He could thus select a nice, juicy little chop and cut it off without being disturbed by any thought of his own possible losses. The Germans are scientific geniuses! There is no denying it!

It was obvious from the first that Von Klotzen hadn't the chance of an egg in a cross-town conductor's trousers. His opponent, a tall, cadaverous Saxon, with a face like a map of Mars, seemed to dart his weapon like a tongue of flame at the rapidly maturing countenance of the young probationer. Finally the long, snakelike blade seemed to curl completely around Von Klotzen's sword, and the tip buried itself in the side of his head, quite disproving the efficacy of blunt points as a safeguard. A bit of flesh flew thru the air and the dogs strained at their leashes. Then the referee sounded the retreat and the poor young chap stumbled stiffly into the arms of his seconds. He had fainted—and old Vulcan swore in disgust!

Was there any sympathy felt or exprest for the unfortunate freshman? Not so far as I could discover.

"Confounded simpleton!" snapped the armorer. "He might have known that that twist would get him if he wasn't careful. Lazy dog!"

Later I learned that his corps mates had insisted upon his continuing the fight —and were prevented only by the surgeons! Talk about humanitarianism—I know *one* field for the propaganda!

So it went, all thru the afternoon. Pair after pair of young fellows stood up, carved each other more or less thoroly, and were duly led off to the surgeons, until the sawdust was soggy, and the atmosphere reeked like an abattoir. I took it for granted that the victims were taken to their homes or hospitals after their battles, but the old man, to show my error, merely pointed out Von Klotzen—the lad who had fainted—who was now causing much amusement among his friends by his vain efforts to get beer thru his dissected mouth. Then I noticed others, in varying degrees of bandagedness, sitting or walking about, laughing or talking—so far as the condition of their faces would permit—making passes with their canes — altogether apparently but little the worse for what they had experienced.

"Of course," remarked Vulcan, "now and then one gets badly hurt or even killed—but what can you do? Accidents will happen, no matter how careful you may be."

Accidents, forsooth! *C'est à rire!*

Eight duels in all were fought that afternoon, and it was sundown before the gathering broke up, in search, I trust, of more academic pursuits. (As a matter of fact, I afterward learned, it adjourned to a dog fight!) Heidelberg, it may be said for the benefit of those who need conviction, is one of the world's greatest seats of learning—most of the learning being done, as one indignant gentleman assured me, by foreigners and the German proletariat!

On my way out I stopped in for a peep at the ante-room where the surgeons attended to the wounded. A rough table for the instruments, a chair, surrounded by more sawdust, and a rude bench, used as an operating table, were all the furniture the room contained.

"But why the sawdust?" I asked, touristically.

"Well," replied a friendly student, "the score is reckoned by the number of cuts sustained and sometimes the doctor, in a close match, turns two or three into one —and that's a bit bloody, you know."

He seemed talkative, so I went on: "What's the truth about these stories we hear of men putting salt in their wounds, so as to make noticeable scars?"

"Absolute driveling nonsense," he answered succinctly. "Of course, the fellows want one or two scars to show, so people will understand that they have been *corps* men, but they take pains that even these may disfigure them as little as possible. A clean, sharp blade and decent surgery, provided, of course, that a man cuts out boozing and batting around for a while, leaves a very neat scar indeed. I have heard, tho, of fellows who graduated without joining a society, who slashed themselves with razors to make people think they had—but really I doubt those yarns very much."

He talked with the easy nonchalance of an American discussing batting averages, and I began to feel touches of vertigo. Old, old Heidelberg, ancient nest of the homing pigeons of science and sense—then I remembered the cotton and the antiseptics—and I had to sit down . . . barbarism raised to the *n*th power, for sure!

On my way homeward I fell in with a couple of young Westphalians and engaged them in conversation. Upon discovering my very obvious nationality, one of them displayed great interest.

"Wonderful country—America!" he exclaimed, enthusiastically. "Wonderful. But do you know, it deprest me terribly. I was so glad to get back home."

I felt no surprise at that, for at the moment I was myself feeling exceedingly homesick for my own land—and I said so.

"Well," said the young man, "I saw one of your football games—such brutality in the name of sport—and then I witnessed a couple of prizefights—really I was made ill . . ."

"But," I exclaimed, "injuries are merely *incidental* to *our* games. They aren't the *sole* purpose. We don't keep score by them!"

"Quite true," he replied, with a Teutonic logic that I could not follow. "But you *do* break legs and arms and what not. And gentlemen do not fight with the fists. It's so common. It is vulgar . . ."

There was nothing further to be said. I could only reflect with a somewhat comforting cynicism upon the marvelous facility man possesses for making divers kinds of a fool of himself—a facility that passeth all understanding.

CHICAGO, ILL.

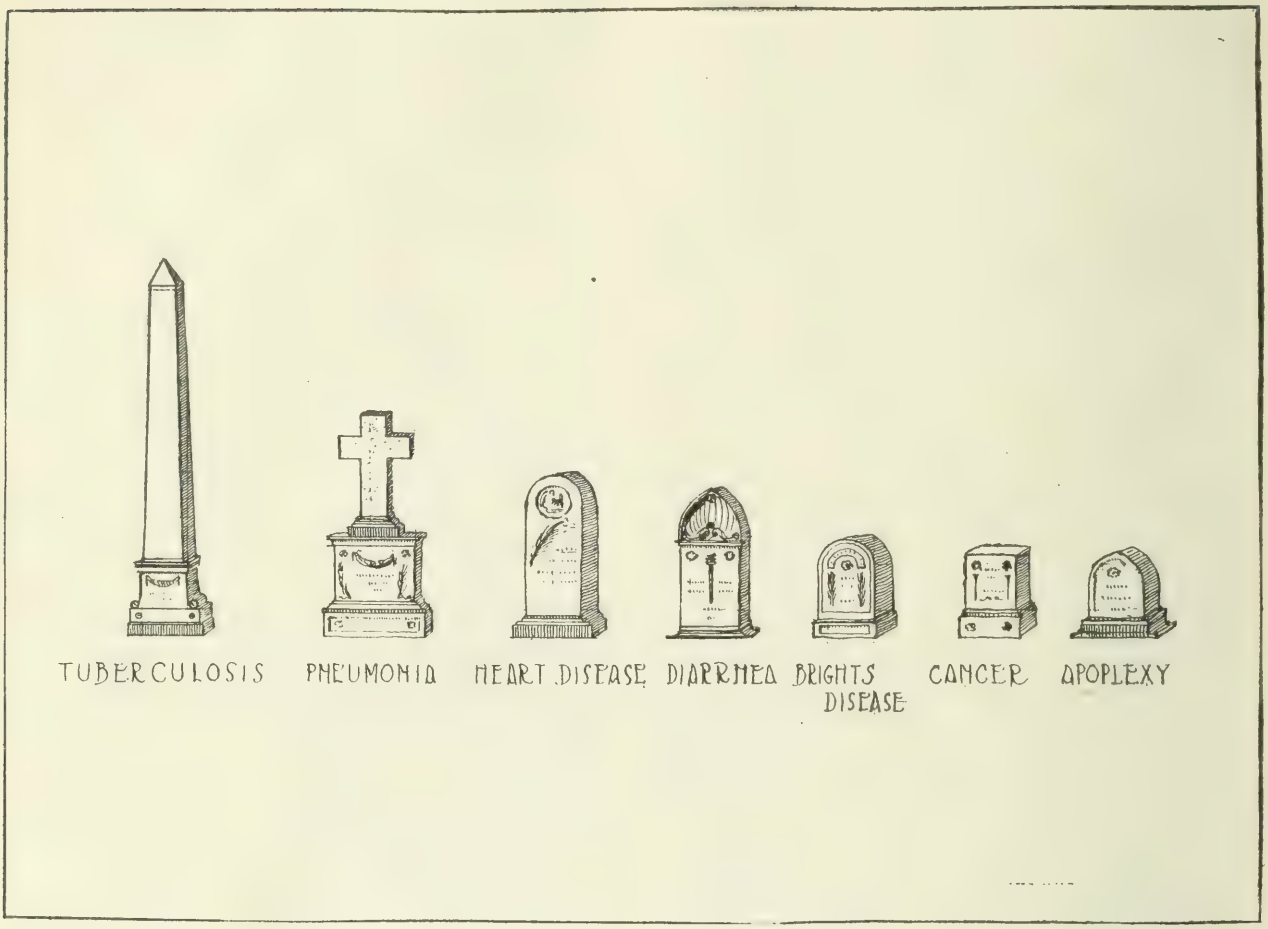
At the Old Year's End

BY MADISON CAWEIN

Bow not the head, but lift
To fate your face!
Not always to the swift
Is given the race.

Not always blurred with tears
Is Life's hard text;
Nor written full of fears
For souls perplext.

But therein, too, the heart
Reads love and rest.
Of all the years impart
These two are best.



Strike hands, then! laugh, and cry,
"Why should I care?"
And higher than the sky
Hang old despair.

LOUISVILLE, KY.

Principal Causes of Death

BY WILLIAM B. BAILEY, Ph.D.

ASSISTANT PROFESSOR OF ECONOMICS IN YALE UNIVERSITY.

The Census volume, Mortality Statistics, 1909, which has recently appeared is undoubtedly the most important official publication on this subject which has yet been issued in this country. Mortality statistics of reasonable accuracy are now furnished for over half of the population of this country and it is now possible to give a fairly accurate picture of the principal causes of death. In the chart is shown the seven diseases of greatest mortality in this country. The annual average mortality per 100,000 population for the ten years 1900-1909, follows:

Tuberculosis	182.6
Pneumonia	152.4
Heart disease	126.3
Diarrhea	112.3
Bright's disease	86.7
Apoplexy	72.0
Cancer	69.2

The death rate from all causes in 1909 was only 82.1 per cent. of that in 1900. For tuberculosis, pneumonia and diarrhea the decrease amounted to about 25 per cent., while for heart disease, Bright's disease, apoplexy and cancer the rate in 1900 was about 10 per cent. higher than in 1909. As a rule the decrease has been greatest for the contagious diseases while the degenerative diseases have, in many cases, shown an increase. Man seems to be making greater headway in dealing with the diseases due to environment than with those resulting from his own bad habits.

In 1909 the death rate from all causes for the registration area was only 14.4 per 1,000 estimated population. This rate is the lowest recorded and is undoubtedly the lowest that has occurred in the history of the United States.

The Christmas Spirit

The spirit of the Christmas season does not depend on creed or circumstance, but is a natural product of the childhood instincts of the race, and where the children are the Christmas spirit cannot be supprest. So one reads between the lines in Zona Gale's interesting story,[1] which sometimes vexes the reader because it does not move more directly and swiftly toward its goal. The village in which Mary Chavah lived had decided to do away with Christmas on account of the economic stress precipitated by the closing of a local factory. Mary's life had been chilled and made critical years before by her lover's sudden marriage with her own sister, and she was no longer a believer in Christmas and its extravagant joys. The children of the neighbors were already planning in sorrow to bury Santa Claus on the coming Christmas morning, when news came that Mary's little nephew, but recently bereft of father and mother in the Far West, was to be committed to her care. Around the coming of this child to Mary on Christmas Eve the rising tide of Christmas joy in the community centers. How it breaks out in unexpected ways and places, and finds expression in spite of determined indifference and plans of avoidance, is ingeniously and effectively related in this attractive tale of life among the lowly. The gaudy pictures in color correspond well enough with the life portrayed in the book, but they will scarcely appeal to the taste of its most appreciative readers.

Much more stirring and dramatic is the story[2] by Mrs. Barclay, which also turns on the coming of a child into the home, and ends with the softening and purifying influences of the childish presence preparing the parental lives for a proper celebration of Christmas. The mind of the hero is unbalanced by contact with the poisonous upas tree in Africa, whither he has gone to secure a satisfactory setting for a new novel he is to write. This mental aberration furnishes the disturbing elements in the plot as well as an atmosphere of suspense and mystery. It also opens the way for a description of many of the curious phenomena resulting from a disordered brain. Aside from this, the simple-mindedness of the characters is carried almost to the verge of absurdity, and the delicacies of their intercourse are often too honeyed not to leave a sickish taste in the mouth.

[1] CHRISTMAS. *A Story. By Zona Gale.* With Illustrations by Leon V. Solon. New York: The Macmillan Co. $1.30.

A Trade Unionist Speaks

MR. PORTENAR has made a valuable contribution to the solution of the labor problem.* Too seldom do we get the matured views of a trade unionist, one who has himself directed strikes and boycotts, who still works with his hands, and yet, by his breadth of view and candor of statement, proves that he has thought accurately and is not afraid to speak the whole truth. Relentlessly he analyzes and judicially he condemns those new methods of violence by a domineering minority, of systematic destruction of an employer's property—called sabotage—and of the general strike as the supreme goal of labor organization, which are embraced under the term syndicalism. "Imagine every human activity in a condition of immobility. Then visualize, if you can, the demons that would be loose: Darkness, terror, famine, rapine, carnage, with pestilence to crown the cataclysm. Our world would be an inferno and we the damned souls in it."

But equally earnest is he in recommending the modernizing of trade union plans. He has no fear of industrial unionism, the combination of all the workmen in any industry, that they may act as a unit, and, if necessary, paralyze

* PROBLEMS OF ORGANIZED LABOR. *By I. J. Portenar.* New York: The Macmillan Co. $1.

that industry. When printers fail to support pressmen, and stereotypers, under their contracts with employers, cannot aid either, then the newspaper publishers, divided by no such craft boundaries, can defeat the workmen in detail.

Craft organization, without industrial organization, leads to an aristocracy of labor, which is as indefensible as an aristocracy of birth or an aristocracy of wealth. Unskilled workmen must be aided by their more fortunate fellows. But industrial organization will supersede craft organization, not on account of pious resolutions or academic reasoning, but on account of necessity. When the wider organization of employers gives them an advantage the workmen will be driven to imitate the masters' tactics.

Organize! organize! and, yet again, organize! is the author's counsel. Especially organize for co-operative production and distribution. If the international trade unions will establish co-operative stores on the general plan of the miraculously successful British stores, they can sell to themselves both the produce of the farmers who are affiliated with them thru the Society of Equity and the union-made goods for which the union label and the boycott obtain only an expensive and a precarious advantage. The author does not realize the failures in co-operative factories with which British experience is strewn; but his advice is, in general, sound. Workmen have much to gain by increasing the purchasing power of their wages.

The Gift of Wonder

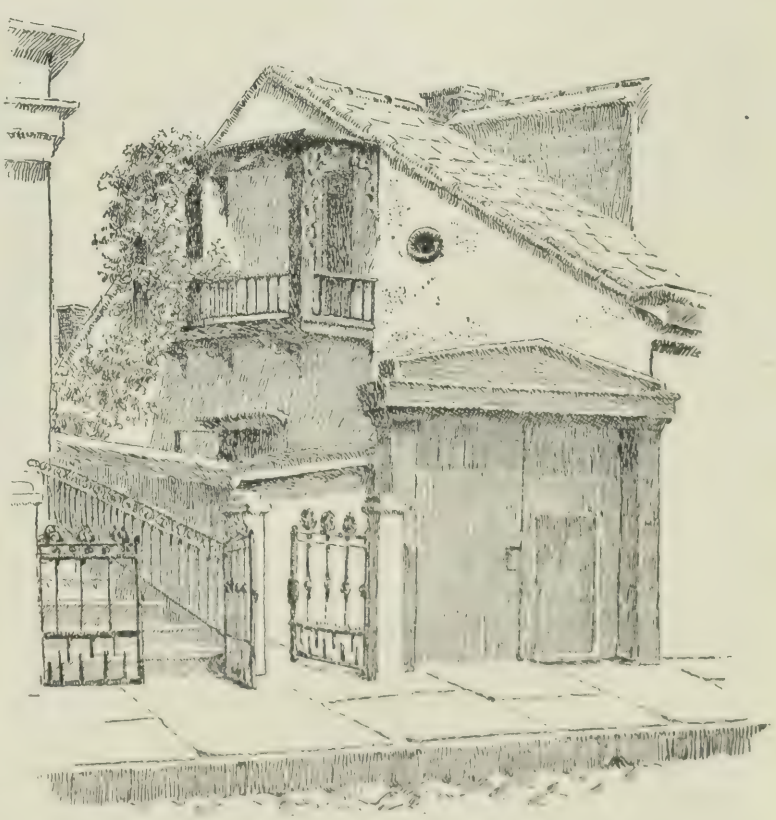
THERE is a new novelist in England largely endowed with that gift of wonder which distinguishes the true artist. All little children have it, seeing with their wide open serious eyes things invisible to their elders. Have we not heard children talk familiarly with unseen persons whose face, figure and actions they can describe with circumstantial detail? And the great artist sets upon his canvas things which escape the ordinary eye: his presentment of humanity, nature, form and decoration, color, have something in them which we as spectators have past by, but which we recognize when we are shown. Thus art consists not in the brilliant reporting of the visible alone, but in the capturing and exhibition of elusive elements seen only by those who have the gift of wonder, of lifting the curtains of mystery.

We do not go so far as to say that Miss Ethel Sidgwick is a great novelist, only that she shows promise of becoming a great character artist. Her character studies are clear, fresh and true to life: we know her people intimately when we have read, but they are not creations of elaboration, of painstaking analysis of motive, of soul dissection. The writer sets character before us by subtle methods of dramatic attack upon our interest, illuminates it with flashes of revealing light, and hightens her effects by a delicate discrimination in the use of material and phrase.

Her early education and environment have no doubt had something to do with it. She comes of a gifted family, her father and an uncle being noted classical scholars, while the three talented Bensons are her cousins. Her heritage of brains and her surroundings have contributed to produce writing of a high order, a style which is graceful and brilliant without a trace of effort, a freshness of phrase and of outlook on life, a gentle humor, and a remarkable insight into life, with the power to portray it.

Promise,[1] her first book, is practically plotless. It deals with the intellectual and emotional development of Antoine Edgell, son of an English engineer and a French woman (impulsive and charming), whose father is a noted violinist. The child early betrays his sensitiveness to music, and his baby days, his education in an English public school after the death of his mother, his relations with his brother, his school friends and his father, his grandfather, who recognizes the artist in him, and his uncle, whose discipline nearly distracts the boy, are all told in an enthralling manner. Antoine moves thru the pages, knowing his talents best, seeing what is to come, for he too has the gift of wonder, a lovable child with a spice of mischief, adapting himself to circumstances, craving for love, and finally winning all hearts.

[1] PROMISE. *By Ethel Sidgwick*. Boston: Small, Maynard & Co. $1.35.



There are pictures of French and English households in this book which, for their fidelity to elusive detail, would be hard to match.

In *Le Gentleman*[2] we have a story logically told and well constructed. "Le Gentleman" is a young Scotsman, to whose native caution and self-sufficiency there has been added the acquired Oxford University manner. He has become engaged to a Kensington School of Art student, a silly little girl, full of art jargon, talk of "sets," and ready for tentative flirtations, but with an eye to settling down finally with her Scot. They are in Paris. The Scot learns that first love is not always the grand passion, for a wistfully charming French girl enters his life. His early training keeps him to his plighted word and the French girl is restrained by a sense of duty to family, and tho their love is declared, they kiss and part. Their romance must remain only a memory for lonely hours. The Latin Quarter here described is the real Latin Quarter, tho it may appear tame in comparison with the conventional, highly spiced conception. This book breathes distinction in every line.

Herself,[3] the latest of the writer's books, fulfils the promise of the others. It is another character study with slender plot, but the characters are living and charming. Who could resist the Clenches, Harriet, the adorable "Herself," her scapegrace father Brian, and the hapless Pat (another who has the gift of wonder, but who learns too late to use it), Irish all, with the endearing faults and blandishment of the race? We follow the fortunes of Harriet from the boarding school at Versailles to the smugly complacent atmosphere of a country house near Oxford, accompanied by rumor of an innocent escapade. Here it is told how this grew to a scandal on tattling tongues, and how rescue followed, thanks to a playwright-lover and her careless father. In psychology, sustained interest, perfection of revealing dialog, this story is a "find' for the novel reader.

Social Life in Old New Orleans. Being Recollections of My Girlhood. By Eliza Ripley. Illustrated. Pp. 332. New York: D. Appleton & Co. $2.50.

The writer of these chapters of reminiscence was born eighty-one years ago in Kentucky. From 1835 until 1847 she resided in New Orleans, where her father practised law. As a matron she lived at Arlington Plantation, near Baton Rouge, until the war drove her from home. At the end of the Civil War, she removed with her husband to Cuba, and the rest of her life, which closed last July, was past in Cuba and in the North. There is no trace of old age in these recollections, unless we count the natural tendency to praise other times, other manners: the days when New Orleans offered "no chefs to be hired, nor caterers to be summoned," when the Spanish picayune was the unit of value in the smaller shops and old markets, when invitations to parties were sent forth in a basket, filled with notes "tied up with

IN OLD NEW ORLEANS
One of the illustrations for "Social Life" in the Louisiana capital —being the Recollections of Mrs. Eliza Ripley (Appleton).

[2] LE GENTLEMAN. *By Ethel Sidgwick.* Boston: Small, Maynard & Co. $1.25.
[3] HERSELF. *By Ethel Sidgwick.* Boston: Small, Maynard & Co. $1.35.

white ribbons," when the only sugar the housewife used was brown sugar from the plantations, or "cone-shaped loaves, hard as a stone and weighing several pounds." This is the season of good eating; know then that in 1842 the hostess of New Orleans seasoned her ice cream "by boiling a whole vanilla bean in the milk," and had it frozen in a huge cylinder by whirling in the ice tub by hand. It took an hour to freeze; and there were no fruit essences or baking powder or seedless raisins in the markets. Every morning, however, the chant of the cream cheese woman could be heard as she moved slowly thru the street, her wares heart shaped, over which she poured a dash of cream from a claret bottle. Ways were simple then, and one enjoys reading this cheerful account of them. However, not all the details are of schooldays, fashions in dress, weddings, New Year's receptions, shopping, and eating. We read also of the old French opera; of Lady Mary Wortley Montagu's visit; of travel by steamboat and stages; of Creole days and ways. "I am no apologist for slavery," writes Mrs. Ripley—and adds an account of the life of the slaves on her father's plantation.

"I knew of only one planter who made his negroes work on Sundays. He was an Englishman who married into a plantation. The indignant neighbors called the attention of the grand jury in that case, and with success, too."

Only during sugar making did every one work day and night. Obviously, the writer is an apologist for the conditions, tho not for all the results, of slavery. But we do not say this by way of reproach. She proves her open-mindedness no less than her intelligence, observation, memory for long past incident, and wide reading. She did not give up reading new books in her old age, as so many do, but comments upon Booker Washington's "Up From Slavery" and Mrs. Harris's "Circuit Rider's Wife." Surely it is evident that *Social Life in Old New Orleans* is a book in a thousand.

The Green Overcoat. By Hilaire Belloc. New York: McBride, Nast & Co. $1.20

A professor of psychology should never steal a green overcoat, no matter how strong the temptation may be. That the results of such conduct will be certain to bring ill luck and disaster not only upon the thief but upon all receivers of the stolen goods in whatever chapter they may be, is the thesis of one of the wittiest novels Mr. Belloc has ever written. The illustrations are by G. K. Chesterton, but that is the best that can be said about them. Much more could be said for the amusing introduction. The author contrives to make his paper dolls seem real; we feel a certain sympathy for the old professor and we almost need Mr. Belloc's characteristic assurance at the end that we need not feel concerned as to the fate of his characters, "for the whole boiling of them are only people in a story, and there is an end of them."

Cease Firing. By Mary E. Johnston. Boston: Houghton Mifflin Co. $1.40.

In *Cease Firing* Miss Johnston brings to a close her epic of the Civil War. It is not romance; the characters, many of them reappearing from "The Long Roll," are puppets of no flesh and blood. It is not history, but rather a vast panorama of intensely colored pictures unrolled be-

AN ALLEY OF MONTMARTRE
In the distance the new Church of Sacré Cœur. From one of the illustrations to "Sensations of Paris."

fore us: Vicksburg, Gettysburg, A Northern Prison, Missionary Ridge, done on a vast canvas and crowded with the horror and ghastliness of war viewed at close range. It lacks proportion and the curtain falls before the dénouement at Appomattox. The style is artificial, strained often to hysterical breaking. Pages might easily be chanted after the manner of Walt Whitman. If this brilliant and comprehensive portrayal could but be the last word on the Civil War for a decade! We are evidently not sufficiently withdrawn to view it without partisan bitterness, which this book must quicken.

Literary Notes

....The sixth volume of the late Dr. J. R. Miller's *Devotional Hours With the Bible* (Hodder & Stoughton; $1.25) contains a large number of sweet-spirited expositions based on the Psalms.

....Many of those who have eagerly read his devotional books will be glad to have the full record of *The Life of Dr. J. R. Miller* (Doran; $1) and his varied labors, written by John T. Faris.

....Readers who are in search for an exceedingly literary, yet well written, account of North Wales, briefly illustrated, will find the book they want in *Gallant Little Wales*, Sketches of its People, Places and Customs, by Miss Jeanette Marks. (Houghton. Illustrated; $1.25; pp. xii, 189.)

....In *Picture Towns in Europe* Albert B. Osborne describes fifteen towns, not so unknown to the ordinary tourist as the artist would infer, which will serve to recall pleasant days abroad, or to stir stay-at-homes to travel (McBride, Nast; $2).

....Some good talk on talk is to be found in Mary Green Conklin's *Conversation: What to Say, and How to Say It* (Funk & Wagnall; 75 cents). She makes some nice distinctions, as when she marks the limits between gossip defensible and scandal. The book is worth owning.

....Impressions of the French capital are an old story, but in *Sensations of Paris* Roland Strong, for more than twenty-five years a resident, succeeds in interesting any one already prejudiced in favor of the panorama of boulevards and alleys. Something remains, despite decay and Americanization. There are many illustrations: one of which we reproduce. (McBride, Nast & Co.; $2.50.)

....Lovers of Dickens will be glad to see Mr. Thomas Alexander Fyfe's *Who's Who in Dickens* (Doran; $2), wherein the novelist's dramatis personæ are alphabetically named and duly tagged with concise portrayal in the exact words of Dickens.

...A British architect, Thomas Dunham Atkinson, is the author of *English and Welsh Cathedrals*, in which the history of the churches is treated, and connected with the general current of architectural history. (Illustrated in color; pp. xxxv, 370; Little, Brown.)

....Mitchell Kennerley is conferring a boon on those readers to whom the work of Leonard Merrick is unknown. The latest volume to appear is *This Stage of Fools* ($1.20), a collection of short stories and sketches, early work, yet representative of his powers of inventing clever plots, character portrayal, and charm in writing.

....Principal P. T. Forsyth has some plain and pertinent things to say of *Marriage, Its Ethics and Religion* (Doran; $1.25) in his new volume. He is by no means deaf to current criticisms, but he will have it that "the promise to obey is but the promise of the sacrifice which love cannot help, if it seeks not its own, is kind, does not behave itself unseemly and never fails."

....*Farm Poultry*, by George C. Watson, M. S., in Macmillan's Rural Science Series ($1.50), appears this fall in a new and enlarged edition which brings this standard handbook up to date and notes a decade's progress in housing and feeding methods. It is a sane and safe book for the beginner, covering every side of the subject in a reliable and practical manner.

....America has one of the world's best collections of books on Turkey and the Balkan States. It is the famous Riant collection, in the Harvard University library, and is described in a bulletin just issued by the United States Bureau of Education. Acquired by Harvard in 1899, it has been increased, until today the section on the Ottoman Empire comprises about 4,000 volumes.

....*The International Bible Dictionary, Self-Pronouncing* (Philadelphia: Winston Co.; $2.40) is edited by Dr. F. N. Peloubet and Miss Alice D. Adams, M. A., on the basis of William Smith's one volume work of thirty years ago. The most commendable thing about this new book, besides its reasonable price, is the large number of illustrations. Pictures of Biblical sites, recovered monuments, and significant, Oriental activities of the present day do something to atone for the unscholarly character of the five thousand articles.

....The three small volumes of The Short Course Series that have come to hand are brilliant popular expositions of some rich and fruitful portions of Scripture. Rev. John Adams, editor of the series, writes sympathetically on *The Lenten Psalms,* Prof. J. E. McFadyen interprets Amos as *A Cry for Justice,* and Rev. Dr. R. H. Fisher sets forth the teaching of *The Beatitudes.* All are heartily commended. (Scribners; each 60 cents).

....Not often do we have so delightful an evening's entertainment as is offered by Frank Jewett Mather, Jr., in *The Collectors* (Holt; $1.25). There are seven stories, a ballad and some few pages of "Reflections upon art collecting." Deft, mellow, human—quite delightfully framed and phrased—these pieces are, and altogether good to read. Clever in motive and artistry, almost unique in literary conception and finish, full of humor (and good humor), these sketches permeate the reader with such content as only comes with human interest and fine literary workmanship. The book is made to harmonize with its literary motive, tho one detects in its format more striving than attainment, with defects quite as apparent as those of the art frauds which figure in the sketches.

....The insight which Mr. Samuel Merwin gained, while editor of *Success,* and as such spending considerable time in Washington, is put to good use in his novel *The Citadel,* published by The Century Company ($1.25). Here is the romance of a high-minded and thoughtful young Congressman who throws himself whole-heartedly into the cause of political purity, who rebels and fights against "the machine," and who, in the end, loses his election but gains the confidence of innumerable followers and the love of a woman.

....In *Studying the Short Story,* Mr. J. Berg Esenwein does not try to lay down an arbitrary rule for the production of the short story, nor does he claim that there is any. His rôle is that of guide to past work, and he has selected and classified for illustrative purposes sixteen short stories, printed in full. To eight of those he has applied an acute critical analysis, his comments appearing on [illegible]n. To all he adds biographical notes, criticisms, questions for student work, and a list of ten representative stories in each class. The book should prove of value, yet while several mediocre American authors' names are quoted, no mention is made of such masters of the short story as Paul Heyse, Paul Hervieu, Villiers de L'Isle Adam, Gogol, H. G. Wells, and Leonard Merrick. (Hinds, Noble & Eldredge.)

Pebbles

"Is your new cottage finished yet, Mr. Come-up?"

"Not yet. We're going to have an Italian vendetta put around it."—*Baltimore American.*

CRITIC—By George, old chap, when I look at one of your paintings I stand and wonder—"

Artist—How I do it?

Critic—No; why you do it.

"THAT very quiet girl had a lot of attention paid her at the club ball. How is it she is so popular with that lively athletic bunch?"

"I suppose it is because she is a dumb belle."

EDUCATION

"The primary purpose of universities is to provide the companionship of scholars at a time when sufficient maturity has been reached to make the joy of the intellectual life intense and productive."—President Butler of Columbia.

How very pat! how very true!
These words, oh, Prexy, said by you!
Look at our colleges today—
We find they are just what you say,
Great places of companionship
For those all bent on scholarship!
The "joy of intellectual life"
Is audibly and tensely rife—
List! its expression you may hear,
Falling so sweetly on the ear:

"Row! Row! Row-dy-dow!
Smash 'em! Bash 'em! Splash 'em now!
Bust their ribs and bang their beans!
Tear their coats and rip their jeans!
Kick 'em! Stick 'em! Yow! yow! yow!
Row-dy Row-dy! Row-dy-dow!"

The "scholars," as we plainly see,
Have reached the great maturity
Where they enjoy the mingling that
Each college gives, like one great "frat."
That is to say, if present scenes
Exemplify what mingling means,
And these wild roars that roll and rip
Are samples of "companionship!"
Hark to them now, as loud they bawl,
Scholars mature, "productive" all:

"Brekky-ko-ax! ko-ax! ko-ax!
Get a cannon, get an axe!
Soak 'em, Harvard! Kill 'em, Yale!
Dartmouth! Twist the Tiger's tail!
Princeton! Princeton! Grind 'em fine!
Hi, there, West Point, buck the line!
Hail, Columbia! Knock 'em down!
Good old Pennsy! 'Rah for Brown!
Amherst! Fordham! Yip! Cornell!
Munch 'em! Crunch 'em! Hear us yell!
Rah! rah! rah! rah! rah! rah!
Boola! boola! Siss! Boom! ah-h-h!"

That's right, Prexy! Let 'er rip!
"Scholarly companionship!"

—*Paul West, in New York Times.*

EAST SIDE IRONY

Drawn by C. R. Weed.

THE FEATHERED ONE: "MORNIN', SOOSIE; I HOPE YOU DONE YOUR CHRISMUS SHOPPIN' EARLY!"

The Independent

Entered at New York Post Office as Second Class Matter. Owned and published by The Independent Weekly, Incorporated, at 130 Fulton Street, New York, N. Y. Hamilton Holt, President; Frederic E. Dickinson, Secretary and Treasurer.

A WEEKLY MAGAZINE FOUNDED IN 1848

One Year, $3.00 Single Copies, 10 Cents

Single copies over six months old, 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as those offered by any responsible agency.

An order for the change of an address should be received two weeks before the change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of the publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Binders holding in book form thirteen current issues will be furnished for 45 cents. If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We welcome unsolicited contributions, but writers who wish their articles returned, if not accepted, should send a stamped and addressed envelope. Even so, we cannot hold ourselves responsible for their return. Authors should preserve copies of their manuscripts.

Advertising rates will be furnished on application.

The Frankensteins of Civilization

It is the part of the wise economist or statesman to watch sharply the products of our civilization, and guard against a thousand of them which are hostile, and, it may be, destructive. The body politic, like the body physical, develops other humors than those that are of benefit. They must be cleansed out of the system or they will usurp murderous control and overthrow our civilization, as they have done with civilizations that went before. Splendor and luxury as well as wealth are products, but baleful products, of civilization, which enervate energy and slay the mother which bore them.

Nor are invention and science free from this danger. Science is the glory of civilization and its creator, but may be its destroyer. It may work to kill as well as to bless. Its ablest service is now given to war, and we do not yet know whether, applied to a great war, it would happily make war impossible or would wreck our cities and reduce a nation of men to penury. Already the expense of war in time of peace is a fearful burden upon Europe; and debts are piling up for the creation of larger fleets and huger dreadnoughts, which the working people can scarcely bear. What will be the result when war comes, and those who even now can scarcely feed their babes find no work to keep body and soul together? What when the fleets of war prevent the fleets of commerce from feeding the millions that crowd the cities? What when the cities themselves are bombarded not only from the ground, but from the sky, for already science is building not merely the modest aeroplane, which will carry only a scout, but immense dirigibles, dozens of them, whose purpose is to sweep over the cities by night and blow them up and burn them up and destroy in a day what civilization has labored centuries to create? This is war; and war has no mercy. War is hell.

We need not to linger over the more familiar septic products of civilization, such as the saloon evil and the resorts of commercialized vice. These are just now attracting much attention and have already, in many of our larger cities, corrupted our police, on whom the protection of civilization depends, with the dangers to both morals and health, such as once swept over Europe when four hundred years ago the *morbus Hispanicus* filled the civilized world with terror, and at the very time when new wealth and new culture were creating the Renaissance. We would pay attention to another most dangerous product of civilization, used not only to save labor, but to destroy its fruits.

Dynamite, with its various congeners, such as nitroglycerine and cordite and half a dozen others, is one of the prime achievements of the chemistry of civilization. Yet it is also capable of being its destroyer and must be guarded against. It has its uses in buffeting a path thru the mountains when one would make a way for a fertilizing current, but in war it adds new horrors to the devil's armory. It is set in the very path of shipping for the very purpose of destroying wealth and life. Even in peace it must be guarded against, for it is not only put in mines under water, and dropped on cities from the clouds, but it is the weapon of social war. Fortunately the rumor was false that last Friday a ship carrying a cargo of dynamite blew up in the harbor of Naples, destroying a

hundred vessels and a multitude of lives, but less serious accidents are numerous, and dynamite is the standard weapon now of those who would overthrow our civilization. First the Los Angeles trial of the McNamaras startled the country; and now the trial at Indianapolis of dozens of conspirators against civilization, with the astounding stories of how dynamite, one of the proudest products of our boasted science, is used to destroy our whole social fabric and turn us backward toward barbarism, tells us how carefully we must guard what with labor we have won. It is now made clear and has been repeatedly confest, that vast masses of men thoroly organized, under a banner of syndicalism, are taught and pledged in every way to destroy property and disorganize society. They foment strikes not for the purpose of securing larger wages or better conditions, but simply to overthrow our present civilization and take possession by force of all the means of production. They declare that it is not enough to educate the people to their views, but that the minority must act, must destroy, must kill, against the will of the people as a whole; and dynamite is their best weapon.

The danger is serious, and the people should be warned and should act. It is something to make stricter laws as to the use and storage of dynamite, which it is now easy enough to get. But if the present social war grows it will waken those that sleep. We make no crusade against Socialism; we are willing it should make its argument and win if it can. But we do object to a minority of men fighting the majority meanwhile with dynamite and sabotage that they may force us to give them what we are not yet persuaded belongs to them. The violent rule of the minority means nothing less than the overthrow of civilization, and the very products of civilization have become its Frankenstein monsters.

Christmas Presents

At this season cynics deplore the custom of giving Christmas presents to one's family and friends. Doubtless presents are distributed with little discrimination by many persons, but what healthy-minded man or woman would deny himself the pleasure of presenting seasonable gifts to the boys and girls who are of kin, or whom he counts his friends? It is important, of course, to choose wisely. A small boy regards his Christmas presents with high seriousness, and to unwrap an unwelcome offering is, to him, no slight disappointment. That is why you must be very careful if you give him a jack-knife; for boys know more of knives than do some department store clerks. If you give him a book, try to remember what *you* liked as a boy, and don't merely pick something out that is labeled instructive by the publishers. Do you remember the letter which Barrie makes believe one boy wrote? It began:

"Dear Uncle, I suppose you are to give me a six-shilling thing again as a Christmas present, so I drop you a line not to buy me something I don't want, as it is only thirty-nine days to Christmas. I think I'll have a book again, but not a fairy tale or any of that sort, nor the 'Swiss Family Robinson' nor any of the old books. There is a rattling story called 'Kidnapped,' by H. Rider Haggard, but it is only five shillings, so it you thought of it you could make up the six shillings by giving me a football belt."

To be sure, it was Stevenson, another Scotsman, and not Mr. Haggard, who wrote that rattling "Kidnapped"; but what of that? Boys do not care who wrote stories; the tale's the thing. As for the advice itself, we don't like to think that boys never care for fairy tales "and that sort of thing"; what of "The Little White Bird" in that case? But we are afraid it is true that boys of the boarding school age scoff at fairy tales. Do only girls and grown-ups and very little boys know their value?

To cap the Barrie quotation, it is a pleasure to turn to the preface to the "Wonder Book." It is as true today as when Hawthorne wrote it, with his fine idealism:

"In performing this happy task . . . the author has not always thought it necessary to write downward, in order to meet the comprehension of children. He has generally suffered the theme to soar, whenever such was its tendency, and when he was himself buoyant enough to follow without an effort. *Children possess an unestimated sensibility to whatever is deep or high, in imagination or feeling, so long as it is simple, likewise.* It is only the artificial and the complex that bewilders them."

May Hawthorne's words serve their purpose now in being taken at their face

value by the men and women who are making children's books and by the aunts and uncles who buy them!

For Scholarship

SOME seek an education for the love of learning, but most young men for the love of money. Just now in this country, as in Germany, there is an unusual number of students, seeking the bread-and-butter education, and the purely cultural courses in the colleges and universities suffer in the comparison. Our Eastern colleges are not keeping their old pace in their academic classes, and particularly the number of students taking Greek is materially lessened, while the technological schools have to raise the requirements for admission in order to prevent their being swamped with numbers. Doubtless this condition is partly or wholly due to the tremendous growth of discovery and invention. Every few years a new branch of technical science is created, as in aeronautics and wireless telegraphy, while old sciences develop extraordinary extensions. These attract and require fresh engineers and adepts, and promise speedy remuneration, while the college graduates who have added three or four years in a law school are lucky if for five years in an office they can make as much as an indifferent typewriter.

There are some professions that require a general culture, and whose members are greatly benefited by it. The clerical profession is one, and the teacher's profession another, to which may be added the legal profession. It would be unfortunate if we should come to such a pass in education that ministers were not expected to have studied Greek. Only a few classical teachers are needed. Already the high schools are ceasing to teach Greek or to require a knowledge of Greek of their principals; and our colleges are actually giving primary Greek, such as fifty years ago was taught in the third year before entering college.

The trouble is not simply that Greek is being lost, but it is more serious than that. It is that in our colleges pure scholarship sems to be less honored than it was. A generation ago the college societies sought as members those who would stand highest in scholarship. The valedictorian would of course be elected at Yale to "Skull and Bones." That is not sure now. The "Phi Beta Kappa" men are quite likely not to be members of the Greek letter societies, but of no society at all. They are the ones who are doing the work for which the colleges were created. We greatly need a revival in our institutions of the love of pure learning, that same eagerness for it which appears in the race for athletic and social distinction. We are speaking particularly of the academic departments in our universities, and of the colleges which have only the academic department and whose aim is scholarship and a general education; for we know that in the technological institutions zeal and eagerness are necessarily fostered by the financial goal constantly set just before the student.

An illustration of the small honor given to superior scholarship appears in the insignificant part which the Phi Beta Kappa society plays in college. This society is composed of all the best scholars, perhaps a quarter or a sixth of the whole, in the two upper classes. They carry a gold key, and that badge is all the distinction they get. They hold no meetings and enjoy no special association or fellowship or other benefit. Possibly that society could be utilized to make scholarship more recognized and honored. A small step, and yet the first step, in this direction has been made in Amherst College. In a new dormitory a suite of rooms has been assigned to the Phi Beta Kappa society. It will be a sort of club room for the members. Each of them will have a key to it, and can use it for conference or study or for lectures before the members. Why should not other colleges develop this idea and supply such a room with that class of reference books, from the Oxford Dictionary to the new Loeb library of classical authors, which the scholar needs to use but cannot afford to buy? It would be of some value that the real scholars, who represent the purpose of the college should be honored with a special club room of their own.

We do not believe that the present decadence in pure scholarship in our colleges will be permanent. It has its cause

in an industrial crisis. There will be a plenty of young men ambitious to enter the professions which require eager study in wide fields of literature and science. But we would have our youth taught that into whatever field of industry or enterprise they expect to enter the best preparation will be that which lays a broad and strong foundation of culture. It is good for merchants and engineers as well as for lawyers and ministers and teachers.

Nor need we fear that additional honor given to scholarship will shorten the life of "grinds." The *Harvard Graduates' Magazine* has taken the trouble to compile the statistics of Harvard classes from 1860 to 1884, and it finds that of the Phi Beta Kappa men 27.54 per cent. have died, while of the remaining members of those classes 31.69 per cent. have died. The best scholars have not usually given themselves to athletic, but to intellectual culture, and they have found that brain work conduces to longevity, just as we have long known that clergymen are the most long lived of all men. At the same time the Phi Beta Kappa men include the larger part of those who have won distinction in later life; so that, as the *Graduates' Magazine* says, "No student need be deterred from trying for distinction as a scholar out of fear that he may handicap his health or his prospects in life."

What Will Panama Mean?

In France the word "Panama" is a term of opprobrium, a synonym for financial chicanery and political dishonor. The De Lesseps scheme collapsed in 1888 after having sunk nearly $400,000,000 in the enterprise, "one-third spent on the canal, one-third wasted and one-third stolen." It was for years after hard to find a man reputable enough to stand as President or Premier of the republic, the leading politicians of all parties were so besmirched with the Panama scandal.

When we took Panama it was hoped that we would clear the name of its ill omen. To be sure, the manner of our taking it was not free from reproach, but the claims of Colombia for the loss of Panama could even now be satisfied by a moderate indemnity. We have spent nearly $400,000,000, but not much of it has been wasted and none of it, presumably, stolen. The Canal has cost a great deal more than our experts led us to anticipate [see The Independent, November 21], but it is probably worth the money, and does credit to the men who made it.

Will it be a credit also to the Congress that controls it? It seems not. The act of August 24, 1912, contained the clause:

"No tolls shall be levied upon vessels engaged in the coastwise trade of the United States."

The Hay-Pauncefote treaty, ratified by the Senate December 16, 1901, contains this clause:

"The canal shall be free and open to the vessels of commerce and war of all nations on terms of entire equality so that there shall be no discrimination against any such nation or its citizens or subjects in respect of the conditions of traffic or otherwise."

Can even a Philadelphia lawyer—reputed the shrewdest of the profession—make these two clauses agree? No wonder Great Britain protests. We protested when Canada attempted to rebate a part of the tolls on Canadian freight thru the Welland Canal, and Canada conceded the point.

Great Britain has been exceedingly generous and friendly in this whole Panama business. It must be remembered in the first place that Great Britain had equal rights with us over the isthmus, for the Clayton-Bulwer treaty of 1850 stipulated that the canal should be under the joint protection and control of Great Britain and the United States, and that neither of these Governments "will ever erect or maintain any fortifications . . . or occupy or colonize or assume or exercise any dominion over Nicaragua, Costa, Rica, the Mosquito Coast or any part of Central America." If Great Britain had held us to the letter of this treaty we could never have obtained exclusive control of the Canal Zone or fortified it as we are now doing. It was therefore necessary to secure the consent of Great Britain to the abrogation of the Clayton-Bulwer treaty before we could undertake the Canal construction, and Secretary Hay, taking up the question with Lord Pauncefote, found the British Government willing to surrender all its rights without compensation, stipulating

only that British ships should go thru the Canal on the same terms as our own. This stipulation we have now violated.

One false step leads to another. Having thus violated our treaty with Great Britain in regard to Panama, we now are tempted to protect ourselves by violating another and more important treaty with Great Britain, that providing for the arbitration of all matters in dispute between the two countries. Sir Edward Grey, in his note of protest, transmitted thru Ambassador Bryce, professes "perfect readiness to submit the question to arbitration if the Government of the United States would prefer to take this course." No wonder Great Britain is willing to submit the case to arbitration. Even those who advocate the exemption of American shipping acknowledge that we would lose if the case were submitted to The Hague or any other international tribunal. That is to say, it would be impossible to find any disinterested parties who would agree with their interpretation of the treaty, that when it says "all nations," it really means "all other nations."

Nor can it be claimed that we gain any advantage by this violation of both treaties. We were able to console ourselves to some extent for our hasty and informal acquirement of the Isthmus by the reflection that it was a necessary step to the construction of the Canal and greatly to the advantage of ourselves and of the world at large. But the exemption of coastwise vessels from tolls is poor policy as well as bad morals. It really means that we going to tax ourselves several million dollars a year for the benefit of a class of shipping which already has a monopoly. If the proposal had been made openly and honestly, if a bill had ben introduced to borrow several millions annually and pay it over to American shipowners, few Congressmen would have dared to vote for it. But insidiously introduced into the Canal Tolls bill, it was past by Congress and signed by the President, and is now defended on the ground of patriotism. There are, we fear, many in Congress and out who would sacrifice all that has been gained in the matter of arbitration rather than forego this bit of financial advantage over our most formidable competitor. If the clause exempting our ships from tolls is not repealed and if, on account of that the arbitration treaty is allowed to lapse, Panama will mean to the world "a Yankee trick."

Nobel Prizemen of 1912

THE list of winners of the Nobel awards is full of surprises. For one thing no prize was given for the promotion of peace, the first time in the eleven years that a Nobel committee has exercised the privilege allowed to it by the will of Alfred Nobel to withhold a prize in case no one worthy of it could be found. It is indeed not a peaceful year, and it may be that the Norwegian Storthing, which awards this prize, intended by this conspicuous omission to call attention to the fact that six European countries had been at war during the year without any attempt being made by them or other Powers to bring the disputes before The Hague. But the peace prize has several times been awarded more for good intentions and earnest efforts in pacific propaganda rather than any decided success in putting a stop to war, and it would be easy to pick out men whose services in the cause have been as conspicuous as, for example, Fried, Asser, Bajer or Renault.

Not to go outside of our own country we should say for one that Mr. Carnegie deserves it. It is true he does not need the $40,000, and he does not care for gold medals, but the award would be an appropriate recognition of what he has done for international comity in building the Peace Palace at The Hague and the Pan-American Union at Washington and his $10,000,000 endowment of the peace movement. The peace prize might well have gone to A. K. Smiley, of Lake Mohonk, if he had not died during the year.

The Baroness Bertha von Suttner, who received the Nobel prize in 1905 for her novel "Die Waffen Nieder!" ("Lay Down Your Arms!"), has just left our hospitable shores, and those of us who have heard her eloquent denunciation of the war now threatening to involve her own country, Austria, are convinced that in her case the prize was deservedly bestowed.

The prize for idealistic literature,

awarded to Gerhart Hauptman, was announced on his fiftieth birthday, and THE INDEPENDENT published on November 28 a sketch of the great German dramatist, with a brief bibliography by Mrs. May Lamberton Becker. On October 31 we published also a sketch by Dr. James J. Walsh of Dr. Alexis Carrel, of the Rockefeller Institute, New York, who received the Nobel prize for his discoveries in physiology.

The Nobel committees have been criticised because they have generally given the prizes to men of long established reputation in the scientific world instead of giving them to young men who had made some important achievement within the year as the founder intended. The committees seem now to be changing their policy and attempting to discover genius in the making, a more difficult and delicate task, for science is now advancing with such even ranks all along the line that it is hard to say who is the pioneer. We need not therefore accuse of professional jealousy the medical men who say that others than Dr. Carrel have done more original work even in his own field, that of the growing of vital tissues outside the body. The chemical prize, for example, is this year divided between two French chemists, standing head and shoulders above all the other chemists in the world, tho not without honor in their own country. The elder, Paul Sabatier, is dean of the faculty of Toulouse and the recipient in 1897 of the Decazes prize and in 1909 of the Jecker prize, the highest honor bestowed by the French Academy of Sciences. The younger François Grignard, is professor in the faculty of Nancy and has received the Cahour prize, the Berthelot medal and the Jecker prize. The work of both men has been in the new and interesting field of reactions between the metals and organic compounds; Sabatier investigating, for example, the catalytic action of the oxides of thorium or titanium on the vapor of alcohols and amines; and Grignard the inventor of "the Grignard reaction," not yet understood, by which magnesium acting in etherial solution effects the synthesis of organic compounds. The fact that these prizes have gone to professors in the provincial universities instead of Paris will have a good effect in counteracting the tendency toward centralization, which has such an unfortunate influence upon French education. Both Sabatier and Grignard have declined offers of positions in the Sorbonne.

In awarding the physics prize to Gustaf Dalen, superintendent of the Stockholm gas works, the Nobel Committee has presumably acted upon personal knowledge of the ability of the recipient, for nothing is known by the outside world which would entitle him to the honor. A search thru the files of the physical and chemical periodicals reveals no trace of any important contributions to science made by Dalen. In 1906 he published an article on specks in paper, giving directions on how to detect various kinds of faults in paper making. In 1908 he took out patents in the United States as well as in Europe on filling receivers for explosive gases with crockery and asbestos, and in 1910 he published a volume on the "Chemical Technology of Paper."

The French claim three of the Nobel prizes this year, Sabatier, Grignard and Carrel, but we can properly lay claim to Carrel for America, since it is in the Rockefeller rather than Pasteur Institute that his best work has been done. On this ruling we must then credit France rather than Russia with Metchnikoff and Madame Curie, and this brings the score of France to fourteen, a close rival to Germany's seventeen Nobel prizemen. Other countries on this roll of honor follow in this order: England, seven; Sweden and Holland, five each; Italy and Switzerland, four each; United States, three, Russia, Denmark, Spain, Belgium and Austria, two each, and Norway, one.

Time to Stop It

IF the feminist cause has any real friends in Great Britain, it is time for them to get together and apply decisive measures to the feline band of finger nail and hat pin rioters ridiculously self-named "militant" suffragets. Their disgraceful antics have gone far enough. The political enfranchisement of women is bound to come. These female hoodlums cannot prevent its coming any more than the McNamaras and the Industrial Workers of the World can prevent the onmoving course of social reform.

The enfranchisement of women will come because it is right, because self-respecting men and women believe in it. It will come because it is a part of the inevitable moral evolution of the human race. It will come because the vast majority of women, like the vast majority of men, are endowed with common sense, self-control and a decent regard for civilization. It will come thru the operation of the same causes that have opened to women the opportunities for higher education, and for business and professional life. It will come because humanity is, on the whole, a law making and law abiding association of intelligent and reasonably conscientious beings.

It is time to stop the rioting of the hoodlums for a number of reasons.

One is that for more than a generation high minded and self-sacrificing workers in the cause of woman's advancement have been telling the world that woman's influence in politics would work for reasonableness, orderliness, graciousness, considerateness and the things of good report. It will, in the long run, work in just that way, because, in the long run, decently behaved women will assert themselves and relegate their disorderly sisters to the rear ranks or, if necessary, to the penitentiaries. The outbreak of violence retards the cause because it makes the unconverted and the indifferent sceptical upon the validity of the rational and moral arguments in its behalf.

It is time to stop these violent tactics also because civilization is face to face with the necessity of taking resolute action against the propaganda of violence in all of its abhorrent and threatening manifestations. McNamara methods have been carried altogether too far in the economic class war. The most priceless achievements of man's collective struggle for advantage and enlightenment are put in jeopardy. Criminality has become assertive, flagrant and impudent. That these methods should now be carried into the struggle for the enfranchisement of woman is a thing incredible and unspeakable.

To those misguided or addle-pated creatures who attempt to justify the campaign of violence on historical grounds, we have just one word to say. Their historical argument is preposterous. It is true that men have won liberty and defended it thruout the generations by fighting for it, and if the day ever comes when women have to fight for liberty we shall do whatever may be in our power to arm them with the most up-to-date munitions of war and shall wish them God speed. If we are not too old we will undertake to handle a few guns for them ourselves. But organized fighting, in which enemies meet face to face in open encounter, is one thing. Sneaking, cowardly, secret, underhanded violence and sabotage are a totally different thing. They have never been resorted to by men worthy of the name, and they have never yet promoted liberty in any age or in any place.

And what if they had? Has mankind made any progress, or has it not? If it could be shown that rioting and machinery smashing had helped to emancipate the British workingman and establish his legal rights, would that prove that women now in these days of steady and resistless advancement of their cause thru law and reason must fall back upon the methods of ignorance, brutality and barbarism?

THE INDEPENDENT has fought for years for the emancipation of woman. It will continue to fight for it; and because it will continue to fight for it, it will speak in language that nobody can possibly mistake against the incredible folly and wickedness of the so-called militant suffragets who, at this moment, are the chief obstacle to the triumphant progress of the cause of woman.

Whitelaw Reid

Whitelaw Reid had won his spurs as a great newspaper man before in 1868 he joined the editorial staff of the New York *Tribune,* soon to be its editor in succession to Horace Greeley and its chief proprietor. He had already edited a country paper, and then served as war correspondent and Washington correspondent of city journals. He built for the *Tribune* the first of the famous tall buildings, and first introduced the linotype for composition. By his success with the *Tribune* he gained wealth, and then married wealth. That made it possible for him to enter the topmost rounds

of the diplomatic service as Minister to France and later as Ambassador to England. The duties were not wholly social, for serious questions can arise between even the most friendly Powers; and, so far as the public can know, his duties were most faithfully and creditably performed in both the diplomatic and the social departments. He was a man to give honor to the country which he represented, even as Mr. Bryce so admirably represented Great Britain with us. A half century as journalist had given him tact and literary skill, so that, whether he were to untangle a diplomatic knot or were to address the nation at some public meeting, he was equal to the highest demands of the occasion. His wealth allowed him to entertain lavishly in England, as he had done equally at home in America, and it gave pleasure and doubtless aided his course as a diplomat. It is a rare thing for an ambassador to die at his post, and in this case Great Britain does him the highest honor.

"Six-Shooter Ethics"

We have received a number of letters sharply criticising the article by Chester T. Crowell defending the right of assassination in certain cases of serious wrong which the laws will not punish. Of these it seems required that we give space to the following, which we abridge from a letter written by Dr. J. B. Cranfill, of Dallas, Tex.:

That there are men in Texas of Mr. Crowell's way of thinking, I do not deny, but that they represent the real heart and civilization of this State is far from the truth.

Texans are no more murderers than are New Yorkers. Now and then, some man on murder bent commits an assassination, but this is no evidence that the entire citizenship of our State approve the crime. THE INDEPENDENT, in its editorial in discussing Mr. Crowell's article, refers to the five New York City criminals now under sentence of death for the murder of Rosenthal. It would be just as fair to charge all citizens of the metropolis with murder as it is to charge all the citizens of Texas with being sympathizers with assassination, because here and there some criminally minded man stains his hands in blood. The great majority of our Texas citizenship—the thousands upon thousands of men who believe in God and in all those high principles that have made civilization possible thruout the world—are most heartily and sincerely opposed to lawlessness of every kind.

I know that in the South there will arise occasionally such a man as Vardaman of Mississippi, or Blease of South Carolina, and even in Texas there will appear now and then such a man as Chester T. Crowell, but these misrepresent the sections in which they live instead of representing them.

I protest most sincerely and heartily against the article to which I am now calling attention, and I trust THE INDEPENDENT will print what I am saying in justice to our large law-abiding, intelligent and progressive citizenship.

Mr. Crowell may feel that his braggadocio apology for murder has won for him his spurs, but he no more represents the real heart of the real Texas than Judas Iscariot represented the Christian religion.

Dean Henson

Dean Henson—for he is no longer Canon Henson, of Westminster, but Dean of Durham—is a *rara avis* among the Anglican clergy, and thorns and nettles to the ritualists and the high and dry clerics. He fraternizes with Baptists and Wesleyans and Presbyterians, and does not seem to set proper store on the fact that he is in the true succession by the laying on of hands of the bishops. In his visit to this country he was entertained by a company of ministers of various denominations, and he has been visiting Dr. Francis Brown, president of Union Theological Seminary. He gave an address to these clergymen of various names which made it clear that he would approve the proposition to come before the authorities of Cambridge University to allow the degree of Bachelor of Theology to be given to others than members of the Anglican Church who would give their assent to the Thirty-nine Articles. He did not believe in denominational theological seminaries. He liked Union Seminary because it is connected with no denomination, and in his emphatic style he declared that if he could have his way he would go about the country and blow up every denominational seminary with dynamite. The dynamite is rhetorical, for he is no syndicalist, but does believe in Church union. In the old days a certain wise man we know used to say that he would have a theological student spend one year at Andover, one at New Haven and one at Princeton, so as to get the different points of view. Is it not better for a theological school to allow different teachers to teach different sides of truth, so that their pupils need not come out lop-sided or even bigoted?

The Police Investigation

We have had in this city this past week a most extraordinary witness in the case of the woman who calls herself Mrs. Goode. She is a woman of great ability, and has told with great freedom and in detail her relations, as keeper of a house of ill fame, with the police. But for her business she might be called an intelligent lady. She has no shame in her business, thinks it legitimate and necessary, and has no objection, so long as the law condemns it, to paying the police reasonably for protection, say a third of her receipts. But she does not want to pay in advance and then be "jobbed" or robbed. She wants a committee of respectable citizens—say a commission, like a railroad commission, to supervise the business and see that it is carried on decently, and that there is no white slave traffic allowed, and no robbery by the police. Indeed, the women themselves who run these houses might form a union and greatly improve conditions, and reduce the evils visible on the streets. The number of girls who ply the trade she puts at 35,000, but to reach that number she adds a great many shopgirls whose wages are not enough to support them. This testimony, spread in all the daily papers, is properly published, for it is not salacious, but full of warning; and it does not tend to approve any system of segregation of a necessary vice—a very gentle term—but rather suggests that it is an evil to be persistently and relentlessly warred against until it is abolished. The public is waking up to it, and half a dozen cities have shown that it can be abolished; and not less in a large city, difficult as it may be.

A Soldier-Academician

The recent election of General Lyautey, French Resident-General in Morocco, as a member of the French Academy, has suggested the question, in France no less than in America, What are his literary qualifications? A veteran member of the Forty explains them in the Paris *Temps* to our entire satisfaction. In the first place, it has not been exclusively writers of fiction and of history whom the Academy has called to its dome by the Pont des Arts; makers of history and romance, men like Dufaure, Pasteur and De Lesseps (the last named Anatole France's predecessor) have received its palms. And General Lyautey has, as a matter of fact, made his contribution to the literature of the French army and colonies; if his works on "The Social Rôle of the Officer," "The Colonial Rôle of the Army" and "In the South of Madagascar" have never been "best sellers," they are, at least, serious studies of quite serious subjects. In the first named of these books, General (then Captain) Lyautey asks the question: Is it not a part of the officer's duty, in an army where compulsory military service is involved, to exert upon his men a moral as well as a professional influence? His answer is affirmative, and he justifies it upon grounds of military expediency as well as upon grounds humanitarian. France is proud of her Moroccan Resident-General, and applauds his recognition by one of the most distinguished of her institutions. M. Mezières terminates his article in the Paris newspaper by qualifying General Lyautey's election to the Academy as "the legitimate recompense of a great heart and of a noble career."

The announcement, not too widely reported in this country, that Dr. Sun Yat-sen, the first President of the republic of China, would soon make a visit to the United States, must unfortunately be now contradicted. He had planned to visit us soon in the pursuit of his new task of the development of a vast railroad system for China, but after conference with Yuan Shih-kai, now President, this has to be deferred. It is probable that the reason is the unsatisfactory state of negotiations with the six Powers thru whom the large international loan is expected, joined with difficulties with Russia over the recognition of Mongolia as an independent state supported and backed by Russia, which is one of the six Powers interested in the loan. Preparations had been made to give Dr. Sun a cordial reception in Japan, which he was to visit first, hoping to get aid in financing one of the projected railroads. We trust he will come here later, and he may be assured of a royal welcome, for he is a miracle worker.

The voice of Dr. Goldwin Smith rises from the dead to warn Canada not to burden itself with indefinite millions of debt to create and support a navy. Mr. Bourassa, an independent leader of the French of Quebec, publishes letters received from Dr. Smith shortly before his death, in which he protests against "burdening the people of this country with costly armaments and exposing them to the dangers of war for the purpose of feeding the fancies of militarists or filling the purses of protectionists on the other side of the Atlantic." Yet Laurier, the Liberal leader, agrees with the Conservative leader, Mr. Borden, in supporting the creation of a $35,000,000 navy, but he wants it owned and controlled by Canada, instead of being absorbed into the Imperial navy. Between them there is a bit of hope that the scheme may fail.

Major Finley, who has been for years Governor of the Moro districts of the Philippine Islands, and who is now visiting in this country, declares that it would be suicidal to give independence to the islands, as the Democratic platform proposed. He asks who would rule them. The Tagalogs expect that they would, but the Moros would not consent to that. In August, 1910, the Moro chiefs held a conference, and they served notice in Secretary Dickinson that if the islands were given independence under Talalog rule they would kill every Filipino they could reach. There are twenty-four tribes or races in the islands, and there is no unity among them, except as we have begun it by putting 500,000 children to school, leaving a million yet without education.

We are glad to hear the following testimony from Cardinal Farley, of New York, in an address to the students of Notre Dame University, Indiana:

"In my journey across the continent I found men very generous. You are of the spirit of the West, which is a great, big-hearted spirit. Bigotry seems to be eliminated almost everywhere, so that your fortune, your luck, is far in advance of what we who were in college thirty-five or forty years ago experienced. You have not to meet the difficulties and the sacrifices that your predecessors of thirty or forty years ago were called upon to bear."

The Cardinal is right. The bigots who hate the Catholic Church as Antichrist are comparatively few and of little account, and are distinguishable by the satisfaction with which they swallow the forged oaths of Jesuits and Knights of Columbus.

The Canterbury Convocation is the representative body of the larger part of the Church of England. Its conservative character appears in the decisions of its lower house on the revision of the Confirmation and Baptismal services. In the latter the expression occurs "in the vulgar tongue." They would not omit it, useless as it is, nor would they change it to "the mother tongue." Nor would they alter the dear old phrase "all fathers, mothers and dames shall cause their children, servants and 'prentices," etc., altho dames and 'prentices are extinct. But it sounds "good," like Mesopotamia.

It will be to a multitude of people not a disappointment, but a surprise, to learn that Helen Gould is to be married. We had ceased to think of her as of the ordinary flesh and blood feminine humanity, and had held her in mind as an ideal, as the verbal expression of goodness, as the abstract quality of reticent beneficence. We had divinized her; now she is humanized once more, one of us, goodness shown concrete, not too good for human nature's daily food, and we are glad.

The theory of justice held by Governor Blease, of South Carolina, is having fresh explication. He is clearly of the view that negroes should be judged differently from white people. He praised the judge who let negroes go for offenses against their own people, but approved lynching for a negro guilty of assault against a white woman. But a rich white man convicted of assault against a white woman, and condemned to ten years in prison, has just been pardoned after two years' imprisonment.

The art of gambling should not be taught in church. It was a good lesson which Archbishop Glennon, of St. Louis, taught his flock the other day, when he said turkey raffles and the turkey trot ought both to be banished.

Will State Supervision End in State Insurance?

BY W. E. UNDERWOOD

In an address delivered before the Association of Life Insurance Presidents at New York, two weeks ago, Hon. William T. Emmet, Superintendent of Insurance of the State of New York, discussing the attitude of present-day governmental supervision over the insurance business, alluded to the marked change which had taken place in that respect during the last ten or fifteen years, and exprest the opinion that in the present temper of the people "the old lax sort of supervision would be looked on as precisely equivalent to no supervision at all, and that supervision of some sort is now regarded as an absolute prerequisite to the continuance of the business of insurance in private hands." He exprest the belief that the demand is for stricter supervision, but admits that while the system has been broadly laid out by law, "there exists a good deal of uncharted middle ground where the question of how far departmental activities should extend is left, and necessarily must be left, to the discretion of the Superintendent of Insurance."

Coming to that branch of the Insurance Department's work, the examination of companies, he said that, whether rightly or wrongly, they would never again stop with merely finding out if a company is or is not solvent. "They will go into questions of management pure and simple," he continued, "as distinct altogether from the question of solvency." Continuing:

> Administrative matters will be discussed, economies will be suggested, the company's attitude toward its policyholders in the settlement of claims will be fully considered. That is what the public now expects, and it will never, I think, be content with anything less. And it will all be attended with a publicity such as was never known in the old days. That is the meaning, in other words, of strict supervision as applied to such a question as the examination of companies by an insurance department. It means, simply, that—however it may have been in the past—we in charge of insurance departments now are expected to enter pretty boldly into fields where perhaps our jurisdiction has not been fully defined, and from the companies what it calls for, it seems to me, is cheerful acquiescence in that attitude—a recognition, at least, that it is inevitable.

Mr. Emmet illustrated his general view on this point by citing the department's activities in shaping new legislation, making a laboratory of the office for analyzing every new idea on insurance matters before passing it into the hands of the Legislature; and the assumption of semi-judicial functions in settling disputes between companies and their stockholders and policyholders. These are examples out of a dozen similar ones which occurred to him of the kind of supervision which the people now expect.

New York's Insurance Superintendent is a good logician, his ideas are skilfully co-ordinated, and he possesses facility and grace of expression. By easy stages, and thru the medium of well-constructed periods, he conducts his listeners to this brief address from insurance supervision as it was ten or fifteen years ago, up thru all its progressive stages, its powers growing more autocratic with every development, until he presents to the imagination the picture of a huge piece of machinery, destined for use by the people as the instrument for providing themselves, thru the State, with all the forms of insurance protection they need. He finally observes that while he may exaggerate the situation somewhat, it seems to him "that at the present time those who are interested in keeping the business in private hands face rather a critical condition." For the present, as he sees it, strict and efficient supervision is the one thing which stands in the way of State insurance. He then reverses the shield by saying:

On the other hand, if conservative insurance men should now co-operate strongly in the creation of a system of strict State supervision—hoping that this will quiet the demand for State insurance—they are apt to find that the structure of supervision which they have helped to build up will, by reason of its very efficiency, serve perhaps as the final strong argument for the taking over of the business of insurance by the State.

So that the private companies, "if they do or they don't, if they will or they won't, are damned if they do and damned if they don't."

There is, admittedly, a tendency toward some form of State insurance, as the present experiment in Wisconsin evidences; but that it will ever assume the proportions of a monopoly in this country is beyond probability. It is an error to assume that the constantly growing financial strength and the general efficiency of the insurance companies are the results of supervision. It has flourished in the face of hostile and obstructive laws. It has, unassisted by the State, solved its own difficulties, charted its own seas, located the shoals. The institution itself has always possessed a sound heart and faithful servitors. It has also, in a small degree and at different periods, suffered from the depredations of a class of parasites peculiar to enterprises of a beneficent character.

State insurance may arrive, but until our political machine undergoes radical changes; until, in fact, our affairs are administered under a benevolent despotism, guaranteeing permanency of personnel in the administration of the State insurance department, the work of the private companies only will be dependable.

Notes

THE directors of the Empire State Surety Company have placed the affairs of that institution in the hands of the New York Insurance Department for liquidation following an examination of its financial condition as of date December 10, showing net assets of $507,995 and gross liabilities, including $250,000 of capital stock, of $688,251, thus revealing an impairment of $180,256. There is, however, a policyholders' surplus of $69,743. The active liabilities consist of: Reserve for unpaid losses, $419,283; unpaid reinsurance, $3,380; unpaid sundry accounts, $13,087; taxes due and accrued, $2,500. The decision to place the company for liquidation in the hands of the department was made to preserve the funds against any unfriendly action. The outstanding business of the Empire State Surety was reinsured several months ago in the National Surety Company.

THE Arizona Fire Insurance Company, Phœnix, Ariz., capital $200,000, has been licensed to transact business in New York State.

WALTER E. HOAG, assistant general manager of the United States Branch (New York) of the General Accident, Fire and Life Assurance Company of Perth, Scotland, died at Alston Sanitarium, December 10

PRESIDENT LOTT, of the United States Casualty Company, lectured before the Phi Delta Phi Club of New York last Monday evening on the subject, "Workmens Compensation Laws as Distinguished from Employers' Liability Laws."

Questions and Replies

E. J.—Keep your policy in the Connecticut Mutual. The Postal Life was examined this summer by the New York Insurance Department, but the report thereon has not yet been made public.

W. S.—Your choice may result as favorably as an endowment policy in one of the best regular life companies, but only time and actual experience can determine that fact. However, the proposition is somewhat speculative.

J. W. P.—The company was originally a fraternal organization; then an assessment association; later reincorporated as a level premium company with $100,000 capital. The name and location were changed in 1911. Its capital and surplus at the beginning of the year aggregated $119,230.

C. H. F.—The statement is correct; it is the largest company, in point of assets, doing an exclusive fire insurance business. On July 1, 1912, its total assets were $32,735,943 and its surplus to policyholders, $18,947,752.

Financial

Securities and the Situation

LAST week was one of extensive liquidation on the New York Stock Exchange, transactions rising on Wednesday to 1,255,575 shares, while the total for the week was 4,868,605. A little more than half the business was done in Union Pacific, Reading and Steel. There were losses throughout the active list, but recoveries from the lowest points. For example, Union Pacific fell to 150¾ (which may be compared with 176¾ a few months ago), but closed at 155½, with a net loss of 11¾. Reading's net decline was 6⅞, but Steel's price was reduced by only 2¾. One cause of the liquidation was, of course, the Supreme Court's decision ordering a dissolution of the Harriman railroad combination. Another was probably a conviction that other dissolutions must follow, including that of the Steel Corporation. A decision unfavorable to the railroads in the Minnesota rate cases had been expected, but it was not announced. In addition, the Union Pacific's annual report showed a reduction of net earnings by 12½ per cent., with a 26 per cent. increase of taxes. There was also the continuing inquiry of the Pujo Money Trust Committee, with Mr. Pujo's assertion that the Stock Exchange existed and did business in violation of the Sherman act and that correspondence relating to its business ought to be excluded from the mails.

On the other hand, there were many encouraging facts to be considered. The country's crops, as everybody knows, have been very large. During the week official reports about winter wheat and the crop of cotton were published. The condition of the winter-sown wheat, 93.2, is very high, for the ten years' average has been below 90. Altho acreage has been reduced by 2½ per cent., it is expected in the West that the winter crop will exceed 500,000,000 bushels. The Government's estimate of this year's cotton crop is 14,311,300 bales, linters included. This is more than was expected in the cotton markets. The total is second only to the great "record" crop of last year, and the Government points out that probably it will be more valuable than that crop, an average of 12½ cents a pound amounting to $855,920,000, which will be increased to $986,920,000 if the seed be taken into account. November's pig iron output, 2,630,854 tons, was only a little below the "record" total for October, and the daily rate of production is now the highest ever known. The steel factories of the Pittsburgh district are making new high records of production. The Corporation's unfilled orders on November 30 showed an increase of 258,000 tons, and the total is almost twice as large as that of one year ago. Railroad gross earnings continue to increase, those for November having been about 12 per cent. higher than those for November, 1911. "What appears to be the largest holiday retail trade ever known," said *Dun's Review* last week, "is in progress." Comptroller Murray, in his annual report, remarked that the banks of the country had past thru the most prosperous year in their history. In agriculture, manufactures, trade or banking there is no warrant for a continued decline of security values.

....The cotton boll-weevil, since it crossed the Rio Grande and first appeared in our cotton fields, twenty years ago, has caused a loss of $125,000,000.

....The Gotham National Bank, which began business in April, 1910, has declared an initial quarterly dividend at the annual rate of 8 per cent., payable January 20. Its capital is $200,000.

....Commodity prices are still rising. The index number of *Bradstreet's* for December 1 is 9.5462. November's number was 9.4781, and there has been a steady monthly increase since June.

The Independent

VOL. LXXIII NEW YORK, THURSDAY, DECEMBER 26, 1912 No. 3343

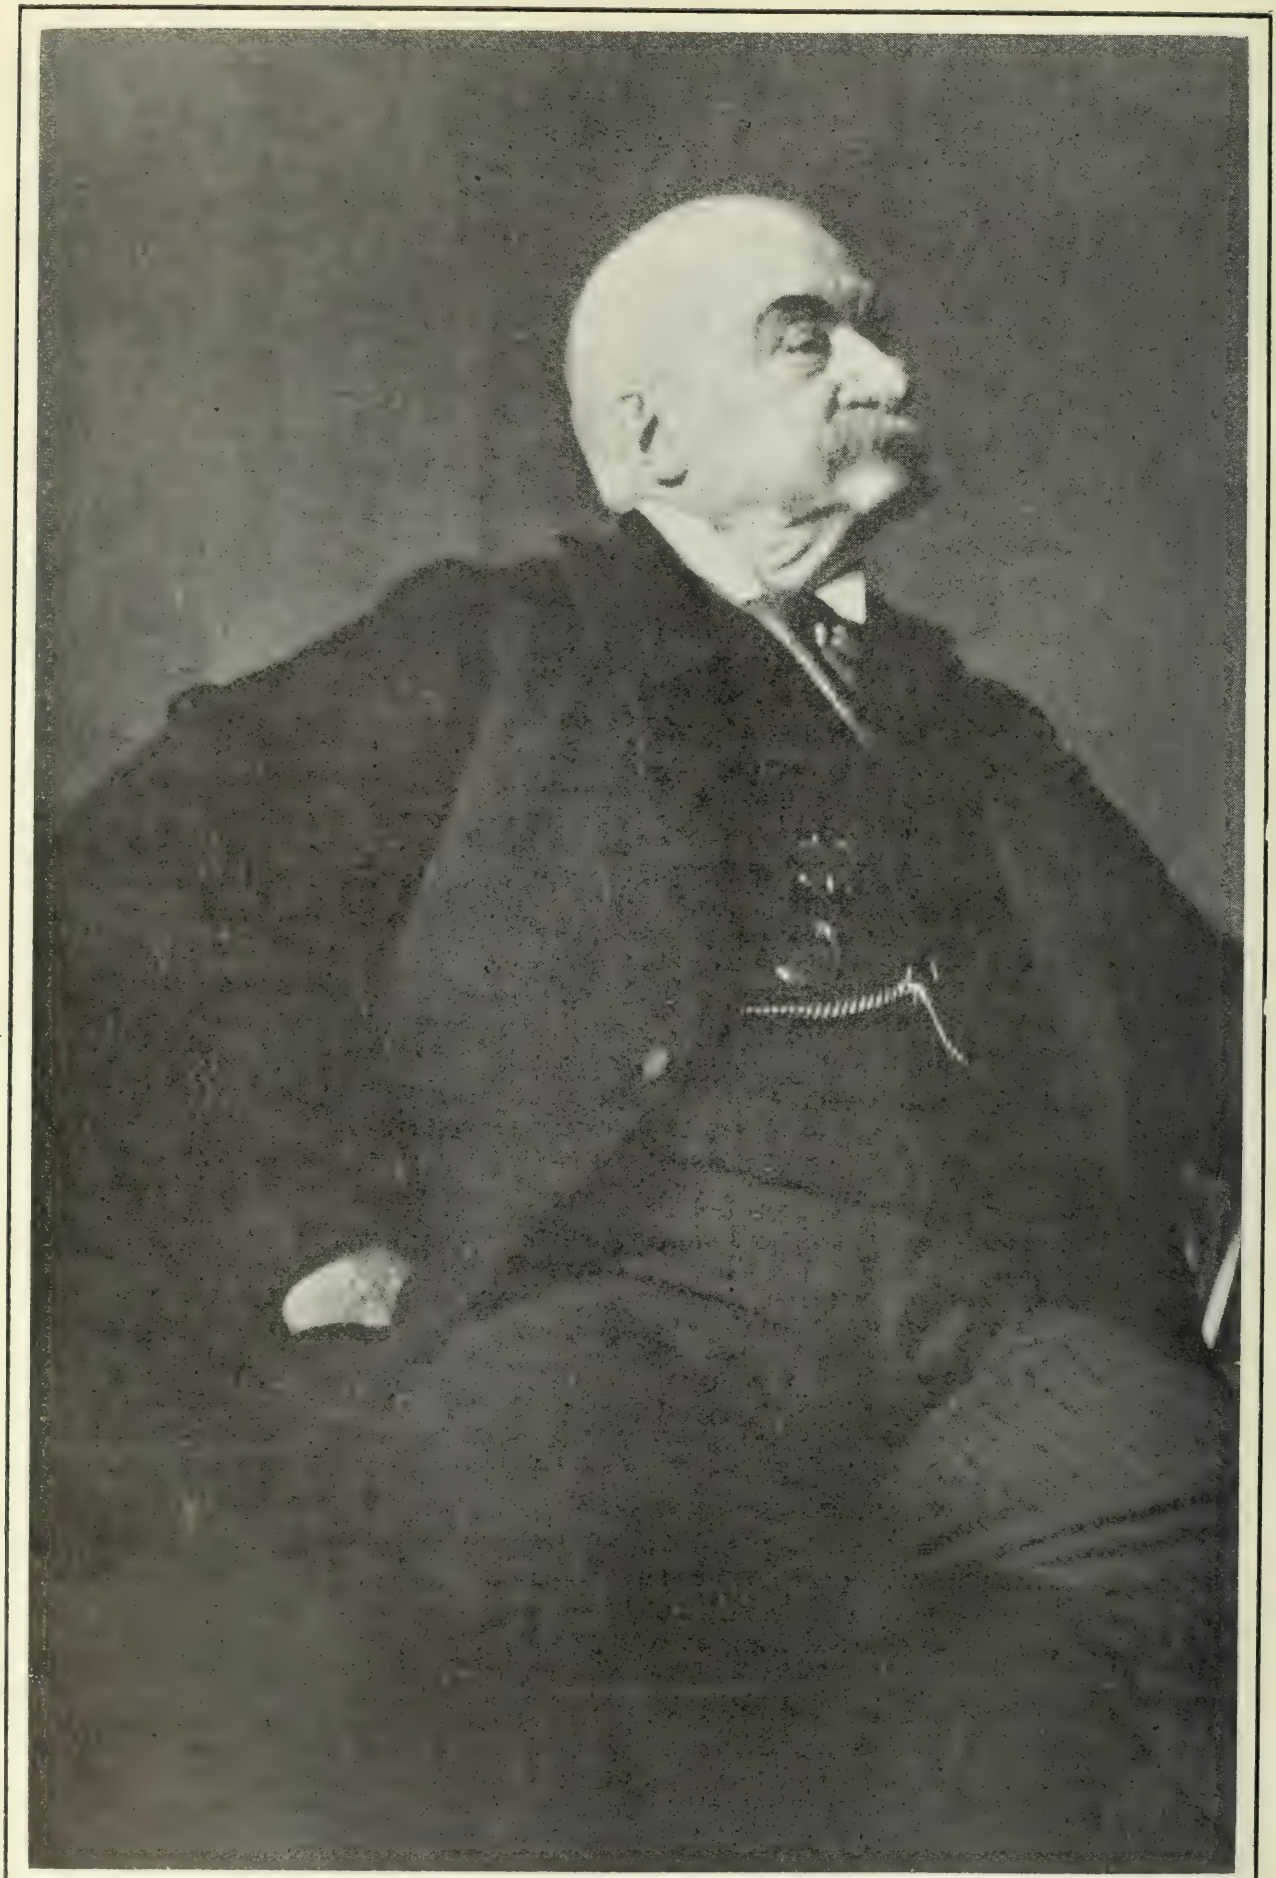
Survey of the World

Another Presidential Message

President Taft, in a message read in the Senate on the 19th (the house having adjourned for the holiday recess), gave Congress his opinion of the charge that he had been playing politics in his recent executive order putting 36,000 fourth class postmasters under the operation of the civil service law. "Criticism has been made of this order on the ground that the motive was political," said the President.

"Nothing could be further from the truth. The order was made before the election, and in the interest of efficient public service. I have several times requested Congress to give me authority to put, first, second and third class postmasters, and all other local officers, including internal revenue officers, customs officers, United States marshals and the local agents of the other departments under the classification of the Civil Service law by taking away the necessity for confirming such appointments by the Senate. I deeply regret the failure of Congress to follow these recommendations. The change would have taken out of politics practically every local officer and would have entirely cured the evils growing out of what, under the present law, must always remain a remnant of the spoils system."

In the same message the President advocated legislation permitting members of the Cabinet to sit in Congress, with the rights of debate, but without votes; the adoption of the Postmaster General's plan for a readjustment of the compensation allowed to railways for carrying the mails; a revision of the land laws to secure and regulate conservation; legislation affecting Alaska and the registry of mineral lands; pure food legislation; provision for a Government building at the San Francisco Panama-Pacific International Exposition; an appropriation for beautifying Washington; the establishment of a public utilities commission for the capital, and the extension of the suffrage to citizens thereof.



Congress

The House, by a vote of 178 to 52, has past the Burnett bill, which applies the illiteracy test to immigrants by providing for the exclusion of all aliens over sixteen years of age who cannot read English or some other language. Those who are seeking to escape from religious persecution are excepted, and an admitted alien is permitted to send for his father, grandfather, mother, grandmother, or his unmarried or widowed daughter, whether they can read or not. The bill goes to conference with the similar Dillingham bill, past by the Senate some time ago.——Democratic Senators in caucus decided that confirmation of Mr. Taft's appointments, those in the army and navy excepted, should be opposed. By filibustering they prevented an executive session for consideration of appointments to which they object.——After the holiday recess, Judge Archbald will testify in his own defense, against the advice of his counsel.——The President has nominated nine men, as follows, to be members of the new Commission on Industrial Relations:

Representing the people, Senator George Sutherland, of Utah; George B. Chandler, a member of the Connecticut Legislature; Charles Simon Barrett, of Georgia, President of the Farmers' Union.

Representing capital, Frederick A. Delano, of Chicago, formerly President of the Wabash Railroad; Adolph Lewisohn, of New York, copper mine owner and philanthropist; F. C. Schwedtman, of Missouri, an electrical engineer.

Representing labor, Austin B. Garretson, of Iowa, President of the Order of Railway Conductors; John B. Lennon, Treasurer of the American Federation of Labor, and James

J. PIERPONT MORGAN BEFORE THE PUJO INVESTIGATING COMMITTEE

Mr. Morgan's testimony is discussed in an editorial in this issue.

O'Connell, of the District of Columbia, Vice-President of the same organization.

Senator Sutherland says he must decline to serve, if he finds that the work of the Commission interferes with the performance of his duties in the Senate.

Political Topics

In the course of an address at the banquet of the Southern Society of New York, on the 17th, Governor Wilson, speaking of panics, made some remarks which have excited comment. They were as follows:

"They say the new Administration may disturb business, but it will not disturb business except as it disturbs the minds of business men. A panic is a state of mind. There is as much wealth in the country on the day after a panic as there was on the day before it. But the people have become excited and have called their loans. That is a natural panic.

"But there are unnatural panics. And sometimes panics occur because certain gentlemen want to create the impression that the wrong thing is going to be done. I have heard that certain men can create such panics. In my ignorance of Wall Street I do not know about this. But I do know that the machinery is in existence for the creation of such panics. But I am not afraid of them. I do not believe there is any man living who dares to use that machinery to create such a panic. And if any one attempts it I promise you that I will build the gibbet for him as high as Haman's. But that is only figuratively speaking. What I will do will be to direct the attention of the people to him, and I think that they will manage to cut him to the quick. With their eyes open, the people are not going to let any man do such a thing."

He has given notice that he will continue to oppose, in New Jersey, the politicians whose foe he has been in the past. If they hope to regain power, he says, they will be disappointed. He is considering legislation for a revision of the State's laws relating to corporations and Trusts. The names of those selected for his cabinet will not be made known, it is said, before March 1. There are reports that Mr. Bryan would prefer the Treasury Department or the Department of Justice to the Department of State.—— Mr. Taft has decided to accept the Kent Professorship of Law at Yale, and will make his home in New Haven. If he should resume the practice of law, he feels that he could not appear in cases

THE PUJO "MONEY TRUST" COMMITTEE

From left to right: Representatives McMorran of Michigan, Hayes of California, Neeley of Kansas, Guernsey of Maine, Pujo of Louisiana, Dougherty of Missouri, Byrnes of South Carolina, Heald of Delaware, and Samuel Untermeyer, attorney for the commitee.

before the Supreme Court, because he has appointed a majority of the Justices. And he has appointed several Federal Judges in Ohio, before whom he might be required to make arguments. In a letter read at the recent annual banquet of the American Society for the Judicial Settlement of International Disputes he said his ideal was the creation of an arbitral court for the settlement of all possible disputes of an international character.——The official count on constitutional amendments shows that Colorado has adopted the recall of judicial decisions, the recall of elective officers, judges included, the woman's eight-hour law and the mothers' compensation act. ——Governor Hunt, of Arizona, will call a special session of the Legislature to consider the abolition of the State Senate, in order that methods of government may be simplified.

Trusts and Railroads

The Government has begun, in Detroit, a civil suit, under the Sherman act, against what has been called the Horse-Shoers' Trust. It asks for injunctions against the Master Horse Shoers' National Protective Association, the Rowe Calk Company and several other corporations, alleging an unlawful agreement to restrict the sale of drilled horse shoes, adjustable calks and rubber foot pads. The combination, it is charged, prevents the direct sale of the devices in question to horse owners and fixes prices.——In Philadelphia, what is called the Candy Trust has been attacked. The defendant in this suit is the Philadelphia Jobbing Confectioners' Association, which prevents, it is alleged, the sale of candy by the manufacturers directly to retailers, consumers, or any jobber who is not a member of the association.——In a suit against the Elgin (Ill.) Board of Trade, sometimes called the Butter Trust, and the American Association of Creamery Butter Manufacturers, the Government asks that both of the defendants be dissolved. It is charged that the Elgin board fixes the price of butter in the interest of large producers and of cold storage companies. —— The Adamson bill, providing for a physical valuation of all railroad property in the country by the Interstate Commerce Commission, has been past in the House, with an amendment requiring an investigation as to issues of stock and bonds.——The Supreme Court, in the anthracite coal railroad cases, decides that the Sherman act was not violated by any conspiracy to apportion output, but orders a dissolution of the Temple Iron Company, by means of which the construction of a competing railroad was prevented, and finds that the contracts with independent mining companies, providing for the purchase of their coal for 65 per cent. of the average price at tidewater, are unlawful and must be terminated.—John Carstensen, a vice-president of the New York Central Lines, has been indicted in Chicago for paying rebates to the O'Gara Coal Company.

The Islands

Archbishop Nouel, the new Provisional President of Santo Domingo, resigned on the 16th, after holding office only thirteen days, but consented to delay his retirement, at the request of members of Congress. His action was due to the course taken by Vasquez, the revolutionist leader, who had asked for his election and agreed to respect his authority.—— Captain Watson, of the Eighth Cavalry, stationed at Jolo, in the Philippines, was killed last week by a Moro outlaw, who had secretly entered his camp. The assassin was killed immediately afterward. The Moro outlaw chief, Arconi, guilty of seven murders, has been killed by the constabulary, with several of his followers.——In an address at Washington, last week, Dr. Piper, Commissioner of Education at Manila, said that only 5 per cent. of the Filipinos, or the educated class, desired independence. The remaining 95 per cent. were willing to be subjects of the United States.—— Colonel Aranda, of the Cuban Veterans' Association, called upon Señor Andrade, the new Mayor of Havana, seeking office. He was unsuccessful, and in his anger he denounced Cuba's Minister to London as a Spanish guerrilla. The Mayor defended the Minister, and had Aranda put out of his office. Whereupon Aranda sent seconds to the Mayor, challenging him to fight a duel. The Mayor called a policeman, ordered the arrest of the seconds and had them locked up in jail.——Before the Cuban Congress adjourned for the holiday

recess, the Conservatives broke a quorum to prevent the passage of a bill originally designed to give amnesty to negro revolutionists, but so changed that it would cover all the frauds or other offenses alleged to have been committed by the Gomez Administration in the last four years.

South America Stuart Fuller, the American consul at Iquitos, who has been making an investigation in the Putumayo rubber district, arrived in New York last week. His report has been forwarded to Washington. His inquiries, it is understood, confirmed the charges made by Sir Roger Casement. He saw and questioned many witnesses or victims of the barbarous conduct of the rubber company's officers. There is abundant proof that natives were burned alive for petty offenses. Many were decapitated, and their bodies given to swine as food. Ingenious and horrible tortures were devised for the punishment of natives whose work was unsatisfactory. In the House, at Washington, Representative Kindred, of New York, has introduced a resolution providing for a Congressional investigation concerning the atrocities. The State Department has not yet replied to the resolution, adopted last summer, calling for information on this subject. In the British Parliament, on the 10th, notice was given of a question to be addrest to the Foreign Secretary, Sir Edward Grey, asking whether the Government knows that the atrocious practices continue. Colombia's consul at Manaos, it is understood, has recently reported to the British consul at Iquitos that the barbarities have been renewed, that natives are tortured by fire, and that the severed heads of 122 of them were found in March last. ——It is not expected that the murderer or murderers of the American vice-consul at Cartagena, Colombia, William B. McMasters, will be apprehended and punished. One of the men believed to be guilty is protected by an alibi, officers of a prison testifying that he was in confinement under their charge until the day following the murder.——Argentina is receiving many immigrants. The number of those arriving in the first ten days of November was 17,350.——Foreseeing a great increase of traffic with the west coast after the opening of the Panama Canal, Valparaiso will spend $13,000,000 on harbor improvements. Congress is considering proposed subsidies for new lines of steamships. One company offers to establish a line, on the route thru the canal to Europe, for a guarantee of 6 per cent. It is said that this will be granted.——Colombia is now inclined, it is asserted, to settle the Panama controversy by direct negotiation with our Government, without continuing to demand arbitration.——President Taft sailed from Key West for the Canal Zone on the 21st. It is expected that Colonel Goethals will be the Zone's Governor. Reports from Washington say that Mr. Taft now thinks the question about the exemption of our coastwise shipping from the payment of canal tolls should be submitted to arbitration.

Mexico Owing to many reports as to the Mexican Government's failure or inability to protect the lives and property of American citizens, and to President Madero's defiant and offensive reply to Secretary Knox's September note, the Government at Washington is preparing to adopt a firmer policy and will send to the Mexican capital, after the holidays, a note demanding the needed protection. It will be accompanied by abundant proof of the acts which suggest it. Disorder continues thruout a large part of Mexico. A town in Jalisco was sacked last week by 600 rebels, after they had killed the 40 rural guards who defended it. It is reported that San Marcial, a town of 1,000 people in Sonora, was attacked and captured by Yaqui Indians, who killed many of the inhabitants and carried the young women to the mountains. There is no protection for life or property in the State of Durango. A rebel force commanded by General Salazar attacked Ascencion, 75 miles southwest of Juarez, on the 18th, and only sixteen of the Federal garrison of 250 escaped.

The London Peace Conference The first session of the conference between the four Balkan allies and Turkey took place at St. James's Palace on December 17, but nothing could be accomplished because it was found that the instructions of the

THE MARCH TO THE SEA.
Servian cannon drawn by oxen from the mountains to San Giovanni di Medua on the Adriatic.

Turkish delegates did not authorize them to negotiate with Greece, but only with the three Balkan states signing the armistice at Tchataldja. The Bulgars, Serbs and Montenegrins refused positively to enter into negotiations without the Greeks. They reminded the Turks that peace had been negotiated with Italy while hostilities were going on, and also that the leader of the Bulgarian delegation, Dr. Daneff, in signing the armistice, had informed the Turkish representatives that Greece would not consent to the armistice, but would have to be included in the peace conference. The Servian delegate, Mr. Novakovitch, said that no time should be lost, since great armies were still in the field confronting one another, and that the responsibility for the delay must be laid upon the Turkish Government and not upon the allies. Reshid Pasha, the leader of the Turkish delegation, replied that it was just because the Turks had been accused of an intention to procrastinate that he invited the delegates from Bulgaria, Servia and Montenegro to enter into negotiations, so that no time be wasted. It was possible, he added, that the allies might propose terms of peace which the Turks under their present instructions might not be able to accept, and in that case more time would be lost in asking for fresh instructions. He, therefore, begged the delegates of the three countries with whom Turkey was empowered to treat to begin work at once and show what suggestions they had to make for a speedy conclusion of peace. This, however, the allies refused to do, so the conference adjourned to give time for the Turkish delegation to receive instructions on this point from Constantinople. At the Friday session Reshid Pasha rose and announced that Turkey had consented to include Greece in the conference, but in return for this concession asked for the revictualling of

the besieged cities. In Adrianople, he said, there were more than 150,000 noncombatants suffering for want of food. It was the desire of the Turkish Government to mitigate, so far as possible, the horrors of war and to provide food during the period of negotiations would not change the military situation. The Balkan delegates, however, refused to consider the proposal, which, as they said, had been fully discussed at Tchataldja when the armistice was arranged. Dr. Daneff stated that they had full powers to settle the terms of peace, but not to alter the conditions of the armistice. Premier Venezelos said that to revictual the towns would be very damaging to the allies. Reshid Pasha then proposed adjournment until Monday, in order that the delegates might get instructions from their governments on this question.——The Balkan delegates dined in the evening at the Russian Embassy and sent a message of loyalty to the Russian Emperor.

The Agreement of the Ambassadors

In 1878, after Russia had dictated terms of peace to Turkey at San Stefano, the whole agreement was upset six months later at Berlin, when the representatives of the European Powers rearranged the map of the Balkans to suit themselves and without regard to the peoples most concerned. This time, in order to avoid such uncertainty and delay, the Powers have decided to hold their supervisory conference or "court of appeals" at the same time and place as the conference negotiating the terms of peace. The first session of the ambassadorial conference was held at the Foreign Office on December 17, the following Powers being represented: Great

SERVIA'S WINDOW ON THE SEA

Servian troops trying to buy provisions on the main street of Alessio. This Adriatic seaport, notwithstanding its unattractive appearance, is regarded by Servia as so valuable as to be worth the risk of a war with Austria.

Britain, Russia, Austria-Hungary, France, Germany and Italy. The conferences were secret, but after the third session, on the 21st, it was announced officially that the discussions had been harmonious and that an agreement had been reached on the most important points involved in the settlement of the Balkan question. It is understood that according to this agreement that Servia is to be allowed access to the sea by railroad from the Danube at Belgrade to some Albanian port on the Adriatic, tho it is questionable whether this will be either Durazzo or Alessio, both of which are now occupied by Servian troops. The railroad, after it leaves Servian territory, will be under the control of the Powers and will be guarded by an international force. The port will be free, so Servia will be able to import and export goods and to obtain war material without interference from any foreign nation. One of the chief grievances leading to the war was Servia's desire to obtain "a window opening on the sea," for hitherto that country has been dependent upon the goodwill of Austria for a market for her agricultural and pastoral products. Of these pigs are the most important, and more than once Austria has threatened ruin to Servia by raising the tariff duties on pork or declaring a prohibitive quarantine on the plea of protection against hog cholera. This method of bringing Servia to her knees has been recognized in diplomacy as the Austro-Hungarian *Schweinpolitik*, or "pig politics." It is understood that the ambassadorial agreement also provides for the autonomy of Albania under the supervision of the Powers, but nominally under the suzerainty of the Sultan. Servia has exprest a willingness to accept the principle of Albanian autonomy and neutralization.

The Greeks Continue Fighting

A naval engagement took place on December 16 between the Turkish and Greek fleets at the entrance to the Dardanelles. In the morning the Greek fleet, consisting of the battleships "Spetzai," "Psara" and "Hydra," the armored cruiser "Georgio Averoff" and four scouts, cruised toward the northern side of the entrance, where they were joined by nine destroyers. Admiral Koundouriolis, the Greek commander, signaled the following message to his fleet: "With the help of God and in the name of the King and our country and justice advance with intrepid bravery against the enemy." The Turkish warships formed in line of battle under the guns of the forts at Sedil-Bahr, and opened fire. The Greek vessels replied at a distance of about six miles, advancing to half that distance. Then the Turkish cruiser "Messudieh" and the light flotilla under the forts of Kum-Kalesi, on the southern shore of the Dardanelles, took part in the engagement, but the cruiser was badly damaged and run ashore. The Turkish flagship "Barbarossa" was pierced by shells on both sides and narrowly escaped being burned or sunk. Vice-Admiral Halil Pasha, formerly Minister of Marine, who was on board the flagship, was killed. Four other Turkish officers and a number of sailors were killed during the engagement. On the Greek side the "Georgio Averoff" was hit several times and her boats riddled.——The Greeks are disappointed in not capturing Janina in time to make use of its possession in their negotiations with the Turks at the London conference. The four forts, with 150 siege guns and 20,000 or more Turkish troops, still endure the daily bombardment without sign of surrender. A Greek aviator flew over the city in a biplane, carrying a passenger who dropped bombs on the principal buildings, doing considerable damage and scaring the inhabitants.——The failure of the Montenegrins to capture Skutari is even more serious than the failure of the Greeks to get Janina, and there is talk—at least in Vienna—of peril to the dynasty on account of the loss of prestige suffered by King Nicholas by reason of the stubborn resistance of the Turkish garrison under Riga Bey. The losses of the Montenegrins have been frightful; 6,000, they say, out of an army of 42,000, which comprised almost all the ablebodied men in the kingdom. And if after all this sacrifice Montenegro should fail to gain the first city it attacked, it would be a hard blow to the pride of the Black Mountaineers.——King Ferdinand of Bulgaria has made a tour thru the territory

taken from the Turks and called upon King George of Greece in Salonika. In an order to the army congratulating it upon the success of the campaign, King Ferdinand used the following language, which is thought to imply that the war is not yet over:

"By the conclusion of the armistice between the Turkish and the allied troops the first period of the war with Turkey has been concluded.

"You should profit by the present moment to rest in order to prepare yourselves for fresh efforts, in the event of which I have no doubt you will cover your banners with new and imperishable glory."

——In case the war is renewed all of the Servian troops not needed in the captured territory in the west will be sent to Tchataldja to assist the Bulgars. ——The London *Economist* estimates the cost of the war in Turkey at $175,000,000 up to the present, allowing $2.40 a day as the expense of each man of the 1,090,000 under arms, that is, 400,000 Turks, 300,000 Bulgars, 200,000 Serbs, 150,000 Greeks and 40,000 Montenegrins. If the destruction of property and the cost of the mobilizations of Russia, Austria and Italy be included, the total loss will amount to about $400,000,000.——In the lower house of the Austrian parliament the Czech deputies attempted vainly to prevent the passage of the mobilization bill by organized obstruction, chiefly continuous speechmaking. Herr Gostincai spoke first for thirteen and one-half hours without stopping, and he was followed by another Czech, Herr Fresl, who broke the record by a sixteen-hour speech, beginning at 8 o'clock in the evening and finishing at noon the next day. He was occasionally interrupted by the other Czechs in order to give him an opportunity to get a bite of chocolate or a drink of milk or lemonade. The other deputies, except for a watch guard, slept on divans placed in the corridors.

American Intervention Suggested

The suggestion has several times been made that the United States, having no selfish interests in Balkan questions, might proffer mediation in case the London peace conference fails to accomplish its purpose. President Roosevelt's action in bringing about the Portsmouth peace conference between Russia and Japan was favorably viewed by the world Powers and he received the Nobel prize for his action in bringing the war to an end. The Hague convention, to which Turkey and the Balkan States are signatories, authorizes any Power to proffer its good offices for the settlement of a dispute either before the outbreak of hostilities or during a war, so there would be no impropriety in President Taft's taking the initiative of intervention if he saw a favorable opportunity. Dr. Daneff, the head of the Bulgarian delegation, when interviewed on this subject, said:

"If an understanding between the Balkan States and Turkey is impossible, notwithstanding the friendly advices which certainly will come from the conference of the Ambassadors, I believe that American intervention will be most opportune and will be received as quite justifiable on account of American interests in the Balkans and Turkey which are not lacking and have sufficient importance to entitle Washington to offer its good offices for an impartial settlement of the conflict.

"The United States has colleges, commercial firms, maritime lines, and missionaries thruout the Balkan States and Turkey. Besides, she has with Bulgaria ties of culture, many among us having been educated in the United States and having brought from that land of liberty and independence that worship for freedom which has hastened the explosion of our natural ambitions.

"I repeat, intervention by the United States, coming in case of failure by the European Powers, would be received with open arms. But I call it purposely intervention, not wishing to underline any other word, as mediation might then be too little, while arbitration, being too much, could not be accepted or admitted."

Stojen Novakovitch, head of the Servian delegation, said:

"The choice of the United States as mediator would be an excellent one. The only fears in this connection are that the distance of the United States from the scene and its lack of knowledge of the different complex problems agitating the Balkan peoples might hamper its action, while a European country would find itself in readier condition, having for years followed the aspirations of the different races constituting the Balkan family."

——The Franco-Spanish treaty on Morocco past the Spanish Chamber by a vote of 216 to 22. Radicals, Socialists and Republicans voted against it and the Carlists abstained. The treaty virtually divides Morocco between France and Spain, enlarging somewhat the Spanish holdings on the Mediterranean and giving France the rest of the country.

FROM OUR OFFICE WINDOW

It has been a fascinating diversion for the editor to watch, from day to day, the construction of the highest building in the world. To do this, he has only had to pause in his labors, and look out the window. Today, the building is practically complete. It is named for the founder of a great chain of five-and-ten-cent stores, known the country over. The Woolworth Building stands in Broadway, between Barclay street and Park place, and is 750 feet from curb to turret—or fifty-one stories high. The building on the right is one of the older sky-scrapers, the Park Row Building—not so high as the Woolworth, altho it looks so from our point of view on the eighth floor of 130 Fulton street.

A Hidden Christmas Hymn

BY DR. ADOLF HARNACK

[Professor Harnack, of the University of Berlin, is known to us chiefly as a critic, but this Christmass message from his pen shows that profound scholarship is not incompatible with deep religious feeling. The article is translated by Maud King Murphy with Professor Harnack's special authorization from *Aus Wissenschaft und Leben*.—EDITOR.]

WE rejoice that each year it returns to us again, this day "which God hath made"; that year by year it calls us forth from great sorrows, and from petty cares, to seat us under the Christmas tree and to bestow on us the peace of God. And if it be only a gleam from that world of holiness and love which falls upon us—if it be only for a brief moment that the gray veil of the common day is rent—one moment of eternity is mightier than the long, empty, bitter hours of time.

"This is the day which the Lord hath made; We will rejoice and be glad in it."

So is it still and so will it ever be. There is one hour in the year in which the round world listens to the call, "Arise, shine, for thy light has come, and the glory of the Lord is risen upon thee!" That is Christmas.

The day is surrounded with splendor and poetry. He who first wrote of it, Luke the Evangelist, first struck with master hand this note of exultant joy. There are no words to tell how great is his narration of the Christmas story. Time has been able to take nothing from it. The music has swelled to a mighty fugue which rolls thru all the history of the world; to a symphony in which the voices of the greatest poets are wedded with the clear song of children. What is there like it in all history?

Christmas song!—a collection such as we should have has never yet been made. It must go from century to century and bring together the best that we possess. It would show what fullness and variety are born of joy. The undertone is everywhere the same, but as the spirit of the nation and the spirit of the family, childhood and experience, simplicity and loftiness, have made themselves at home in the Christmas story, and as moreover every note of piety from the strongest to the tenderest rings thru these words, so a history of the religious spirit of the people, a history of faith and a history of poetry, can be read in the songs of Christmas, not less than in the Christmas pictures. How beautiful it would be, could one put beside the best songs of every period the pictures of the Nativity which it has painted, and hear and see them together! We could then celebrate Christmas with every age, and no one of them would seem distant or unintelligible.

The oldest Christmas poem is known to all of us, for it stands in the Gospel of Luke; it is the greeting of the angels, "Glory be to God on high, and on earth peace, good will to men." But in our New Testament there is another poem which we may also consider a Christmas song. It is hidden away in an unfamiliar passage, and is not known to many. Nor will it seem at once and to every one really a poem, but it is one, and has strength and beauty of its own.

In the first Epistle to Timothy, we read at the end of the third chapter, "Great is the mystery of godliness: He who was

MANIFESTED IN THE FLESH,
PROVED IN THE SPIRIT,
SEEN OF ANGELS,
PROCLAIMED AMONG THE NATIONS,
BELIEVED ON IN THE WORLD,
RECEIVED UP IN GLORY."

The author of the Epistle did not himself compose this hymn (its beginning is unfortunately lost); he found it already in existence. It originated in some Christian community of Asia Minor in apostolic times. But it is not for its antiquity alone that it deserves honor, but also for its contents and its form. The form unfortunately loses much in translation; in the Greek all the six verbs have their stress on the same syllable, and the accent falls on the next to the last syllable of each phrase. In this way, and by other means as well, the short lines receive a weight and a confident

vigor which can not be conveyed in our language But even in translation it is evident that in a few words much is said.

The poem falls into two stanzas. The first begins with the great mystery: "He, the Christ of God, was manifested in the flesh." We are reminded of John, who also wrote in Asia Minor. But that He who was manifested in the flesh was not flesh, the second line affirms: "in the spirit" it was proved that He was the Spirit,—divine spirit. Of what the author is thinking in this spiritual proof of the Redeemer the third line shows us: "seen of the angels." That He did not remain on the earth and in the grave, but was raised in the spirit, and seen by the angel host, is proof that He was a heavenly being, returning to His own home. But in the words "proved in the spirit" we need not think solely of the resurrection. Wherever the Redeemer has given proof of the power of the spirit, there is also proof that He was not and is not flesh, but spirit.

If the beginning of the first verse reminds us of John, the beginning of the second reminds us of Luke. "Proclaimed among the nations" corresponds to the angelic message in the story of the birth: "Behold, I bring you good tidings of great joy, which shall be to all people." The Redeemer has already been proclaimed beyond the bounds of Israel, among the Gentiles, and the poet adds, rejoicing, that the message has won belief; nay, in his full, exultant cry he anticipates the centuries, "Believed on in the world!" Then the second verse closes with the thought that concludes the first: He is received up again into Heaven, wrapt in the glory of God. Nevertheless, the world has not lost Him, but is full of faith in Him, and its eyes behold His glory.

How much is said in this close-wrought hymn! Who the Redeemer is, how He came, whither He is gone, by what means He was proven, where and with what result He was proclaimed, and withal the opposition of flesh and spirit, of heaven and earth, of Israel and the Gentiles. Birth, resurrection, ascension are included.

There were but few who could sing so heroically in later times. Luther's "objective" Christmas songs come perhaps nearest to our hymn. They seem like commentaries on our text, but commentaries full of insight and power. For "manifested in the flesh," Luther sings:

"He whom the round world could not hold
Now Mary's arms enfold" . . .
"In our own poor flesh and blood
Is clothed the everlasting good."

There is already a reminder of the heroic poet, and he continues:

"Eternal light our dark shines thru,
It makes the world and all things new:
It shines in depths of darkest night,
And makes us children of the light."

These notes would have been as well understood and as joyfully received in the first and second centuries as in the sixteenth.

"The eternal light our dark shines thru": by a chance of the calendar—for it is no more—Christmas Day falls near the time of the winter solstice. The choice of the date was determined by a simple reckoning from the twenty-fifth of March. No one originally thought of the heathen sun festival. It was, however, an intelligent chance that ruled here, and we may well accept the symbolism of sunlight for eternal light as a welcome after-thought. But we must no more make a sun festival of Christmas than of Easter. We have on that day a much better and higher thing to celebrate than the return of the earthly sun. We should think of the sources from which our soul's peace flows, and of the powers which maintain us, our families, our nation and the whole Christian community. A people of brothers and sisters; called to a living hope — so the early Christians named themselves; and they knew that thru Jesus Christ they belonged to a society as inclusive as human life and as deep as human need. Little is left to us of this consciousness, and that little sleeps hidden in our hearts and does not venture into the light of day. We barter all else that we possess, but our best we keep for ourselves, often enough to others' hurt and to our own. May Christmas Day entice it forth and give us courage to add to those earthly gifts with which we delight our loved ones the best gift of all—a heart warm and true, an open mind, a helping hand!

BERLIN, GERMANY.

The Year in Finance and Trade

BY FRANK D. ROOT

[Mr. Root, a member of the staff of THE INDEPENDENT, has for years devoted some attention to the general course of financial and industrial affairs. All the details of the record of American financial and commercial activity cannot, of course, be set forth within the limits of this brief article, nor can there be any elaborate analysis. His aim has been merely to touch upon the leading points in the record, and to direct attention to a part of the statistical evidence which deserves to be considered.—EDITOR.]

RECOVERY from panic depression was checked in 1910. Caution and restraint affected the course of business in 1911. Crops, as a rule, cotton excepted, showed considerable reductions. Prices of a majority of the active securities advanced, but the additions were small. It seemed to be a waiting year. Judged by the best evidence that measures production and trade, 1912 has been a year of prosperity. On the farms, many crop records have been broken. In the iron and steel industry there has been great and profitable activity. A new high record of output has been made at the furnaces, mills are employed to their full capacity, and prices have steadily advanced. Railroad gross receipts have been greater than last year's by 8½ per cent., and net earnings by 5½ per cent. The additions in October were exceptionally large. Bank clearings show a gain of 9 per cent. For the banks of the country it has been the most prosperous year in their history. The growth of building operations has been 5½ per cent. In foreign trade there are new high records, far above the summit in the past. The net gain of population by immigration (ten months) has been 567,019, against 324,513 in the corresponding months of last year. January dividend and interest payments will exceed those of one year ago by 7½ per cent. In the closing months the upward movement was restrained by war in Europe, but it is to be noticed that the effect of an extraordinary political campaign, and of an election which gave a broad grant of power to the Democratic party, was imperceptible, so far as production and general business were concerned.

In the market for securities there were heavy losses in 1910, and only slight gains (for a part of the list) in 1911. Gains outnumber the losses in 1912, but they are not large. In the following table, relating to representative railway and industrial stocks, are shown the gains of 1909, the losses of 1910, the irregular changes of 1911, and the net changes of 1912, up to the end of last week:

MOVEMENT OF SECURITIES.

The summit for the year was reached by several leading stocks, at the end of September or in the early days of October, owing largely to crop abundance and the volume of trade. Afterward, declines

were caused by the effect of the Balkan crisis upon European stock exchanges and capital, the liquidation which followed the decision ordering a dissolution of the Union Pacific merger, the attitude of the Pujo Money Trust Committee toward great exchanges and banks, and some growing doubt as to the character and effect of approaching Democratic legislation. The national election, in November, involving a change of party control at Washington, was followed by an advance of prices on the Stock Exchange.

Much deserves to be said about the growth of the steel trade and of the effect of this growth upon all branches of business. The steel upward movement did not begin with the good crop news, altho undoubtedly it was helped by crop reports in the second half of the year. Before the end of March it became known that the steel trade was improving. There was room for improvement, for the Corporation's net earnings in the year's first quarter, to be announced a few weeks later, were only $17,826,000, falling even below the poor record ($23,000,000) of the quarter immediately preceding. The pig iron output began to rise in March, when 2,405,000 tons were made, against a monthly average of about 2,000,000 since August. The advance was to be maintained, and the monthly record was to be broken in October. Here are the figures:

PIG IRON, TONS.

1905	22,992,380
1906	25,307,191
1907	25,781,361
1908	15,936,018
1909	25,795,471
1910	27,298,545
1911	23,649,547

1912.

January	2,057,911
February	2,100,815
March	2,405,318
April	2,375,436
May	2,512,582
June	2,440,745
July	2,410,889
August	2,512,431
September	2,463,839
October	2,689,933
November	2,630,854
Eleven months	26,600,753

The year's total, about 29,500,000, will be the greatest ever known. Beginning in March, steel prices rose. They had been exceptionally low. The price of copper also advanced. Before the end of the year it was to be 17¾ cents a pound, and the dividend rates of Anaconda and Amalgamated were to be increased. The growing demand for steel was from the general public, rather than from the railroads, altho the latter made large purchases later in the year. Nothing in the political situation checked this demand. Month after month there were reports of rising prices, a steadily growing number of orders unfilled, and new high records of production at the mills. The Corporation's earnings for the second quarter were more satisfactory, and in the third quarter they rose to $30,000,000. For three years they have been as follows:

	1910.	1911.	1912.
First	$37,616,876	$23,519,203	$17,826,973
Second	40,170,960	28,108,520	25,102,265
Third	37,365,187	29,522,725	30,063,512
Fourth	25,990,978	23,105,115	
	$141,144,001	$104,255,563	

On the Stock Exchange the price of Steel common rose to 80¾ on September 30. It is now 68. Beginning in October, it suffered by reason of the liquidations which followed the Balkan declaration of war and the Union Pacific merger decision. But the condition of the industry was not affected. In the season which recently closed the iron ore movement from the Lake district amounted to 47,500,000 tons, which exceeds by 5,000,000 the record of the best previous season.

The first of the year's crop reports was not an encouraging one. It related (in May) to the winter-sown wheat, 6,469,000 acres of which, or about 20 per cent., had been winter-killed. Estimates of other crops, however, were favorable, but they did not point to the great yields which were afterward to be disclosed. As one month's report followed another, the estimates steadily increased. Even the quantity of winter wheat grew from 358,000,000 bushels (July report) to 389,000,000 in October, but the yield, like the crops of spring wheat, potatoes, corn, oats and barley, was steadily

underestimated, altho additions were made every thirty days. Not until the Government's final report was published, on December 16, was the full size of the crops known. The figures are given below:

THE CROPS.

	1912.	1911.
Corn	3,124,746,000	2,531,488,000
Spring wheat	330,348,000	190,682,000
Winter wheat	399,919,000	430,656,000
Total wheat	730,267,000	621,338,000
Oats	1,418,337,000	922,298,000
Barley	223,824,000	160,240,000
Rye	35,664,000	33,119,000
Buckwheat	19,249,000	17,549,000
Flaxseed	28,073,000	19,370,000
Rice	25,054,000	22,934,000
Potatoes	420,647,000	292,737,000
Hay, tons	72,691,000	54,916,000
Tobacco, lbs.	962,855,000	905,109,000
Cotton, bales	14,311,300	16,250,281

Eight of the crops—corn, oats, spring wheat, barley, rye, potatoes, hay and rice—exceed the highest previous records, and the excess, for the six cereals first named in the table, is 453,000,000 bushels. Corn surpassed the record yield of 1906 by nearly 200,000,000 bushels, and oats the record of 1910 by 232,000,000. It was seen that the past year's dutiable imports of potatoes and hay would not be repeated in the near future. Prices of wheat, corn and oats declined, of course, and the estimate, on December 12, of a cotton crop of 14,311,300 bales (second only to last year's extraordinary yield), caused a reduction of $1 to $1.50 a bale in the market. Agricultural exports in November exceeded those of any previous month by 13 per cent. A report published on December 9 showed that the condition of winter-sown wheat (a coming crop) was far above the ten years' average. Thruout a considerable part of the year the assurance of great crops stimulated manufactures and trade and enabled many to forget much that was disagreeable in politics.

Sales of stock on the New York Exchange in January were less than 11,000,000 shares, and in February the number fell to 7,000,000. The market was dull at the beginning of the year. In the latter half of March, however, the field broadened and prices rose, partly, as has been said, on account of growing activity in the steel trade. The month's transactions were 14,500,000 shares, and the number in April was nearly 16,000,000. Mr. Roosevelt's candidacy and his success at the Illinois and Pennsylvania primaries appeared not to affect the market. Canadian Pacific shares advanced rapidly. Their gain for the year is about 19 points, but the present price is 22 points below the highest, 283, which was reached in August. A settlement of wage disputes in April caused the anthracite coal railroad shares to advance. In May (13,500,000 shares) there was still a broad and active market, but dulness followed in June, July and August. Crop news and steel trade news was good, the volume and character of general business were satisfactory, but the political conventions and other political events imposed some restraint. In the first eight months of the year, loans on call were made at low figures, the rate ranging from 2 to 3 per cent., and very rarely rising to 4 or 5. In September the share market broadened again, prices rising on crops and trade conditions. Premiums for prompt delivery were being paid at the steel mills. At the end of the month high records for the year were made by several stocks, Steel common being one of them. The call rate rose for a time to 7½ per cent.

But the upward movement was checked by the Balkan declaration of war, on October 8. European security markets were sharply depressed, and prices at New York suffered by reason of extensive liquidation on foreign account. While the European government banks raised their discount rates and strove to protect their holdings of gold, large quantities of American securities were sold in New York by foreign holders, simply because New York was the best market. October's transactions on the New York exchange exceeded 14,000,000 shares. It was estimated that foreign sales there amounted to $40,000,000 or $50,000,000. In November there was comparative dulness (8,700,000 shares), and foreign rebuying of American stocks was reported. The national election did not check trade activity. On the day following the Democratic victory

heavy buying in the New York market caused an advance of 2 to 4 points. It was a million share day, and part of the addition was retained at the end of the week. The call loan rate rose for a very short time to 20 per cent., owing mainly to the movement of money westward, but much lower figures were soon restored. In December the Union Pacific merger decision caused extensive liquidation, which was prolonged because the Government and the company were at variance as to the method of dissolution. But a part of the losses have been regained. Union Pacific, which sold at 176 at the end of September, fell to 153⅝ and is now 160. Reading, 179 in April, has risen from 158 to 167¼, assisted by a decision in the anthracite coal roads case and by an increase of the company's dividend rate. Steel common (80¾ in September) has advanced to 68 from its recent low price of 63⅝. For a long time transactions in these three stocks have been nearly half of the Stock Exchange's business. Below are shown the totals for recent years and for eleven months of 1912:

STOCK EXCHANGE TRANSACTIONS.

	Shares, number.	Bonds, par value.
1906	284,298,010	$674,452,850
1907	196,438,824	526,170,450
1908	197,206,346	1,082,161,120
1909	214,632,194	1,317,291,000
1910	164,150,061	634,722,850
1911	127,207,258	890,210,100
1912.		
January	10,906,138	$113,834,000
February	7,086,554	51,828,000
March	14,552,052	69,951,000
April	15,959,338	63,437,000
May	13,662,747	60,965,500
June	7,219,721	45,731,500
July	7,158,324	$51,910,500
August	8,952,358	43,530,500
September	10,107,254	45,364,000
October	14,166,896	46,327,300
November	8,725,317	38,114,200
Eleven months	118,496,639	$630,993,500

All foreign trade records were broken in October and again in November. The sum of our exports and imports in 1912 will exceed $4,100,000,000. Last year's total was only $3,626,000,000. Exports have doubled since 1904. The figures for eleven months of the current year and for corresponding parts of two preceding years are as follows:

FOREIGN TRADE.

	Exports.	Imports.
1912	$2,148,563,324	$1,664,309,560
1911	1,867,619,610	1,391,684,958
1910	1,637,256,221	1,426,194,277

As the year closes what are called the fundamental conditions are sound, and the indications are favorable. The crops, as a whole, are the greatest ever harvested. Leading industries are notably active and reasonably profitable. At the iron furnaces the current rate of production is the highest ever known. Railroad earnings are increasing. November's gross receipts showed a gain of 12 per cent.; October's gain in gross was 13½ per cent., while the month's increase of net earnings was 16 per cent. This addition followed a succession of large net increases since last May. So far as can now be seen, the only danger lies in unwise national legislation. But it should not be assumed that the legislation of the dominant party will be shaped by such men as Mr. Pujo.

NEW YORK CITY.

Constantinople College in War Time

By Mary Mills Patrick, Ph.D.

[While the guns of the Bulgars were thundering at the gates of Constantinople and the routed and wounded Turks filled the streets and mosques of the city, there was one peaceful oasis, the woman's college, where the daughters of the warring races pursued their studies unafraid. Constantinople College, of which Dr. Patrick is president, is doing for young women of Turkey and the Balkan States what Robert College has done for the young men. It is supported by friends in America and has recently received large gifts for the erection of the new buildings sketched above.—EDITOR.]

"MY father is an officer in the Bulgarian army," said a Bulgarian girl in the preparatory department. "And mine is an officer in the Turkish army," said a little Mohammedan girl. "And that makes us sisters, doesn't it?" Such a degree of humane sentiment as this, however, has not always existed, and either discussion or silence has sometimes only seemed to increase the tension. The students and faculty of Constantinople College number, including in this its preparatory department, about three hundred, and are composed of representatives of all the races that are now engaged in deadly conflict. Altho the college is in the Turkish capital, yet many Bulgarians and Greeks, together with one Servian, form a part of the student body, and these nationalities are represented by both men and women in the faculty, while there are about forty Turks among the students and three Turks in the faculty, one woman and two men.

KIAMIL PASHA

The Turkish Grand Vizier, who has aroused the admiration of the world by preserving order and protecting the Christians when Constantinople was attacked by the Bulgarian troops.

The question naturally arises: "How would it be possible for such a college to go on harmoniously during the present war, which is so largely a racial one?"—yet harmony has for the most part existed, altho free conversation and gay smiles have not always reigned in the cosmopolitan groups that gather after the faculty meetings, or around the tea table or among the students; and at luncheon and dinner with the mix-

ture of races present, silence or conversation about the weather have often been the only refuge.

Such circumstances have necessarily developed many dramatic situations, which stand out in our minds as marking the passing from one phase to another of the transformation of the Balkan Peninsula. There was the time of the first surprising rush of victories by the armies of the allies and the difficulty of believing that the Turkish army was really retreating.

There were the days early in the war when the hospitals began to overflow with wounded soldiers, and all college classes were suspended for a short time in order to sew for them, and students of all nationalities combined in making garments for the hospitals, for, as a Greek girl remarked: "The wounded are of no nationality."

Then there was the time of Salonika's danger and the necessity of removing the old Sultan Hamid to a place of safety, for he who had been the Caliph of all the Mohammedan world must not fall into the hands of unsympathetic aliens. Unfortunately Beylerbey Palace was selected to receive the old tyrant, right under the shadow of Scutari College. He is said to be in good health and spirits and to have brought with him twelve wives to solace his loneliness, and to have rewarded the German officers who formed his escort from Salonika each with a brilliant diamond ornament, according to the fashion of the old days of magnificence in Yildiz.

All the changing points of view during the last month have led up to the final scene with the armies of the allies at the gates of the city, and heavy cannonading is now plainly heard by day and night. Will Constantinople fall? Will its mosques and minarets cease to be the emblems of a Mohammedan city? What would be the consequences should the

THE MUSURUS PALACE

Endangered by the war the Bulgarian girls were brought from the old college at Scutari on the Asiatic side to the new site on the European side of the Bosphorus, where they were under the protection of the American gunboat, "Scorpion."

SEWING FOR THE SOLDIERS
Students of various races in Constantinop le College making garments for the wounded in the hospitals.

city capitulate after nearly five centuries of impregnability? Wild rumors are circulated that King Ferdinand intends to have a Te Deum chanted in Saint Sophia and that the Turks prefer to blow up the mosque rather than to allow such a desecration.

The chief difficulties in Constantinople College, caused by the war, have, after all, arisen from the fact that it is a divided institution, as the college proper is still on the rights of Scutari in Asia, a mile distant from the Bosphorus, while the preparatory department is established on the new site at Arnaoutkeuy, about five miles up the Bosphorus. This department is housed in the Musurus Palace, a picturesque building on the European shore of the Bosphorus, adjoining the college property, with a winding path at the rear which leads to the upper part of the new college site, where modern buildings are at present being erected for the future of the institution.

The source of danger in the Scutari College was the Bulgarian girls, and there came a day when an order was sent from the Embassy to remove all students coming from a distance, from Scutari to Arnaoutkeuy, where they could be more fully protected. It is certain that the procession which left Scutari for Arnaoutkeuy one morning will never be forgotten by those who took part in it—sixty young women, each with some small part of her possessions in her hands, and in the rear the second cook, carrying the meat that had been purchased for the college dinner, and a porter with a large basket of bread.

In the Musurus Palace the protection is adequate, and during these last days of bombardment the "Scorpion," our American stationaire, is anchored in the bay before the gate, and Captain Upham, of the United States navy, is making us his debtor for many kindnesses.

During the startling changes of the past weeks one figure has stood out before all others as worthy of respect and admiration, that of Kiamil Pasha, the present Grand Vizier, and the ablest

statesman among the Turks. This noble patriot is over eighty years of age, yet vigorous in both mind and body, and a strong leader of his people even in the time of their overthrow. He has restrained the fanatical elements of the population, represt the tendency among the people to revolt; has concluded peace with Italy, and preserved pacific relations with the Great Powers. One of the sad elements of the political situation, however, has been the danger of a revolution in the capital caused by dissatisfaction at the victories of the allies. So while confidence has been maintained in the efficiency of the present Government to preserve order, it has not been possible to be sure that the Government would be able to stand. Up to the present moment, however, the patrolling of soldiers in the city and extra police service have been above criticism. Yet while the order is perfect the situation is uncertain. Europeans have been in a state of panic, and hundreds have left the city.

One of the most dramatic moments of the war was the entrance into the harbor of men of war of all the nations of Europe. At first each one of the great Powers sent a battleship, soon followed by a second, and then by a large array of gunboats from all the small Powers, each one of which did not wish to be outdone by the others. Therefore the flags of all nations are flying in the entrance of the Golden Horn—Spanish, Rumanian, Swedish, Belgian and others besides the flags of the great Powers.

The ordinary man of the streets in Constantinople has not kept pace with the changing events of the past weeks, for Turkish papers have recorded Turkish victories as far as possible. "What are all those boats?" asked one villager on the Bosphorus of another, looking with wonder on the assembled fleet of the European Powers. "Are they all Turkish ships?" "No," replied the other, "those are the boats which the Turks have captured from the Greeks."

TURKISH STUDENTS IN CONSTANTINOPLE COLLEGE

This group of Turkish girls, photographed unveiled, is in itself a demonstration of the value of the work done by this American college.

In general, however, thoughtful, intelligent Turks have shown great nobility of character and courage in the face of misfortune. The sentiments of the best elements among them are exprest by Halidé, the most distinguished Mohammedan graduate of the college. "The dignity of the Turkish nation requires them to be strong," she says, "and a nation that knows how to bear defeat can bear anything."

A French instructor in the college was crossing the Bosphorus one day when the panic among Europeans was at its hight, and she saw an Armenian boy in great fear, as he had just been reading a French paper which foretold massacres and carnage for the Christians of Constantinople. She sat down by the boy and told him that he need not fear the Turkish people, that she had found them to be possest of great nobility of character, and that the Government was maintaining perfect order in Constantinople. She had not noticed that three Turkish officers were sitting near her and listening to the conversation. On reaching Scutari one of them stepped up to her and saluted her in the Turkish fashion, saying: "I wish to thank you, mademoiselle, for your kind words for the Turkish people. From your appearance I should judge you to be a member of the faculty of the American College in Scutari." On being assured that such was the case, he added: "I wish to thank you on behalf of our nation for your noble sentiments of sympathy and confidence in the Turkish nation, and also to thank all the faculty of the college for what they are doing for our people."

It has been a war in which each of the conflicting causes has appealed deeply to the sympathies of those conversant with the situation. Turkey did not desire to fight the Balkan States. Her constitutional government is comparatively new, and has not yet accomplished its aims of unity and reform. The people have been bewildered by the sudden liberty after the tyranny of Sultan Hamid's reign, and have not yet been able to find their highest expression.

"If they would only have given us more time," said Princess Noumet, the president of the Red Crescent Society, in referring to the situation.

There has also been a certain hopelessness in Turkey's attitude, from the fact that whether she should gain or lose, Europe would show neither justice nor pity.

On the other hand, there are the enterprising Balkan States, with thirty-odd years of remarkable growth and progress behind them, eager to right the wrongs of their compatriots in Macedonia and to add to the possibility of development of their own small countries. May it not be that out of this war, so sudden and unexpected in its results, may come good, not only for the cause which may triumph, but for all the people of the Near East?

CONSTANTINOPLE, November 21, 1912.

The Memory

BY HERBERT HERON

SHE lies where heavy-lidded stars
Hang pale above her sleep.
Oh, dark the night whose sorrow mars
The watch the planets keep!

A little while, and then our tears
Pass, like an autumn rain:
An iris-bow of light appears
Beyond our mist of pain.

Tho she is gone, we still can feel
The joy her living gave:
Her charm and loveliness conceal
The ruin of the grave.

To cloud her memory with tears,
When all but that is fled?
We think of those enchanted years
And not that she is dead.

She lies where glad, awakened stars
Keep watch above her sleep,
Beside the singing harbor-bars
That hold the plunging deep.

CARMEL, CAL.

The Stock Exchange

BY MAURICE L. MUHLEMAN

[Now that the Stock Exchange is under investigation by Congress and there is a popular demand for radical legislation on the subject we believe our readers will welcome a comprehensive explanation of just what the Stock Exchange is and does, by a student of the subject. Mr. Muhleman was from 1888 to 1901 deputy assistant treasurer of the United States at New York and is the author of seven books on the monetary systems of the United States and other countries.—EDITOR.]

THE sporadic action of the committee of the House of Representatives which was directed to investigate the alleged "money trust" has left the impression upon the mind of the average reader of the newspaper reports that thus far there has been a "great cry and little wool." Actually, however, the inquiry has placed on record officially several facts which, if given adequate weight by the committee, and if duly "followed up," will render its labors fruitful.

Thus the committee now knows that the New York Clearing House Association is a voluntary organization of banks which is in position to exercise a powerful influence upon the monetary affairs of the whole country; that the New York Stock Exchange is a voluntary association of brokers which has the power to influence security values; that under our present monetary system the United States Treasury, when it has a large surplus and is thus the chief depository of the country's reserve cash, is forced by circumstances, in case of a crisis, to come to the rescue of the stock market. All these facts were known before, but perhaps not by Congress "officially."

But the most important fact elicited was that which President Hepburn of the Clearing House Association so cogently put before the committee, viz., that the evils of the situation are attributable chiefly to the neglect of Congress, for more than a decade, to reform our admittedly archaic and inefficient monetary and banking system; a neglect of duty on the part of the national legislators that should be definitely and forcibly brought home to the people whom they are supposed to represent.

It is not contemplated in this paper to cover the entire subject, but only to bring out the main features of Stock Exchange operations, the relations of the banks thereto, and their influence upon the public welfare, in a manner that will aid the people to reach intelligent conclusions as to the remedies to be applied.

The commission appointed by Governor Hughes in December, 1908, to examine into the methods and results of speculation, clearly recognized the evils which the defective banking system imposed, but decided that it was a subject for National and not State legislation; it was then believed and hoped that the National Monetary Commission would adequately consider and cover the subject. This hope has not been realized, and hence the committee of the House of Representatives is endeavoring to perform this duty.

The New York Stock Exchange.

When it is said that the New York Stock Exchange is a voluntary association, we mean that it is not a corporation, has no charter, and is not subject to the usual supervision of the State which the law contemplates in the case of corporations. This does not imply that the State has no jurisdiction if it chooses to exercise it; only that, since it has not exercised it, the usual visitorial powers are not applicable.

The present Exchange is a development of a body of brokers formed more than a century ago (1792). While there are in New York City at this time two other security markets, the Stock Exchange is so preeminent that it unquestionably dominates.

The membership of the Exchange is limited to 1,100. For its government it has a constitution which, elaborated by years of experience, is, upon the whole, admirably devised for the purpose; the discipline under its provisions is, in general, strict, and penalties for violations are often severe. Memberships are

not transferable without consent of the Exchange authorities.

The object of the organization is to provide a place for the purchase and sale of securities,—shares of corporations, bonds of governments, states, municipalities and corporations. To quote the constitution, it is to

"furnish exchange rooms and other facilities for the convenient transaction of their business by its members, as brokers; to maintain high standards of commercial honor and integrity among its members; and to promote and inculcate just and equitable principles of trade and business."

The management of the Exchange is in a governing committee consisting of forty members, a president and a treasurer, elected by the members; this body is given absolute power over every matter that may arise, and its decisions are not subject to appeal. In the few instances where members have appealed to the courts against the board's decisions, the judges have invariably held that since members voluntarily accept the constitution of the Exchange to govern them, they are fully bound thereby, except only if the ruling of the board is clearly oppressive, which has rarely, if ever, been found to be the case. The organization thus virtually makes and executes its own laws. For most purposes this is very desirable; but when the public is injured thereby it has the right to demand interference by the State.

About one-third of the members of the Exchange are inactive; that is, they do not actually trade on its floor. Many private banking houses and capitalists own memberships because it enables them to buy and sell securities at a lower cost; the commission charged all outsiders is one-eighth of one per cent.; to members the charge is only one thirty-second of one per cent., and in certain cases only one-fiftieth of one per cent. While the price of a membership has in recent years ranged as high as $95,000, this has been regarded a profitable investment.

Primarily created to facilitate the handling of securities which the public wishes to acquire or dispose of, the Exchange has developed into a powerful machine whose influence is felt not only thruout this country, but also on the other side of the Atlantic. The securities traded in on the Exchange include the shares and bonds of every important, and most of the less prominent, railway companies of the United States, and the bulk of the securities of the larger industrial corporations. It is estimated that the par value of such securities listed on the Exchange is fully $50,000,000,000, which represents nearly two-fifths of the wealth of the nation. The volume of transactions involves values estimated at $17,000,000,000 a year, which, when taken in connection with the influence upon the material welfare of the nation, makes the institution the most important financial organization in the world.

The mechanism of trading has developed to a degree that is surprising, and is so carefully adjusted that the multitude of transactions, involving on some days a turnover of $150,000,000, are carried on without the slightest friction. The hours of trading are limited strictly from 10 a. m. to 3 p. m.; on Saturdays from 10 to 12. When business is active the bidding and asking continues without cessation from the moment of opening to that of closing. To the uninitiated spectator in the gallery, the floor looks more like a bear garden than a place where business is done; yet most of the ejaculations which members shout at each other are transactions, duly noted and constituting binding contracts, under which the securities are deliverable the following day. Several hundred of such contracts are made daily in this apparently chaotic manner, and it is rare that a member undertakes to repudiate one of them. The transactions are reported, and the prices thus made are published and constitute the official quotations governing the dealing in such securities throughout the country and in those foreign exchanges where they are dealt in.

Listing Securities.

To a country engaged in the development of its resources by means of corporations, a stock market is a necessity. There must be a place where securities of these corporations can continually be bought and sold at known prices. Upon the one hand it serves to bring into the development work the capital of individual investors, and upon the other

hand it affords these investors the means to dispose of their securities promptly when desired. This unquestionably useful function is accompanied at times by detrimental results which are proper subjects of criticism. In general this applies far more to shares than to bonds.

The Exchange does not permit trading in securities until they have been "listed"; that is, officially placed upon the lists of shares and bonds to be dealt in by members. This apparent discrimination is entirely justifiable.

The rule governing "listing" is that the corporations issuing the securities shall present statements as to their organization and of their condition as to property, income, security issues, etc., sufficient to enable the Exchange authorities to determine that the securities have a standing warranting their acceptance. But the Exchange specifically disclaims giving any assurance to the public that the corporations in question are properly conducted or that the securities have any value whatsoever. It is merely a *prima facie* certificate of respectability; to admit any and every security issue without such a certificate would obviously give respectability to any and every wild-cat venture, grossly misleading the public.

The action of the Exchange in respect to the listing of securities has not always been beyond criticism, and in the opinion of many who have studied the subject, the Exchange should require a greater degree of publicity from the corporations issuing shares and bonds, relative to their property, business and income, in order that the investing public may be more fully informed of the true value of the securities. The Exchange, however, maintains the position that this publicity is a matter for the governments, National and State, to prescribe; but since most of the States granting charters to corporations have wofully inefficient laws relating to this subject, the conditions continue to be deplorably unsatisfactory.

It would seem a primary principle in business morals that a corporation which desires the public to invest in its securities should give the public duly authenticated, honest statements of its property and business, and that laws should provide for adequate penalties for misleading the public. But under our system few such safeguards exist, except so far as the Federal Inter-State Commerce Law now provides them as with respect to railway corporations. They do this vastly better abroad, and the laws there have commanded wholesome respect for the rights of the public. Here we have forty-eight different sets of laws, one for each State, and every State fears that it may lose business to one of the others if it makes its corporation requirements too drastic. Hence progress toward adequate regulation has been slow. The Federal laws can reach only corporations engaged in inter-State business.

While the attitude of the Exchange is technically correct, and the public which suffers from the defects in our system should lay the blame upon the States (in other words, upon the people, including themselves), the Exchange is unquestionably the only single body in the country that could establish uniform regulations which would go far toward giving the public greater security. It could demand information to show what kind of property is represented by the shares, require frequent reports and such other publicity as would furnish assurance of real respectability, pursuing the perpetrators of false statements as guilty of a public offense thru the Exchange as a public body. In its capacity as a quasi-custodian of credit it should manifest sufficient public spirit to demand respectability from the purveyors of the wares that are dealt in upon its market, thus squaring its action with the constitutional proviso quoted: to promote equitable principles of business.

The function of the Exchange in the distribution to investors of the securities created by the corporations also involves a question of principle. Ordinarily a new issue of shares or bonds is taken over by a syndicate which subsequently disposes of them to the public, in large part thru the Exchange. For this purpose it is requisite to sell at prices that will yield the syndicate a profit. Under the practices of the Exchanges it is entirely possible, as will presently be shown, for syndicates to raise the prices arbitrarily to the desired point, altho occasionally they fail to interest the public. The prices so fixed are in many instances higher than the conditions war-

rant, and after the syndicate has sold the securities and hence ceases to be interested in them, the prices so over rated naturally decline to their proper level. The public has the securities and bears the loss. This is usually the case where a corporation is over capitalized (with "watered stock," as the term is used) or where the security issues have been far in excess of the value of the property represented.

Such detrimental results could be very largely minimized by adequate regulation.

Price Making.

In order fully to appreciate the activities of the Exchange, it is necessary to consider the normal functions of a market. A market is essentially a place where buyers and sellers, directly or thru agents, assemble to trade in commodities or securities. This meeting of those who have something to sell and of those who want to buy brings about a determination of market price. The price making on the Stock Exchange is manifestly of very great importance to all owners of securities or prospective investors; it is hence essential that the prices so made shall be made honestly and not fictitiously. It is also important that the market be free and open, so that the operation of the desire to sell and of the desire to buy may have full play, unhampered by conditions artificially influencing the price making.

Price of a security when normally made is the expression of preponderant concentrated opinion of the value and income-producing capacity of the property represented, or the faith in the credit of the issuing authority. It follows that any event or factor which affects the income or the credit of a corporation will influence the price of its securities; unfavorable crops, general business stagnation, wars and rumors of wars, operate to depress prices; favorable conditions tend to advance prices. It also follows that if occurrences are exaggerated or misrepresented, the market will be affected. Prices are also influenced by the apparent demand for securities; thus a large number of orders to buy a certain security will tend to raise the price, and orders to sell will depress it.

One of the detrimental features of the modern development of practices on the Exchange, from a strictly economic point of view, is that so large a part of the members act not merely as brokers, as the section of the constitution quoted above seems to contemplate, but as principals. In other words, some trade for themselves alone and some for themselves as well as for others. The fact that a considerable number of members feel bound not to indulge in this practice would seem an admission of its viciousness. But that admission concerns only one of the phases of the condition; it means merely that these members realize that personal participation in speculation is likely to bring them into difficulties, whereas the true reason for the objection to the practice lies in its effect upon the price-making function. If the trading were confined to brokerage or agency transactions, the results would be the deliberate expression of the public outside; as it is, the fact that so many members trade for themselves vitiates these results; and the worst of this is that the rules have not always effectively prevented members from trading to the detriment of their own customers; for example, selling the shares themselves when executing a customer's order to purchase.

A broader view of this influence is obtained when one considers the actual business done. It is conceded that in very large part the daily transactions are purely speculative and not for investment purposes. On some days the proportion of the former reaches ninety per cent.; and it may be said that on many days more than half of the speculative business is done by members between themselves; buying transactions of the morning are offset by selling transactions of identical shares near the close of the day, which would seem to be merely wagering on the turn of prices. Obviously this is not profitable in the long run, for members are then only winning from each other; it requires that the public participate to make the "business" profitable.

Yet all these transactions influence prices. Active trading by members gives a semblance of demand for shares which in fact does not exist. It is entirely

feasible for a coterie of members to artificially, and hence arbitrarily, raise or depress the price of a security far above or below the market value which genuine competitive action of the investing and the speculative public would produce; it is undeniable that this is frequently done.

It will be noted that I am not excluding from the category of legitimate transactions on the Exchange those which may be classed as purely speculative by outsiders. The question involved in these cases is entirely one of degree. It is, for example, entirely proper for an individual to purchase a security in the belief that its value is certain to rise; he is entitled, just as fully as in real estate purchase, to reap the profit that may accrue to him by reason of his foresight; it depends, however, upon the method which he employs to do this.

Incidentally, it should be said that by the same reasoning it is entirely legitimate for an individual to *sell* a security in anticipation of a decline in price, even if at the moment he is not in possession of the security. This process, known as "short selling," will be discussed hereafter.

Margin Trading.

The vice of speculative trading is involved in the question of margins. Marginal trading means that a man with say $1,000 in hand desires to buy 100 shares of stock quoted at $100 per share, or having a value of $10,000; his cash is hence only 10 per cent. of the purchase price. Many brokers accept such orders, the procedure being to have the speculators borrow the remaining 90 per cent. of the price. Actually the brokers borrow 80 per cent. from banks, putting up the stock as security, and lend their customers 10 per cent. of the price from their own capital. Should the price of the shares fall 10 per cent., the speculator is "wiped out," unless he has been able in the meantime to put up more cash, or securities in place of cash. Should the price rise 10 per cent. he would reap a profit of $1,000, less the charges for interest on the loans and commissions for buying and selling.

The best class of Exchange members reject this kind of business, requiring at least 20 per cent. margin, many demanding 50 per cent. This distinction concedes that 10 per cent. margin trading is vicious; yet the Exchange has persistently opposed any interference with this practice, despite the fact that it causes enormous losses; the contention is that any fixed rule would interfere with the right of a broker to give his customers credit. This is not a satisfactory reason for the perpetuation of the vice and is absolutely repugnant to the declared object to "maintain high standards."

The small margin trader is evidently actuated by the desire for large profits; these are obviously twice as large in ratio with a 10 per cent. margin as they would be with a 20 per cent. margin. The risk is correspondingly greater.

It is quite clear that a very large part of the trading is in essence purely wagering on the probable future price of a security; yet under the interpretation of the rules of the Exchange which prohibit fictitious trades, every one of these transactions is proper, because in form they are the same as those where the purpose is investment. In each case there is actually or impliedly created a contract calling for the delivery and receipt of the shares; in margin trades the shares are bought by the brokers who borrow thereon, and when the customer desires to realize, the shares are formally sold and settlement made. Thus the law against wagering contracts is not violated, at least in letter; and courts have duly upheld transactions of this class as proper ones; the form and intent are held to govern. Yet it is notorious that in most of the transactions of trading brokers, just described, there is no intention either to receive or deliver shares. This is also true in the case of most of the margin transactions; and so long as the contracts are legal in form, apparently the sole counteracting influence is the insistence upon a satisfactory margin.

The courts base the distinction between gambling transactions and proper ones on the question of *delivery;* when there is no intent to deliver and receive the securities, it is gambling. But the courts are satisfied with the formal contract presumed to be created under Exchange rules. Thus the legal fiction

sanctions the violation of the spirit of the law.

In 1892, a "clearing" system was introduced under which the purchases and sales by members are offset and only the differences are settled by deliveries of shares and payments by checks. This device is unquestionably useful and beneficial, because it saves much labor and risk; but it manifestly makes it easy for the trading brokers, who may thus "play the market" day after day without ever delivering or receiving a share of stock, provided they see to it every day that their buying and selling transactions balance. In fact, it is well known that most of this class of members are seriously concerned, near the close of each day, as to how they will stand at the "clearing," and shape their trading so as to avoid having a difference in shares to account for.

The Hughes Commission, which was not unfriendly to proper speculation, gave it as its deliberate opinion that the rules

"make so easy a technical delivery of the property contracted for, that the practical effect of much speculation, in point of form legitimate, is not greatly different from that of gambling. Contracts to buy may be privately offset by contracts to sell. The offsetting may be done, in a systematic way, by clearing houses, or by "sing settlements." Where deliveries are actually made, property may be temporarily borrowed for the purpose. In these ways speculation which has the legal traits of legitimate dealing may go on almost as freely as mere wagering, and may have most of the pecuniary and immoral effects of gambling on a large scale."

No justification of speculation can include the transactions described as free from vice and evil effects; they arbitrarily and fictitiously influence prices; they may be, and at times are, employed to "fleece" the public. To the extent that security values are thus influenced by operations which are virtually wagering, the public is wronged, and is hence justified in demanding a remedy. Yet the Exchange would see the volume of its business shrink by more than one-half if such transactions were excluded, which may be one of the reasons for permitting them to go on.

It is conceded that the vast majority of small-margin speculators usually lose. While it is impossible to estimate the amount of the losses and waste, it is conceded that it runs high into the millions every year; the morally evil accompaniments are incalculable. In the opinion of the Hughes Commission, the gain therefrom to the Exchange members supports their costly mechanism and extravagances, and a new crop of such speculators is periodically provided from all over the country to supply their needs. When memberships are rated at $95,000, the capital investment represents over $100,000,000, upon which the members want to earn returns.

Short Selling.

Many persons are of the opinion that "short selling," which means that at the moment of sale of a security the seller is not in actual possession thereof, is a vicious practice that should be forbidden. This view is erroneous, as is shown by the circumstance that in the many cases here and abroad where laws were passed to prohibit such sales it was found desirable to repeal them soon afterward. New York's attempt took place in 1812.

There is no device so serviceable to check an unconscionable inflation of prices. The short seller in effect believes that prices are inflated, that they will fall later on, and that they should fall. He therefore undertakes to check the upward tendency by selling, and if sales are sufficiently numerous the inflation is checked. If his opinion is well founded he gains by the transaction to the extent of the difference in prices; but he also serves a useful purpose by preventing the catastrophe which would certainly ensue if prices were "boosted" so high as to bring into the market a large number of shares for sale and cause violent declines, which always breed trouble.

Moreover, under the rules of the Exchange one who sells shares must actually deliver on the following day, and for this purpose he must borrow the shares until such time as he concludes to buy; that is, when the price has fallen to the figure which he expected. Every short sale must be "covered" by such a purchase at some future date, which has the effect of checking an inordinate fall.

It is ordinarily only the experienced speculator who sells short; the public at large and the small-margin speculators

do so rather sparingly because the device appears complicated; hence the great loss waste is not attributable directly to this practice, altho a "bear market" unquestionably causes the "wiping out" of a lot of small-margined operators.

That the device is at times misused must be admitted. A group of speculators, well provided with borrowing power at the banks, may proceed to depress prices by short selling, may buy in shares at the low figures which they create, merely for the purpose of selling them again to the "dear public" at higher prices which they in turn create by reversing their action. When such operations are undertaken purely for the profit to be gained, which, of course, does occur, the "high standards" are evidently strained; but it is to be said that the active Exchange members are not always, and in many cases not at all, responsible for such operations, which are engineered by men outside or by inactive members, the active members serving only as brokers.

In order that a short-selling movement may be successful, it is usually necessary that certain conditions exist; for example, that prices are inflated or that the business outlook is doubtful either in general or as to the particular securities to be sold. Short selling is after all an expression of a kind of pessimism which cannot make much headway in the face of general optimism. Hence short sellers quite often lose when their judgment is at fault.

Manipulation of Prices.

When it is desired to "make a market" for a security, the practice is to artificially create a semblance of demand with the price going steadily upward; this leads the public to believe that there is an opportunity for profit. The mechanism employed is for the holders of a large majority (or all) of the shares to select one person as manager, being at all times prepared to buy any shares offered for sale by others at the market price. This, of course, requires a substantial sum of money to "carry" the shares, and this sum is borrowed from the banks on the pledge of the shares. The procedure has been properly called "manipulation," and in large part the plan is executed by what are known as "matched orders" and "washed sales." Thus, the manager simultaneously instructs one or more brokers to sell and other brokers to buy. At the outset he is the only buyer and the only seller, but gradually the activity of the stock attracts attention, and some outsider buys a few shares; then more join the movement. When all the shares to be "marketed" are disposed of, the business is closed and profits are divided.

But it sometimes happens that before this time comes the outside holders or buyers want to sell, and the syndicate is compelled to take back the shares at the market price. Occasionally the price then falls violently and a panicky condition is developed, sometimes resulting in a crisis.

In almost every operation of this character it soon becomes known to the shrewd observers that a "manipulation" is on; the newspapers mention it and discuss it; brokers likewise refer to it. Yet the authorities of the Exchange have usually let it go on without check; if a crash came they have been loud in deploring the wickedness of the members engaged therein and have handed out punishments; if the scheme succeeded without catastrophe no need for action appeared, even if the inflated price of the shares fell violently, leaving the public to bear the losses. That is what the public that wants to engage in speculation is for.

In its nature the speculative business is such as to develop a marvelous acuteness of certain mental faculties in those members engaged in it. Some of them specialize along certain lines, and, stimulated by an intense desire for gain or winning, the tendency is to accomplish the end in view by methods which strain the rules; occasionally rules are simply ignored. The risk of penalty, even to loss of membership, hangs over delinquent members. Yet many are apparently so accustomed to assuming risks that they take the chances. A study of the history of one of the severest failures in recent years disclosed that the firm had for quite a period indulged in almost every form of violation of trading principles with impunity.

The numerous amendments to the con-

stitution bear witness how the governing board has been put to it to meet such instances in the past; it is, however, contended that they cannot devise rules to correct all vicious practices without impairing the usefulness of the system. Thus transactions engaged in merely for the purpose of artificial price making, where every observer may be morally certain, and some members absolutely *know,* that manipulation is in progress, are assumed to be beyond control because they are in form in accordance with the rules; it is regarded impossible to distinguish by rule between "matched orders" and bona fide ones, altho to the intelligent outsider matched orders look exactly like fictitious trades, which are prohibited. A continuance of this attitude will eventually force legislation that will make such a distinction; for most manipulative price making clearly wrongs the public.

These questionable transactions are often deliberately carried on for the purpose of increasing the capital of the manipulators, borrowed from the banks on the securities. As a rule, banks loan up to 80 per cent. of the market price; it is obvious that whenever the market price of a security is advanced, the amount of loans obtainable at the banks may be increased. Thus shares standing at 90 have a larger borrowing power than if valued at 60. In practice it seldom makes any difference how the price was made; but there are many notable instances where banks have taken cognizance of a reasonable belief that manipulation was going on, and have refused to advance the loaning power with the advance in price.

The Exchange and the Banks.

This brings us to the relation of the Exchange operations to the money and banking system. It is quite clear that without the support of the banks the operations of the speculative market would shrink enormously. The great bulk of the capital for speculation comes from the banks. It has therefore been a settled policy of all interested in the promotion of speculation to utilize every device possible under our banking laws to facilitate the process; and the policy has been developed in the past twenty years, right under the eyes of Congress, without creating the slightest desire on the part of that body to interfere. It would seem that when the record, within a twelvemonth, shows a variation in the rates for loans on the Stock Exchange between 1 per cent. per annum and 125 per cent. per annum, the latter being always indicative of conditions approaching, if not always culminating in, panic, this should be sufficient notice to Congress that there is something absurdly wrong in the system.

In almost every year this condition recurs. The New York banks begin to accumulate money in the earlier half of each year from the banks all over the country; money not then needed, in the midwinter and spring seasons, for agricultural or other local purposes. Since the local banks cannot employ it profitably at home it is sent to New York, where it always earns 2 per cent., that being the rate almost universally allowed by New York banks on country-bank deposits. Against these as against all other deposits the New York banks must hold at least 25 per cent. reserve in cash.

While it is quite certain that the larger part of these funds will not be needed by the country banks for several months, they are regarded repayable on demand, and hence must be loaned out on terms that enable their recall at any time. That is why these transactions are known as "call loans." The money is, in fact, habitually loaned to brokers for Stock Exchange purposes, and the supply being great during a large part of each year, the rate is excessively low; it sometimes ranges at or under 2 per cent. week after week.

Then when the country banks need their money for crop purposes, and call for it, the New York banks find their reserves going down to the danger point and must in turn call in loans from the brokers; this causes many sales of securities in order to pay off loans, and the prices fall. When the crops are large these demands from country banks for funds are so large and insistent that Wall Street has a panic thru the fall in security prices and losses due to compulsory sales by the speculators on margin.

More than this, when the call-money

rates rise to 10, 20, 50 per cent. and higher, some country banks send more funds to the money center to be loaned at these profitable rates in the security market; the additional profit lures the banks into the speculative field.

It is folly to say that this affects only Stock Exchange operations and does not concern legitimate business, for it not only *does* concern legitimate business, but it potentially affects security values in which so many are deeply interested. Bear in mind that not only are those who directly own securities affected by the fluctuations in prices; the millions who have money in savings banks, in trust companies and in commercial banks are also interested, because these institutions invest large parts of their resources in such securities; reports place the sum now so invested at $4,500,000,000.

When speculation is deliberately encouraged by the abnormally low money rates, it naturally becomes rampant and dangerous, leading to inflated prices; then when attempts are made to restrain it by raising the rates, the bubble of inflated prices bursts. These conditions not only affect all securities; the frantic efforts to check disastrous decline in the prices and save the situation from complete wreckage cause a restriction upon commercial loans and higher charges for these. In other words, the ordinary, day by day, legitimate business of the country, of gathering its products and distributing them to the consumers, is seriously interfered with, and, in fact, penalized by higher charges for discounts, because of this exigent demand for speculative loans.

The speculators are, then, not using much of their own money; the bulk of the funds needed for the "business" consists of money borrowed from the banks in the center, which in turn really borrow it from banks thruout the country. Thus the deposits of a man in Maine, or in Ohio, or in Iowa may be used in the maelstrom which is called the stock market, and this money is loaned out at 2 per cent. by the banks in the country because they claim to have no opportunity to lend it out at 6 per cent. at home. Sometimes this is actually true; sometimes it is a prevarication.

It is quite conceivable that a man in Des Moines having, let us say, $2,000 in a speculative account with a broker, has also $2,000 on deposit in his local bank; that the deposit may be loaned out in New York to another broker, by means of whose operations the Iowa man's speculative account is "wiped out." In other words, the Iowa man's own deposit may be employed to accomplish his speculative loss.

It is obvious that with the large surplus of funds available for speculative purposes in the banks and trust companies of New York, those who are in control of them can exert a powerful influence upon the whole credit structure of the nation. By concentration and mergers less than twenty of these institutions now hold the bulk of these funds, and the control is in the hands of a few men. With a loan fund of scores of millions thus made available for use in the stock market, security prices may under Exchange rules be advanced or depressed, whether facts justify or not. The danger to the nation lies in the opportunity to use the power improperly; it was an abuse of this power that caused the panic of 1907.

The wide fluctuations in prices which the share market exhibits at times are of themselves evidence of the need for a regeneration of the system; in many instances they are caused or stimulated by false rumors and misrepresentations, but in many cases they are attributable merely to the use of the power which the system affords to shrewd speculators. Even when bona fide conditions, favorable or adverse, cause rises and falls, the fictitious factors come in to exaggerate the advance or decline enormously. A well regulated system would unquestionably give our security market a measure of stability warranted by the true conditions governing values, and hence a more creditable position among the world's great institutions.

Defects in the Banking System.

There are three factors which operate to cause the congestion of money in New York City to be used in the speculative market.

(a) The national bank note system, under which bank notes are kept in cir-

culation forcedly when the need for them has passed; since these banks must invest capital in bonds to permit note issues, they wish to have that capital earn something continuously, reckless of the pernicious influence of the currency inflation thus caused. Every other civilized nation provides for bank currency issues based largely on credit, and the notes are withdrawn from use when not needed for business. Here the volume of notes is almost stationary; in many years there has been an increase in volume at the time when notes are least needed, and a decrease at periods when most needed. The excess of these notes during the earlier half of the year is roughly estimated at $200,000,000, which is also a measure of the volume of excessive congestion of funds in New York. The banks are not *required* to keep the notes in use; they do so merely to get the 2 per cent. profit by depositing them or their equivalent in New York.

(b) The national bank reserve law encourages the practice of lending country deposits in New York, by providing that a part of them may be treated as "reserve," which the law requires to be kept by the depositing banks. It prescribes that a country bank must have 15 per cent. reserves against deposits, but only 6 per cent. need be in cash; the balance may be "on deposit" with, or loaned out to, banks in the centers. Virtually, then, a large part of the country banks' reserves is in the stock market, *voluntarily* put there by these banks. In addition to this, other idle funds of these banks are so loaned in New York. Yet many of the managers of these banks are loud in their denunciation of Wall Street methods, blind to the fact that they themselves are important factors in the system that creates them.

(c) The practice of paying interest on these deposits by New York banks; a matter that is entirely within the power of regulation by the New York Clearing House Association. Many attempts have been made by the far-seeing and conservative members of that body to abrogate this practice; they recognize the evil effects thereof. But a majority of the members have always opposed the change, because it means business and profit to them to continue the practice; and this despite the fact that for a substantial part of each year the rates at which these funds can be loaned out are at 2 per cent. and often lower; there is almost a certainty that during the other half of the year the rates will be higher, thus averaging up sufficiently to cover the interest paid to the country banks and leave a profit.

It will surprise most people to learn that, beginning with 1868, Comptrollers of the Currency and Secretaries of the Treasury have intermittently called the attention of Congress to these serious defects in our system, and that Congress has ignored the admonitions.

While clearing houses are primarily established merely for the purpose of exchanging checks, their modern development includes a number of other functions assumed for the purpose of co-operation. If we had a scientific Federal banking law there would be less need for the assumption of such functions and powers. As it is, our system of individual banks lacks the co-operative feature which the clearing houses supply. Naturally, the New York Clearing House leads in importance and exercises great powers, including an influence upon the Stock Exchange when occasions arise. But it quite properly refrains from anything in the nature of interference with the Exchange.

Stock Exchange operations are entitled, just as other business is, to bank accommodations; but they should be circumscribed by conditions which set a curb upon the vicious class of operations, and adequate banking laws would serve to make such conditions. The Government is not warranted in expecting the clearing houses to undertake all of these duties, while it thru its lawmakers neglects them.

If the banking laws were revised to correct the defects referred to, much of the evil that exists would be eliminated. But the circumstances that so large a part of the banking business of the country is conducted by institutions chartered by States, and Congress is supposed to have control of national banks only, has been used as a reason for non-action; it is assumed that national banks would be

placed at a disadvantage in competition with State institutions. In fact, there is no question but that the national Government has, under the Constitution, so broad a power over all matters relating to our money, that effective legislation could be enacted. It is purely a case of neglect, due in part to legislators' ignorance of the conditions.

There is nothing to prevent the Federal Government from taking jurisdiction over all banking which involves interstate exchange, as practically all banking does. Pursuant to this authority it may require all clearing houses to be incorporated under Federal charters and may prescribe laws for their regulation. It may prohibit the payment of interest on bank deposits with other banks, if upon no other ground than that the practice detrimentally affects the country's welfare.

Regulating the Stock Exchange.

Many who have devoted much time and study to the problem, prominent among them being Professor Emery, of Yale, are of the opinion that the great waste, moral and material, incident to the existing speculative system, cannot be eliminated from the process without injury to the beneficial purposes, and that therefore the evil must go on. The Hughes Commission registered a dissent from this view, pointing out that the governing board of the Stock Exchange has absolute power; that its members are familiar with every detail of the mechanism and in position to know what is being done. They are more competent than any other body could be to introduce and enforce reforms if they were sincerely disposed to do so. Indeed, some of the criticisms of the Hughes Commission have been followed by amendments of the Exchange rules, which shows clearly that action could and should have been taken long before.

There are those who believe that the Exchange should be abolished, as a detriment and menace to the nation. It is easy to see that such a course would result in such large losses to *bona fide* investors that the cure presumed to be effected would immeasurably exceed the evil. Unless there is a market for securities where they can be bought and sold at known prices, the values of the securities will shrink enormously. But it may also be answered that to abolish a useful instrumentality, essential to business in this age and civilization, because of some vicious features, would be a pusillanimous admission of our incompetence to regulate it. The loudest calls for abolition come from those who have lost in the class of speculation properly characterized as gambling; but the State is not called upon to abolish a useful institution merely to protect the greedy from the effect of their sins. Serious thinkers advocate regulation, and at any time when the public really wants it, regulation will come. But until the banking laws are properly revised, regulation will be attended with difficulties.

The Hughes Commission did not favor State regulation because it believed that the Exchange could regenerate itself, if it really wished to do so, and "make good" as to the avowed objects of its existence. But thru the influence of a majority of its members it persists in ignoring the need for regeneration; it insists that the transactions criticised are not vicious because they are thinly veiled by a formal contract; it places the transactions which the commission has practically characterized as gambling upon the same plane with such as are consistent with equitable principles of business. It assumes that since fictitious trades are forbidden they do not occur; a pleasing fiction which may some day be dissipated by the courts when the judges wake up to the gravity of the public wrong done thereunder.

Self-regulation would be so eminently preferable that legislation should be urged only as a last resort; but that such legislation will come if conditions continue much longer is quite certain. Perhaps the Congressional committee will demonstrate the need therefor when it has completed its investigation.

New York City.

Nuestra Señora de la Esperanza

The New Spanish Church in New York City

BY EDWARD CARLETON KNIGHT

THERE is a tone of sadness and yet, at the same time, a note of triumph, in the introductory paragraph of a recent article in *El Peregrino,* a Spanish fortnightly published in Madrid. Freely translated it reads: "The 18th of May, 1904, will always be remembered by lovers of Iberian art, history and literature, for on that day, scarcely five years after Spain had lost her last possessions in the New World, a distinguished citizen of the United States founded in New York the Hispanic Society of America." The American referred to is Mr. Archer M. Huntington. The Hispanic Society is housed in a beautiful new building, which is located on Broadway at 156th street. This was followed by the Spanish church, a little chapel called Nuestra Señora de la Esperanza (Our Lady of Hope), delicately beautiful and complete in every detail, both artistic and ecclesiastical. A flush of gold spreads over the whole interior, and the eye feasts on aurean browns and greens and yellows and coppers in rapid succession. Then it rests on the most conspicuous object in the room, the high altar of Siena marble, which was made in Italy and contributed by Mr. and Mrs. Frederick Courtland Penfield. Over the altar

THE SPANISH CHAPEL IN MANHATTAN

hangs the sanctuary lamp, the gift of King Alfonso XIII of Spain. It is modeled in bronze after Goya's lamp, which hangs in the famous Church of San Antonio de la Florida, in Spain. Three winged cherubs support a bowl in the form of a sphere, upon which is traced a map of the world emblazoned by the Spanish arms. In it the soft light of olive oil will burn as long as the church stands. Then the eye shifts to a beautiful side altar, which was given by Mrs. Penfield, and to another by Mr. J. Pierpont Morgan and Mr. Amos Eno. Adorning the latter a superb Sorolla portrait of Joseph and the Christ Child, both of whom are represented without the conventional halo. This is unusual in a Roman Catholic church, but there is not the slightest loss of spiritual dignity in the figures. Joseph is painted in the dress of a carpenter. He holds in his arms the Christ Child, whose radiant face blond hair and blue eyes are illumined by the spirit of Truth, Light and Love.

ST. JOSEPH AND THE CHRIST CHILD
A painting by the Valencian Plein-airiste Joáquin Sorolla y Bastida is one of the treasures of Nuestra Señora de la Esperanza.

A Madonna by Madrazo, another Spanish painter of note, will adorn the other side altar. The fourteen Stations of the Cross are striking oil paintings by Mr. Harry Dey, a promising young artist. The windows are of beautiful design and represent favorite Spanish saints, the Annunciation, Visitation, Nativity, Adoration, Presentation and the Marriage Feast at Cana. The nave is illumined by a skylight in three sections, representing the Father, Son and Holy Ghost. An interesting detail is the door of the tabernacle of the high altar, which is a gem of the goldsmith's art. The key of the door is fashioned in gold set with diamonds. Inside are the golden vessels of communion, which are to be augmented soon by a chalice and aborium from Maria Christina, the Queen Mother of Spain. The church itself, which has already been blest by Cardinal Farley, will be consecrated in the spring. It is Italian Renaissance in style, and in the words of Cardinal Farley, is a gem of beauty and a triumph of Christian art. It is the product of the endeavors of Mr. Huntington, Miss Maria de Barrill and other citizens of New York.

WHERE THE EQUITABLE BUILDING STOOD

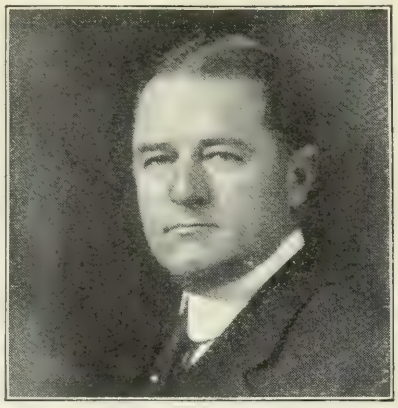
The site of the offices of the great life assurance society, destroyed by fire last winter, would make a wonderful city park, in the heart of New York's financial quarter. There is, however, little chance of its being put to this use. The highest structure shown in this view is the Singer building, towering in lower Broadway, now only the third highest building in New York, yet none the less impressive for being only forty-one stories high. The Hanover Building is shown at the extreme left of this illustration, the City Investing Building behind the Singer Tower (to both right and left). The low domed structure in the center is the Clearing House, on the right of which looms the Bank of Commerce, overshadowed, in its turn, by the Syndicate Building. In the foreground, on the right, appears the Fourth National Bank.

The New Generation in Wall Street

BY T. D. MacGREGOR

A STRIKING thing about the big financial events and movements of the day is the prominent part that younger men have in them. We read about the Chinese loan negotiations and it is Henry P. Davison, the young partner of J. Pierpont Morgan, who conducts them, while Willard D. Straight, scarcely in his thirties, represents the Morgan interests in China permanently. When the finances of Persia are to be reorganized it is W. Morgan Shuster, also in his thirties, who is called from America to do it. Prominent in the fight for currency reform in this country is Paul Warburg, of Kuhn, Loeb & Co., a scion of a prominent family of European bankers. And so on, in a great many instances. In the early days of the republic there was only one Alexander Hamilton. Today there is no dearth of young men with probably as great financial acumen and farsightedness as the young man who was our first Secretary of the Treasury.

To state it in another way, a new generation is making itself felt in Wall Street. Of course, new generations always do make themselves felt. It's a way they have. But without doubt a particularly forceful new element is now coming to the front at the country's financial center, and with this infusion of new blood, this changing personnel, are coming new ideas, different methods, and unquestionably a larger consciousness of what might be called wealth-responsibility.



Who are these coming men of Wall Street? First of all, let it be stated none of them seeks the limelight. Not a few of them have already "arrived," and practically unheralded. It has been asserted that great millionaires, railway builders and financiers are better known by their wealth and by their works than as living human beings. But it is impossible to stifle popular interest in such strong personalities.

The name of Morgan has come to be almost synonymous with Wall Street, so any article of this nature appropriately begins with the well-known, glass-partitioned offices soon to be removed from the corner of Wall and Broad streets, and, by the same token, the first to be considered in discussing the new generation in the firm of J. P. Morgan & Co. is John Pierpont Morgan, Jr., "Jack" Morgan, as he is familiarly known in the financial district. Mr. Morgan, Jr., is not exactly young, being forty-five years old, but nevertheless he represents the new regime in the Morgan interests. He is a New Yorker by birth and a Harvard man by education. His palatial home is located near Glen Cove, L. I. The younger Morgan resembles his father in many respects. For one thing, he does not care for personal publicity, especially that of the sensational kind. A prominent financial writer was on terms of near intimacy with "Jack" Morgan, representing one of the more conservative newspapers, and was in the habit of seeing him in his office for an occasional interview. This man later went with one of the notoriously sensational sheets in the metropolis. Wishing to find out whether or not he would still be *persona grata* at the Morgan office in his new connection, he sent in his new card. Mr. Morgan sent out the stalwart Cerberus who guards the portals of his inner office with the message that Mr. Morgan would never see anybody from that paper.

When Mr. Morgan, Sr., is away, which is a considerable part of the time nowadays, Mr. Morgan, Jr., directs the firm's general policy. While the younger Mr. Morgan is an important factor in shaping his firm's policy along general lines, Henry P. Davison, the first vice-president, is the specialist who is entrusted with individual charge of the firm's biggest enterprises. Mr. Davison, good-looking, athletic and well groomed, is suave and courteous to customers, bankers, newspaper men and other interview-

ers. He is readily accessible to anybody with proper credentials. Mr. Davison came to the Morgan house via the vice-presidency of the First National Bank. His forcefulness and ability so imprest Mr. Morgan that he has given him a place of very great importance and responsibility in the business. He works absolutely relentlessly, keeping longer hours at his desk oftentimes than men under him. Naturally he gets results. The nature of his work calls him abroad a great deal. He is just as likely to be found in London, Paris or Hong Kong as in New York. He was one of the experts on the original Aldrich commission which went to Europe to study monetary conditions. When in this country he lives at his fine place in the colony of multi-millionaires on Long Island.

Despite popular opinion to the contrary, there are still groups in Wall Street. The Schiffs — the Kuhn-Loeb party—head the main group outside of the Morgan interests, and thereby hangs a tale.

At the time of the memorable panic of 1907, E. H. Harriman, "the Little Wizard of Wall Street," said in a newspaper interview: "The time will come when many persons will wish that they had pledged their watch charms to buy stocks in this market." He was right and the improvement in stocks since that time has been particularly noticeable in the properties he had helped to build up. Harriman's bankers at that time were Kuhn, Loeb & Co., and today the connection between these two interests is stronger than ever. When Kuhn-Loeb is mentioned, the person versed in the affairs of Wall Street at once sees in the background the Union Pacific, the Southern Pacific and the Illinois Central railroads. Thru their controlling interest in the stocks of these vast properties, Kuhn, Loeb & Co. are absolute masters of the destinies of these far-reaching roads whose bands of steel bind together the fertile West and the effete East.

Since Harriman's day the power of this group of bankers has been greatly strengthened by the great improvements made in the actual physical efficiency of these Western railroads. Union Pacific is a leader among stocks. This fact, while it has given the Kuhn-Loeb interests enormous prestige, has also heaped upon them tremendous responsibility.

The American interests of this house are coming under the supervision of Mortimer Schiff, son of Jacob H. Schiff, and this young banker is typical of new conditions and new personalities in the world of finance.

Speyer & Co. form another similar group. These two houses work largely with foreign capital, and so are quite independent of American money and the local banks, whereas Morgan deals thru and with the big New York institutions which he controls. It is said that either Kuhn-Loeb or Speyer could raise $50,000,000 overnight, if necessary, without asking New York banks for any aid. This gives these bankers immense power. With the help of French and German capital they can quickly throw millions into the stock market. All they have to do is to draw bills of exchange on their

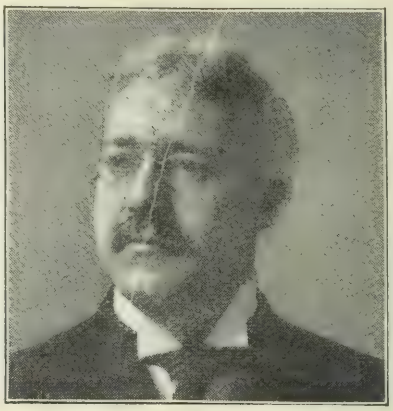
President Chase National Bank.

W. MORGAN SHUSTER
Ex-Treasurer-General of Persia.

European connections and turn them into money for use in stock operations here. All of this is legitimate, of course, and has no detrimental effect locally.

James Speyer, the head of the American branch of the great European banking house of Speyer & Co., is still in his early prime. He is a small man physically, but he has mentality plus. He is a very genial man. He is not only a banker, but a publicist. He is president of the Economic Club and frequently speaks on matters of economics and finance. He spends a great deal of time in Europe. Like the other foreign group of financiers in Wall Street, the Speyers are largely in railroads, controlling the so-called "Frisco" and Gould lines.

The Gould system includes the Missouri Pacific, the Denver & Rio Grande and the new Western Pacific, connecting St. Louis and San Francisco. Some time ago the Missouri Pacific almost "went broke" thru neglect and mismanagement. There were frequent rumors of sale by George J. Gould. Then, about two years ago, it was announced that Kuhn, Loeb & Co. had taken charge of the property and would handle it themselves. But on account of the unwillingness of Miss Helen Gould to part with her interest, it is said, the deal fell thru. The next thing heard was that the Speyers had become the financial representatives of the property. George Gould, as president, retired, and B. F. Bush was put in his place. Since then great progress has been made and the property is showing astonishingly good results compared with its former wretched and run-down conditon. Gould is not out of the road entirely, but Speyer & Co. have their directors on the board and they direct the policy. "Jim" Speyer interested his European connections in this great effort, and as a result the Deutsche Bank and other big European investors have put millions of capital into the rehabilitation of these railroads.



It is also hard to think of Wall Street without picturing the massive structure of the National City Bank and what it stands for—the largest bank in the country. And when you think of the National City Bank you think of a brilliant man who is not too old to be included in this scintillating category—its president, Frank A. Vanderlip. He was an Illinois farm boy, who began to hustle for himself at the tender age of twelve years, and became successively a machinist, a stenographer, a newspaper reporter, a financial writer, a private secretary, Assistant Secretary of the Treasury at Washington, and then was called by James M. Stillman to become vice-president of the National City Bank of New York, and later to succeed him as president of the institution. Mr. Vanderlip has worked hard all his life and has largely developed his own remarkable powers. It has been said of him that few bank presidents know as many phases of American life as he does and few have such broad sympathies. When he took up his duties at the National City a few years ago, there was some uncertainty in banking and financial circles as to the outcome. There was even some uncertainty concerning him, but Vanderlip marched in and took the bit in his teeth at once. The bank has improved under

FRANK A. VANDERLIP
President of National City Bank.

Vanderlip. Not only has its business and prestige grown, but it is no longer the sweatshop it used to be considered in the old days. Great consideration is shown for the welfare of employees of both the day and night shifts. Lunches and club rooms are provided for them. Their *esprit du corps* is maintained by a little monthly paper which they publish themselves. Every year Mr. Vanderlip invites the whole working force of the bank with their friends to an outing at his beautiful place at Scarboro, in Westchester County. Mr. Vanderlip is a strong advocate of genuine business education and training. He has lectured at the Finance Forum of the West Side Y. M. C. A., New York, and is a member of the advisory council of the Alexander Hamilton Institute.

Another of the country's biggest commercial banks is the Chase National, and its new president, Albert H. Wiggin, is emphatically one of the "comers" in the upper and inner circles of finance. His rise has not been spectacular, but it is none the less noteworthy. Mr. Wiggin is forty-four years old. From 1885 to 1891 he held minor positions in Boston banks. From 1894 to 1897 he was assistant cashier of the Third National Bank of Boston, and between 1897 and 1899 vice-president of the Eliot National Bank. Then he came to New York, and after being vice-president of the National Park Bank, he went to the Chase as vice-president and later succeeded A. Barton Hepburn as president, and he may be called a disciple of that broad-minded banker. He is strictly an institutional banker and has had little part in underwritings or great security flotations. He is a director and member of the executive committees of the following New York institutions: Bankers Trust Company, Guaranty Trust Company, Astor Trust Company, Lawyers Title Insurance and Trust Company, and the Union Exchange National Bank. Other large corporations with which he is identified are the International Paper Company, the International Agricultural Corporation and the American Surety Company. When the affairs of the Westinghouse Electric and Manufacturing Company were to be straightened out, Mr. Wiggin was one of the committee which framed the plan of reorganization and he is now a member of the executive committee of the corporation.

"Hustler" is a word that applies to Mr. Wiggin. His mental perception is very quick and he has a remarkable memory for facts, especially facts having to do with the credit of industrial concerns. He is a hard worker and the despair of his secretaries. He has many personal friends and gets around a good deal, but almost every trip he takes is a business trip. As secretary of the New York Clearing House and a member of the loan committee he has had an important part in recent financial history in New York, and he will be heard from right along in the future.

Another young financier, who, like Frank A. Vanderlip, has risen not so much on account of business shrewdness as by broad financial intelligence is

GATES W. McGARRAH,
Mechanics and Metals National Bank.

CHARLES D. NORTON,
President of First National Bank.

CLARK WILLIAMS,
President of Windsor Trust Company.

Clark Williams, president of the Windsor Trust Company. Mr. Williams comes of the family after which Williams College was named and is a graduate of that institution. He made a great record as Comptroller of New York State and afterward as Superintendent of Banks. He is making the Windsor Trust Company and that is making him. As he is only forty-two years old he has before him a future of much promise.

Still another of the new force in Wall Street is Gates W. McGarrah, who came from the land of Goshen (N. Y.) and has quickly made a deep impression in the financial affairs of the metropolis. Mr. McGarrah is president of the Mechanics and Metals National Bank, which is a recent consolidation of copper and other metal interests. He is an important factor in railway equipment concerns, such as the American Brake Shoe and Foundry Company. He stands for the banking end of big commercial interests and large-scale financing, as opposed to the old speculative ideas which used to be dominant in Wall Street.

Then there is Charles D. Norton, the forty-one-year-old vice-president of the First National Bank, who was born in Oshkosh, Wis., and ever since has been moving upward. He is a graduate of Amherst College and studied at first hand the banking systems of England, France and Germany. In 1897 he became assistant general agent of the Northwestern Mutual Life Insurance Company of Milwaukee, Wis., and general agent in 1905. He was made Assistant Secretary of the Treasury in April, 1909, giving up what was understood to have been a $25,000 salary in order to enter the Government service. He was President Taft's private secretary for a while, and then he came on to New York to take office with the First National Bank, where he is in line for bigger things.

Benjamin Strong, vice-president of the Bankers Trust Company, that very sturdy institution, which, scarcely a decade old, now occupies its own new skyscraper in the heart of Wall Street. Mr. Strong may be considered a financial Benjamin. He is a son-in-law of E. C. Converse, the president of the Bankers Trust Company, and is now the active head of that institution.

James N. Wallace, of the Central Trust Company, is on the reorganization committees of many railroads and industrial concerns which have fallen upon evil times and need to be put on their feet again. His directors value his services so much that occasionally they make him a present of a little matter of $50,000 or so.

Among others who ought to be mentioned in any such summary as this are the following:

Thomas W. Lamont, who takes Henry P. Davison's place in the Morgan house when Mr. Davison is away; Willard V. King, the cultured forty-four-year-old president of the recently merged Columbia-Knickerbocker Trust Company; and Seward Prosser, president of the Liberty National Bank, a type of the modern executive who does not hesitate to keep

the telephone wires hot over as great a distance as from New York to Topeka, Kan., to facilitate important business matters.

A fair proportion of these men are college trained. Two of them, Messrs. Wiggin and Norton, like the late E. H. Harriman, are the sons of clergymen. All are more or less interested in public and philanthropic affairs. Mr. Speyer is active in the Provident Loan Society, which lends money to needy people on personal property at legal interest. He is a director of the Mt. Sinai Hospital, the University Settlement Society, the Charity Organization Society, and the Saturday and Sunday Hospital Association. Mr. Wiggin is also particularly interested along these lines.

The conclusion must not be drawn that the older men of Wall Street are no longer in the saddle. They are still there, but the real work is being done by this newer generation. It is a good thing for Wall Street and the country at large that there is such a strong, capable and high-principled force at the helm.

These men stand for real constructive finance. They are here to build up and not to destroy. As long as men of this caliber hold sway there will never be another "Black Friday," nor any repetition of the many shady transactions and disgraceful deals that formerly brought Wall Street into disrepute and made the country at large distrust it.

New York City.

Christmas Gifts

BY RALPH M. THOMSON

Not grudgingly, O Lord, nor thru constraint;
Not as some money-changer bent on gain,
Whose motive bears commercialism's taint,
And shows the imprint of a deathless stain;—
But unto each alike—if great or small,
Or rich or poor, or far from Thee apart—
Lord, let me give, if I would give at all,
Without dissimulation in my heart.

Not loftily, O God, nor yet in state;
Not as the condescending of the earth,
Who of benevolence so loudly prate,
And stoop to pander in accord with birth;
But scorning to exact a single toll,
Lord, let me do, and for the least of them,
With something of that love deep in my soul
With which Thou gavest Him of Bethlehem.

Not critically, Lord, nor in disdain;
Let me not prove an ingrate strewing woe;
Forbid that I may cause one mortal pain,
Or change one token-bearer to a foe;—
But on this Christmas day when nations sing
The glory of the Infant undefiled,
Make me to know that jewels from a king
Have no more worth than tinsel from a child!

Savannah, Ga.

The Responsibilities of the Magazine

BY ROBERT UNDERWOOD JOHNSON

[A series of addresses is now being given at the School of Journalism of Columbia University by prominent editors, presenting various phases of newspaper and magazine work. Of these talks none has set forth a higher ideal than that of the editor of the *Century*, part of which we are permitted to print. For nearly forty years Mr. Johnson has been on the editorial staff of the *Century*, and the high standing of that magazine is the best of evidence that he has put into practice the principles here professed.—EDITOR.]

THE responsibilities of the magazine are chiefly those that affect its readers—that is, the public—on the theory that every periodical is a public trust—a test from which no respectable editor will shrink. There are other responsibilities connected with a magazine, including one upon which little has ever been said—the unwritten obligation of the contributor to aid the editor to attain his ideal article—which I hold to be one that shall interest the reader who knows all about the subject and the reader who knows nothing about it. But here I shall consider my topic only in three aspects—the responsibility, first, for accuracy; second, for impartiality, and, last of all, for tone.

In the point of accuracy, the obligation rests equally upon newspaper and magazine, with a larger allowance to the former for haste of preparation. If the last form of a daily is caught up in the rush of belated news that must be crowded in, so there are "last moments" in the magazine, with a smaller office force to draw upon. Still, much may be expected of the discipline and the habit of accuracy. In these days of authoritative writing the author may fairly be assumed to be an expert, tho the most serious errors I have ever known have been made by men who "ought to have known better." Among much of larger importance that I learned from my able, just and scrupulous predecessor, Richard Watson Gilder, was the ethics of technical accuracy: the scrutiny of names, dates, and the accents and spelling of foreign words; minute faithfulness in quotation; the elimination of common errors and awkwardness; intelligent punctuation; logical paragraphing, and many other conventions of composition that show only by their absence and therefore are regarded as the anise, mint and cummin of literary composition. Alas, no one praises good proofreading, but ah!—let him encounter the bad! Few know the trouble that is taken by magazine editors to run an error to earth, fewer still know the humiliation that follows upon blunder. The rule should be, take nothing for granted; challenge everything. There are forgotten faithful ones in printing offices, without whose aid some well-known authors, and some of us editors, would often have made a sorry sight.

Certain it is, that with all the admirable writing in America—and both in newspapers and magazines, I believe, the average is perceptibly higher with every decade—there is, in the enormous and increasing output of the printing press, a counter tendency to slouchy work. One does not expect much of untrained men writing on their non-literary specialties: that would be breaking a butterfly upon a wheel. The "best seller" may have its vogue for its content rather than its literary execution, yet, in the cult of numbers and bigness which is the damnation of American letters, the writer becomes an authority by the very multiplication of his name, tho he may not know the elementary use of "shall" and "will." There are those who believe that great aid and inspiration in the arts may be derived from the lately established American Academy, which, enlarging the functions of foreign organizations, so-called, has for its purpose to represent the interests and uphold the standards of letters and the other arts. Its authority, of course, would only be that of the men who compose it, and its methods would have to be the furthest possible from the dogmatic or the oracular. One minor way in which it might be useful would be in committing to its most scholarly section the preparation from time to time of lists of words not sanctioned by good

usage. Thus, gradually a standard—at least a negative standard—might be set up for writers and speakers.

It is undeniable that the widening of popular appeal is at the expense of accurate writing. The language grows and must grow from time to time, but there remains a distinction between growth thru immature and irresponsible reporters, taking the first bit of slang or the first approximate word that occurs to them, and growth by the appropriate employment of words by educated men. In short, we must sooner or later recognize that, while language is the natural expression of the multitude, literature is a fine art of a few, as are all other arts, and one to be achieved by long and arduous toil—save, perhaps, in the case of rule-breaking geniuses. It is thus only that the arts can be of use to the many. Stevenson, gaining the ease and flexibility of his style by laborious imitation, now of Macaulay, now of Emerson, is a steady rebuke to those who think with Dogberry that writing as well as reading comes by nature, or that discipline and a refined manner, whether in literature or life, have become a creed outworn.

The responsibility for accuracy goes deeper. It extends to the endeavor to procure faithfulness in what is called realism. This relates primarily to fiction, which is so large a part of every magazine and includes the detection of improbabilities, inconsistencies or non-sequiturs. Realism, necessary as a means, is inferior, often unworthy, as an end. Realism is the prose, idealism is the poetry, of fiction. One aims at an exactitude of fact indispensable in its *place;* the other breathes the breath of life into all it touches. Realism excites admiration for its laboriousness or its finesse; idealism glows with warmth and inspiration—and its limitations are as indefinite as those of flame. Realism is the perfection of the stone with which the temple is built; idealism is the glory of the temple itself —its form, mass, proportions, beauty. Thus every art presents a miracle—what miracle can be greater?—the transformation of inert material—paint and canvas, paper and ink, dull clay, the ivory keys of a piano—into ideas and significance. The editor if he is to aid in forming the taste of his time, if he is to aid in developing artists, not only must aim at faithfulness in detail and excellence of material, but also must recognize and strive for the permanence of ideal work.

Indeed, realism, in the sense in which it is set forth as a propaganda, that is, as actuality, does not exist. No one paints life as it is—thank heaven!—for we could not bear it. Somewhere he must compromise with the dulnesses, the secrecies, the indecencies, the horrors of life. He will come off very well if only he gets thru without telling any lies about life, so far as he does describe it. All the talk about realism resolves itself into a question of where one shall draw the line as a matter of taste, or, in some cases, as a matter of personal immunity from the attention of the prosecuting attorney. There are magazines, and prosperous ones, that, under the plea of realism, live by evil suggestiveness, debauching the immature, seducing good writers by dirty money, and inflicting upon the public generally an unwholesome view of society. Their success has inspired many a writer with the hypocrisy that he is probing like a surgeon for a hidden disease, when he is only sordidly joining the rush for the precipice. Misled by an apparent or even an actual cleverness, the public takes all that is offered it with little or no discrimination or scruple, and leaves it on the library table to contaminate the young. Let me not be misunderstood. No subject, short of the disgusting, is taboo in literature—*if* it be treated from the proper point of view and with the right color and proportion. Terror, even horror, may have its uses. Miss Jane Addams's volume on the "Ancient Evil," full as it is of terrible revelations of the underworld, is a tonic, tho a bitter one, and its seriousness and sincerity are enough to give the contemporary world the "new conscience" which she invokes. Contrast with it the salacious and sordid treatment of the topic by one of the amateur philosophers in fiction who masquerade as gentlemen! And yet what they do is done in the name of an accurate rendering of life!

We now come to the question of a magazine's obligation of impartiality. All magazines, however much they may partake of the character of miscellany, and however little of propaganda, have

a bias in their influence upon the public, due to choice of subjects and of writers. It should be a matter of pride to Americans that our magazines, with few exceptions, are above the suspicion of any other motive than the good of the public. The concealed advertisement is unknown in their pages, some going so far as to refuse to take up a subject at the suggestion of any one having a pecuniary interest in the treatment of it. The relation of the business and editorial departments is most honorably independent. They have no axes to grind for others or themselves at their own grindstones, and are more likely to do injustice to their friends than unduly to exalt them. They aim to achieve their highest success by serving the people. The editor not only regards his office as a public trust, but he more frequently minifies his office than magnifies it. In other words, he acts along the line of decent instincts.

We come now to the third and concluding aspect—the responsibility of the magazine for its tone, which may be said to include style, taste and moral influence.

Style I believe to be the inevitable expression of the personality, or, as Buffon puts it, "style is of the man." General Grant's style, for instance, is Doric, as the exponent of the solidity, simplicity and directness of his mind. Wherever found, in music, sculpture, painting, architecture, poetry or prose, style is the bold, sure and indefinable thing that gives reality and value, as opposed to the perfunctoriness, the artificiality and the fumbling of the amateur. Add to it charm and humor, and you have literature headed for immortality. It can be little aided or injured by discipline, and, like love,

> It can no more be hidden
> Than flame on mountain top.

It is the one thing an editor is most in search of, since it glorifies everything with which it deals.

But much can be taught about writing, and to judge by manuscripts received much needs to be taught. Sometimes it seems as tho we are in an ignorant, undisciplined and insurgent age, with Youth at the prow and Pleasure at the helm, and that the impatient wave has fallen upon letters. Common usage, the rule of the majority, is ousting the tradition of manners in society and in literature. A popular writer is sufficient authority for any solecism, and even good writers fail to feel their responsibility for keeping pure the "well of English undefiled."

Of course, in these days when soldiers, brokers, strikers, and a hundred other classes are imported into magazines as contributors, because of the intrinsic interest of what they have to say, one can draw no hard and fast, certainly no academic, line, or expect even a uniformity of standard. Sometimes the editor can only brush the mud off the coat of such a contributor, tie his cravat neatly, see that his buttons are all on, and otherwise make him presentable. But it is time to protest against the idea that all that is admissible in the *négligé* of common speech is suitable for that refined, exact and artistic expression of thought which we call literature. The main fault of magazine writing today is a vulgar disdain of good manners in language, method and appeal. Distinction of phrase, charm of style, nobility of aim often give way to irresponsible smartness, or a brutal "knocking over the ropes" in the endeavor to carry the immediate point. The theory seems to be that you will not get attention unless you raise your voice to the pitch of the steam whistle. No one can long endure unseasoned literary food, but must we have a diet of paprika? No, the kingdom of heaven is not taken by violence, nor are the laurels of literature. What we need is *quality*—the quality that gives distinction to style and indicates the sure presence of ideas. If writing is to be an art —rather than a form of desultory conversation—we shall need all the conservative forces we can command: such as respect for learning, the steeping of one's self in good literature, and the cultivation of nobility and dignity of view as against the vulgarity of standard that places the accent of contempt upon "highbrows" and, in a Presidential campaign, upon a professor.

When we come to the question of taste (which may be defined as tone in minor, tho still important, matters) there is still a wide opportunity for those disputes which the proverb forbids. To many the word "taste" implies something

aristocratic, an attitude of looking down on some one, and those who have taste and cultivate it have somewhat of the shamefacedness which nowadays one feels in discovering that he is exhibiting better manners than another. And yet taste is only a liking for the best things, and instead of renouncing our tastes in the presence of those who do not share them, thus keeping them in abeyance, we should rather feel that the best is none too good for us, and without aggressiveness should hold firmly to the assertion of our point of view. There is too much feeling in America that nothing matters; that bad art is almost as good as good art; that one book is about as desirable as another if it be interesting, and that somehow discipline, good manners and scrupulous integrity are going to come to children by inheritance or chance without example, inculcation or shaping. The literary anarchists consider taste as an effeminate quality that clogs the utterance of the poet or the painter, instead of something to be attained by a wide acquaintance with the principles of art. The taste of one age is not necessarily that of another, nor is taste the most important or fundamental thing in the world; but I hold it to be part of the duty of an editor to keep before himself an ideal of the greatest literature and the highest conduct, so that at least he may not lower the taste of his time.

But, altho taste may be lightly considered and dismissed as an additional refinement of life, without which one may live happily and even usefully, the same cannot be said of tone. That plow runs deeper into the soil. In a magazine tone shows itself primarily in the type of man whom the editor honors, or rather in the standard that he maintains in doing men honor. For it is not sufficient that he shall set up to the admiration of the public the most distinguished men of science, the noblest enterprises of philanthropy, the most beautiful works of art. He can do this merely in deference to the readers' interest. It is equally important that he should not hold his influence so cheap as to give its support also to fourth-rate, shady or meretricious personalities, that the chorus girl and the political boss, the prizefighter and the discredited broker shall not be accorded a place of authority and honor. It is this confusion of values which disturbs the sense of moral perspective in the young. Of what use is it to teach one not to steal, if he sees no discrimination against the clever thief?

Tone is also shown by the relative importance which certain themes hold in the schemes of editing. There is an affectation of comprehensiveness about some magazines, as there is about some men of the world. My experience of the so-called man of the world is that usually he is a man of only half the world. This is true of some magazines. They are so engrossed in the presentation of the superficies of life — the clash of material things—and in presenting each phase as if it were the only important thing in the world (and how cleverly they do this!) that you may search their pages from end to end for a year without finding in them a trace of nobility, or spirituality, or even of the type of poetry that exalts and comforts mankind in an existence sometimes heavily overshadowed by the cloud of Destiny. I am not now speaking of those that from the highest motives have taken up the cause of the oppressed and the helpless — God-speed to them!—but only of those who never seem to rise to a higher emotion than sentimentality. There is a vast deal of exploitation of the seamy side of life that is simply sentimental or sordid.

There are negative ways in which tone may be attained. One may avoid the cynical, or sneering, or whimsical, or perverse or depressing course, and yet not become complacent and colorless. But the magazine's duty goes farther. There are many things in our American life that need to be severely criticised. We are still in the formative stage. We need the faithful wounds of a friend. We need even satirists. We need critics —nowhere more than in the literary calling. But the province of the critic is not merely to find fault, but to set forth constructive principles. It is not difficult to discover even in the darkness of midnight that one is in a quagmire; what one needs to know is how to get out of it. The magazines have made many contributions to this constructive work and, each in its own way, have still this patriotic function to perform.

New York City.

Mary Mother

BY A. J. BONSALL

Lady Mary came to town,
And a dear, dear burden weighed her down.

Oh, and her woman's need was great,
But she could not pass the hostel gate.

Oh, and her woman's hour had come,
But in Bethlehem she had no home.

Lady Mary moaned and said:
"Let us seek the cattle shed."

And so this night she went to house
With the oxen and the cows.

There she fell upon her knees
And said: "God, give me a little ease."

There she fell upon her face
And prayed: "God, shew me of His grace."

And there, before the morrow's morn,
Lady Mary's babe was born.

Without the stars were shining bright;
Within was only a lantern's light;

But she saw her son and fondly smiled
With a mother's joy in her firstborn child.

She kissed his hands and side and feet,
For, "Oh," she said, "how he is sweet!"

With her weak and trembling hands
She wrapt the babe in swaddling bands

Then weariedly she closed her eyes,
And slumbered lightly, motherwise.

Sleeping, Lady Mary dreamed,
And wondrous real her vision seemed.

On every place her lips had pressed
A blood red mark made its attest.

His infant fingers held a dart
That sharply pierced her mother heart.

He took her by her yielding hand
And led her to a mountain land,

Where grew a monstrous cross of wood
That cast its shadow where they stood.

And all things fled before its face,
Save a serpent hissing at its base.

She would have cried with pain and fright,
But her breath was held by the awesome sight.

And her heart stood still as with fearless tread
Her manchild crushed the serpent's head,

Then made the cross's arms to bow
And lift him to its frowning brow.

She scarcely dares to look: but, lo!
The cross begins to change, and grow

Into a throne of splendor bright
That fills the ages with its light.

And nevermore the world grows dim,
But draws the world to worship him.

The mother wakes: she feels the smart
Of the arrow in her heart

She wonders, "Does my baby feel
Where the serpent bruised his heel?"

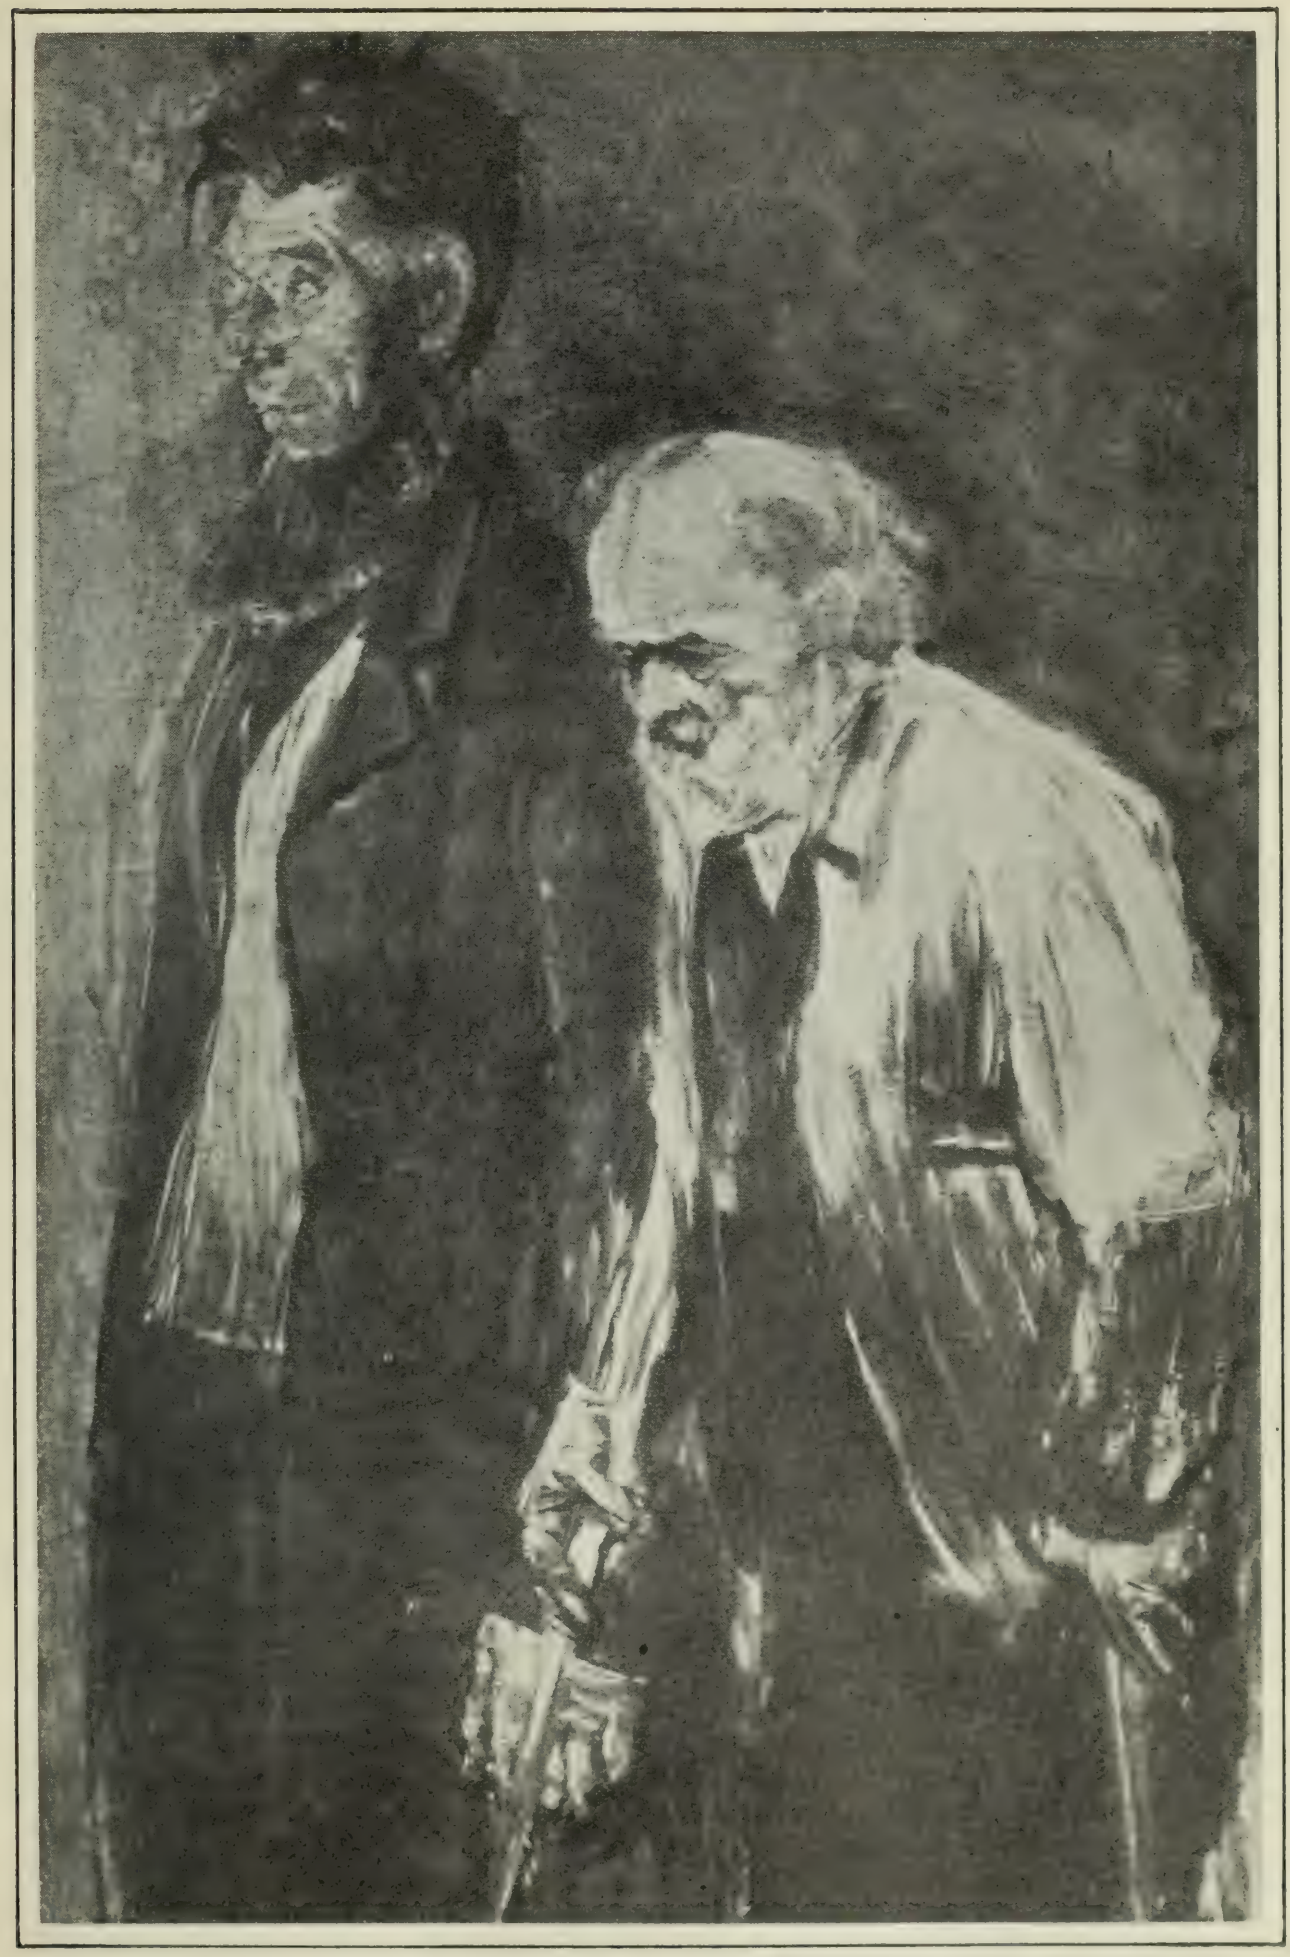
Concerning Scandinavian Art

BY HENRY GODDARD LEACH, Ph.D.

[The exhibition discussed by our contributor is held under the auspices of the American-Scandinavian Society, founded in 1908 to promote the development of intellectual relations between our own country and Denmark, Norway and Sweden. The exhibition has just opened in New York, and will be transferred to Buffalo, Toledo, Chicago and Boston—spending six months on this side of the sea. Dr. Leach is secretary of the American-Scandinavian Foundation, which finances the exhibition out of the funds left in 1911 by the late Niels Poulson, the Brooklyn iron merchant.—EDITOR.]



THE characteristic of Northern painting most likely to impress the American public is its closeness to the soil. The Scandinavian's art is at once a peasant art and a national. These are some of the reflections in which New York indulges on the opening of the Scandinavian Art Exhibition this month, in the American Art Galleries. In viewing the 150 pieces of painting, statuary, tapestry, wood carving and porcelain which make it up, the American public is for the first time granted opportunity to see Northern art as a whole, and to form an estimate of its larger tendencies.

"THE WOMAN MOUNTAIN CLIMBER"

A painting by Jens Ferdinand Willumsen. One of Denmark's contributions to what Paris calls *la belle école blonde*.

I have said in effect that the Scandinavian painter is in perfect harmony with his environment. One of the men who exemplifies this principle is Anders Zorn, the etcher and portrait painter already well known in America, where he has had for his subjects statesmen and captains of industry. In Sweden he lives and works among the Dal-carls, the peasants whom he paints. Carl Larsson, the celebrator of Swedish home life, is the smiling father of a romping family of young people. Gustav Fjaestad, whom Christian Brinton calls "the world's greatest painter of snow effects," is the former champion distance skater of Sweden. Prince Eugen lives in a villa overlooking the summer landscape of which he is Sweden's most sympathetic interpreter. Over Lake Vänern Otto Hesselbom glorifies in oil his "Native Land," while Gunnar Hallström, at his native island home of Björkö, expresses in water color "The Gladness of the Earth." Bruno Liljefors carries his gun into the wilderness and returns to his studio to paint only the birds of the sea and the beasts of the forest. Anna Boberg, the only woman who appears in this exhibit, sought in vain adequate expression for the artistic in her soul until, acting upon a happy inspiration, she cast her lot among the simple fishing folk; here, far north within the Arctic Circle, she lives in the Lofoten Islands, tossing about in rude fishing craft, or, enveloped in seal skins, painting in the open those salty studies of snow-ribbed mountains plunging into the waves and ribboned sails "Putting Out to Sea."

"BEGGARS," BY LUDWIG KERSTEN

A Norwegian canvas expressive of what Mr. Brinton calls this nation's "boisterous individualism."

"MY NATIVE COUNTRY," BY OTTO HESSELBOM
Smiling or desolate, green or snowclad, "Our Country" is "Our Country" to the Swedish landscapist.

This Swedish group of paintings is an epitome of modern Swedish life. From the ski scenes of Gunnar Hallström on the hard-packed snow and the half-congealed Arctic torrents of Fjaestad to the soft "Summer Night" of Prince Eugen and the warm "Hall Kesti" of Zorn; from the untamed nature of Liljefors's "Black Cock in the Snow" to the domesticity of Carl Larsson's genre picture of "My Wife," they all exhibit in fresh and glowing colors the youthful spirit of a widely scattered Northern nation awakening to a new sense of national life.

Less national to us Americans must appear the Danish collection, because the colors are more subdued and the subjects less striking: "A Portal," a "Lady Reading," a simple "Chamber with Sunshine" are the most sensational subjects offered by the most prolific of the Danish exhibitors, Vilhelm Hammershöi. Sea gulls and parsonage gardens and placid beechwoods, parrots and goldfinches and portraits do not attract the jaded eye as instantly as ski runners and rosy Mora lasses. But look again and you will realize that these Danish painters are expressing scarcely less than the Swedes the temperament of their own people. The Danes are habitually as subdued and unassuming as the Swedes are dignified and elegant. The exuberance which the Swedes have devoted to the picturesque the Danes have applied to economy and thrift, developing a humorous common sense of life which enables them to take supreme joy in beaches and beechwoods and lamp-lit, whitewashed cottage interiors, in the less ostentatious moods of life. Tho less attractive, with less technical skill, Danish art is perhaps even more independently national than the Swedish.

The spirit of modernism in Danish art is best exemplified in the eight paintings exhibited by Jens Ferdinand Willumsen. This artist is a leader among the group of men who revolted from the old Academy of Fine Arts in the King's Market in old Copenhagen, and exhibit in a hall of their own, which Willumsen himself designed, in the modern quarter of the town, opposite the Grand Central Station. The works of art exhibited in the Free Exhibit for a few years startled even the blasé and cosmopolitan Copenhageners. For Willumsen and his followers knew no school; they exprest their artistic moods as the spirit moved them. One year Willumsen exhibited colored statuary suggesting the days of Praxiteles, another season he painted on carved wood; his subjects varying from intoxicated café life to wind-swept mountain tops; and what he produced one year was no promise of what might

startle the public the next. The two paintings of Willumsen which are attracting most attention in the present exposition are "The Woman Mountain Climber" and "Youth and Sunshine." The former is a replica of the painting hung in the reception room of Hagemann College, a dormitory for technical students in Copenhagen. It shows a modern athletic woman who has climbed up into the clouds, and pauses with more peaks before her and yawning valleys stretching behind. "Youth and Sunlight" shows a group of naked children romping into the surf, the sunlight on their bodies, the sand and the sea spray.

More modern still is the group of paintings from Norway. Collectively they are less unified than even the Danish group. Eight Swedish painters are exhibiting and fourteen Danes, while the honors of Norwegian art are shared by seventeen painters. The Norwegians have been less to school abroad than the Swedes, and the modernists among their younger men, revolting from the stern naturalism of the nineteenth century, are striving after new symphonies of color to interpret life's hidden secrets. A leader in the new movement is Edward Munch, whose revelation of the so called unpleasant side of life has raised a storm of protest at home in Norway as vehement as the praise he wins in Germany. So it was with Ibsen in the drama; and both interpret the self-torture of the prying Norwegian soul.

New York City.

The Nettle and the Rose

BY LAIRD HAGIE

A little brown bird in a blossoming tree
Was singing and swinging so merrily,
That the wind came by and paused to know
What was the reason he warbled so;
And the bird replied, "With my little brown bride,
  I have builded a nest, you see,
And I fear no harm, for love is a charm,
  And nothing can injure me."

Then the wind laughed long with a sneering note,
And he spoke to the bird with a boast in his throat:
"I have roamed o'er the earth from mountain to sea
And never a charm like this can there be;
For I neither love nor fear God above,
  Yet never an equal have found";
And he tore the nest from the little bird's breast,
  And scattered it over the ground.

Then the song died out and the vale was still,
And God looked down from the hight of the hill,—
But only a tear-drop told that he saw;
For God in His wisdom had made a law
That the rain shall fall and the fates shall call,
  Whether we scoff or pray,
And the nettles shall grow and the roses blow
  Together till Judgment Day.

Mt. Pleasant, Iowa.

Literature

Ireland from Within and Without

It might be thought an impossibility to write of modern Ireland without touching on either politics or economics—on either the question of Home Rule or of land purchase. And yet this is exactly what Mr. W. P. Ryan has accomplished in *The Pope's Green Island.*[1] Mr. Ryan is concerned with something deeper and more vital than the political questions which have disturbed Ireland ever since the union of 1800. It is the revival of Irish nationality, the emergence of the spirit of Ireland from bondage, that forms Mr. Ryan's topic; and he finds the expression and the means of this revival in the Gaelic League—a league which has cut across the limits of the concentration camps into which the ecclesiastical and political authorities had driven the Irish; which, gathering Irish men and Irish women into one great organization, has reawakened the sense of their common nationality, common needs and common interests.

Mr. Ryan is a Roman Catholic. He may or may not be in the good graces of the Church authorities, but there is in his book no trace of any antagonism to the Church. There is, however, a great deal of frank criticism of Church authorities, criticism which none but a Catholic could offer, and which ought to be of value as coming from the inside. Mr. Ryan's book is really a plea for the Irish to be allowed to solve their own problems, and to deal with their own religious difficulties. Altho he does not mention the Home Rule movement, he shows plainly that most of the "Rome rule" of which such bitter complaint is made in Ulster is really imposed upon Ireland by England. England has undertaken to rule Ireland thru the priests and bishops; the hierarchy, recognizing the source of its strength, is therefore in keen antagonism to the national aspirations of the Irish people. "England in theory," he writes, "objects to Rome rule and the priest in the schools; but rules indirectly thru Rome and sets the priest in complete managerial control of the vast majority of the primary schools in Ireland."

The salvation of Ireland Mr. Ryan sees in the revival of a sense of nationalism thru the preservation and revival of the Irish language. The Gaelic League was formed in 1893. Its president ever since it came into existence has been Mr. Douglas Hyde, who has breathed into the League much of his own inspiration and zeal. The League arose in a time of demoralization, recrimination and confusion consequent on the tragic fall of Parnell. At first it seemed a vain dream to try to create a united Ireland, without distinction of class or creed, on the basis of a revived language and a resuscitated national literature. But dreamers are often wiser than practical men of the world, being of the spirit spiritual, not of the earth earthy. Before the end of the century the League had become a power in Ireland. Then a new danger appeared. The Church authorities disliked the bringing together of Protestant and Catholic in a common movement, and seeing themselves unable to check the progress of the League, they endeavored to capture it, and make of it an arm of the Roman Catholic Church. The attempts made to this end and the frustration of these attempts, with the triumphant re-election of Mr. Hyde, the Protestant founder of the League, as president, are dramatically described by Mr. Ryan. Incidentally he shows how slight is the hold of Romanism—as distinct from Catholicism—on the Irish nation, and how thoroly the Irish might be trusted to deal with the problems of outside interference were they free from the control of the alien government, which has made the priest its agents.

If at this late stage in the agitation over the Irish Home Rule question, a book were needed to justify the claims of the Nationalists, it is surely forthcoming in Mr. Barry O'Brien's *Dublin*

[1] The Pope's Green Island. *By W. P. Ryan.* Boston: Small, Maynard & Co. Pp. vi, 325. $1.50.

Castle and the Irish People;[2] for it shows perhaps better than any other book on Ireland the spirit in which that country has been governed since the union. In bringing out this spirit, or rather in making it understood by people who do not know Ireland, Mr. O'Brien has gone straight to memoirs and letters of Lord-Lieutenants and Chief Secretaries who have been in power in Dublin since the union, and he thus allows these rulers—few of them Irishmen—to reveal their own attitude toward the Irish people.

The all-important member of the British Government, so far as Ireland is concerned, is not the Lord-Lieutenant. It is the Chief Secretary—the man responsible for the government of Ireland to the House of Commons, and Ireland's representative in the Cabinet. Practically, this Secretary is another Minister for Foreign Affairs; for most Chief Secretaries, as Mr. O'Brien shows, have regarded Ireland very differently from the way in which the Secretary for Scotland regards that country or the Home Secretary regards England. The Secretaryship for Scotland is not nearly so old an office as the Secretaryship for Ireland, but it has never been held by a man who was not a Scotsman. Both Scotland and England would be shocked if it were proposed to install in the Scotch office a man who was ignorant of Scotland and the needs of the Scottish people. Since the union, to go no further back, Chief Secretaries for Irish affairs have not only not been Irishmen, but they have been strangers to Ireland, and in many instances they have been hostile to the Irish people. These men when appointed to office were ignorant of Irish history, Irish character and Irish wants, and in most cases indifferent to Irish claims.

Mr. O'Brien has compiled a list of the men who since 1801 have held office as Chief Secretary, Lord Chancellor of Ireland, or Lord-Lieutenant. He gives the nationality of each and notes the attitude of each of these holders of office toward the Irish people. Out of one hundred and fifty-seven men entrusted by the Government in London since 1801 with the government of Ireland, Mr. O'Brien can pick out only sixteen who have been in touch with Irish public opinion, and only five of this long list were of the same religious faith as the majority of the Irish people.

Few Canadians now living can recall the days when Canada was governed regardless of Canadian opinion, and the case is the same with Australia, New Zealand and South Africa. In these oversea dominions the government must be in accord with public opinion or step down and out. Irish opinion in the government of Ireland has been disregarded by the British Cabinet for generation after generation; and from whatever point of view the Irish question is regarded, one vital fact, as Mr. O'Brien proves, has to be conceded—that the Irish are governed by the public opinion of another country. Mr. O'Brien does not blame the officials of Dublin Castle—it is his experience that they are frank, able and courteous gentlemen, and he is satisfied that if Ireland had a national government tomorrow these officials would serve Ireland as faithfully as they now serve England. Mr. O'Brien has much to say that is new, or at any rate he succeeds in putting an old question in a new light. His story reads briskly, notwithstanding much detail and the many quotations necessary to give authenticity to his statements.

Mr. Sydney Brooks writes entirely from the point of view of an outsider in his *Aspects of the Irish Question,*[3] and, like most Englishmen who undertake to write on Ireland, he shows a tendency to lecture the Irish rather than to try to understand them. He is, however, favorable to the demand for Home Rule and he regards it as extremely probable that Home Rule will be granted to Ireland. He is also sympathetic with the efforts of the Gaelic League, Sinn Fein, and the Irish Agricultural Organization Society toward the creation of a sense of Irish nationality, and a revival of both the intellectual and the material prosperity of Ireland. He gives a pleasant and encouraging account of the newer and better conditions in Ireland which have

[2] DUBLIN CASTLE AND THE IRISH PEOPLE. *By R. Barry O'Brien.* New York: E. P. Dutton & Co. Pp. xvii, 378. $1.25.

[3] ASPECTS OF THE IRISH QUESTION. *By Sydney Brooks.* Boston: John W. Luce & Co. Pp. 255 $1.50.

come about within two decades. A change, he asserts, has come over Ireland's thoughts about herself. Her horizon has expanded, a new life has inspired her people, and the Irish mind is showing a new and decided inclination toward the concrete and the constructive. The realization has come to Irishmen that the upbuilding of the nation depends on the efforts of Irishmen in Ireland, and that these efforts to produce their best results must be non-political and non-sectarian. Mr. Brooks is as emphatic as Mr. Ryan in his assertions that Home Rule would not mean Rome, rule, but probably Rome ruin.

Aspects of Home Rule is a compilation of Mr. Balfour's speeches in opposition to the nationalist movement.[4] Some of them were made as long ago as 1893, when Gladstone's second bill was before the House of Commons. The most recent of the speeches was made in London in November, 1911, when it was known that the bill of the Asquith Government was to be the principal measure of the session of 1912. There is no recognition here of the case that Mr. Barry O'Brien makes out so convincingly that Ireland has always been governed without regard to the public opinion of Ireland. The demand for home rule, according to Mr. Balfour, is solely due to the fact that generations of agitators have told Irishmen that their destinies ought to be worked out separately from those of England and Scotland.

Home rule from twenty different aspects is discussed by prominent members of the Unionist party in *Against Home Rule*.[5] Mr. Balfour contributes one of the articles, and Mr. Bonar Law, who succeeded him as leader of the Unionist party in the House of Commons, writes the preface, which may be taken as the keynote of the book. Unionists have never admitted that the Irish have a substantial case for Home Rule. Their position is that the case the Nationalists have so long put forward is based on historical as distinct from present day causes. They will not or cannot recognize the Nationalist idea, and they oppose Home Rule because they conceive that it will weaken the national position of the United Kingdom and will inflict an intolerable injustice on the Protestant minority in Ireland. All these arguments are put with force and clearness both in *Aspects of Home Rule* and in *Against Home Rule,* and a student of contemporary British politics who is interested in the Home Rule bill now before Parliament need not trouble himself with the speeches made against the bill if he has these reprints of Mr. Balfour's speeches and the symposium in which the case against Home Rule is presented by Mr. Bonar Law, Mr. Balfour, Mr. Austen Chamberlain, the Marquis of Londonderry and other Union leaders.

Two Books by Galsworthy

IF a real knowledge of life comes only by the use of that "intellectual sympathy by which one places one's self within an object in order to coincide with what is unique in it," then John Galsworthy's essays collected under the title of *The Inn of Tranquillity*[1] is a true Bergsonian document, according to the intuitive method. Every one of its sketches of man or beast is written not as if looking into the heart of the subject, but looking out from it. He can and does wake within the reader the actual heartache of the artist in boots whom machine made footwear drives out of being; the dumb acquiescence of the old cabby before the taxi chauffeur; the blundering good will of jurymen no less than the helpless incoherence of the offenders with whom they deal. In one unforgettable story he makes one live, along with a hunted puppy, the agony of flight from fear. And if he go no further, this is a long way to go. He takes his own advice, offered in the second part of the book, "to set before the public . . . the phenomena of life and character, selected and combined . . . set down without fear, favor or prejudice, leaving the public to draw such poor moral as Nature may afford," and he admits that this "requires a far view, together with patient industry, for no immediate practical result." This disarms criticism in advance; after

[1] THE INN OF TRANQUILLITY. *By John Galsworthy.* New York: Chas. Scribner's Sons. $1.30.

that, no one can quarrel with him for reaching no result with all his heart-searching intuition, all his luminous understanding—unless one resent the indication in the first of these essays that he may be on the point of evolving from all this a philosophy of contentment. For out of such things as he feels and makes one feel no one has any business to evolve a contented philosophy. For those who regard "The Pigeon" as Galsworthy's masterpiece this book will be a delight; to those who measure him by "Justice" it will be a disappointment.

The mayor of our greatest city has in recent months extolled "outward decency" as an ideal for civic administration. Social "outward decency" is the butt of Mr. Galsworthy's most recent satire, as it has been that of his earlier work. The bitter humor of the "domestic drama in three acts," styled *The Eldest Son* and presented for the first time last month on a London stage, is admirable in pungency and cleanliness.[2] The piece has little or none of the whimsicality and picturesqueness of "The Pigeon," but it is forceful and moving. The situation is in no sense novel. The squeamish will complain, moreover, that it involves two cases of profane love and several lines of verbal profanity. The "eldest son" would be the villain in melodrama; here is he only one more victim of circumstance; one of those who must pay the price of error. He does not pay it in the conventional way, however; for the girl Freda does not hold him to his offer, and Swetenham, her old father, is delighted at the opportunity to decline for his daughter a "charity marriage" such as none of his stock have ever been reduced to accepting. "She's not the first this has happened to since the world began, an' she won't be the last. Come away!" As for the aristocrats, they are safe in their family pride and free to perpetuate their line without the infusion of vulgar blood. They are spared the jibes of Socialists and the cold shoulder of the county families. Quite appropriately, it is two women—Sir William's wife (no sentimentalist, either) and one of his daughters (the Amazon unafraid)—whom one supposes to really grasp the situation. And it is a strong recommendation of this domestic drama that almost all the characters in it command some degree of the reader's sympathy, even choleric Sir William, for all that his ethics are obsolete; even "Bill," the eldest. The moral is obvious: that a "marriage" cannot repair every wrong done, and that pride does not always belong to the blue of blood. This is an ironic representation of society such as the Meredith of "The Comic Spirit" and "Richard Feverel" would have applauded. It is also a piece of work more shapely and firm-textured than most of Mr. Galsworthy's.

[2] THE ELDEST SON. *By John Galsworthy.* New York: Chas. Scribner's Sons. 60 cents.

Catholic Modernism*

THIS history is of Catholic Modernism. The author touches not Modernism as it is found in the conventicle and the synagog. But is it not rather soon to write up the story of Modernism? Not too early, however, as Catholic Modernism is dead, that is, officially. M. Houtin gives in great detail the story and has made of the fast and dry facts an engaging life. He begins with the establishment of the Catholic Institute of Paris in 1878 and ends with the Odyssey of Duchesne, whom he calls "the father of Modernism." Thruout those thirty odd years, THE INDEPENDENT has kept its readers in touch with this movement among Catholics both abroad and at home. Today M. Houtin presents in logical and usually chronological sequence the leaders who came on the scenes; the books that have been written; the magazines and journals which ran their brief day; the Papal letters, briefs and encyclicals; the efforts of the busy Index.

For us Americans, the most striking feature in Modernism is that it served to bring the American Catholic Church into the story of the Universal Church. Just as the Spanish-American War made the United States a world Power, so about the same time the seething [illegible] turmoil, the condemnation [illegible]d in bandonments of Catholicism and it [illegible] in Rome and elsewhere, made American Catholicism an integral part of the Ro-

* HISTOIRE DU MODERNISME CATHOLIQUE. *Par Albert Houtin.* Paris, chez l'auteur, 18 Rue Cuvier.

man Church. To this result, of course, the establishment of the Catholic University at Washington, the creation of the Delegation Apostolic, and specially the meteoric career of Archbishop Ireland in the politics of the two hemispheres contributed chiefly.

The outcome is Rome's triumph. Good men have thrown off the soutane; great professors have been snubbed and forced upon their knees; able reviews and journals suppressed. At Washington, at Louvain, at Quebec, as at the source, the Gregorian in Rome, earnest, honest study is brushed aside and routine—hard and fast routine—is the order of the day.

Too soon, however, is it to draw out the final results of Modernism, and M. Houtin does not attempt it. On the whole, Modernism failed and Modernists never crystallized. They went down one after the other. *Divide et impera* is Rome's eternal maxim. Altho built on solid evidence, the outcome of indefatigable study, criticism and investigation, it went down before the onslaught of authority, backed by traditionalism and reactionism. Again it never got in touch with the laity at large, save in a measure in some political aspects, where it was not needed, for democracy spells the same and much better.

Modernism, however, has left important results. Loisy's works, especially "The Gospel and the Church" and "The Fourth Gospel," can never be shelved. nor can the positions ever be restored which Duchesne annihilated in his *"Liber Pontificalis,"* "The History of the Ancient Church" and *"Fastes Episcopaux."* Nor again, after Houtin's "Americanism," can American Catholic leaders lay any fair claim to be called "liberals." In the political world, there is no small connection between Modernism and disestablishment in France and Portugal.

Before closing it may prove enlightening to learn how a Catholic scholar defined an ultramontane. Mgr. Kraus, Professor of Church History in the University of Fribourg in Baden and the go-between of the Emperor William to the Pope, on his knees before that same Pope, defines that elusive entity thus:

"An ultramontane is he (1) who prefers the Church to religion; (2) who identifies the Pope with the Church; (3) who believes the Kingdom of God is of this world; and, as pretended by the Roman Curia in the Middle Ages, the keys of St. Peter embrace temporal jurisdiction over rulers and peoples; (4) who thinks religious convictions can be imposed or removed by material force; (5) who is ready to sacrifice a clear conclusion of his own conscience to the judgment of an external authority."—(Page 58.)

The Life of Mirabeau. By S. G. Tallentyre. Portraits. 8vo. Pp. 366. New York: G. P. Putnam's Sons. $3.50.

The biographer of Voltaire, "the last great influence of the old order," finds in Mirabeau "the first of the new." After Voltaire's "undamming" of the torrent, after Rousseau's work (neglected here), came the cue of the great orator and opportunist, the son of *l'ami des hommes:* a soldier, publicist, States-prisoner, pamphleteer, statesman and plagiarist who is, in sum, one of the vital forces of a vital age. Mirabeau used "all the strength of his mighty genius to turn those rushing waters into the channels of use, of wisdom and of safety." A demigod of tarnished godhead, powerful beyond belief yet human in weakness, Mirabeau's figure is a tempting one to the psychologist, to the moralist, to the historian. The whirlpools and rapids of his stormy career boil with his own heat

MIRABEAU.
From S. G. Tallentyre's Biography (Putnam).

and that of the times. Mr. Tallentyre's study is sympathetic, arresting, and—almost inevitably—dramatic. Mirabeau was not so much a revolutionary figure as a revolution on his own account: his short life, wrecked on rocks of heredity and fate, a shock of storms and passions innumerable.

A Picked Company. By Mary Hallock Foote. Boston: Houghton, Mifflin Company. $1.30.

In 1842, a Congregational minister, of Dugdale, New England, had a dream of transplanting a colony of his people, a "picked company," beyond the Rocky Mountains, where they would found a righteous state. Mrs. Foote tells the story of this exodus and of the grim journey of seven months it took to reach the new home in Oregon. The author's knowledge of pioneer life in the Far West and the scenery of the Rocky Mountains and the inherent interest of the subject promise an engrossing story; a promise that is hardly fulfilled to the reader's expectation. The book is rather a recital of the life of an unmoral and beautiful young woman who, as a member of the picked company, acts out her weak and wicked nature to the demoralization of the party. Her history is painful and most unpleasant, its telling has no justification, except as a touchstone to reveal the quality of the stern Puritan justice of the pioneers, who exiled her from their company, only taking her back in her dire extremity of illness and inability to return to the civilization left behind them. Stella Mutrie was not worth wasting so much ink over, especially when such a wealth of interesting material lay at the author's hand as that young life in Oregon, "a crusade founded on religion and hard work," with the minister ruling his little community in autocratic fashion, and the burgeoning of a new State in the springtime of the forties.

Retrospection. By Hubert Howe Bancroft. New York: The Bancroft Company. $2.

Mr. Bancroft's *Retrospection* can hardly be called an autobiography. It is composed of snatches of personal recollections, with much political and historical writing and even some adventures in economics. It touches here and there upon almost every subject, and it deals with the world and its problems from the perspective of a life of eighty years. To Mr. Bancroft the Pacific region is the most glorious section of the planet; Roosevelt and Diaz are his two modern heroes, and the labor union calls forth from him a long and fierce denunciation. The most interesting part of the book is that which relates to his indefatigable work in collecting and handling the material for his voluminous histories. He had at the beginning but a meager equipment for the task: little education and no skill or practice in writing. Born in Granville, Ohio, in 1832, he was sent at the age of twenty by his brother-in-law, a bookseller in Buffalo, to open a bookshop in San Francisco. Here he built up a lucrative business. Some years later, while engaged in this business, the thought came to him to gather a collection of every book, map and manuscript relating to the western part of the continent. To this task he devoted years of the time and labor of himself and a corps of assistants. He traveled extensively, usually with copyists and stenographers at his elbow. His means were abundant, his energy tireless, his purpose inflexible. As the collection grew, the problem of what to do with it became more pressing. He thought of an encyclopedic summary, he thought of a daily newspaper in which much of the data might be published, and after revolving in his mind every conceivable scheme, he finally decided to turn historian himself. From that decision, enforced as much by necessity as by choice, came the monumental historical works of Hubert Howe Bancroft.

A Man's World. By Albert Edwards. New York: The Macmillan Company.

"It is the story of how I, born at the close of the Great War, lived and of the things—commonplace and unusual—which happened to me, how they felt at the time and how I feel about them now."

Such is the proem and purpose of *A Man's World*, by Albert Edwards. Certainly no one could mistake it for a woman's. The story is told in bald, somewhat hard, prose, and it goes straight on from start to finish, like a man talking to that friend, more intimate than any we have, of whom we dream, who will excuse all because comprehending all. The book lacks atmosphere. It is a lunar landscape, with incredibly

harsh outlines. Arnold speaks of doing deeds of kindness, but with no kindness in his voice; he speaks of emotions without emotion; the effect is bleak and desolate. Like so many modern novels, the hero has no religion except humanitarianism, and no sensibility save a statistical, professional ardor—no, nothing so flame-like as that!—a mere bent for social service. We have said the hero had no religion—yet in his boyhood a ghastly travesty of Christianity was forced upon him, and he experienced a disillusionment which spoiled the sweet wholesomeness of a child's faith into bitter inner revolt. Becoming a hypocrite himself for a time, he thought all other professedly Christian people were hypocrites also. And he never outgrows that illogical attitude. His threatened blindness, his passion without love for Ann his nurse, his subsequent meeting with Suzanne, the beautiful young lawyer; his work as special county detective, and his experiences with the criminals in the Tombs, all are related in the same level, unaccented voice, as tho he were talking to a friend in a dark room, in an effort to make his life clear to himself. This peculiar style has an effectiveness that a more ornate one would lack, and while some of the incidents of his work in the Tombs are unsavory enough, dealing with cutthroats, cadets and their victims, and grafting politicians, the low-keyed manner of recounting them robs them of some of their loathsomeness. The story of Nina seems to us improbable, but its telling is the most dramatic part of *A Man's World*.

A Christmas Garland. Woven by Max Beerbohm. New York: E. P. Dutton & Co. $1.35.

The cleverness of Mr. Max Beerbohm finds a broad and congenial field for exercise in his new volume of burlesques. He tells us in his preface how he long ago "acquired the habit of aping, now and again, quite sedulously, this or that live writer," often in the hope, he suggests, of learning what to avoid. Some of these imitative efforts have appeared in *The Saturday Review*. Selections from those already printed with the addition of as many more make up this *Christmas Garland* of skits in the style of Kipling, Chesterton, Galsworthy, Gosse, Arnold Bennett and a dozen other contemporary authors. In every case Mr. Beerbohm has caught some of the pronounced features of the imitated writer's style or mood, and has accentuated them with such skill that the result is both instructive and highly amusing, without becoming too ridiculous. Among the best hits are those satirizing the intricate mazes of Henry James, the indecision of A. C. Benson and the egoism of G. Bernard Shaw. Each chapter presents some topic or thought related to Christmas, and the merriment produced is in harmony with the season.

Bismya, or the Lost City of Adab. By Edgar James Banks. 174 Illustrations. 12mo, pp. xxi-455. New York: G. P. Putnam's Sons. $5.

Dr. Banks was the director of the expedition of the Oriental Exploration Fund of the University of Chicago to Babylon. Bismya is the modern name of the ancient city of Adab, one of the very oldest cities of Babylonia, and the only one in which, with the exception of Tello, Niffer and Warka, any extensive excavations have been made. It is also one of the largest and most promising of them all. It was only after long and most exasperating delay at Constantinople that Dr. Banks finally obtained permission to dig there, and he carried on the work for nearly two years. He found the large, square mound to represent Adab, one of the oldest cities in Southern Babylonia. The most remarkable of the many objects found was the complete statue of a king of the extremest antiquity, whose name, read by Dr. Banks as Daudu, or David, was inscribed, in most archaic characters, on its shoulder. It now rests in the Ottoman Museum at Constantinople. The story of the diggings, of the Arab life of the camp, of the dangers and disappointments, and of the discoveries, is graphically told, with abundant illustrations. This is the second American expedition for the purpose of excavation, the other and more extensive one being that carried on at Nippur under Dr. Peters, Dr. Haynes and Dr. Hilprecht by the University of Pennsylvania. Dr. Banks's discoveries, if less important, were of

historical value, and included tablets, vases, a study of burial customs, and in various ways it increased our knowledge of early history, while it added another identified city of the highest antiquity whose name only had come down to us as Ud-nun-ki, or Adab, on the records of Hammurabi and other kings. By way of criticism we would simply observe that there is no evidence whatever to show that the uninscribed cones figured on page 415 were phallic symbols.

Traditions of Edinburgh. By Robert Chambers. Philadelphia: J. B. Lippincott Co. $6.

Edinburgh has been visited and revisited, written and rewritten about, but all lovers of "Auld Reekie" return to Robert Chambers's *Traditions of Edinburgh* for a book of valuable antiquarian lore and historic interest. Published first in 1825, when the author was a mere stripling, it created a stir in the old town and won the warmest praise from all critics, notably Sir Walter Scott, who contributed some of its material. Mr. Chambers was in a splendid position to gather authentic material. He knew the literary men, the artists and gossiping worthies of the period, and extracted valuable information from many old gentlemen and ladies whose minds were stored with recollections of other days and manners. His book was revised in 1846 and took its final form in 1868. Messrs. Chambers, the Edinburgh publishers, have now issued it under the American imprint of J. B. Lippincott in a solid, sumptuous, albeit unwieldy, volume, with many drawings in color and pencil by James Riddel, R. S. W. The artist has caught the fleeting atmosphere of this romantic old city, and depicts its old buildings, winding streets, narrow wynds and tortuous closes in all weathers; in the genial sunshine of sharp spring, when the snell east wind (which evoked Stevenson's epithet of West-endy and East-windy) sweeps along the magnificent Princes street; the August heat tempered by the sea breeze; the autumn haar, which, rising from the North Sea, drifts in a wetting, hazy cloud about the Castle Rock; and in the snowy mantle of winter, when ancient roofs and chimney pots are transformed. The text contains a wealth of material for the antiquarian, the architect and the artist, but most of all for the reader who loves a gossipy chronicle of bygone days. In the pages of this entertaining book live again such characters as Deacon Brodie, Weir the wizard, Knox, Darnley, Queen Mary, Burns, Boswell, Allan Ramsay, the members of the court at Holyrood and the Castle, the judicial bench, the bewigged wits of Parliament House, and the belles of the Assembly Rooms. There is legend galore, the talk of the clubs, alehouses and theaters, and back-stair and front-door gossip. Many of the buildings described have now fallen before the progressive builder and iconoclast, but enough remains to show the glories of the northern capital. Footnotes and a map trace what remains and what has vanished.

Friar Tuck. By R. A. Wason. Boston: Small, Maynard & Co. $1.35.

"Human nature is so blame contrary, itself, that nuthin' else could possibly be contrary to it." When Happy Hawkins, supposititious chronicler of the tale, makes this remark only the fact that it is made on page 119 keeps us from regarding it as a defense of the book in which it occurs. It is a valid defense, moreover, since the characters, from Horace, the tenderfoot, who became a cowboy without discarding his side whiskers or his everlasting references to Grecian mythology, to Olaf, the Swedish ranchman, who could see people's astral bodies, all stand out vividly and share with real human beings the characteristic of not being "copied from life." Friar Tuck is the best drawn and most incredible character of all. His real name is the Rev. John Carmichael, but he earned his nickname by his industrious search for the worst company he can find, tho with a nobler motive than that of his medieval namesake. He combines in himself orthodox doctrine, unconventional manners, a fine voice for hymn singing, a love for horses, a remarkable talent for endangering his life, sincere nonresistance principles and a skill at bowie-knife fighting. If any criticism must be made, it is that pioneer Wyoming has been somewhat overdone in fiction of late years.

The Jingo. By George Randolph Chester. Indianapolis: Bobbs, Merrill Co. $1.35.

The author of "Get Rich Quick Wallingford" has achieved a delightful combination of realism and fantasy in his sparkling and imaginative tale of an undiscovered island kingdom, peopled by descendants of some highly cultured settlers, who are entirely civilized and modern in spirit, but, knowing nothing about the rest of the world, are primitive in customs. To this mysterious island, thrown up from the sea after a shipwreck, comes an intensely modern young American business man. Here is indeed a splendid *mise en scène* for romance and imagination, and Mr. Chester works out a novel of many surprising situations, excellent character drawing, and a charming plot. A note of delicate humor pervades it and the gradual transformation from the arcadian simplicity of island life to extreme modernity—modern manufacturing methods, inventions, public service, banking, politics and social customs, all introduced by the wonderful modern—is most cleverly and convincingly described. The impossible becomes quite possible thru the writer's skill, and thru the constant and stirring action runs the thread of a charming love story.

A Prisoner of War in Virginia. By George Haven Putnam. New York: G. P. Putnam's Sons. 75 cents.

Mr. Putnam gives a most realistic account of his experience in Libby and Danville prisons during the years of the Civil War. He was captured at the outset of the famous battle of Cedar Creek, October 19, 1864; tho the enemy were routed by Sheridan later in the day, he did not have the good fortune to escape. Stripped by his captors of every discoverable bit of personal property, he and his companions were at once taken to Richmond, where a further search disclosed on the person of our author the sum of $150, sewn in his shirt. This was of course promptly appropriated. He was kept in Libby until late in December, when with others he was taken to the Danville prison. At the end of February he was returned to Richmond, under a parole which gave him freedom from prison but confined him within the Confederate lines. Shortly before the fall of Richmond he was exchanged. The details of prison life are vividly told —the suffering from hunger, cold and disease; the gradual breaking down of iron constitutions and the wearing away of strong minds into blank obliviousness or insanity; the desperate and fruitless attempts at escape, and the almost equally desperate devices employed to keep themselves from physical and mental collapse. Mr. Putnam writes without indignation or invective; it is a tale of a far-off happening, which carries no surviving resentments. That much of the cruelty and hardship suffered was avoidable and needless is borne in upon the reader, but it is not told him. He learns that from the white spaces between the lines.

The World's Leading Painters. Leonardo da Vinci, Raphael, Titian, Rubens, Velasquez and Rembrandt. By George B. Rose. New York: Henry Holt & Co. $1.75.

This latest addition to the worthy series of biographies called "The World's Leaders" adheres strictly to the aim of the series and gives accounts of the lives of the six eminent painters named on its title page, mentioning, of course, the best works of each of these masters, but without attempting much of critical exposition. Barring a tendency to a rather too frequent use of the superlative in characterization, the essays are judiciously and carefully written. Devoid of distinction of style, they necessarily vary widely in readableness in accordance with the varying appeal of their subjects to human interest. Mr. Rose knows well the historical setting of each of his artist-heroes, and for those who have not the time or the desire to read the standard biographies, but who want something more than the ordinary encyclopedia provides, this succinct work will serve a useful purpose.

Ancient Philosophy. By A. W. Benn. New York: G. P. Putnam's Sons. 75 cents.

Philosophy is in danger of becoming really popular if the present flood of digests, summaries and reproductions of the thinkers of the world continues. A charmingly readable, almost colloquial,

book like the one Mr. Benn has given us is especially dangerous from the point of view of those who believe the light of learning will go out unless it is hidden under a bushel. The volume is not a mere list of names and dates, for the author insists upon placing the ancient Greek thinkers in line with modern thought and upon giving his personal reaction on each of the thinkers with whom he deals. This running fire of comment is sometimes laudatory, sometimes caustic, but always interesting. An anti-theological bias peers out at intervals of a few pages, but aside from this the author's point of view is commendably impartial. Mr. Benn takes a peculiar joy in smashing revered historical traditions, as where he undertakes to prove that Epicurus was one of the least scientific of all Greek philosophers, or where he develops at length the religious intolerance of the Athenians and concludes that "there was in the Athenian populace a dense layer of intolerant fanaticism such as no other Greek city ever exhibited," speaking casually in another place of "such a home of superstition and intolerance as Athens."

Literary Notes

....In our issue of December 12 we attribute to B. W. Dodge & Co. an illustrated reprint of *Marcus Aurelius Antoninus*, issued by the Dodge Publishing Company, of New York.

....*The Apostles' Creed* (Eaton & Mains; 75 cents), by Henry Wheeler, contains a short sketch of the history of that symbol together with an extended popular and strictly orthodox exposition of its contents.

....An authorized translation of Rodin's rhapsody *Venus* (to the Venus of Melos), by Dorothy Dudley, with pictures of the Venus and the sculptor, bears the imprint of B. W. Huebsch (pp. 26; 50 cents). Here Rodin pays tribute to the ancients, who obtained,

"by a minimum of gesture, by their modelling, both the individual character and the grace borrowed from grandeur that relates the human form to the forms of the universal life. . . . Admiration overtakes me like sleep."

....The whole business of entertaining, formal and informal, from a golden wedding to iced tea on the porch, is described and illustrated in *The Party Book*, by Winnifred Fales and Mary H. Northend (Little, Brown & Co.) It arranges luncheon and dinner giving, with the proper invitations, menus and table setting, decorations, refreshments for evening parties, and ways of amusing children and grown folk, in four divisions, but the beauty of the book is the way it goes into the details that the young hostess wants, even to the delicate differences that every one is supposed to know and usually learns by making mistakes.

....The initial number of *The American-Scandinavian Review*, dated January, 1913, has just reached us. It contains three Danish sonnets by Maurice Francis Egan, articles on the industrial future of Norway and the commercial future of St. Thomas, translations from the Icelandic and from August Strindberg, and several pages of editorials and book reviews.

....The best of the Cole lectures so far is the volume by President W. H. P. Faunce, who gives in terms of purpose, faith, character, moral action and social ideals some highly satisfying answers to the question, *What Does Christianity Mean?* (Revell; $1.25). The frequent use of happily chosen quotations and illustration gives clarity and force to well established truths

RODIN THE MIGHTY

A drawing by Gertrude Huebsch reproduced as the frontispiece of "Venus," by the sculptor (Huebsch).

....The Library of Congress now contains over two million books and pamphlets, 120,000 of them being accessions of the year 1912. Including MSS., music and maps, the collection has passed the three million mark.

....*The Chink in the Armor,* by Mrs. Belloe Lowndes, tells cleverly and realistically of life in a French gambling spa. A well-written mystery story of cosmopolitan society—reminding one somewhat of Marion Crawford. (Scribner; $1.30.)

....The reasonableness and unconventionality which characterize the discussions of Dr. George C. Peck in *The Method of the Master* (Revell; $1) make his chapters on various permanent problems of the religious life attractive and helpful.

....If any one is desirous of seeing Mr. Lincoln done up in passable verse to the extent of 400 pages, he will find the feat accomplished in Mr. Denton J. Snyder's *Lincoln in the White House* (Sigma Publishing Company, St. Louis, Mo.).

....The important but burdensome task of sifting out the best from the flood of new books for children has been undertaken by the Federation for Child Study and an annotated book list of recent publications is published by the Federation at 10 cents. Secretary: Mrs. Thomas Seltzer, 219 West 100th street, New York City.

....From Mohonk Lake, N. Y., we receive two modest but useful brochures, each with forty colored illustrations, one of birds of New York and the other of flowers. The descriptions are adequate but not technical, and allied birds and flowers not figured are noted and described. If the yellows are not always as bright as nature, the drawing is good and the colors fairly indicated.

....George Bourne in the *Change in the Village* (Doran; $1.35) gives from his personal observations a vivid picture of English rural life of today; not a pleasing picture for the continual drain of the most enterprising to the city and decline of local industries has caused a degeneration in the community spirit for which the author in his optimistic closing chapter fails to suggest any adequate remedy.

....Mr. Harold M. Wiener has brought together in his *Pentateuchal Studies* (Oberlin: Bibliotheca Sacra Co.; $2.15) a number of articles which continue his attack on the validity of the conclusions established by the higher criticism of the Old Testament. The author believes that he has at length vanquished the critics and now finds their whole system *in extremis.* Not content, however, with pointing out errors in the critics' work, he assails their characters and declares that men as "Doctors Skinner, Briggs and Driver" descend to "the deliberate misrepresentation of facts." But then Mr. Wiener himself is not a "critic," but a "barrister-at-law."

....The Department of Germanic Languages and Literatures of Columbia issues an interesting monograph on *The Chorus in the German Drama,* from its inception in the responsive chants of the tenth century, thru its various revivals and reappearances to its new form of the orchestra in the music dramas of Wagner. An introductory chapter sketches the position of the chorus in Greek, Roman and French classical drama.

....It is unfortunate that the travels of so thorogoing and brisk a globe trotter as Edgar Allen Forbes should be published so unattractively as the Fleming H. Revell volume entitled *Twice Around the World* (Pp. 319; $2). The illustrations are, many of them, excellent, but they are wretchedly disposed, apparently because novelty of effect is aimed at. You may open Mr. Forbes's book and read of almost any part of the world—especially the Far East. It only depends what page you open.

....*The Lure of Life,* by Agnes and Egerton Castle, is a semi-romantic story of a young bookish recluse whom the sudden inheritance of fortune thrusts out into the world. He is led into a flirtation of souls with a married siren who enslaves his imagination but keeps him at arm's length. She has a niece, a healthy out-of-doors hoyden. To save the aunt from a situation incapable of explanation to her suspicious husband, the niece marries the student. A fairly entertaining story. (Doubleday; $1.35.)

. . . "It seems that, all the things of life having been said thousands upon thousands of times, there remains nothing for the poet to do but point to them with his finger, murmuring the while some words to accompany his gesture; and that is what Mallarmé did."

So writes Rémy de Gourmont in his fourth series of *Promenade's littéraires* (Mercure de France; pp. 348; 3 fr. 50), wherein he leads one thru various symbolistic byways, not quite all of them *culs de sac,* to a concluding paper on the mooted subject of *Latin et français;* a paper declaring for the Latin culture, as all contributions to the subject (of any weight or conviction) have declared, since the *mal du français* was first diagnosed. But not all of these delectable essays, republished from the *Mercure,* the *Temps,* etc., treat of symbolists: we even find Meredith discussed, and Senancour, and Casanova, and Racine, and other writers of verse and of prose, oddest of page fellows.

....The Princeton University Press announces that among its Monographs in Art and Archæology in preparation are: *Problems in Periclean Buildings,* by Professor George W. Elderkin; *Lost Mosaics of Rome,* by Professor Charles Rufus Morey; *Cassone Paintings and Other Furniture Panels of the Italian Renaissance in America,* by Professor Frank Jewett Mather, Jr.; *The Red Relief Ware of Cervetri in Etruria,* by Professor Austin Morris Harmon; *Luca Della Robbia,* by Professor Allan Marquand.

....To those who find relief from the burdens of life in talk about thrones, and the hardships of princesses when the quarrelsome parents can't agree on the price offered for a royal bride, the reminiscences of the Princess Luise of Prussia (*Forty-five Years of My Life,* by the Princess Luise of Prussia. New York: McBride, Nast & Co.), will afford refreshment. The forty-five happy years of her life expired in the year 1815. Her early life at the court of Frederick the Great and his immediate successor, with its sunny and dark spots, is well told in French, and well translated into idiomatic English.

....About the time when the Princess of Prussia was sharing the gay life of courts and taking her chances of happiness in a throne seat, a gay life of a very different external aspect was passing at the democratic centers of a new country. The story of it, as it arranged itself in various small capitals, from Philadelphia to New Orleans, is delightfully told in the American way, that is, with the intrigue left out, and the scandal hardly touched upon, by Mary Caroline Crawford (*Romantic Days in the Early Republic.* Boston: Little, Brown & Co.; $2.50). The fathers and mothers in the Quaker City looked rather closely—perhaps too closely—upon the frivolities, yet while human nature in republics is not wholly different from human nature among the royalties, and the ladies' dresses will take the fashion of the times, the gaieties of our capitals would more complacently bear the censorious eye of "Concern" among Friends as to the deeper frivolities. Certainly the "Mis-

CONGRESS HALL AND THE CHESTNUT STREET THEATER, PHILADELPHIA, ABOUT 1800
From Crawford's "Romantic Days in the Early Republic" (Little, Brown)

chianza" engineered by Major André of unhappy memory, in the last days of General Howe's residence as master of ceremonies in Philadelphia, gave a European coloring to the simple games of the rustic ladies of the town of Brotherly Love. Only a few weeks ago, all this was staged in the great Philadelphia pageant. The ladies were quite as lively and quite as lovely as those of the capital of Frederic's successor. The festival occurred in May. In July some things had happened outside, and Mad Anthony Wayne wrote:

"Tell those Philadelphia ladies who attended Howe's assemblies and levees that the heavenly, sweet, pretty redcoats—the accomplished gentlemen of the guards and grenadiers—have been humbled on the plains of Monmouth. The Knights of the Blended Roses and of the Burning Mount have resigned their laurels to rebel officers, who will lay them at the feet of those virtuous daughters of America who cheerfully gave up ease and affluence in the city for liberty and peace of mind in a cottage."

....The importance of the little book called *The Modern Household*, by Talbot and Breckinridge (Whitcomb & Barrows; $1), is in inverse ratio to its size. A study of the place of the home in the modern social structure, of the forces tending to its decadence and to its upbuilding, of its scientific management so as to make returns "in terms of comfort, enjoyment, growth, education and individual and group efficiency," it may well be that its reading and study—it is especially adapted to study classes—may mark a point of illumination for more than a few home makers. Questions at the end of each chapter are a guide to individual research and investigation, and the bibliography is unusually complete.

....A woman who knew Guy de Maupassant exceedingly well contributes to the *Grande Revue* an article on the great storyteller. The paper deals, for the most part, with personal traits—notably his joy in physical strength, his love of children (without any desire to have them for himself) his passionate love of life—yet it discusses also his literary preferences. Not that he read much; but perhaps that is one reason why his opinions on books have value. He held that Rabelais, Molière and Balzac were the greatest geniuses produced by France, tho to Flaubert he paid the tribute: "He is the master—the most perfectly harmonious of artists." Zola he held to be of a talent more wide than deep. What could be saner than these literary judgments? Yet so early as 1885, if we may believe this anonymous writer, the author of "Horla" was the victim of strange illusions.

....Few will read Henry Lahee's rambling pages on *The Grand Opera Singers of Today* (L. C. Page; $2.50) because of interest in the subject matter, much of which is too trivial for one to waste time over. The illustrations, however, are attractive, and amid the chaff some grains of wheat may be found in the form of quoted criticisms and sketches of significant personages of the opera world. Mr. Lahee's argument for opera in English is unanswerable: "People are repelled by the idea of listening to what they cannot understand. Give them opera in English and they will enjoy it. When they find that it is just as unintelligible in English as in any other language they will learn to appreciate the more artistic presentation of opera in its own language."

....From the United States Bureau of Education we have *Special Collections in Libraries in the United States*, prepared by W. Dawson Johnston, librarian of Columbia, very valuable for one who wants to know where to find special rare books. Do you want to study Italian literature in old editions? You will be told to go to Wellesley College; or to the Jewish Theological Seminary, New York, for the Kabbala and Hebrew incunabula; or the New York Public Library on Volapuk and Esperanto. We miss mention of Union College's collection of Palestine Topography from Edward Robinson's Library.

....A small volume of homely verse by Dr. W. A. P. Martin, D. D., LL. D. (*Legends and Lyrics*. Shanghai: Kelly & Walsh), will be welcome to those who, in the missionary world, have a clinging desire to find high poetry in the Celestial Empire that was. These Eastern legends give evidence at least that tall monarchs could step down at times from the immeasurable affairs of state to construct somewhat measureless rhapsodies in verse. Thus the Emperor Kien Lung, in 1748, visits a famous mountain shrine, and writes his imperial autograph, very humanly, with this poetic addition freely rendered by Dr. Martin from the engraved inscription "on the face of a rock near the entrance of the temple":

> "Why have I scaled this misty hight,
> Why sought this mountain den?
> I tread as on enchanted ground,
> Unlike the abode of men.
>
> Weird voices in the trees I hear,
> Weird visions see in air;
> The whispering pines are living harps,
> And fairy hands are there.
>
> Beneath my feet my realm I see,
> As in a map unrolled;
> Above my head a canopy,
> Bedecked with clouds of gold."

....Most interesting is William Dudley Foulke's account of how he came to write *Masterpieces of the Masters of Fiction* (Cosmopolitan Press; pp. 269; $1.25). Having determined to reread "the masterpieces," instead of taking up recent fiction, he prepared a list of great prose works to be read rapidly, that he might acquire "a comprehensive notion of the whole," and discover what changes time had made in his appreciation. Rabelais, Cervantes, Le Sage, Defoe—the list begins; it includes Voltaire, Bernardin de St. Pierre, Chateaubriand, Balzac, Dumas, Merimée, Feuillet and Flaubert, of great French prosateurs, and a sprinkling of Germans and Russians, besides writers of English. Each author is appraised in a few paragraphs on the basis of the "masterpiece" read. The criticism is sincere. Beyond that we can think of no compliments to offer Mr. Foulke. It is no easy matter finding something worth while to say of great books when one is limited in space. Nor are there evidences here of personality or charm of treatment. The summaries are excellent enough, however, and Mr. Foulke ends on a note of optimism: "There has been no time in the past when the standard was higher than it is today."

....The title *A Farmer's Note Book,* by C. E. D. Phelps (Badger; $1.50) is a little misleading. Its day by day jottings show as keen an interest in the roots of words as of plants—in the evolution of an implement as in its present utility—as many gleanings from the library as from the field. The diary form is a pleasant one in which to intersperse this quaint bookish lore with the really valuable suggestions of a practical farmer of wide experience.

....New Testament scholarship owes a great debt of gratitude to Professor Adolph Harnack for his distinguished services in the interests of historical and literary criticism. That obligation is considerably increased by [illegible] review of the evidence relating to Luke's authorship of the Acts and *The Date of The Acts and of The Synoptic Gospels* (Putnam; $1.50). On the ground of lexical and other evidence Professor Harnack argues for the unity and Lucan authorship of The Acts, and contends that the best attested dates of the other books are in harmony with this conclusion.

....Tastily bound religious booklets are always held in high favor as Christmas gifts. A large assortment is furnished by different publishers. Here is the leather-bound pocket series issued by Funk & Wagnalls, and containing some ideal discourses on noble themes: *The Latent Energies of Life,* by Dean Brown, of Yale; *The Call of Jesus to Joy,* by Dr. W. E. Griffis; *The Conservation of Womanhood and Childhood,* by ex-President Roosevelt; *The Misfortune of a World Without Pain,* by Dr. Hillis, and *The Signs of the Times,* by W. J. Bryan (each 75 cents). From the Pilgrim Press we receive Professor Rauschenbush's enforcement of the social gospel, entitled *"Unto Me"* (35 cents), Dr. Grenfell's sturdy appeal in *What Can Jesus Christ Do With Me?* (35 cents), Rev. J. N. Pierce's incisive study of *The Masculine Power of Christ* (50 cents), and William Allen Knight's touching story, *At the Crossing With Denis McShane.* There is a special holiday edition of the gentle tale of *Brotherly House* (Doubleday, Page & Co.), by Grace S. Richmond, and the extracts from the sermons of the late Dr. Richards, arranged for daily readings, are more substantially bound under the title of *The Truth in Love* (Plainfield, N. J.: Honeyman; $1). We may well add to this list the choice messages of Dr. Horton in *Victory in Christ* (Sunday School Times Company), and the attractive volume by H. M. Kieffer containing *Short Stories of the Hymns* (Lancaster, Pa.: Steinman & Foltz). Each and all of these are worthy to recall devout memories and bear friendship's greetings.

Pebbles

TOM—Nothing but women at the beach where I am stopping.

Jack—Summer girls, eh?

Tom—Yes; some are girls.

SAPLEIGH (who hasn't bagged a thing).—Yes, I know Rocksley well. I've often shot at his country home.

Friend.—Ever hit it?

"DIDN'T I see your daughter with a strange young man last night?"

"You certainly did. When he asked my daughter to go with him for some ice cream he asked her mother to go along, and he went home at 10 o'clock without any hints, and he wears sane socks and don't seem to think he knows it all. He certainly is a strange young man."

THE two women were seated on the sand at the seashore. The elder one said:

"That's my daughter with the red bathing suit just going into the water."

"Oh, indeed!" said the other one.

"Yes, she's just eighteen. I'm going to bring her out next winter."

"Gracious! You don't mean to say you're going to allow her to stay in the water that long?"

THE New York INDEPENDENT presents an editorial on "What College Men Do." Baylor University boys will please notice that the editorial is a little less than a quarter of a column long, but it is fairly comprehensive. —*Waco* (Texas) *Morning News.*

IN Mr. John Joseph Conway's *Footprints of Famous Americans in Paris* (Lane) one finds diverting anecdotes none of them so good as those told of the artist Whistler. To an English student smoking a pipe when Whistler entered his painting school, "You should be very careful," the Master said. 'You know you might get interested in your work and let your pipe go out."

It was in London that a very dirty newsboy approached Whistler. "How old are you?" the great man said

"Seven, sir," the grimy urchin answered.

"Oh! you must be more than that," Whistler insisted.

"No, sir, I ain't," rejoined the boy.

Then, turning to a friend, Whistler said: "I don't think he could get as dirty as that in seven years, do you?"

The Master rarely met his match, altho he did so once in Sir Morrell Mackenzie, the famous throat specialist. He called in Sir Morrell to treat a French poodle of which he was most fond. The physician was none too well pleased at being invited to diagnose the illness of a dog. He prescribed, however, pocketed his fee, and drove away. Next day he sent an urgent message to Whistler asking him to call quickly. On his arrival Sir Morrell said, without a smile, "How do you do, Mr. Whistler. I wanted to see you about having my front door painted."

Drawn by C. R. Weed.

"UNTO EVERY ONE THAT HATH . . ."

The Independent

Entered at New York Post Office as Second Class Matter. Owned and published by The Independent Weekly, Incorporated, at 130 Fulton Street, New York, N. Y. Hamilton Holt, President; Frederic E. Dickinson, Secretary and Treasurer.

A WEEKLY MAGAZINE FOUNDED IN 1848

One Year, $3.00 Single Copies, 10 Cents

Single copies over six months old, 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as those offered by any responsible agency.

An order for the change of an address should be received two weeks before the change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of the publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Binders holding in book form thirteen current issues will be furnished for 45 cents. If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We welcome unsolicited contributions, but writers who wish their articles returned, if not accepted, should send a stamped and addressed envelope. Even so, we cannot hold ourselves responsible for their return. Authors should preserve copies of their manuscripts.

Advertising rates will be furnished on application.

Annus Mirabilis

To enjoy this Christmas Day, and to recall the amazing history of the year, would be worth the burden of a hundred reincarnations. Gautama might be glad to come back again even from the passionless peace of divine absorption; or Confucius from the nothingness of spiritual excellence and the disappointment of political hopes; or Alexander from the crash of his universal empire; or Paul from the great company of the Apostles and Prophets, that they might see and rejoice in deeds of the year in which we who live are so happy to have had a part. For what would they see? An empire greater than Alexander dreamed of, where Buddha and Confucius are worshiped by a quarter of the world, suddenly overthrowing its tyrannous dynasty and assuming popular government and setting its face westward to fresher ideals of true civilization; and the horrid dream of the Turkish nightmare lifted from the despair of four centuries of European enslavement, and the Turk driven back to the walls of Constantinople to make his next stand in the Mosque of St. Sophia.

It is good to live in these days. We may be grateful if Providence allows us to see the weight of these world-revolutions. There are those whose interests do not reach beyond the limits of the village that confines them. The man who has never been north of Dallas cares nothing for what the rest of the country or the world thinks or does. It is a great thing to be a citizen of the whole world, and to live in such a world as this year sings the hymn of peace and good will. For Christianity this year has made a tremendous opening in China. Christianity is in good favor just now. Its representatives have been at the very head of the revolution. Christianity working for liberty and enlightenment; the first President a Christian, and the next a supporter and friend of Christian education. In less than a year the ancient empire has been transformed into a modern republic, peace restored, and no reason appearing why, faster than Japan, China should not be absolutely regenerated, its provinces linked together with railways, and a worthy and strong civilization established, to clasp hands with us across the Pacific. Shall we reach out the hand, or shall we be the backward nation? China will ask of us brotherly justice.

And what can we say, that is worthy on this Christmas day, of the Balkan miracle? The chancelleries of Europe smiled, or trembled, when the little Balkan states, poor in men and money, dared war with the Turkish Empire. It was a miracle that they could league together to fight a common foe. Greater was the miracle when they showed marvelous military genius and drove the hated Turks pell-mell to the gates of Constantinople.

And the clock will not go backward. China will never be the old empire again. The world is becoming republican to stay republican. Even the regal governments of Western and Southern Europe have kings only in name, and the people tell their kings what to do. Nor shall our children or our children's children ever again see the Turk dominating any part of Europe. The four centuries of Moslem oppression is over for ever and ever; and the Turkish rule in Asia will never again be what it was, cruel and blighting. For the Turk is human, and the Turk can learn as well as can the Chi-

nese. With a sudden leap forward the redeemed territory will enter a new life. The passion with which the soldiers have fought indicates what was the restraint with which they have held themselves during the four centuries' waiting for their revenge; for Constantinople was captured by Mahomet forty years before the discovery of America. It was a strange result of the overthrow of Constantinople which scattered the learned Greeks and their books and gave Europe the Renaissance and the Reformation. But what ended the Dark Ages for Europe put a pall of blackness over Greece and the Balkans. In our days Greece and Servia and Bulgaria and Rumania have become independent and have made wonderful progress, but no greater than Macedonia will make.

For the breed of great men cannot become extinct. Do we remember that in this very redeemed territory was born Alexander, the greatest conqueror of history, whose Macedonian phalanxes overcame Egypt, Persia and India, and whose single empire was sufficient to be divided into four great empires? Do we remember that the greatest of the Byzantine Emperors, Justinian the Great, whose Pandects and Digest are the foundation of all modern law, and who built St. Sophia, the most daring of all churches, was born of Slav parents in this same territory? It is a beautiful land, inhabited by brave mountaineers, a land of poetry and attar of roses, and America has had no small part in giving its youths the ideals of liberty restrained by constitutional justice.

No Standing Army

We call the attention of the American people to a bill now before Congress (House Resolution 8141) which, if enacted, is likely to cost the nation millions and millions of money and will practically turn the national guard into the regular army. Briefly stated, the principal purpose of the bill is to pay officers of the militia from $100 to $360 and the enlisted men from $45 to $225, thus imposing a burden of nearly $15,000,000 on the Federal Government to pay the militia recruited now only to the minimum prescribed strength. But once this resolution is on the statute books, there is nothing to prevent the national guard growing to enormous proportions and the expense rising to $100,000,000 or more. Indeed, this is precisely what is likely to happen. And furthermore, as Congressman Slayden, of Texas, says in his able minority report against the bill:

> "If once the burden of maintaining the organized militia is transferred wholly to the general Government, as sooner or later it certainly will be, if the course of legislation marked out by the pending bill is entered upon, the natural and sure result will be the eventual conversion of the citizen soldier of the militia into a professional soldier devoting his whole time and attention to military duties and supported by the general Government on an equal footing with his brother in the regular army. In other words, a second regular army will have been created, but it will be an army actively engaged in political life and wielding therein an influence so great as to be irresistible when consolidated and exerted in the interest of that army or any of its members."

Moreover, this bill gives the President power *in any emergency* to order the militia out, even out of the country, and thus leave the State perhaps unable to cope with some domestic dispute. The young man who enters the militia in the future may be called upon against his will to embark on some foreign war of aggression with which he may have no sympathy at all.

The bill can only be justified on the ground that we need a great standing army to repel some probable invasion from without, for not even the most blatant Jingo will admit we need a great army for offensive operations on other nations.

But before we find it necessary to have a great standing army the following impossible hypotheses must be supposed:

First—That England, France, Germany or Japan intend to fight us. Manifestly we don't need a large army or navy for any other nations. They are too small.

Second—That if they do fight us, they can defeat our first defense, the navy.

Third—That they could declare war, defeat the navy and land on our shores and take some important positions before we could muster in and drill a citizen army capable of driving them out.

Fourth—That if they got on our shores, they could even get off alive.

The truth is that England, France and

Germany are on record as being willing to negotiate arbitration treaties with us of unlimited scope. We can negotiate them whenever our Senate is ready. We speak with conviction when we say that Japan will follow suit when the time is ripe. If any one doubts the good will that Japan has for us let him remember how recently Japan voluntarily consented to a modification of the Anglo-Japanese alliance so that England might negotiate an arbitration treaty with us and not have to choose in case Japan and the United States were at war whether to break the alliance or the arbitration treaty. Surely Japan would not have renounced her right to call upon England's aid if she had ever expected to have trouble with us.

If, then, there is absolutely no need of a great army for national defense, there can be no justification whatsoever for spending millions of extra dollars on one just because the populace prefers more to see the soldiers march by on the Fourth of July than the Amalgamated Hod Carriers on Labor Day, or because some giddy girls prefer brass buttons to gold shirt studs.

If the United States of America is the greatest nation in the world it is because her citizens have given their main attention to the cultivation of the arts of peace. This has been our greatest source of strength even when we had to enter upon war. Shall we reverse our whole history simply to please a few militarists when the fruits of their wicked madness can be seen in any nation in Europe today?

We hold it is not a law of nature that militarism is to consume all the fruits of progress. Let the people speak in no uncertain tones to Congress and defeat this iniquitous measure, that threatens the peace and prosperity of the country.

Character

Mr. J. Pierpont Morgan's testimony before the Money Trust Committee interests the country, for he is supposed to be the center of the Money Trust, and in many other ways he is an interesting and picturesque character. He is a big man physically; he does very big things; he takes up the great business corporations—steel, shipping, banks, as the Lord takes up the isles, "as a very little thing." But all this does not seem half to occupy his mind. Now he runs off to Egypt to oversee the excavation of an ancient city; again he is purchasing in bulk a great collection of Japanese porcelain, or a rare series of old masters, or sending to this country several cargoes of choice treasures for the Metropolitan Museum of Art, of which he is president. There is a current story that he declined a professorship of mathematics in the University of Göttingen, where he was a student. His father was a banker and his name he takes from his grandfather, Rev. John Pierpont, Unitarian minister and poet of temperance and anti-slavery in the old Washingtonian war against drunkenness and the Abolitionists' war against slavery.

Mr. Morgan's testimony before the Pujo committee has touched various lines interesting and amusing, as when and can be none, or when he said he did he declared that there is no money trust. not have a large holding in several banks, only a million or two. But far more interesting was his sparring with the counsel of the committee, Mr. Untermyer, over the matter of credits. Mr. Untermyer would have it that it is only the collateral that counts when a man wants to borrow money, but Mr. Morgan insisted that the character of the borrower is of first importance. But these passages from Mr. Morgan's testimony are worth quoting in full:

Q.—"Is not the credit based upon the money?" A.—"No, sir."

Q.—"It has no relation?" A.—"No, sir; none whatever."

Q.—"So that the banks of New York City would have the same credit, and if you owned them you would have the same control of credit as if you had the money, would you not?" A.—"I know lots of men, business men, too, who can borrow any amount, whose credit is unquestioned."

Q.—"Is that not so because it is believed that they have the money back of them?" A.—"No, sir. It is because people believe in the man."

Q.—"And is regardless of whether he has any financial backing at all, is it?" A.—"It is, very often."

Q.—"And he might not be worth anything?" A.—"He might not have anything. I have known men to come into my office, and I have given them a check for a million dollars when I knew they had not a cent in the world."

Q.—"There are not many of them?" A.—"Yes, a good many."

Q.—"That is not business?" A.—"Yes, un-

fortunately it is. I do not think it is good business, though."

Q.—"Is not commercial credit based primarily upon money or property?" A.—"No, sir; the first thing is character."

Q.—"Before money or property?" A.—"Before money or anything else. Money cannot buy it."

Q.—"So that a man with character, without anything at all behind it, can get all the credit he wants, and a man with the property cannot get it?" A.—"That is very often the case."

Q.—"That is the rule of business?" A.—"That is the rule of business, sir."

Q.—"If that is the rule of business, Mr. Morgan, why do the banks demand, the first thing they ask, a statement of what the man has got, before they extend him credit?" A.—"That is what they go into; but the first thing they ask is 'I want to see your record.'"

Q.—"For instance, if he has got Government bonds, or railroad bonds, and goes in to get credit, he gets it, and on the security of those bonds, does he not? He does not get it on his face or his character, does he?" A.—"Yes, he gets it on his character."

Q.—"I see; then he might as well take the bonds home, had he not?" A.—"Because a man I do not trust could not get money from me on all the bonds in Christendom."

Here is a lesson, a principle, for young business men. It is not sharpness that wins success so much as it is character. The man who stands by his promises, the man who will not put bonds on the market unless he believes them good and will back them up; the man who tells the truth and deceives no one; the man whose business is legitimate and carried on conservatively—that is the man who can get credit. Honesty is the best policy. Character pays in business; only character can win permanent and great success. This is not a bad lesson for Christmastide.

The Town House and the School-House

Professor Commons, of the Wisconsin Industrial Commission, adds another to the public uses to which public schoolhouses can be put when he asks that they provide room for an employment office. They are already used here and there for polling booths, for public libraries, for political meetings, for popular lectures, and for social centers. But they are not generally used in these ways, but are devoted solely to teaching children five or six hours a day during school term, and are utterly useless in the evenings and in the long vacations. This is a real waste of money and service.

The ordinary country town has several sorts of public buildings. Usually there is a high school building and several buildings for primary and intermediate schools. Then the New England town supplies a town house for town meetings, and there are one or more buildings for the fire department. It may have a court house provided by the county. Then there are buildings of a semi-public sort, a lecture hall, a music hall, a library building, a meeting place for the grange and others for various clubs or societies, all costing money to build and keep in order. Why so many and at such cost?

In a scattered community or in a town with several centers it is necessary that there be local schoolhouses for small children, unless they be carried to a central school; but it would seem that these various public utilities might often be provided for in a single large building to the great advantage of the people, and the incidental advantage of the taxpayer. Let us suppose the high school to have, besides its necessary classrooms and its provision for industrial training and scientific apparatus, a large hall where free lectures will be given, where the agricultural fair will show its treasures, where political meetings can draw the voters, where elections and town meetings can be held, and which could be rented for theatrical, musical and other entertainments—or even for Sunday use to churches. In a smaller hall or in schoolrooms, various clubs, societies and granges could hold their regular evening meetings, and why not have an employment office? It will thus be made the social and industrial center of the town. One or more rooms will be open every evening for social purposes, and in one of them will be the public library. Attached to it will be the town museum, where the historical club will gather in cases old books, papers, manuscripts, records, battle flags, ancient spoons and flagons, and a hundred of the choice memorials of the ancestors; while around the walls will be arranged the mirrors, chairs, clocks and bureaus, with their secret drawers, of a former generation. They would be to the children as educational as their history books, while the natural

history club will have its cases of minerals, birds and butterflies.

We would have the parents follow the children to the schoolrooms. At present the parent never visits the schoolhouse. We would have the schoolhouse the best known building in town. It should belong to the parents as well as to the children. It should not be simply a schoolhouse, but be rather the town's house, the decent and useful public house. There is no important public function that such a building might not well assume. Education does not stop when a boy or girl leaves the high school; it has just begun. The lucky or ambitious youth goes on to college, but those not so lucky do not need to stop there. They must be still learning, and the evening classes, the lecture courses, the musical programs, the political meetings, the scientific, historical and social clubs should all be provided to supply in the school building a post-graduate course for the high school graduate. Hundreds of central high school buildings are erected every year, and the State Board of Education should be ready to supply ideal architectural plans at various costs, and should have in consideration the larger extension of the service which the principal building owned by the town can supply.

Home Rule for Counties

SURPRISING tho it may appear, especially in view of the rapid development of local government in the municipality in the United States, the movement toward home rule for the county, that is, the administration of local affairs within the county, is a very late one. California is one of the pioneers of the movement, its electors having adopted an amendment to the Constitution (Art IX, Sec. 7½) in the autumn of 1911, permitting any county to frame a charter, with the approval of the Legislature, for its own government. This fact made the inclusion of the subject in the program of the Los Angeles meeting of the National Municipal League particularly appropriate, as did the further fact that a county board of supervisors was actually in session at the time the league met in that city, to devise a charter for Los Angeles County.

City Attorney Percy V. Long, of San Francisco, a leading lawyer of the State and a progressive student of government, pointed out that, with certain limitations, from a very early period in its history, the local territorial subdivisions of England enjoyed a very great degree of freedom, and were permitted to manage their local affairs without interference from the central government. The foundations of local government were thus laid down, administrative power was decentralized, and a knowledge of the laws and obedience to them was consistently taught by a participation in their administration and enforcement. This was the contrary of the continental systems, in which the central government absorbed, governed and regulated everything, metropolitan and provincial, thus destroying the latent capacity of the local civic bodies to enjoy and exercise the governing power, with its helpful lessons in preserving and defending the common weal.

Altho this form of local independence was brought over to America by the first settlers, the growth of the power of the State legislatures was at the expense of the law-making local bodies, until at the present time practically all power of administration and taxation, except in certain municipalities administered under charter government, is vested in the State legislatures.

This legislative intervention has resulted in (1) the elimination of the active legislative and administrative participation of the county in government; (2) the irresponsible, and often factional, passing or killing of important local legislation; (3) the creation of dangerous State-wide corruption in county politics; and (4) the causing of needless county expenditures, with correspondingly heavy taxes. Absolute non-participation in the control of county affairs is not advocated by leaders like Mr. Long, but merely non-intervention in purely local matters. These evils have become so glaring as to cause county government to be pointed out as one of the weakest points in the governmental system of the United States.

As a remedy, the new idea of home rule for the county has come to the

front. This means (1) the right of each county to decide matters of local interest for itself; (2) exemption from special legislation; (3) the privilege of choosing its own administrative officials; and (4) to formulate its own system of taxation.

Thus the people most affected are to be invested with the power of self-government and self-taxation. Under such a charter, framed by its own representatives, definite, and at the same time flexible, the county is to be enabled to assure to its inhabitants a more economical, more efficient and more popular control of local affairs than under the old, highly centralized system.

In the same manner, so its advocates maintain, home rule in taxation will assure a greater equality in assessments, the elimination of expensive and inefficient state boards of equalization, and enable the individual county to tax in the manner that it deems best. Under this system certain interlocal industries will be the objects of State taxation, while property purely local in character and location will be the source of county revenue. In the opinion of men like Mr. Long, who spoke at length before the league, laws for uniform taxation thruout the State are no longer efficient and must give way to this new practical method.

An examination of the California municipalities now operating under such charters as are advocated for the counties shows the granting of a wide range of power in caring for the welfare of the community. This would mean the placing in the hands of the several counties the agencies for prosecuting great public benefits, such as irrigation, as well as the control of such public utilities as power sites and lighting plants.

The Los Angeles County Board of Supervisors availed itself of the opinions of the local government experts present at the Los Angeles meeting of the National Municipal League. At the several hearings which they attended, these experts strongly advised against any elective county officers whatever, other than the members of a commission. If their views prevail, even the sheriff will no longer be in politics. He would be appointed by the courts, and the district attorney would be appointed either by the courts or by the commission. The assessor would likewise be appointed.

The experts emphasized efficiency. The commission would select talent superior in quality, it was contended. Civil service and independence of politics would develop the efficiency, it was argued, that popular elections failed of. Among other suggestions it was urged that the constables serve under the sheriff; that justices of the peace should go under civil service, and the establishment of an efficiency bureau.

The Oregon Progressives have prepared a plan (which will go before the electors of the State on an initiative petition) which involves the appointment of the sheriff and the district attorney by the Governor, and vests all the removing power (save that exercised by the county judge, who is to remain an elective officer) in an elective board of three county directors, who are empowered to hire a county business manager, who in turn is to appoint all other officials.

Short ballot advocates, chief among them Richard S. Childs, urge such a county board of directors, with power to employ a county manager at an adequate salary. It will be interesting to see how this idea will take hold of the county populations, especially those where the rural communities predominate.

The Ideal School System

THE INDEPENDENT was the first to advocate industrialization of the public school system. We have believed in and advocated it these forty years. It was plain that we should not educate the bulk of our boys and girls away from the farm, and that was exactly what we were doing. It was equally evident that our schools were leading the movement toward concentration of population into towns. The factory and the school were working together. The mischief of overcrowding and depreciating production could be reversed only as we altered the school tone and method. Agricultural colleges, working far in advance of the people, were not enough. The common schools were headed the other way.

Just how to get at this matter and work a reform was not so clear. The last twenty-five or thirty years we have been working at this problem. Public senti-

ment had been almost universal that education was desirable for its own sake. Only a few saw that a republic must educate for an end, and that that end must not be knowledge, but ability to apply knowledge; first to character and then to united social efforting. Experiments have been going on in all directions. Public sentiment has astonishingly changed. The agricultural colleges have done marvels in the way of winter schools, orchard schools, and direct instruction of the farmers themselves. They have trained a splendid band of New Age leaders.

Reorganization of the town schools has led in some cases to the introduction of shops, and in some cases garden work is a part of the curriculum. Trade schools have given momentum to correlated country work. The dissatisfaction of the land workers who have found their children educated for stores and commerce has grown into a demand for a change. The farmer reasonably desires that his boy shall be so educated that when he returns home he shall be a better farmer than those who have preceded him. That each pupil shall be trained for what he is personally worth is but half the story. The momentum is now toward social results, toward consolidated effort for higher civilization.

This naturally has involved a large number of propositions. Not a few of our cities have been working out the new education from local inspiration, and the results are remarkable. The *Journal of Education* publishes an article by its editor, A. E. Winship, on the schools of Los Angeles, schools which he believes to have reached a little more perfectly reorganized system, up to date in all respects, than any other school system in the United States. This may not be quite true, but it is so approximately true that the schools of Los Angeles deserve the careful study of all parents and teachers.

Beginning at the right point, which is the out-of-door point, Superintendent Francis turned his kindergarten out of doors. We shall live to see the larger part of all school work in the open, but we are glad to see a beginning with the youngsters. The class meets on a platform, about thirty by forty feet, with a roof, and with sides about two feet high. Protective slides can be drawn in case of a storm. Here the Froebel blocks are left out, and other formalities of that sort. It is recognized that children can play with anything, if they have a chance, and in this case they have spent months playing with the pieces of board and blocks that were left by the carpenters when the school buildings were erected. There was decidedly too much mechanism and formality about the old style kindergartens. Froebel probably did not intend to carry all children thru with the same formulas, but Mr. Francis is right to liberate them altogether. Inexpensive blocks and inexpensive tools lead the way to working in the dirt with inexpensive garden tools. Children cannot be taught too early to create something, and by far the larger half of the boys and girls like best those tools that dig, and those results which are brought about by the assistance of Nature. We can set down about one-third to mechanics and leave two-thirds for the land.

This out-of-door business has already eliminated the stupid child from the younger class of pupils, working wonders, it is said. It is not altogether left out from the higher classes. There is a certain amount of initiative permitted in the whole school. Mr. Winship tells us that he saw the eighth grade boys set to unpacking and installing a lot of benches for the wood-working room. They uncrated these benches in splendid order, carried them to the room and installed them in perfect condition. They then went back to pack up the rubbish, withdrawing the nails to prevent waste. It is nothing to say that boys, at any time, would be glad of this sort of relief from book work—let them have it in every school and let study be entirely relieved of its tedium.

There is an intermediate building in which are collected the sixth, seventh and eighth grade pupils. Here comes another right up to date idea, worked out. Thru the whole of the sixth grade the child himself is the study, and the intent is to find out what he is good for and what special activity he most enjoys. This secures him from being twisted somewhere in his course to doing what

he does not like, and being fitted to do somebody else's work in life. In some parts of the city, as in all large cities, many children are handicapped by environment; it is the business of the schools to see that they are not handicapped for life. It will startle a novice to be told that the children in these schools of Los Angeles are not being cut down in their hours of work, but are encouraged to do much more than the school hours provide for. Any child can be at the buildings from eight to nine in the morning and for two hours after school. If so, the boy or the girl will find provision for manual and domestic training. The teachers who put in this extra time are well paid for it, but, very curiously, they all report that it does not wear on them, but rests instead. The solution is that study becomes a joy instead of a task when there is freedom in it.

The Board of Education has built an inexpensive luncheon house, with adequate kitchen. It pays the cook, who serves meals of soup, meat and vegetables to any pupil, for a penny. The women's clubs of the city add to this nutritious diet, nuts and oranges, grapes and apples. This does away with the craving of the pupils for lunches that are served up by peddlers, and compounded of unwholesome viands. The intent is, however, to take care of those who cannot secure adequate nutriment at home. It is well understood that mental work needs a well nourished body.

We are now prepared to hear that Los Angeles has gone even farther and established a hygienic department in full. Hygiene is a part of the curriculum. The child is taught to be healthy. There are seven school physicians, four of them men and three women, and there are seven school nurses. The physician in charge has elaborately equipped medical offices, and his work covers all phases of medicine and surgery, nervous as well as purely physical disturbances being cared for. Here is a solution of the sex problem. It is not yet safe to put this in the hands of untrained teachers, but a school department of hygiene covers the case. The board has even erected a hospital, where those children can remain and be provided for whose cases cannot be cared for in a single day.

Superintendent Francis is arranging for a junior college, adding two years to his high school courses, so that the pupils may be fully equipped for the labors of life, or may enter any university or college. There are eight hundred teachers who are also pupils. That is, eight hundred of the teachers are taking various special courses as well as instructing in other lines. No thoroly up-to-date educational system can leave out this feature. The superintendent who expects to accomplish great things must be supplied with adequate helpers. His teachers must be ready to study as well as to teach, and the Board of Education must provide for this sort of instruction. Here then we have a great organization, all studying, all working, all co-operating.

The Board of Education, the supervisory force, and the hundreds of teachers, the children as well and their parents, constitute a body fully alive to their common interests, and wide awake to the reformatory character of what is going on. Every school with its library has also a trained librarian, whose business it is to assist the teachers with lantern slides as well as books. The school becomes the great organizing force of the community, and it is felt at every point. When our American school system gets hold of the whole people, to construct and reconstruct socially as well as individually, we have reached the ideal school.

President Eliot's Theology

President Eliot is thus quoted in an address to the Unitarian Ministers' Club in Boston:

"You cannot go to the Chinese or Japanese with your doctrines that are mere traditions. Take the doctrine of justification by faith, or the atonement, or the doctrine of the Trinity, etc. These are not acceptable to the Chinese or Japanese minds. They find more in Confucianism or Buddhism than in this teaching. But tell the heathen Chinese that you believe in good works, and that you do not accept the inferiority of women, and he then listens to you."

Nevertheless the Chinese and Japanese are taking to Christianity quite largely. We do not see what objection President Eliot can have to the doctrine of justification by faith, which is quite a Unitarian doctrine, the converse of which is justification by ritual ceremonialism, as any

reader of Paul's Epistles can know. Justification by faith means trusting with simple love the mere goodness of God, as Abraham did before he was circumcised. Nor do we see why he "relucts" from the atonement. Unitarians have had much to say of at-one-ment; and if President Eliot believes in a God who rules the moral order of the world, as we are sure he does, he must believe that in some way, and out of His infinite love and mercy, God will bring souls out of the condemnation of sin into pardon and peace, which is atonement, altho we may rightfully differ much in our philosophy of it. Of course, President Eliot, as a Unitarian, rejects the doctrine of the Trinity; but what kind of a Trinity? Is it the Trinity of the Nicene and Athanasian Creeds, or is it the modal, or Sabellian, Trinity which sees in the one God the three relationships of fatherhood, redemption and guidance?

Wholesale Freeing of Convicts

We are glad to learn something for which to commend Governor Blease, of South Carolina. He says he will follow the example of Governor Donaghey, of Arkansas, who has pardoned 360 convicts from the State penitentiary. What the Governor has in mind is to break up the detestable and cruel convict camp system. Some Southern States make over a million dollars out of the system. The convicts are mostly negroes, but some of them are white men and boys. In order to fill up the leased gangs minor courts and justices of the peace send men to these gangs on long terms for minor offenses. Governor Donaghey tells of two negroes sentenced for thirty-six and eighteen years respectively for forging an order for eighteen quarts of whisky, three years for each quart, and of a white boy who died from being compelled to work in the hot sun while suffering from fever. This is no sudden impulse which has led the Governor to take this action, for he had denounced the system from one end of the State to the other, and had again and again begged the Legislature to abolish it. Now he abolishes it himself. It is a system of slavery, under which men guilty of minor offenses, or not guilty at all, are put in the power of irresponsible and usually brutal drivers, whose business it is to get out of them the last pound of labor. The system is a shame to any State that adopts it, and the Governor of Arkansas has discovered a short cut for destroying it, which other States than South Carolina might well adopt.

Primitive Man

Another skull of primitive man has been discovered, this time in England, at Piltdown, on the River Ouse, and it is older than any other previously discovered, at least in Europe. It is credited to the period of the Lower, or older, Pleistocene, which is the geologic period immediately before that in which we live, the period of mammoths and cave bears and other huge mammalia. This skull may be 50,000 years old—no one knows the length of the geologic periods. At the time when the owner of this skull was alive England was a part of the Continent of Europe, and elephants, mastodons and hippopotamuses ranged the warm meadows and woods, while man still had a jaw like a chimpanzee's and had hardly learned to talk. We do not gather, however, that this early Englishman was lower in the scale than the Javan Pithecanthropus, which made such a stir in the scientific world a few years ago. That was half man and half ape, and so is this. The anthropologists have decided that the cave-men whose skeletons had been found hitherto in Europe were not the ancestors of the present inhabitants, but that they entirely disappeared; but this new, or rather, very old skull may properly represent the ancestral source of man as he now exists; for there is no longer any question among scientific men that man is, physically, descended from the ape by the slow process of evolution. And yet we do not the less value the Mosaic story of creation for higher purposes than those of history or science.

The Name of Christian

The Christian Connection is one of the oldest denominations that have originated in this country. It has an organ, *The Herald of Gospel Liberty*, which claims to be the oldest religious journal in the United States. Somewhat

later, Mr. Campbell originated another religious body properly distinguished as the Disciples of Christ. A leading member of the Christian Connection went over to the followers of Campbell and took quite a secession with him. He also was urgent about using the name *Christian,* and since then, as they have grown strong, they have preferred to be called Christians rather than Disciples. But the older and much smaller denomination does not like to have the only name they have transferred elsewhere, and just now they have once more made sharp complaint. The Disciples' organ in Cincinnati answers more sharply, calls the claim of its smaller rival "arrogant," "reckless," "uncivil," "hydrophobic" and "childish," terms of bitterness or contempt which we do not like to see used in a discussion about a name which should be spoken only with reverence and brotherly love. As to the claim of the Cincinnati organ that their opponents are a denomination, a sect, while they, the Disciples, are not a sect and do not use the designation *Christian* in any denominational sense, we cannot assent. They are as much a denomination as any in the United States, and draw as close lines of inclusion and exclusion. Every one else knows they are a denomination, even if they do not know it. The best solution would be for the Christian Connection to unite with the Disciples, if they are not yet ready to unite with the Congregationalists, as they were two or three decades ago invited to. The name of *Christian* is not one to quarrel over. The distinctive tenets of the Disciples of Christ are (1) that they are not a sect, and (2) that unimmersed persons must not be received. The two are self contradicting. They refuse to receive other Christians because not immersed. That is the essense of sectarianism and makes them a denomination, and as such they have no right to take another denomination's name.

Catholic Support of Woman Suffrage

The Catholic Church has no objection to woman's suffrage. Archbishop Redwood is the Metropolitan of the Church in New Zealand. He is just now visiting this country, and he says that women have had the vote in New Zealand for many years, and it has been proven that they use it wisely and judiciously, and for the greatest common good. He is heartily in sympathy with the movement in this country, and believes that the tide of equal suffrage cannot be stemmed. Not very long ago a woman was elected Mayor of Wellington, the capital of New Zealand, and her administration was a meritorious one. The greatest service of the women voters to New Zealand he finds to lie in the school, hospital and charitable departments, and in bringing about municipal beautification and improvement. The women of New Zealand have maintained the high standard of purity and womanhood, and, if anything, they are better wives and home-conservers. And why should not that be the effect?

A Calumny Resented

Bishop McFaul and *The Freeman's Journal* have good right to complain of a calumny against the Catholic Church in Hayti published in *World's Work* by William Bayard Hale, a correspondent whom we have found aforetime not trustworthy. He said that in Hayti the people are nominal Catholics, but that Voudouism is their real religion; and to justify it he told of his conversation with a bishop there who declared that he received letters from Saint John, and that he was himself Philip the Evangelist, who ascended the chariot of the Eunuch of Ethiopia and converted him. The Rev. Mr. Hale says:

"Philip the Evangelist proposed to give me a letter of introduction to the Queen of Sheba."

The purpose was to show what a caricature of credulity, superstition and Voudouism the Catholic religion in Hayti is. We do not know how low its condition may be, but when asked to give the name of his bishop Mr. Hale refused to do so. The Coadjutor Archbishop of Hayti declares that the article is a calumny and a stupidity; that there is no such Catholic bishop as is described; but he suspects that the man Mr. Hale met may have been a visitor there. He says:

"There has, however, been here a certain bishop, Mgr. Holly, an American from Mobile, a negro, representing the High Church of England and calling himself a 'Catholic,' but not a

Roman Catholic—a man affiliated with the sect of the Adventists, etc. Perchance this is the bishop to whom the writer of that article alludes."

That is amusing enough, "an American," "a negro," "a bishop," "High Church of England," "a Catholic," but "not Roman," and an "Adventist." It may have been he, if such a composite man there is, whom Mr. Hale met; but it cannot possibly be the Bishop Holly, now dead, whom we knew to be no such versicolored magpie and not insane. At any rate, Mr. Hale's story is discredited.

The Churchman of last week contained an admirable editorial on the proposal to change the name of the Protestant Episcopal Church. It argued that if the name "Protestant" is to be left out, the right of private judgment must be maintained; and it even quotes Cardinal Newman, who replied to Mr. Gladstone:

"If I am obliged to bring religion into after-dinner toasts (which indeed does not seem quite the thing), I shall drink—to the Pope, if you please—still, to conscience first, and to the Pope afterwards."

And it suspects that those who are so afraid of the name of Protestant will be disappointed by the result of the change, as were those who pushed the dogma of Papal Infallibility, of whom Canon Scott Holland said:

"It has come about that the infallibility proclaimed is to be understood, not in the sense of the party who carried it, but in the sense of those minimizers whom they decried; so that, instead of Mr. W. G. Ward's vision of a Papal Bull arriving every morning for your breakfast with *The Times* and the toast, there has not been really one single infallible utterance in the forty years that have followed the proclamation."

We cannot approve the bill which has past the House of Representatives, denying admission at our ports of immigrants who cannot read, with certain minor exceptions, as of elderly parents and grandparents of immigrants who are literate. The persons excluded are mostly honest, hard-working men who would do the coarse labor of our industries. They will not learn to read, but their children will have to, will be compelled to. Their children will be on a fair level of opportunity and culture with other people's children, and it is the children that we must be considering. The old folks don't count for the future of the country, only for present needs of labor in streets and mines. And be it remembered that the higher forms of labor cannot be carried on without a full supply of cheap, coarse labor. Skilled labor rests on unskilled labor, and there is no danger that the market for unskilled labor will be overstocked.

America, the excellent weekly edited in this city by Jesuits, does not approve the publication by us of an article on the Three American Cardinals. It takes this occasion to tell the difference between the Guardians of Liberty, whom we have denounced, and ourselves. It says:

"The former would disfranchise American Catholics or otherwise politically disqualify them because they are Catholics; the latter would leave them alone because American Catholics are really not Catholics at all."

Oh no. We would not disfranchise or disqualify any of them. We would have them vote because they are American citizens, and if they are good Catholics all the better. It is the bad Catholics and the bad Protestants we are afraid of, and there are so many of them!

The number of old soldiers on the pension list diminished by 31,804—87 die every day; and yet, with the reduction in numbers, the appropriation from the treasury for pensions will have to be $20,500,000 more for 1914 than for 1913. That is because Congress has been very generous in the new pension laws. For years we have been expecting relief to the treasury by death, but instead of that the cost has increased. But it can't continue indefinitely. The last pensioner of the Revolutionary War died in 1869.

Following a discussion at the late meeting of the Governors in Richmond over the intermarriage of whites and blacks, a bill has been introduced into Congress on the subject. Of course Congress has no authority over marriage in the States. Such intermarriages are never likely to be between pure whites and blacks, but between whites and part whites. Just why the white blood in a mulatto or quadroon should be forbidden to mate with its like, neither science nor love can explain.

The other day, when the British Congregationalists met in Manchester the Anglican Bishop of Manchester gave them greeting and compliments. But that does not please the *Church Times,* organ of the ritualist faction, and it rebukes the Bishop and tells him that "it is high time that this practice of indulging in effusive compliments between mutually antipathetic bodies should be given up!" "Antipathetic!" Do not Christians love one another?

The Church of England has two archbishops, but their authority does not extend into Scotland, where there are seven dioceses with bishops, but no archbishop. If that is anomalous the Scottish Churchmen are satisfied to have it so, for they want no little Pope. The bishops choose one of their number to act for them as Primus, much as the senior bishop has served American Episcopalians, and no sentiment for the higher dignity appears to exist in this country.

Elder William Jennings Bryan, distinguished as he is in the counsels of his Church, cannot be Moderator of the next session of the General Assembly at Atlanta, Ga., because he is a layman and not a minister! Prodigious! Ridiculous! He can preside as Vice-Moderator, but not as Moderator, because the presbyteries have decided that only a minister can moderate. Then let the presbyteries, with their lay membership, reverse their own rule.

So long as Servia's capital is threatened by the troops of her powerful neighbor mobilized on the other shore of the Danube we live in dread lest some one should revive that ancient alphabetic poem:

An Austrian army, awfully arrayed
Boldly by battery besieged Belgrade.
Cossack commanders cannonading come
Dealing destruction's devastating doom.
Every endeavor engineers essay
For fame, for fortune fighting—furious fray.
Etc., etc., etc.

The action of the Congregation of the Index in condemning the Church history of the famous Catholic scholar Duchesne luckily came after the conclusion of the Catholic Encyclopedia. It is to the credit of that work that it depends very much on Duchesne, and he is quoted as authority not dozens, but hundreds of times. There is no danger that the Encyclopedia will be condemned, and the scholar can get his conclusions without reading the original.

A correspondent asks why, if the Ussher chronology, which makes the world six thousand years old, is not correct, its figures are put at the tops of the references column in our Bibles. The answer is, that this is not now done. The American Bible Society prints these figures in none of its Bibles, and we are confident that neither does the British Bible Society. To do it would be to teach what is not true in many instances.

In Italy the Pope is not independent. He ought to be; he is in this country. But in Italy when he appoints a bishop, as in a late case, the Italian Government can forbid the candidate to take possession of the Episcopal house and enter on his duties. The proper remedy is for the Church to seek absolute separation from the State, as in France, where that evil has been abolished, and the State has no concern with the induction of bishops.

Of those who die at adult age how many achieve distinction enough to be worth a permanent, tho brief, biography in a biographical dictionary. Sir Sidney Lee, editor of the British "Dictionary of National Biography," puts the number at one to 4,000, which one would think generous, and which would put the achievements within the reach of an ambitious man of natural ability.

It is startling to learn that a new and emphatic warning has had to be sent to Mexico for the protection of Americans engaged in business there. While the statements made as to the number of Americans killed arouse anxiety, we think that Mr. Taft can be depended on to avoid intervention while taking due precautions.

That is not a bad solution of the problem, What to do with our ex-Presidents, which would make them college professors or lecturers. We congratulate New Haven on calling Mr. Taft to a professorship of law.

The Oldest Insurance Sin

BY W. E. UNDERWOOD

REBATING commissions—which means that the insurance agent or solicitor allows his customer some part of his (the agent's) commission—is one of the oldest of insurance sins. And it is one of the hardest to eradicate, because of the many difficulties encountered in proving it. The offenders are the beneficiaries and between them they can disguise the transaction in innumerable ways. Long before any of the States enacted laws on the subject, the leading companies in all branches of insurance wrote against it, ruled against it, instructed their representatives against it and assessed penalties against it. Occasionally some bungling culprit was punished; but these, totaled from the beginning of insurance to date, make a number so small as compared with the multitudes who performed the feat successfully and continuously that the most skilled mathematician would find it impossible to calculate the percentage. The decimal place would be too distant to mean anything to the average comprehension.

Rebating is as natural to a middleman as his breath or the circulation of his blood. He is dependent for his success on the number and magnitude of his trades. He operates in the open market and has innumerable and strong competitors. He receives as compensation a small amount of the money he is the means of passing from buyer to seller. As competition grows keener, rather than lose the business he seeks, he will accept for his services one-half the usual reward—one-quarter — one-tenth; sometimes he will negotiate it free of charge rather than have it pass for the time being into the custody of a rival. The rebater's creed is: "Half a loaf is better than no bread."

The removal of the practice from the business of insurance is desired by companies because it destroys uniformity in rates and practices in the open field, and places a power that should not be exercised at all in the hands of unscrupulous but clever men. Its destruction is desired by the legislator on the ground that it discriminates unjustly between buyers of insurance of the same class, some securing identical benefits from the same companies at less cost. Both sources of power, the companies and the State, regard it as an immorality. Perhaps it will be totally eradicated some day—one of those millennial days we love to contemplate when we've nothing else to do.

Two gentlemen, evidently engaged principally in the business of fire insurance, have been discussing the subject of rebating lately in the columns of the *Journal of Commerce*. Both condemn and both seem to think that, notwithstanding the law prohibiting it, the practice flourishes hereabout as vigorously as the proverbial green bay tree. That's doubtless correct, too. It thrives everywhere. One of these gentlemen would amend the law so that traps could be set to catch offenders. He would employ "stool-pigeon applicants" and send them around among agents and brokers, demanding a division of commissions. The other party to the discussion disagrees with the proposed remedy. He would have a penalty of "say a $100 fine for each policy on which the assured received a rebate," and then hand over half the fine to whoever would disclose the transaction. The first is a sort of "marked money" method; the other employs the services of the informer.

Either one of these remedies is as good as any of those now in vogue and nothing would be lost in trying both if desired—nor gained. The actual defect resides in old human nature. Some of the keenness of the desire to get on in the world must first be trained out to really make the offense of rebating odious.

The Equitable Control

THE examination of Mr. J. Pierpont Morgan before the so-called Money Trust Investigating Committee of Congress last week has again brought into public view and recollection the ownership by that financier of the controlling interest in the capital stock of the Equitable Life Assurance Society. Again the public is reminded that 510 of the 1,000 shares constituting the stock of that insurance company—that $51,000 worth of the entire $100,000—was acquired by Mr. Morgan at the price of $3,000,000. The annual dividend allowed by law on that stock equals 7 per cent. on the par value, a total on Mr. Morgan's block of $3,570, or one-ninth of 1 per cent. on his investment.

The publication of the testimony also revives interest in the promise—or was it only a suggestion?—to "mutualize" the company. It is now some six or seven years since the Hyde interest was taken over by Messrs. Ryan and Harriman, Mr. Morgan's predecessors in control, and since the indefinite proposal or suggestion involving "mutualization" was first bruited about. The talk recurs at irregular periods.

An amusing feature of Mr. Morgan's testimony last week relates to the manner in which he acquired the stock from Mr. Ryan, and his reason for doing so. He said he asked Mr. Ryan to sell it to him. "Did you tell him why you wanted it?" he was asked. "No; I told him I thought it was a good thing for me to have," he replied. "Did he tell you that he wanted to sell it?" "No; but he sold it." Mr. Ryan hesitated about it, observed Mr. Morgan, but finally sold it. His stated reason for securing control was that he thought it was the thing to do; that he believed it best to have that lot of stock where there was no danger of it being divided up into small lots. "The only reason I did it," he added, "on which I am willing to stand up before the community or anybody, is that I thought it was the thing to do."

There is much force in keeping that block of stock intact if it is the intention of the present owner to sell it to the policyholders of the company; but none at all if it is to remain in his estate. The public have rather believed that the several gentlemen who managed to get this stock intended, as they intimated, to pass it over to the policyholders by way of beginning the process of "mutualization," and it is to be hoped that this belief is not groundless.

Notes

DISCUSSING the proposal to revise the standard fire insurance policy of New York, William B. Ellison, former Corporation Counsel of New York City, and an authority on fire insurance law, characterizes the movement as a step in the right direction. He asserts that the present form contains a mass of technical conditions and provisions very difficult of comprehension by the public. "Indeed," he observes, "they are so fraught with technicality and ambiguity that the courts themselves, the highest courts of record in the country, constantly differ in matters of construction." Of course, this is all wrong. There is no reason why the insurance contract cannot be phrased in simple, direct language, easily understood by the average intellect. That is certainly the thing intended.

THE Attorney-General of Michigan rules that no fire insurance companies doing business in that State may anywhere issue insurance on any one risk in excess of 10 per cent. of its paid-up capital (or deposit, if a foreign company), no allowance being permitted for reinsurance.

A LATE ruling by the Commissioner of Banking and Insurance of New Jersey holds that policies extant on property that is transferred to New Jersey must be canceled and replaced by policies issued and signed by an agent resident in that State.

ALBERT S. GILLETTE, founder and for sixty-five years president of the Girard Fire and Marine Insurance Company of Philadelphia, died in that city December 8, at the age of ninety-four years.

REPRESENTATIVE JOHNSON, of Kentucky, has introduced a resolution in the lower House of Congress, providing for an investigation of the Insurance Department of the District of Columbia.

Financial

Irving National Bank

ONE of the youngest bank presidents in the city of New York is Rollin P. Grant, who has recently been elected president of the Irving National Bank in place of Lewis E. Pierson, who has become a partner in the wholesale grocery house of Austin, Nichols & Co. Mr. Grant was born in Westfield, N. J., in 1870, and after receiving a high school education began work in the Clinton Bank at the age of eighteen. In 1898 he became paying teller of the Irving National Bank, in 1901 its cashier, and five years ago its vice-president. The New York National Exchange and the Irving National Bank were both organized in 1851 and became one bank in 1907. When Mr. Grant entered the service of the Irving in 1898, the assets were two million dollars. Now the total resources are over fifty million dollars. The four vice-presidents are James E. Nichols, Willis G. Nash, Benjamin F. Werner, Charles H. Imhoff and Emil Klein. The directors are M. M. Belding, Jr., president of Belding Bros. & Co.; Robert H. Gerry; Gerrish H. Milliken, of Deering, Milliken & Co.; James E. Nichols, of Austin, Nichols & Co.; S. Frederick Taylor, president of Borden's Condensed Milk Company; William A. Tilden, president of Fort Dearborn National Bank, Chicago; and Frank W. Woolworth, president of F. W. Woolworth Company, and others equally well known. The Irving National Bank will shortly move to the new Woolworth Building, on Broadway, opposite the Post Office, one of the tallest buildings in the world.

ROLLIN P. GRANT
The new president of the Irving National Bank.

Tables Relating to Bonds

DURING the current year, and up to December 22, bonds having a par value of $663,125,500 were sold on the New York Stock Exchange. The sales in 1911 amounted to $890,210,100. In recent years the largest annual sales have been those of 1908 ($1,082,161,120) and 1909 ($1,317,291,000), which followed a total of only $526,170,450 in 1907. As a rule, after a panic there is an increased demand for bonds, owing to loss of confidence in stocks. In the pages immediately following we publish today complete and trustworthy tables relating to all the bonds reported in the regular daily lists of the New York Stock Exchange. These include the bonds of the steam railroad companies, coal and iron companies, gas and electric lighting companies, street railways, telegraph and telephone lines, manufacturing and other industrial corporations, express companies, the United States Government, foreign Governments, and the States. Francis Emory Fitch, the well-known compiler and publisher of standard quotation statements and other records of the Stock Exchange, has prepared for us these comprehensive tables. They show the title of each bond; its rate of interest; the year of its maturity; the dates of interest payments; income (or annual return, irrespective of maturity); yield (or approximate annual return, if the

bond be held until maturity); the highest and lowest prices, with dates, in recent years; and prices at latest sales, with dates. There is also other useful information. While those who desire to buy may well be guided by these tables, a wise investor will seek also the counsel of competent persons. He may find in the tables certain issues which are attractive by reason of their income figures, and which may be of excellent quality, altho they are not prominent in the market. With respect to them he should procure the advice of bankers, easily to be found in New York and some other cities, who have carefully studied the history of bond issues and who know the actual value of the securities in question.

....Imports of cocoa into the United States have grown from 57,000,000 pounds in 1902 to about 150,000,000 pounds in 1912.

....It is estimated that more than 2,000,000 tons of steel rails have already been ordered for delivery in 1913. This total includes 18,000 tons for Australia.

....An official statement recently published at Washington shows that the gold output of the United States in 1911 was 4,687,053 ounces, valued at $96,890,000, against $96,269,100 in 1910. The silver output was $32,615,700, a gain of nearly $2,000,000.

....Banks have sent protests to Congress against the proposed coinage of 3-cent and half-cent pieces, saying it would require costly changes in commercial mechanical devices, such as cash drawers and registers, adding machines and counting machines.

....The Toronto *Monetary Times* remarks that new railways are opening land for settlement in Canada's northwest Provinces, and that if the last ten years' ratio of increase is sustained the wheat crop of those Provinces in 1920 will be not less than 513,000,000 bushels.

....According to a statement made by Canada's Minister of Railways, the Government has decided upon improvements at Halifax that will cost $30,000,000. They will include six piers, each 1,250 feet long and 300 feet wide, a 2,000-foot landing stage, elevators and railways.

....A recent census report shows that in the latest census year the capital invested in the manufacture of tobacco was $245,660,484, and the value of the products was $416,695,104, of which New York, standing first, had $76,661,552. The number of employees was 197,637.

....According to a statement made by the Canadian Minister of Railways, the cost of the proposed Grand Trunk Pacific road from Moncton, N. B., to Winnipeg, would be $258,500,000, and the interest charges guaranteed by the Government for ten years would be $65,000,000.

....A. Barton Hepburn, president of the New York Chamber of Commerce, has been appointed by the French Government an officer of the Legion of Honor, in appreciation of the part taken by the Chamber in the reception of the French Champlain delegation, which visited New York last May.

....Gen. Thomas L. James, Postmaster-General under President Garfield, has resigned as president of the Lincoln National Bank, having held the office thirty-one years, and has been elected chairman of the board. His successor is Charles Elliot Warren, who has been successively assistant cashier, cashier and vice-president of the bank.

....Our exports of tin plate have increased from 70,199,298 pounds in 1911 to 181,899,366 pounds in the first nine months of 1912. Before 1898, no tin plate was exported. Since 1891, our domestic output has grown from 5,000,000 pounds to 1,619,005,000, and imports have fallen from 1,036,489,074 pounds to only 6,613,253 in the first three-quarters of the present year.

....According to an estimate made by the *Financial Chronicle*, gold production in Africa, Australia and India for the nine months which ended with September showed an increase of 6 per cent., or $11,735,000, over the output of the corresponding months of 1911. Allowing for the increases in this country, and assuming that the rate will continue, the *Chronicle* estimates the world's output for the full year at $485,000,000, a gain of $18,000,000 over 1911.
